**Language:** English

**Abstract:** The compounds [mPTA][CoCl<sub>4</sub>] (1, mPTA = N-methyl-1,3,5-triaza-7-phosphaadamantane cation), [CoCl(H<sub>2</sub>O)(DION)(2)][BF<sub>4</sub>] (2, DION = 1,10-phenanthroline-5,6-dione), [Zn(DION)(2)]Cl<sub>2</sub> (3) and [ZnCl(O-PTA=O)(DION)][BF<sub>4</sub>] (4) were synthesized by reaction of CoCl<sub>2</sub> with [mPTA]I or DION and ZnCl<sub>2</sub> with DION or 1,3,5-triaza-7-phosphaadamantane-7-oxide (PTA=O) and DION, respectively. All complexes are water soluble and have been characterized by IR, far-IR, H-1, C-13 and P-31{H-1} NMR spectroscopy, ESI-MS, elemental analyses and single-crystal X-ray diffraction structural analysis (for 1). They were screened against the human tumour cell lines HCT116, HepG2 and MCF7. Complexes 2 and 3 exhibit the highest in vitro cytotoxicity and show lower cytotoxic activities in normal human fibroblast cell line than in HCT116 tumour cell line, which demonstrates their slight specificity for this type of tumour cell.

**Author Keywords:** Cobalt; Zinc; N ligands; Medicinal chemistry; Antitumor agents

**KeyWords Plus:** Transition-metal-complexes; In-vitro cytotoxicity; Ray crystal-structure; Water-soluble PTA; Coordination chemistry; Superoxide-dismutase; Anticancer activity; Ligands; 1ST; Drugs
