Keywords:

- yeast genome;
- chromosome VII

Abstract

We report the sequence of a 9000 bp fragment from the right arm of *Saccharomyces cerevisiae* chromosome VII. Analysis of the sequence revealed four complete

previously unknown open reading frames, which were named G7587, G7589, G7591 and G7594 following standard rules for provisional nomenclature. Outstanding features of some of these proteins were the homology of the putative protein coded by G7589 with proteins involved in transcription regulation and the transmembrane domains predicted in the putative protein coded by G7591. The sequence reported has been deposited in the EMBL data library under Accession Number X82775.
