List of Tables

1	Individuals failing quality control thresholds	2
2	SNPs failing quality control thresholds	2
3	Significance and odds ratio estimates for all SNPs taken forward for replication.	3
4	Comparison of most significant genotyped and imputed SNPs	4
5	Interaction between the most significant SNP for each locus and HLA region	5
6	Results of conditional analysis for the <i>SCHIP1-IL12A</i> locus at 3q25	5
7	Overlap with loci associated with other autoimmune diseases	6
8	GRAIL results for all novel PBC loci	7
9	Non-synonymous SNP analysis using 1,000 Genomes data	8
10	Identification of cis-eQTL within all associated loci	8

List of Figures

1	Quantile-quantile plot of observed <i>versus</i> expected p-values	9
2	Manhattan plot of association results from imputed data	10
3	Linkage disequilibrium for <i>SCHIP1-IL12A</i> locus at 3q25	11
4	Regional association plots of all genome-wide significant loci	12
5	Plot of first two principal components from the GWAS samples and HapMap data	23
6	Heterozygosity and missingness for analysed SNPs	24
7	Cluster plots for all SNPs taken forward for replication	25

Supplementary Tables

Table 1: Individuals failing quality control thresholds. WTCCC2 indicates sample failed QC criteria for the Wellcome Trust Case-Control Consortium 2 study.

Sample	Criteria						Total ^a
	Heterozygosity	Call rate	Gender	Non-European	Relatedness	WTCCC2	
PBC cases	28	15	5	37	21	N/A	81
NBS controls	42	54	12	13	51	236	249
58C controls	68	84	5	44	23	255	231

^a Some individuals failed quality control for multiple reasons.

Table 2: SNPs failing quality control thresholds. HWE indicates Hardy-Weinberg Equilibrium test; MAF indicates minor allele frequency; NMCAR indicates not missing completely at random. WTCCC2 indicates sample failed QC criteria for the Wellcome Trust Case-Control Consortium 2 study.

Sample	Criteria					Total ^a
	Call rate	HWE	Low MAF	NMCAR	WTCCC2	
PBC cases	9,022	10,164	67,387	5,217	N/A	79,941
NBS controls	16,958	15,167	195,422	11,545	214,848	237,455
58C controls	15,317	14,721	196,294	12,209	215,732	239,454

^a Some SNPs failed quality control for multiple reasons.

Table 3: Significance and odds ratio estimates for all SNPs taken forward for replication.

SNP	CHR	Position (bp)	P-value	OR	95% C.I.

Table 6: Results of conditional analysis for the *SCHIP1-IL12A* locus at 3q25. The most significant SNP at this locus is rs485499; analyses of SNPs in this region were performed including this SNP as covariate in a logistic regression model. For each SNP reaching genome-wide significance in the conditional analysis, the significance of the regression coefficient for each SNP is shown for the models with and without rs485499 included (P_{GWAS} and $P_{Conditional}$ respectively). Linkage disequilibrium between rs485499 and each SNP is shown in the r^2 column; see Supplementary Figure 3 for a graphical representation of the LD between these SNPs.

SNP	Position (bp)	P_{GWAS}	$P_{Conditional}$	r^2	Type
rs4525910	161129306	2.18×10^{-9}	2.73×10^{-8}	0.001	Imputed
rs7610160	161169039	2.61×10^{-9}	1.73×10^{-8}	0.006	Genotyped
rs17811014	161170723	6.98×10^{-8}	1.10×10^{-11}	0.016	Genotyped
rs13064168	161174900	3.31×10^{-7}	5.73×10^{-10}	0.011	Imputed
rs2366408	161178793	3.64×10^{-11}	1.14×10^{-8}	0.024	Genotyped

Table 7: Overlap with loci associated with other autoimmune diseases for all novel PBC loci with $P_{C_{combined}} \leq 5 \times 10^{-8}$. Acronyms are as follows: MS, multiple sclerosis; CD, Crohn’s disease; SLE, systemic lupus erythematosus; RA, rheumatoid arthritis; Coeliac, Coeliac disease; T1D, type 1 diabetes; UC, ulcerative colitis; PS, psoriasis; AS, ankylosing spondylitis.

1	rs12134279	195.58 - 196.21	<i>DENND1B</i>	0.01	Associated with asthma.
2	rs10931468	190.77 - 191.61	<i>STAT4</i>	1.08×10^{-5}	Mediates responses to IL12 in lymphocytes; regulates T-cell differentiation.
3	rs1372072	16.82 - 17.13	<i>PLCL2</i>	0.05	Expressed in skeletal muscle.
3	rs2293370	120.58 - 120.79	<i>CD80</i>	1.6×10^{-3}	Provides regulatory signals for T lymphocytes.
4	rs7665090	103.61 - 104.24	<i>NHEDC2</i>	0.32	Sodium hydrogen antiporter.
5	rs860413	35.74 - 36.08	<i>IL7R</i>	1.5×10^{-3}	Receptor for IL7; involved in activation of T-cells and SCID.
7	rs6974491	37.32 - 37.41	<i>ELMO1</i>	1	Promotes phagocytosis.
11	rs538147	63.60 - 64.04	<i>MACROD1</i>	0.41	Role in invasion, metastasis of gastric cancer.
11	rs6421571	117.82 - 118.30	<i>DDX6</i>	0.10	RNA helicase found in P-bodies and stress granules.
12	rs1800693	6.29 - 6.33	<i>TNFRSF1A</i>	8.8×10^{-3}	Activates NF-kappaB, mediates apoptosis, regulator of inflammation.
14	rs911263	67.34 - 67.98	<i>RAD51L1</i>	0.24	Involved in DNA repair and recombination.
14	rs8017161	102.54 - 102.68	<i>TNFAIP2</i>	0.40	Expression induced by tumor necrosis factor alpha
16	rs12924729	10.92 - 11.22	<i>CIITA</i>	4.5×10^{-4}	Positive regulator of class II MHC genes.
16	rs11117432	84.55 - 84.58	<i>IRF8</i>	2.0×10^{-3}	Transcription factor of interferon regulatory factors.
22	rs968451	37.87 - 38.19	<i>SNORD43</i>	0.76	Noncoding small nucleolar RNA.

Table 9: Results of non-synonymous SNP analysis using 1,000 Genomes data [1] for those SNPs reaching genome-wide significance in the combined analyses. Proxy SNP indicates the non-synonymous SNP used as a proxy for the genome-wide significant SNP identified in the GWA analysis, with r^2 providing an estimate of the linkage disequilibrium between the two SNPs.

CHR	SNP	SNP Position	Proxy SNP	Distance to hit SNP (bp)	r^2	Gene
4q24	rs7665090	103770651	rs2866413	5,474	0.97	<i>MANBA</i>
5p13	rs860413	35978799	rs6897932	68,467	0.80	<i>IL7R</i>
19q13	rs3745516	55618554	rs11546996	477	1.0	<i>SPIB</i>

Table 10: Identification of cis-eQTL within all known associated PBC loci that are in LD ($r^2 > 0.8$) with the most associated SNP at that locus, using data from the Gene Expression Analysis dataset at the University of Michigan Center for Statistical Genetics (<http://www.sph.umich.edu/csg/liang/imputation>). Results where a SNP has $p < 1 \times 10^{-5}$ for an effect on gene expression are reported in the table.

Chromosome	SNP	Gene	eQTL p-value
6p21	rs7774434	<i>HLA-DRB4</i>	6.4×10^{-12}
6p21	rs7774434	<i>HLA-DQA1</i>	1.7×10^{-10}
6p21	rs7774434	<i>HLA-DRB1</i>	2.1×10^{-10}
17q12	rs7208487	<i>CRKRS</i>	2.4×10^{-7}
17q12	rs2879258	<i>CRKRS</i>	3.2×10^{-7}
17q12	rs11655972	<i>CRKRS</i>	3.8×10^{-7}
17q12	rs8073907	<i>CRKRS</i>	3.5×10^{-7}

Supplementary Figures

Figure 1: Quantile-quantile plot of observed *versus* expected p-values. Blue points indicate the results of the complete GWAS. Yellow points indicate the results after all known loci (including the HLA region) are removed. Red points indicate the results after all known loci and the genome-wide significant loci identified in this study are removed. $\hat{\lambda}_{GC}$ was estimated from the complete GWAS data.

Figure 2: Manhattan plot of association results from data imputed using the HapMap3 Indo-European dataset. Imputation was performed using only those markers that passed QC and were genotyped in cases and controls. Analysis of the imputed data was conducted for those SNPs with a quality score (predicted dosage r^2) > 0.4 in PLINK version 1.07 (Purcell et al., 2007). Gold points indicate SNPs with a suggestive ($\leq 1 \times 10^{-5}$) level of association, red points indicate SNPs with a significant ($\leq 5 \times 10^{-8}$) level of association. Filled dots indicate SNPs for which only missing data were imputed, empty dots indicate completely imputed SNPs.

Figure 3: Linkage disequilibrium (r^2) between genome-wide significant SNPs at the *SCHIP1-IL12A* locus at 3q25. The most significant genotyped SNP in the region was rs485499. The remaining SNPs shown were still genome-wide significant ($P \leq 5 \times 10^{-8}$) in an analysis conditioning on rs485499. Three of these SNPs were genotyped (rs7610160, rs17811014, rs2366408), the remaining two were imputed using HapMap3 data. See Supplementary Table 6 for association results for each SNP. Plot was created using Haploview [3].

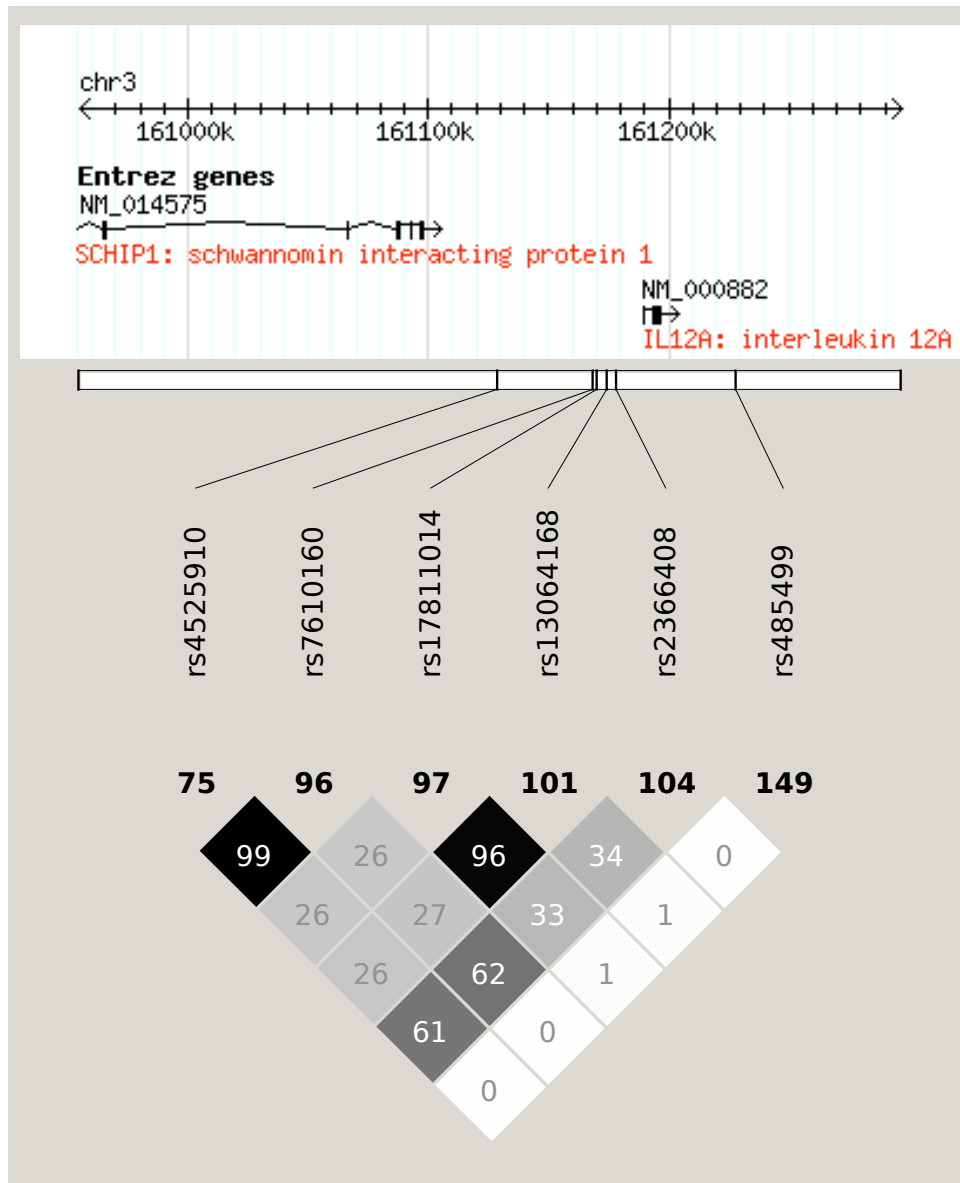

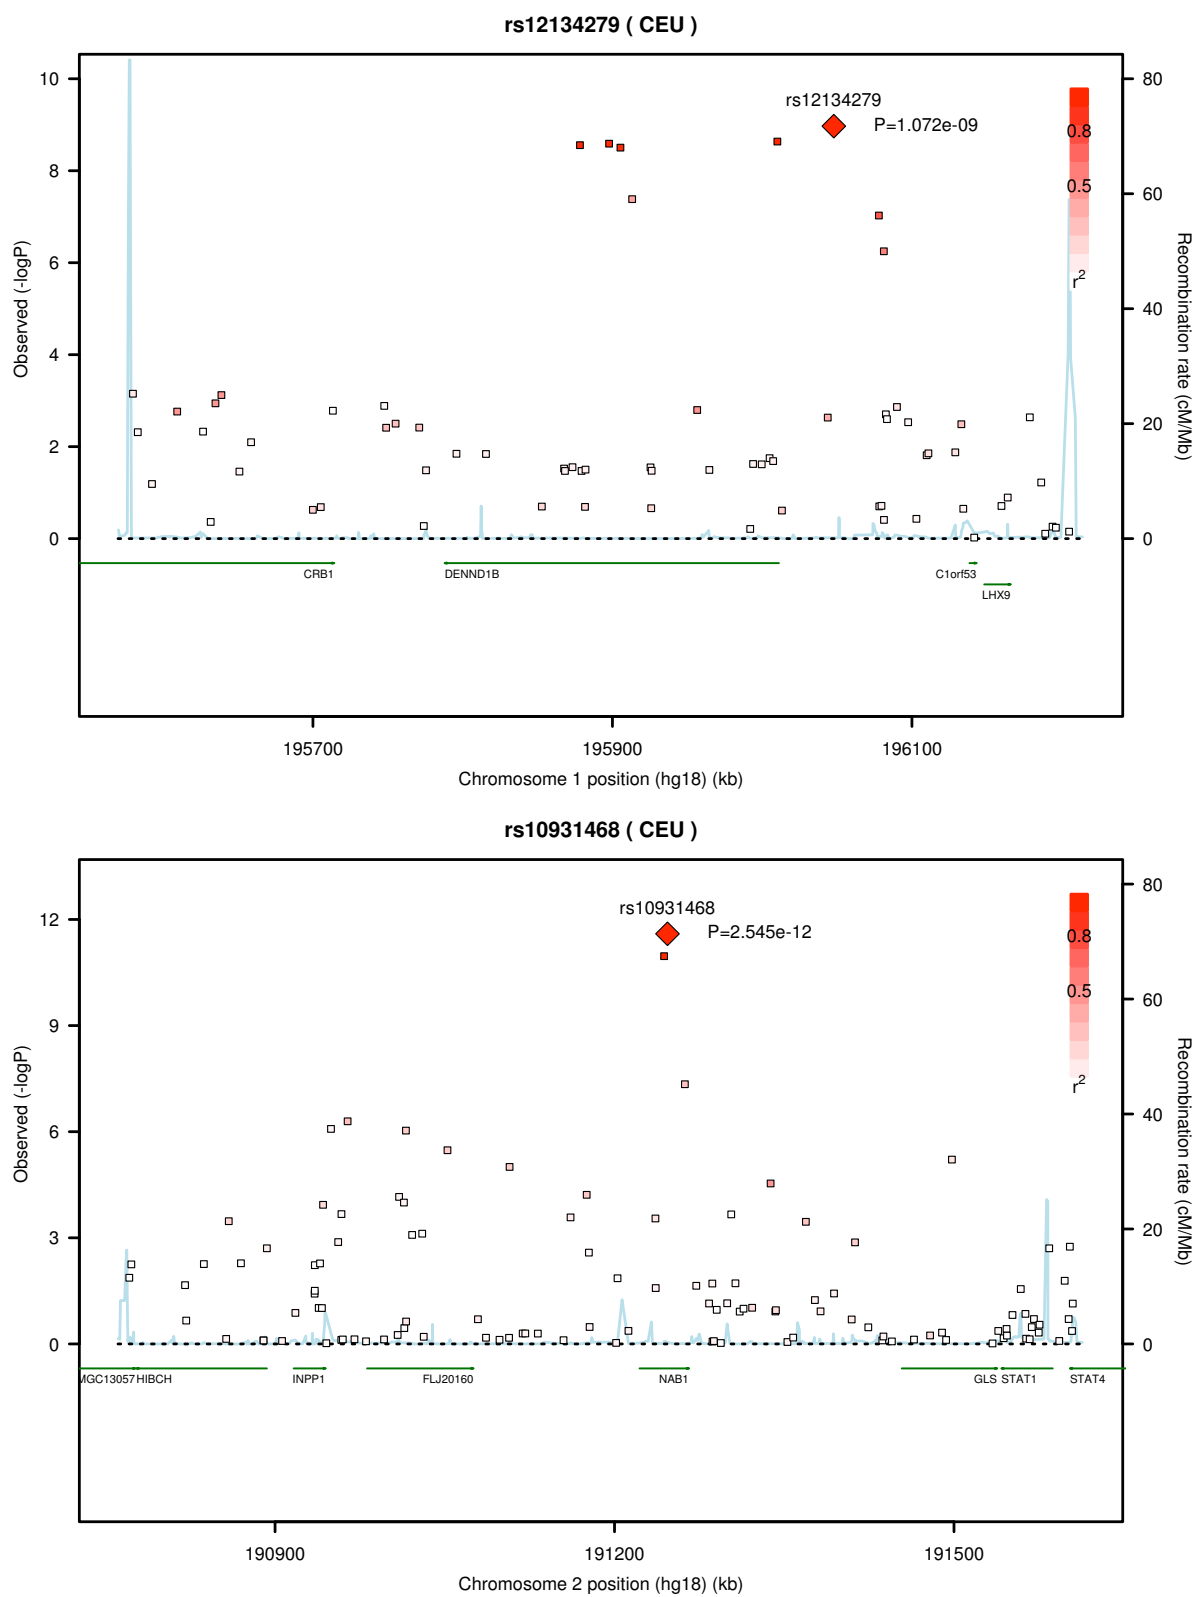

Figure 4: Regional association plots of all genome-wide significant loci, created using SNAP [12].

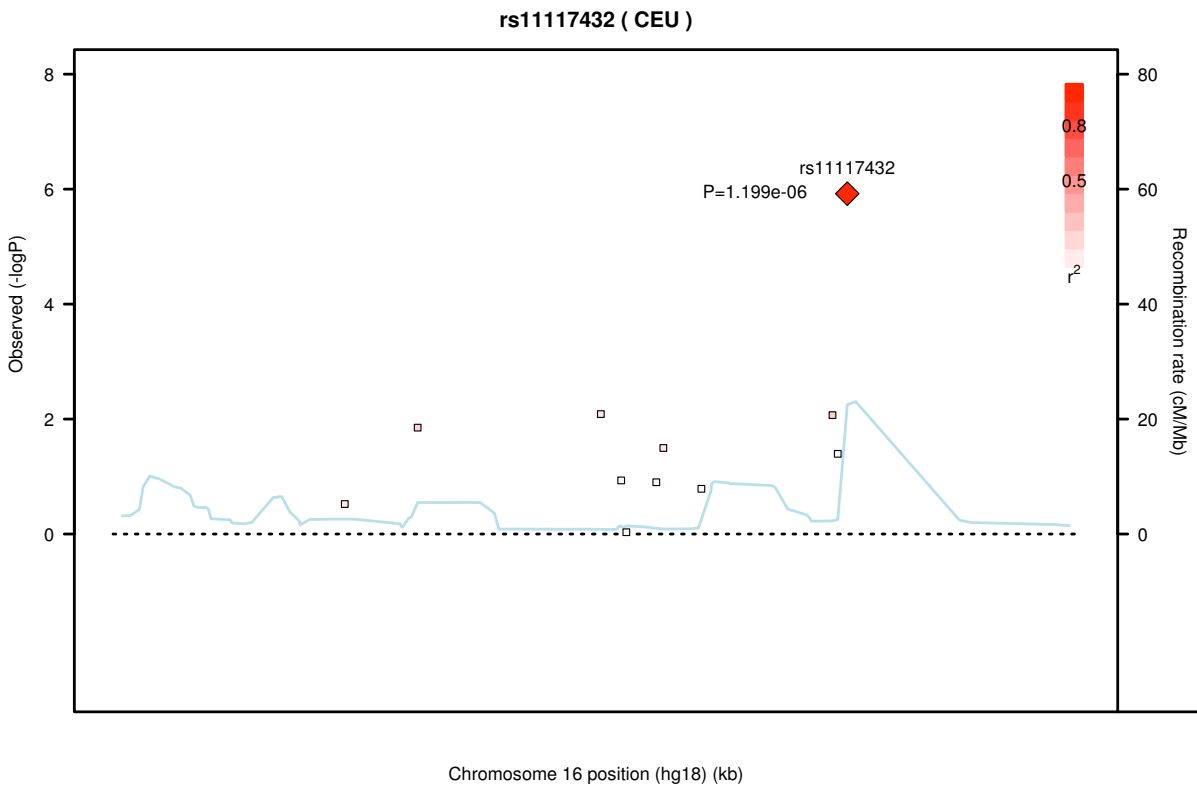

Figure 5: Plot of first two principal components from the GWAS samples and HapMap data. Eigenvalues for 61,863 SNPs were calculated for the CEU, CHB, JPT and YRI HapMap samples, and these were then applied to the GWAS samples. Red crosses represent individuals from the GWAS showing non-European or mixed ancestry.

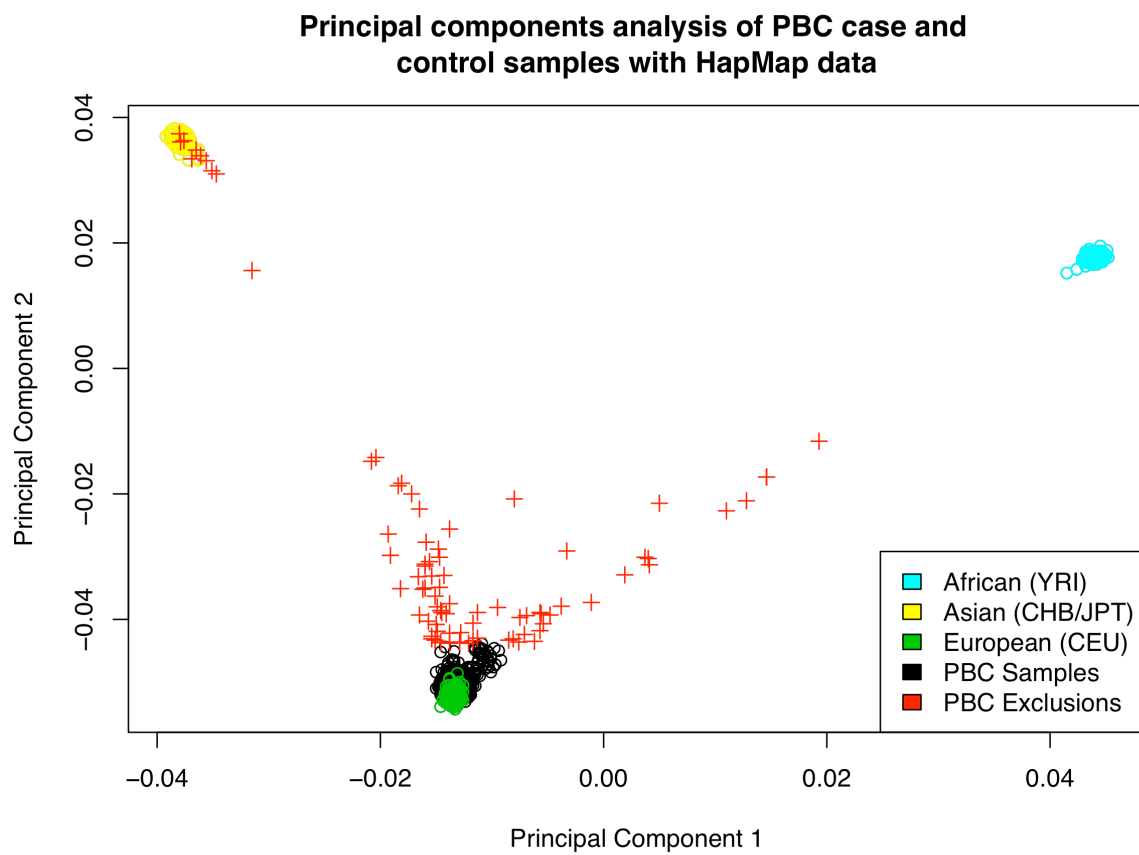

Figure 6: Heterozygosity and missingness are plotted for all GWAS samples based on the SNPs analysed in this study. The red dashed horizontal lines indicate ± 3 standard deviations from the mean, and the red dashed vertical line indicates the call rate threshold of 0.02.

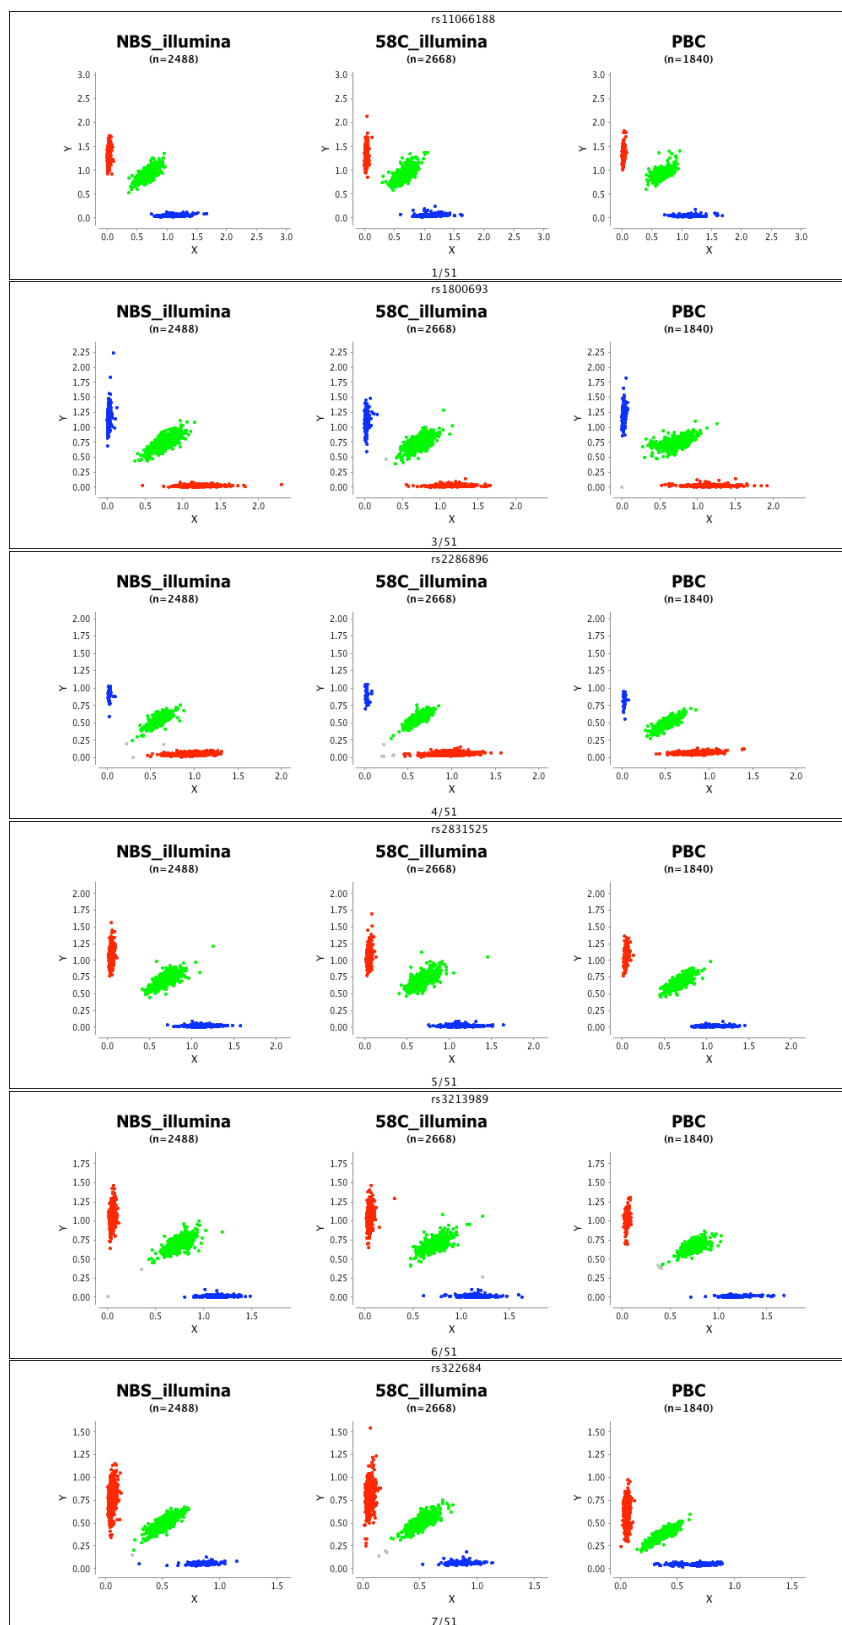

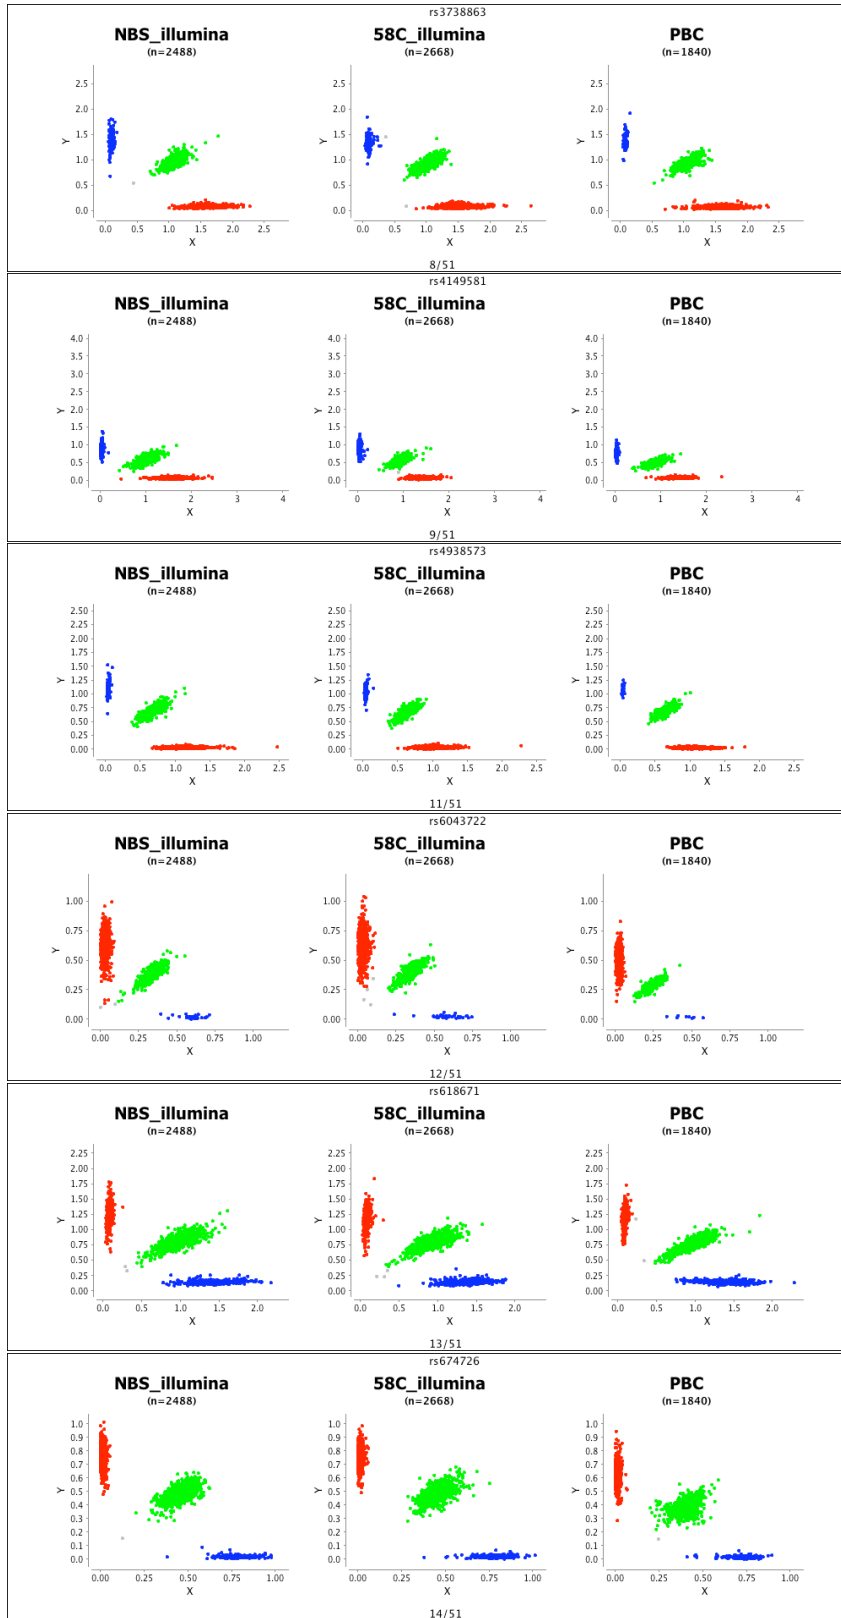

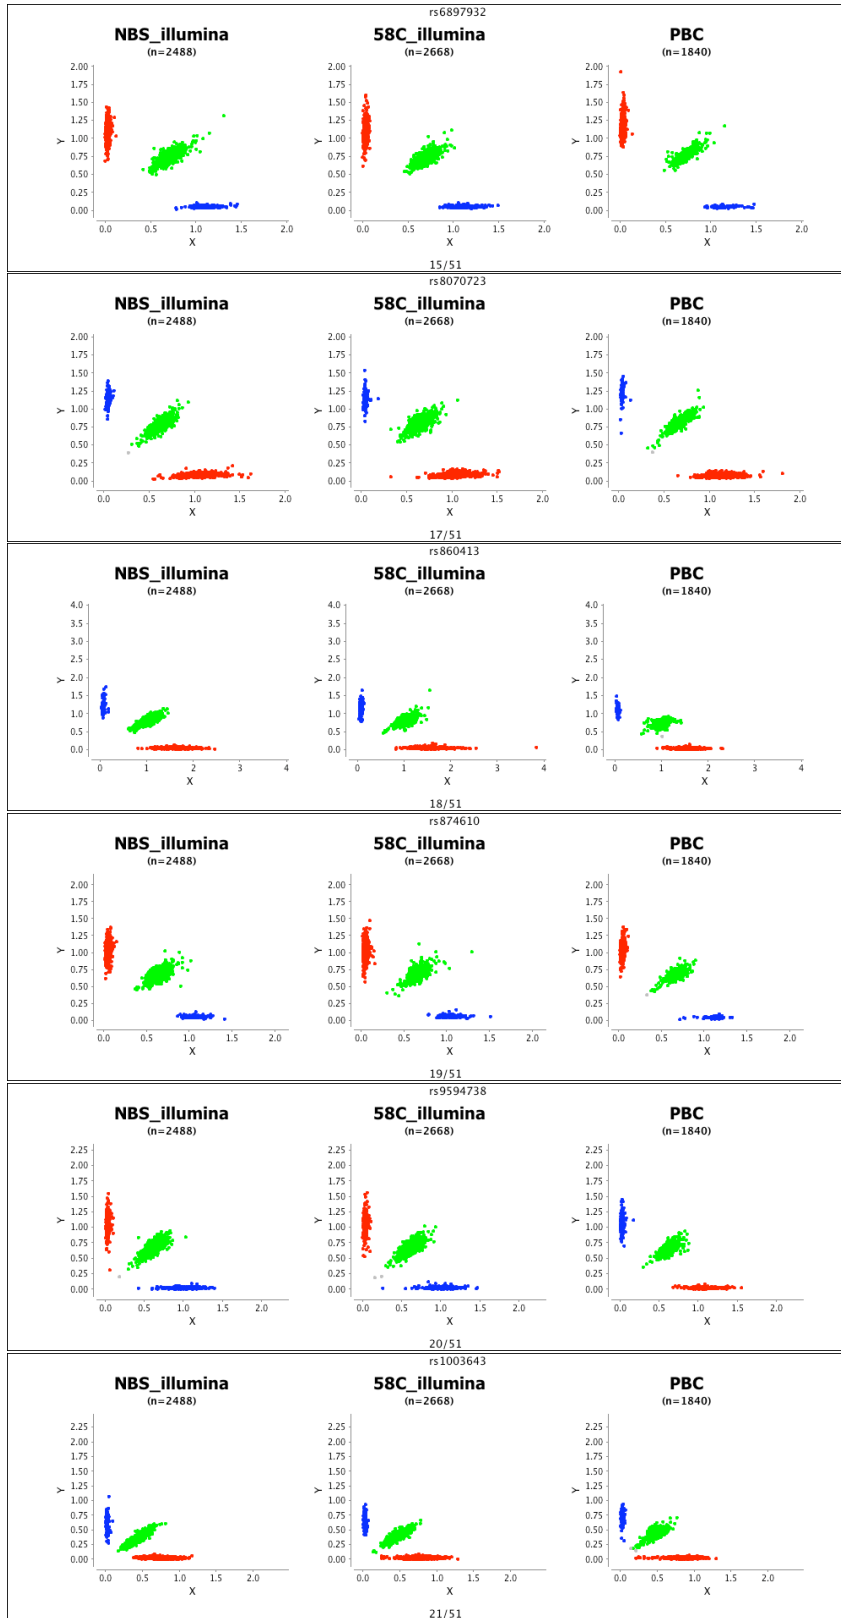

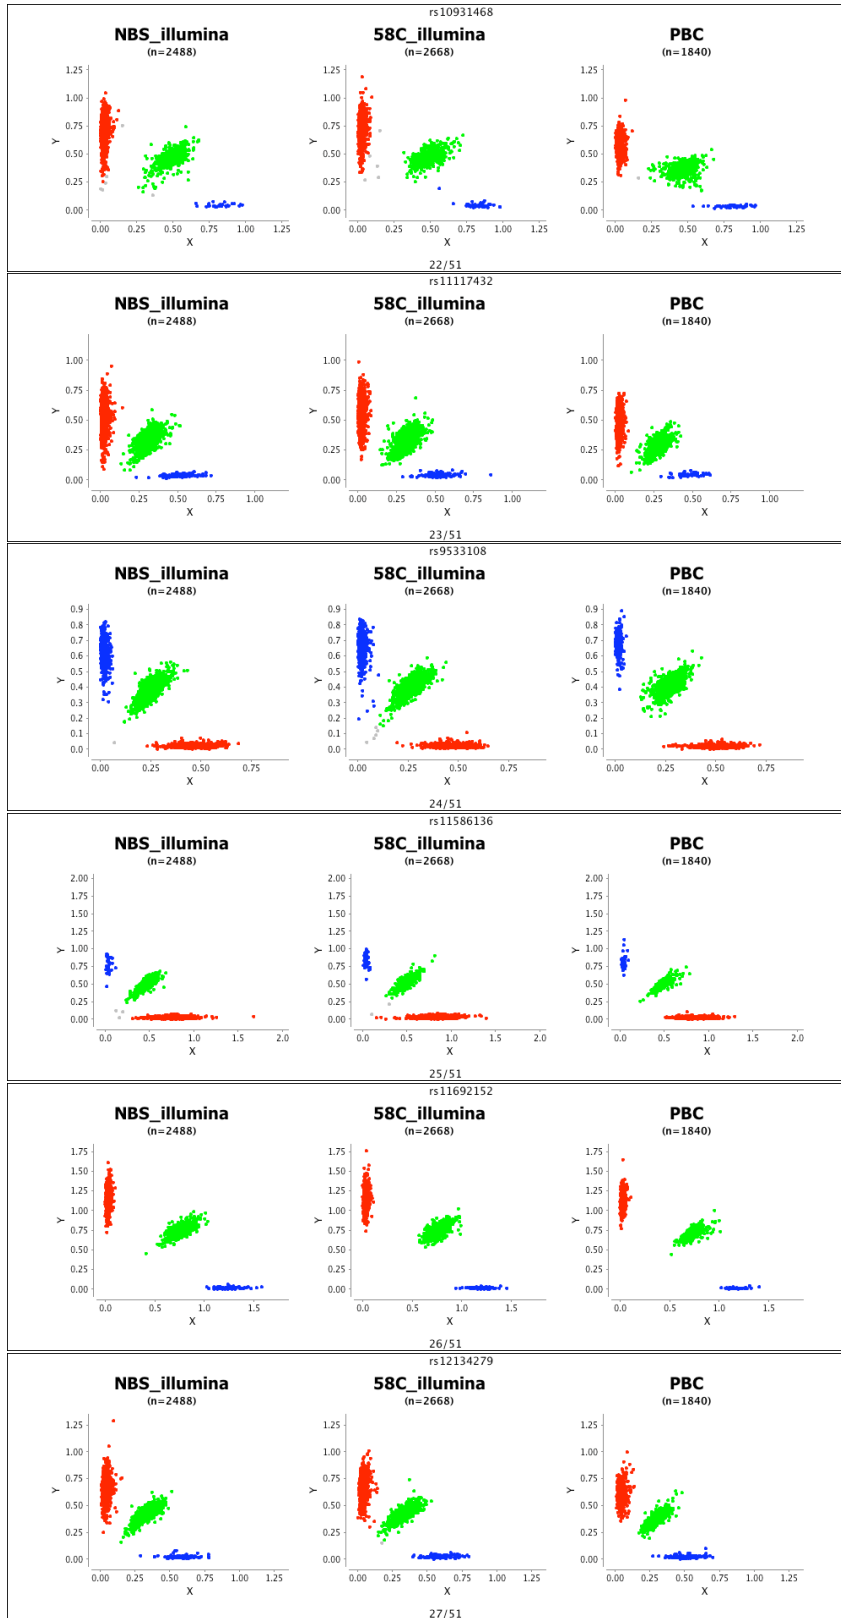

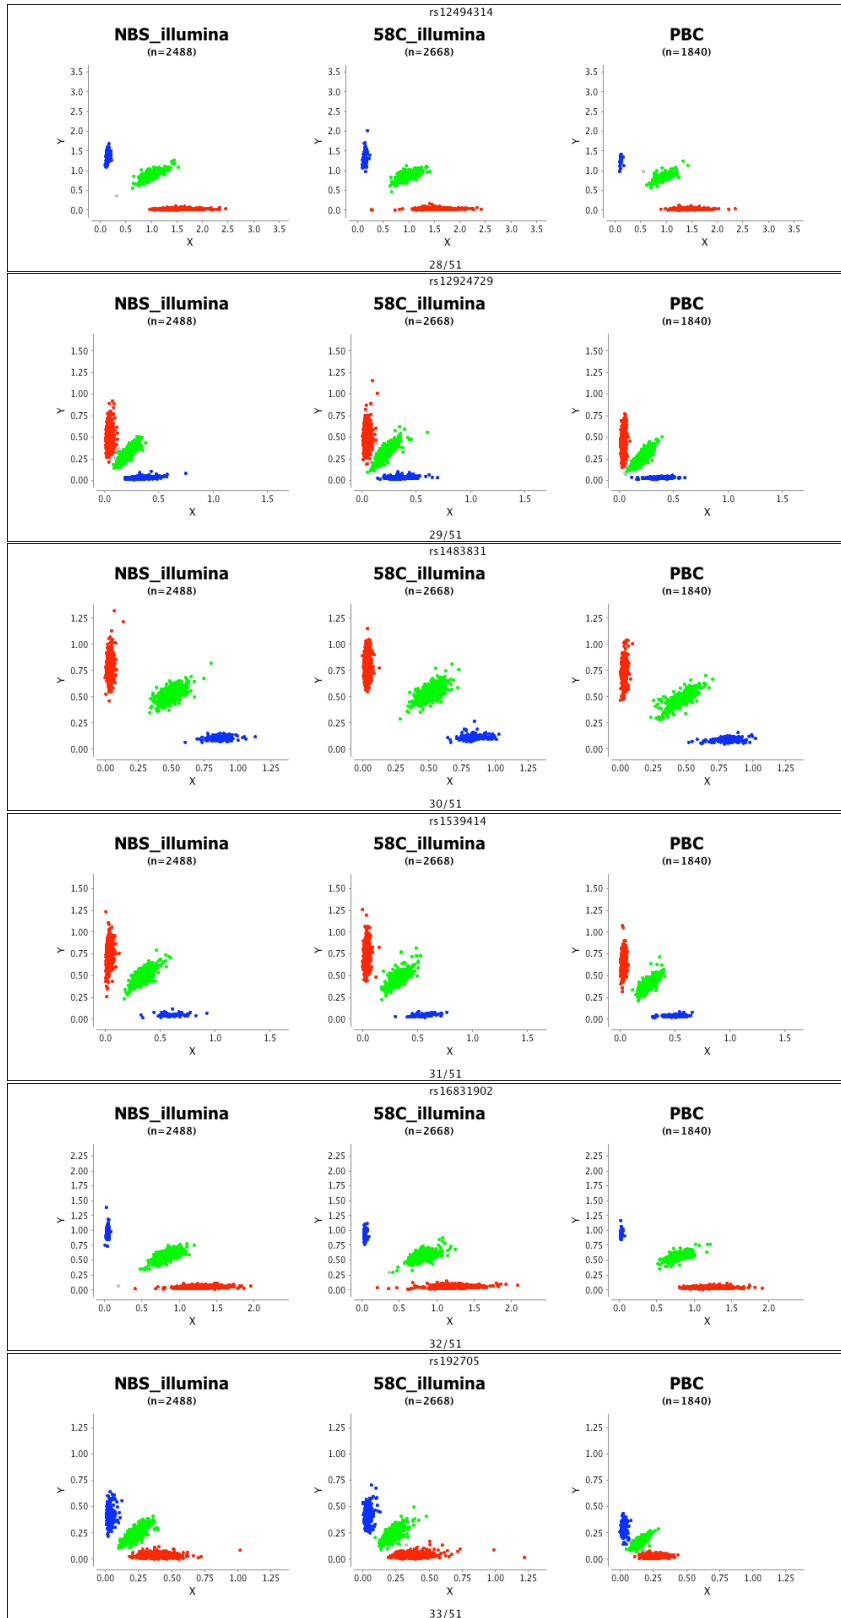

Figure 7: Cluster plots for all SNPs taken forward for replication, created using Evoker [13].

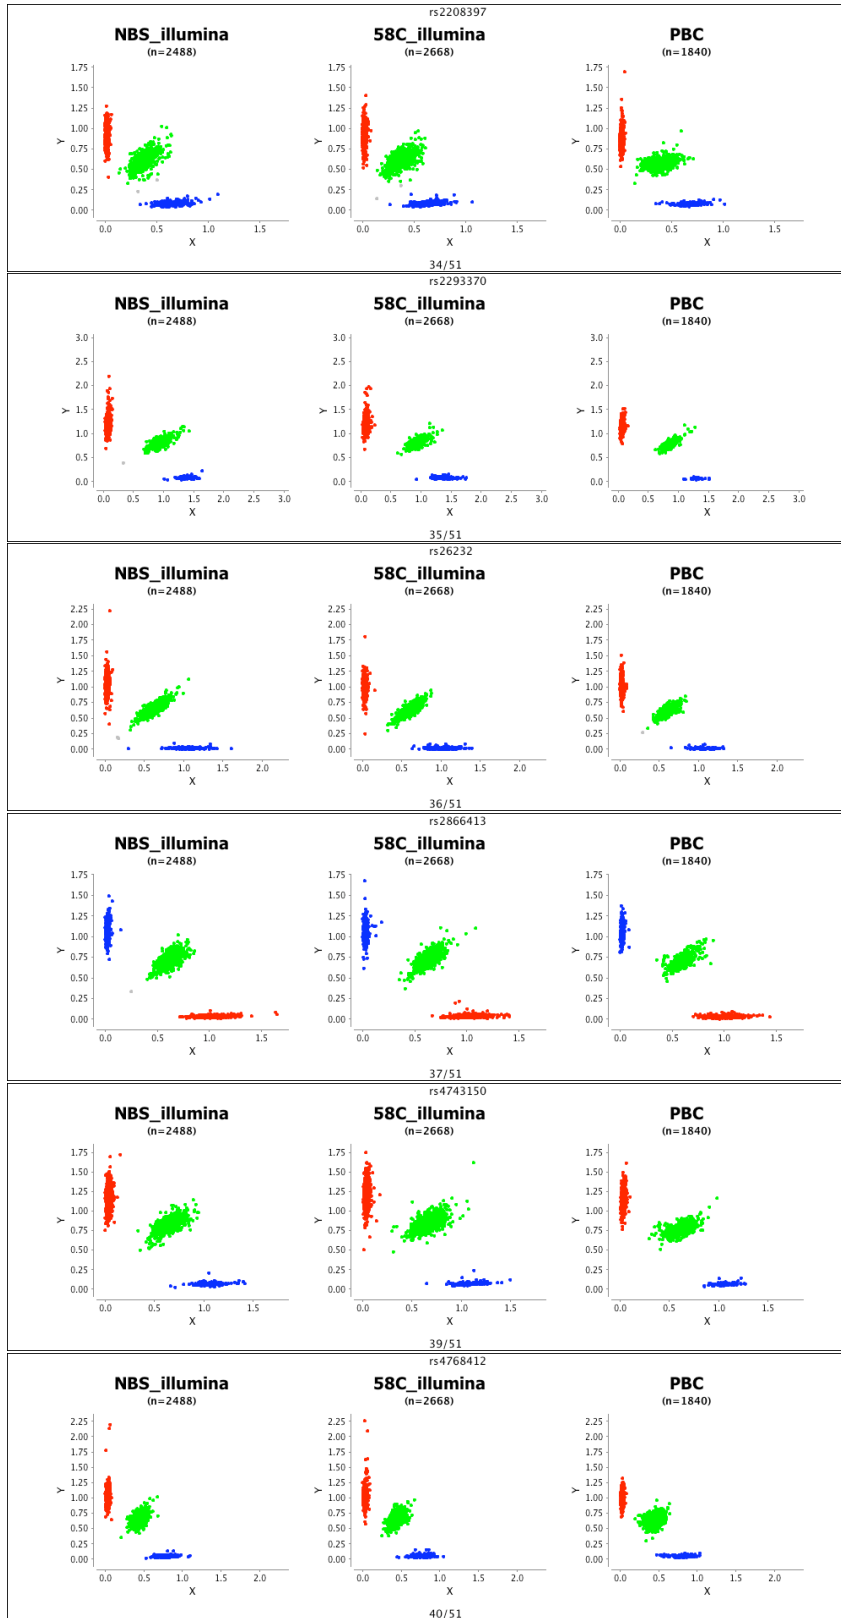

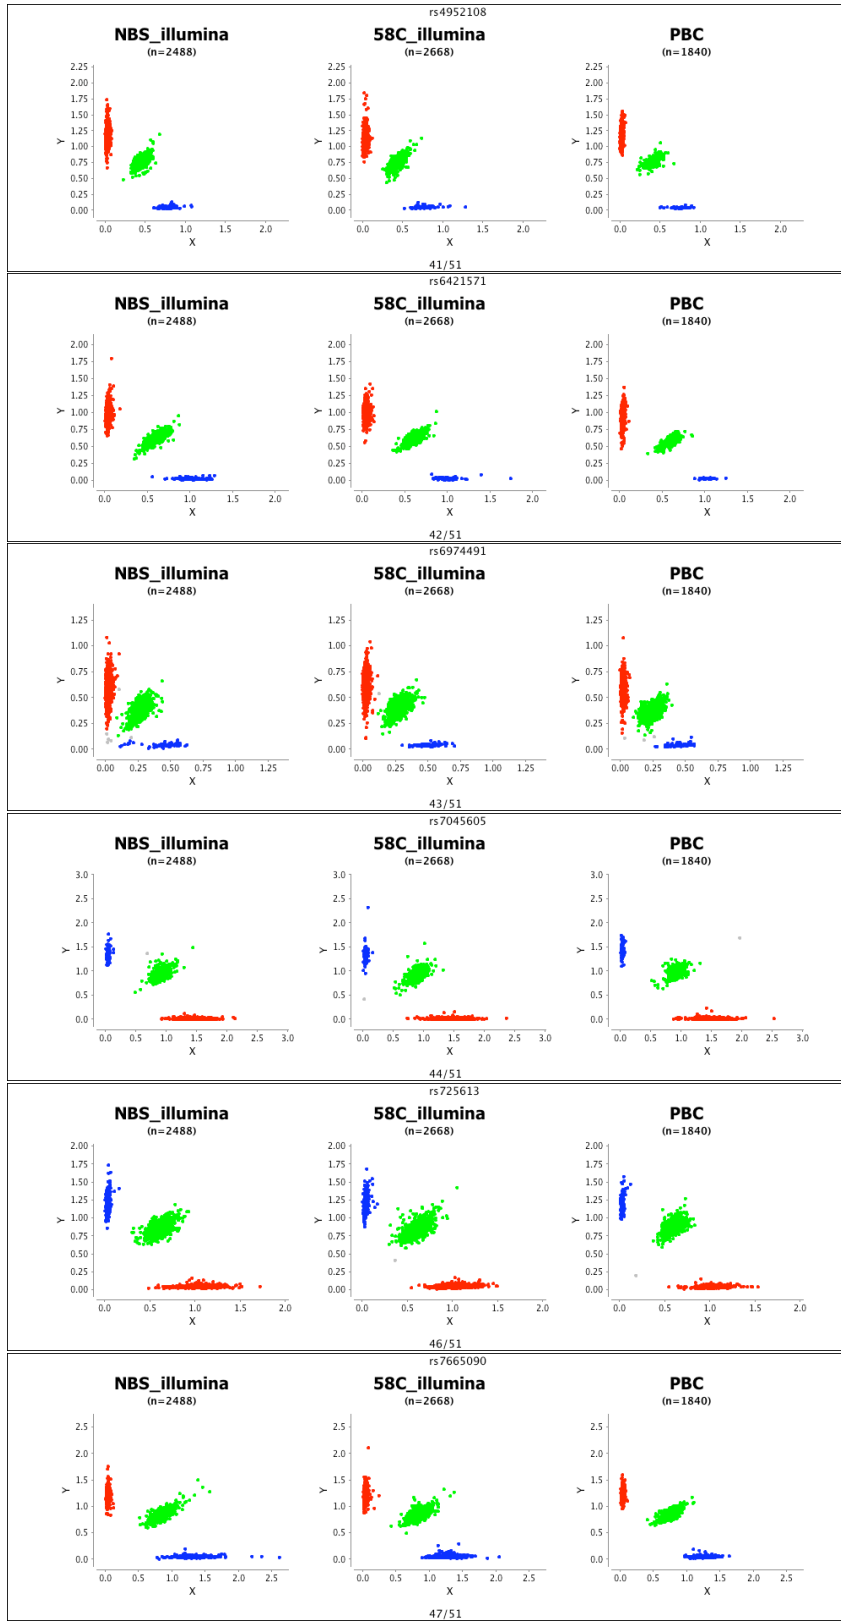

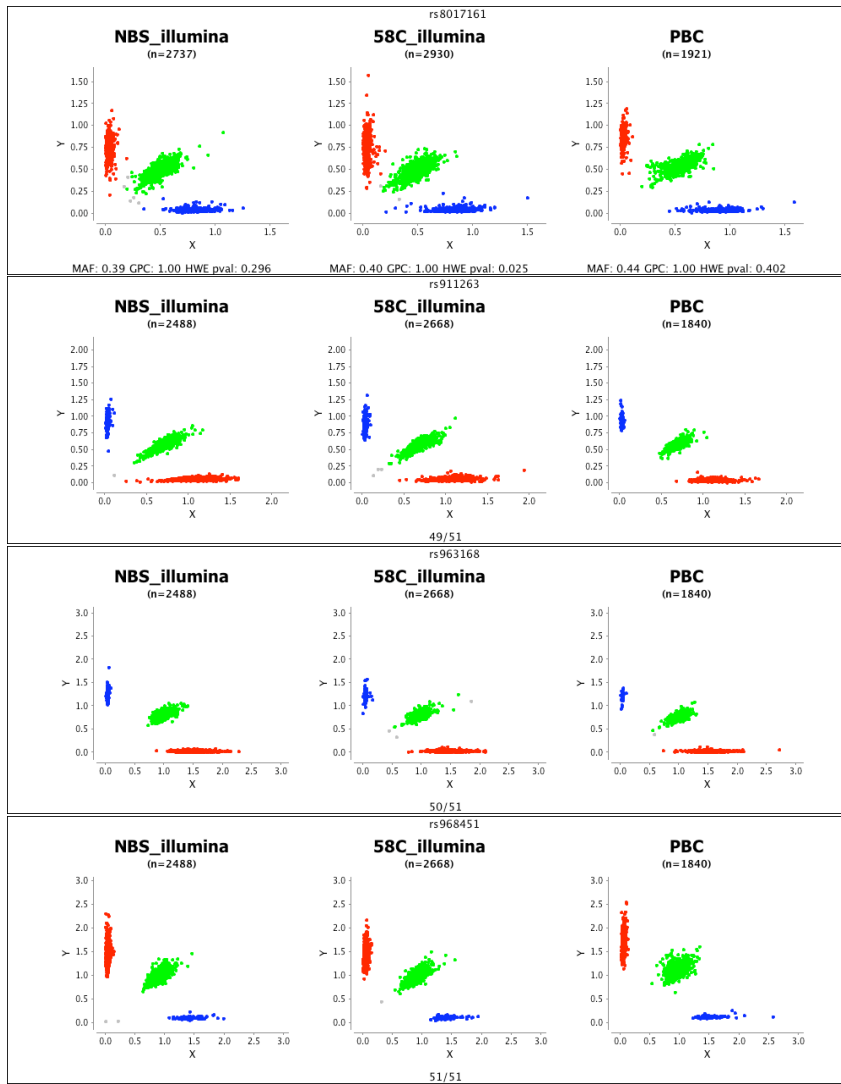

Consortium Membership

The UK PBC Consortium

Management committee: Graeme Alexander¹, Heather Cordell², Peter Donaldson³, Michael Heneghan⁴, David Jones³, George Mells^{1,5}, James Neuberger⁶, Collette Thain⁷, Richard Sandford⁵ (chair).
