Translational Medicine

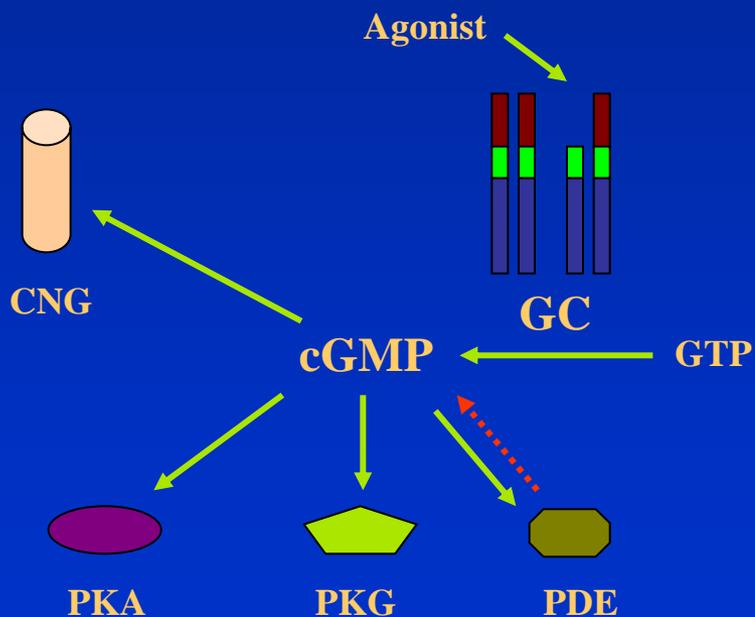

Translational Research Project: from the cGMP Pathway to Colorectal Cancer

Targeting Strategies:

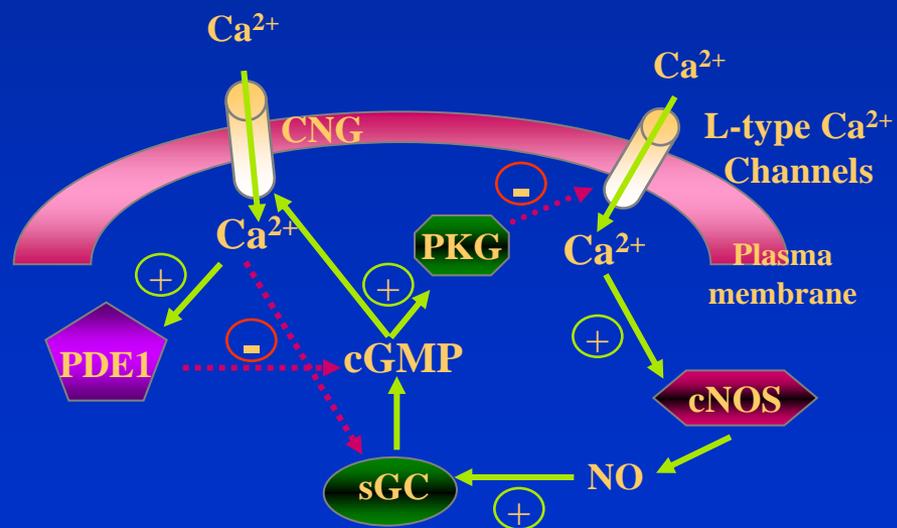

- 1. Cyclic GMP-Dependent Pathway as a Tumor Suppressor System to Prevent Colorectal Tumorigenesis**
- 2. Cyclic GMP-Dependent Pathway as an Antimetastatic Strategy to Disrupt Colorectal Cancer Metastatic Progression**

Cyclic GMP Signaling

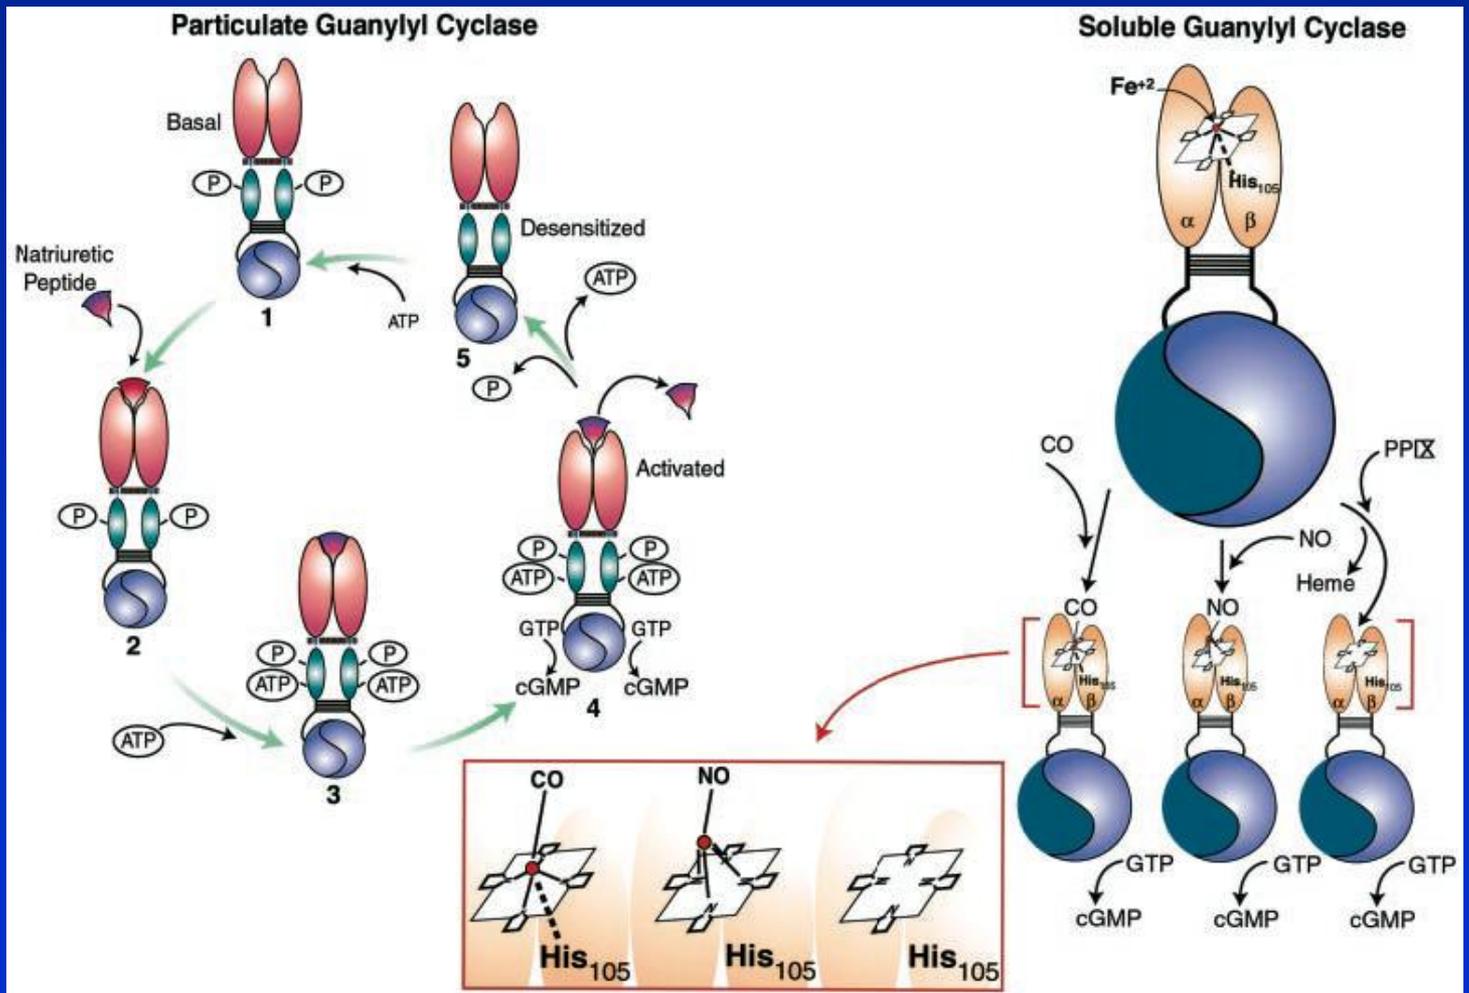

General Model for cGMP Signaling

Pituitary Cells

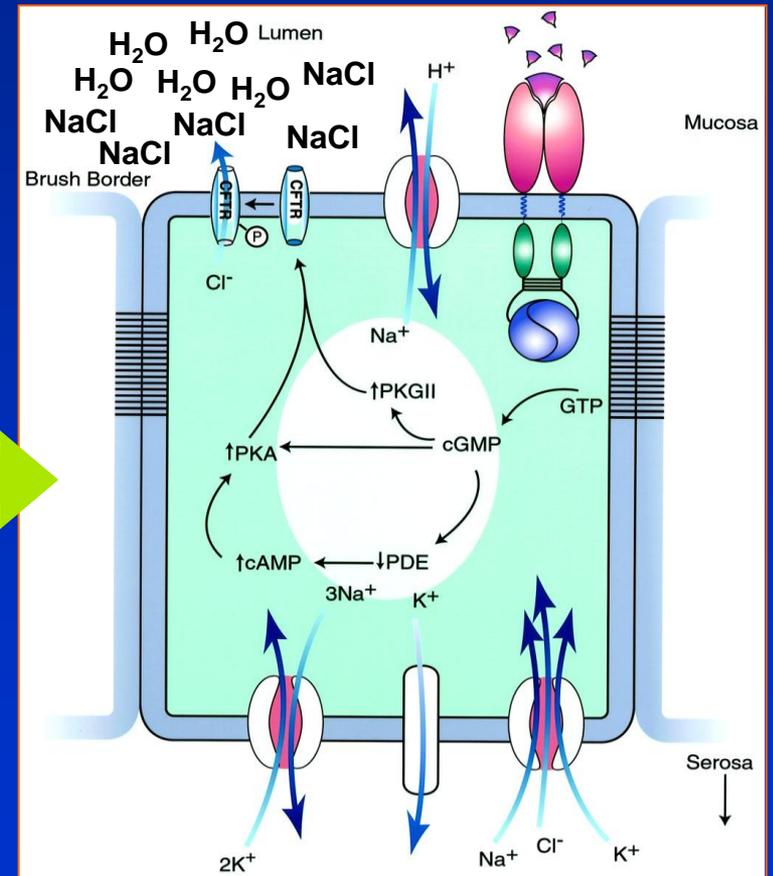

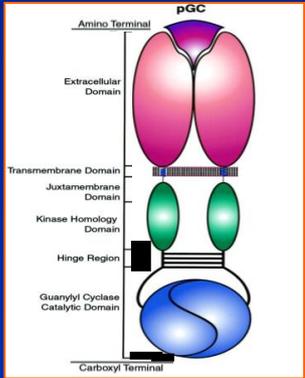

Guanylyl Cyclases

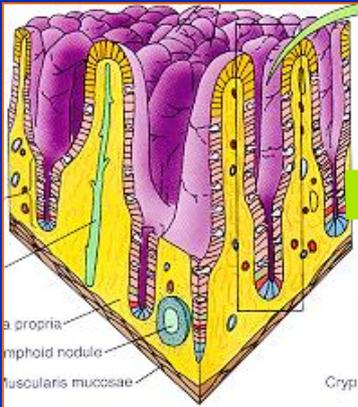

Guanylyl Cyclase C (GCC)

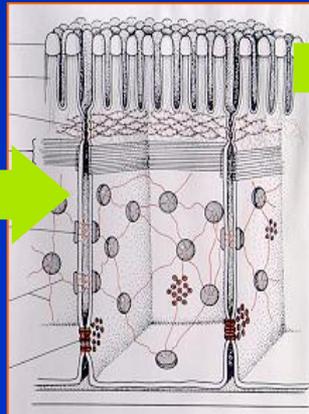

GCC is selectively expressed at brush-border membranes of intestinal epithelial cells and regulates fluid homeostasis

Lucas, et al. (2000) Pharmacol. Rev. 52: 375-413

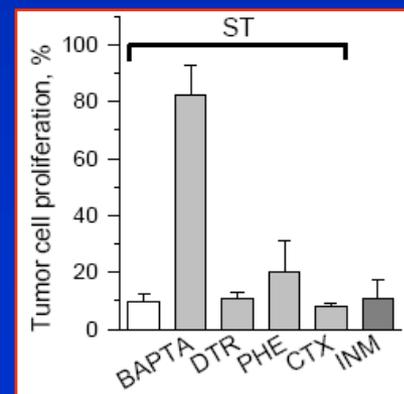

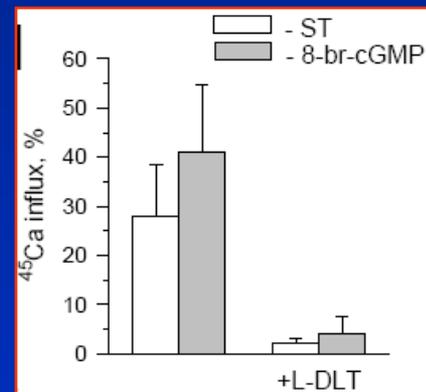

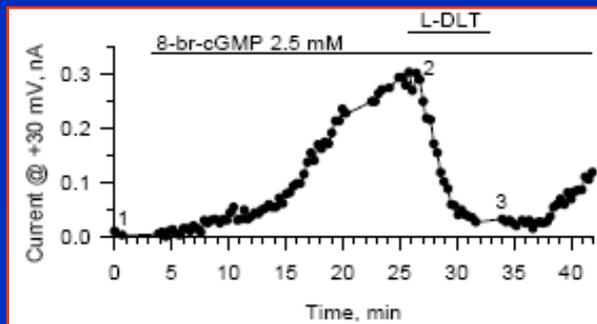

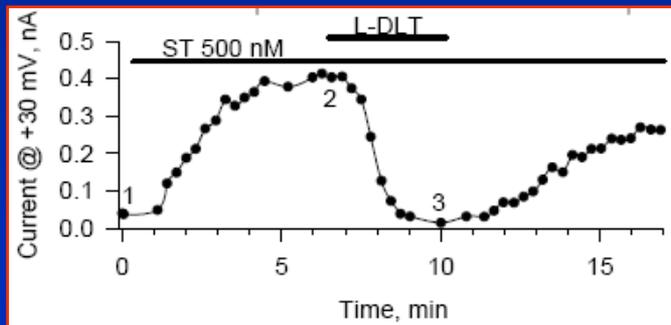

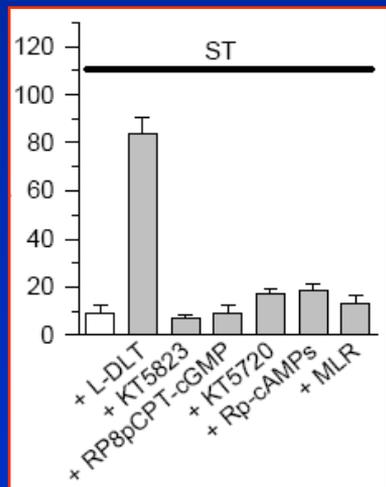

Crypt and Villus Enterocytes

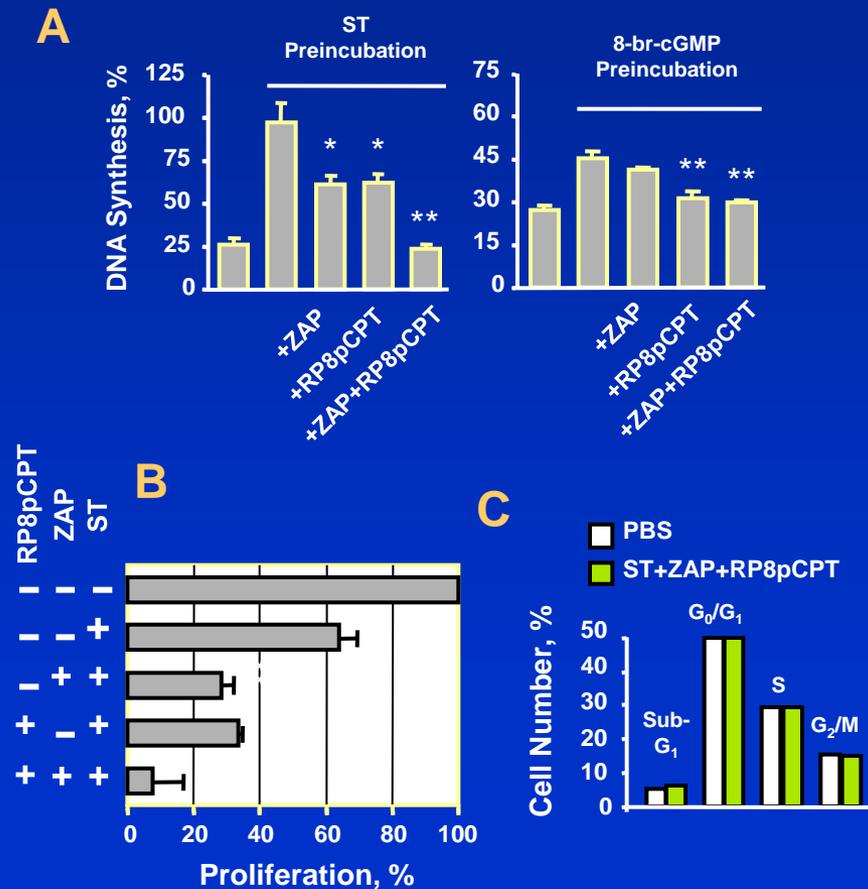

Brush Border Microvilli

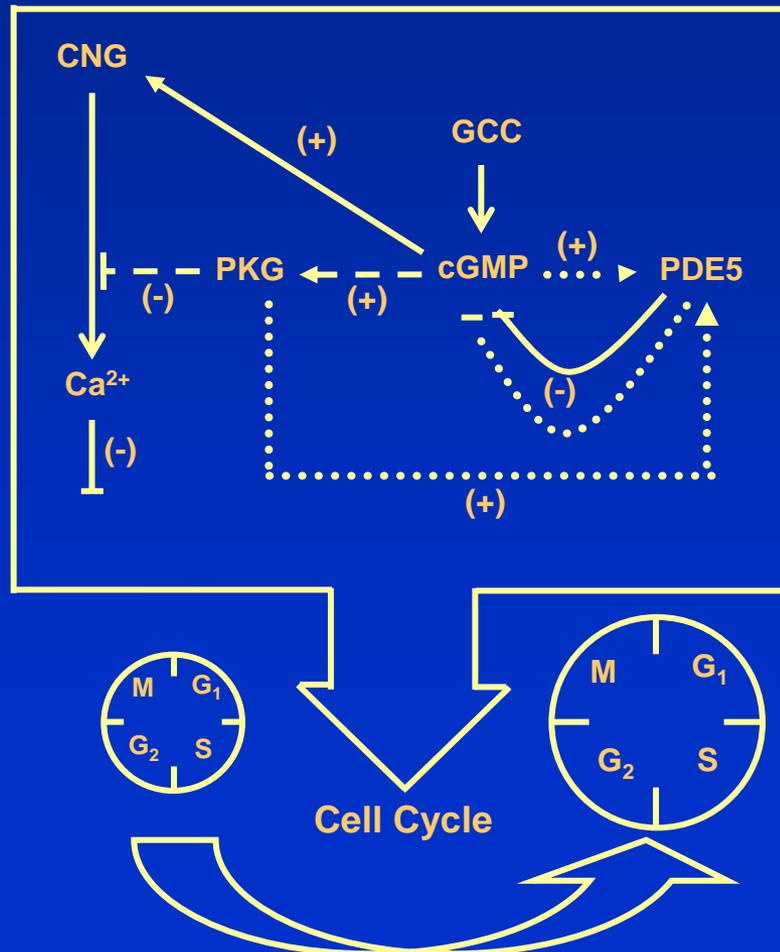

Antiproliferative cGMP Signaling Targets Cyclic Nucleotide-Gated Channel

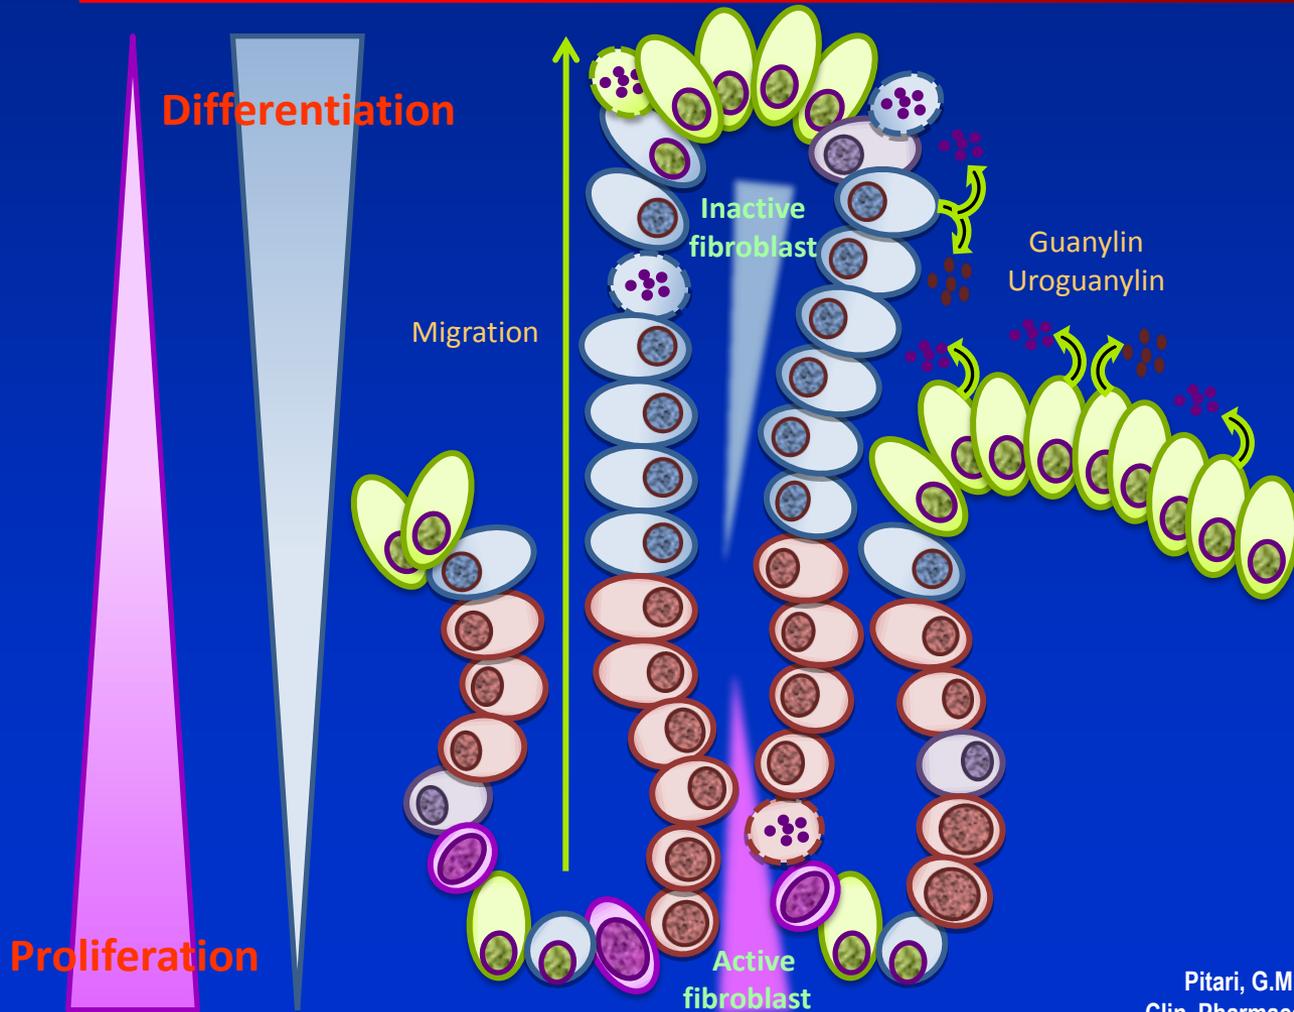

Antiproliferative cGMP Signaling Undergoes Negative Feedback Regulation

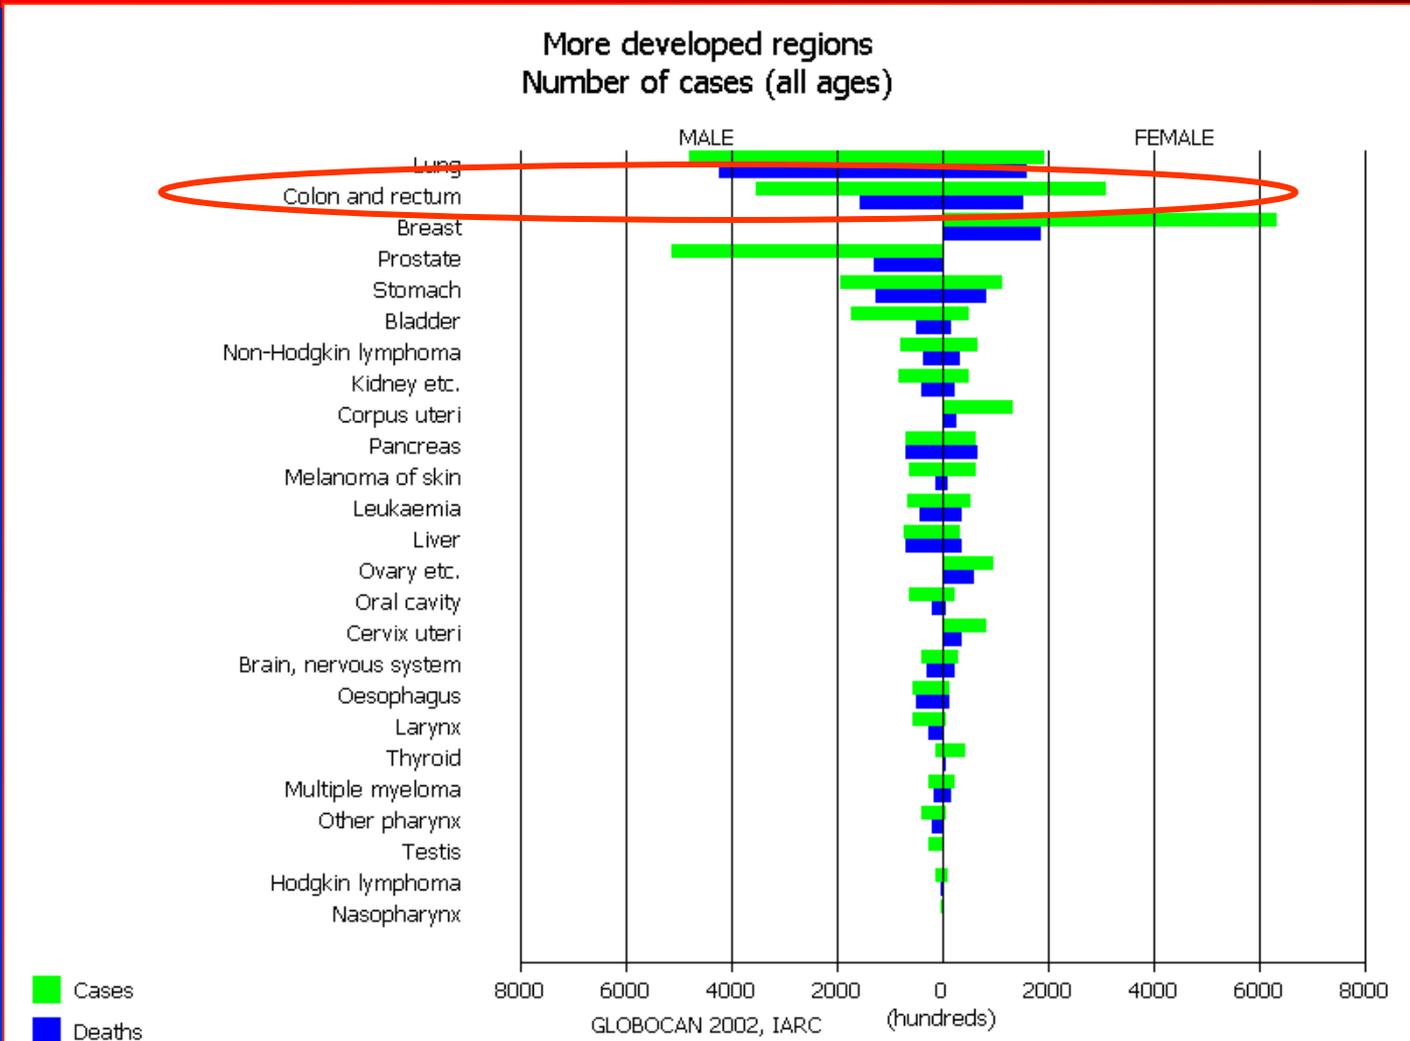

The Antiproliferative cGMP Signaling Pathway in Intestinal Epithelial Cells

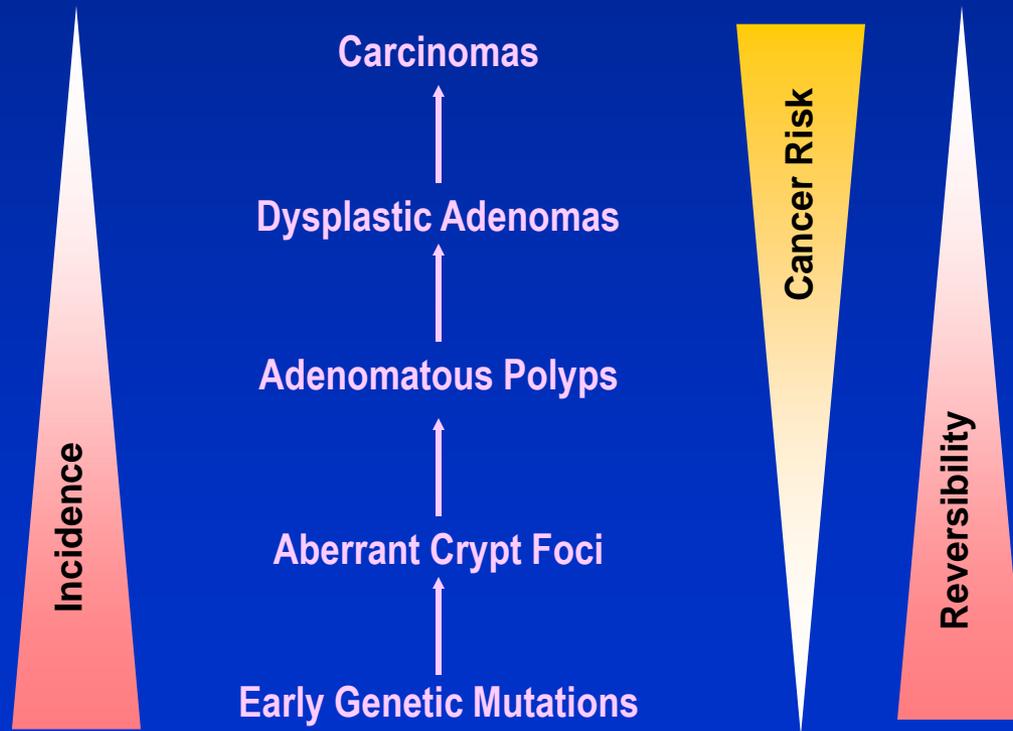

Cyclic GMP Signaling by GCC Controls The Crypt-Villus Homeostasis

Colon Cancer: the 2nd Most Deadly Cancer in Developed Nations

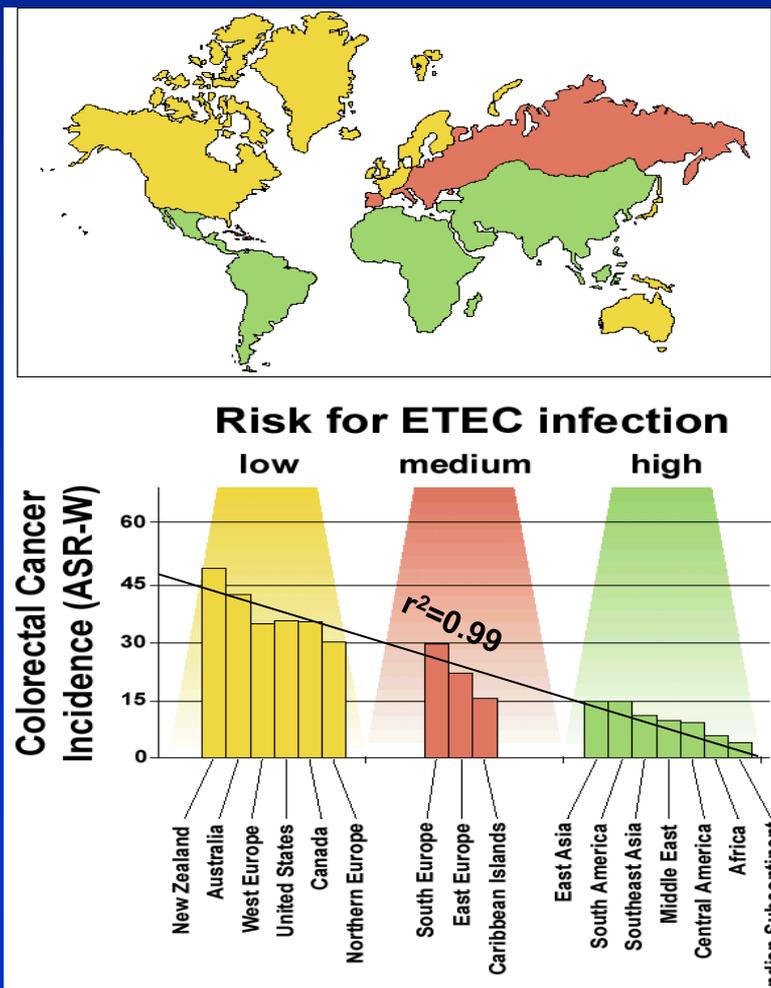

The Pathological Sequence of Colorectal Cancer

Colon Cancer: Diagnosis and Therapy

	<p><u>Stage I</u> Invasion up to the <i>muscularis propria</i></p> <p>↓</p> <p>Surgery</p>	<p><u>Stage II</u> Invasion of the serosa and adjacent organs</p> <p>↓</p> <p>Surgery</p> <p>↓</p> <p>Chemiotherapy ?</p>	<p><u>Stage III</u> Invasion of regional lymph nodes</p> <p>↓</p> <p>Surgery</p> <p>↓</p> <p>Chemiotherapy</p>	<p><u>Stage IV</u> Distant Metastasis</p> <p>↓</p> <p>Surgery</p> <p>↓</p> <p>Chemiotherapy</p>
5-years survival	~ 95%	~ 80%	~ 65%	~ 7%

Tumor Containment / Vascular Clearance

Summary

- *The cGMP pathway in intestinal epithelial cells regulates the crypt-villus axis and opposes colorectal tumorigenesis*
- *GCC, a guanylyl cyclase receptor selectively expressed by normal and malignant intestinal epithelial cells, coordinates a paracrine tumor suppressor system in the intestine*
- *The cGMP pathway potentiates the cytostatic effects of extracellular calcium by regulating the activity of CaR*
- *The cGMP pathway reduces the metastatic potential of colorectal cancer cells, in vitro and in vivo, in part by regulating the function of MMP-9*
- *Cancer cell MMP-9 regulates metastatic functions, including actin polymerization and cell spreading, and in vivo seeding of target organs*

Translational Significance

- *GCC ligands represents novel agents for the prevention of primary and metastatic colon cancer*
- *GCC ligands represents novel agents for the treatment of primary and metastatic colon cancer*
- *Combinatorial strategies with GCC ligands and dietary calcium may provide a novel paradigm for the treatment of colon cancer*
- *Cancer cell MMP-9 is a highly selective and effective molecular target for preventing metastatic progression of colorectal cancer*
