Interactive Course Builder: A Novel Approach to CMS Development

Joseph Defazio

School of Informatics

Interactive Course Builder is a creative research-based, design and development project. The goal is to develop a content management system (CMS) that allows the storage and manipulation of course content (e.g., syllabi, assignments, grading criteria, weekly class schedules, etc.) for e-Learning using 'smart technology such as the iPad. This application will enhance and streamline online course development. This application will be pilot-tested using the School of Informatics Media Arts and Science Gateway course titled: N100 - Foundations of New Media.
