Innovation Centers on Inputs for Animal Nutrition and Health Network - RCIISNA is linked to the Brazilian Technology System from the Ministry of Science, Technology and Innovation. This aims to integrate 23 Institutes of Technology - ICTs with Brazilian's enterprises to practice innovation for supplies to animal health and nutrition. The network also aims to support cooperative projects to provide technological and economic development to animal health and nutrition. RCIISNA is an experiment that seeks to expand the scope of value-added from the industry of animal health and nutrition aiming on the innovation. This is considered strategic to Brazil and affects the projections for the Brazilian agribusiness. The imposition of strict regulatory standards to the quality of exported products and the pressure for lower impact on ecosystems requires technologies that surpass these challenges. Brazil has varied of industries of supplies, as well as academic and technological skills for RD & I. In this context, is considered critical to stimulate the Brazilian enterprises and ICTs to cooperate for innovation. The RCIISNA network expected to fill gaps and to stimulate innovation to animal health and nutrition.
