Acknowledgments

My students' need for affordable education encouraged me to take this initiative and make this into a reality. First, I want to thank them for being my inspiration on this project. Then, I would like to extend my sincere gratitude to Jessica Kirschner, OER Librarian at VCU, for working tirelessly with me on this project. Without her support, motivation, and enthusiasm, this project would not have come to fruition. I also want to thank Janet Reid, Business Research Librarian at VCU, for assisting me with editing end-of-chapter exercises. Additionally, I appreciate the help from ALT Lab/Online@VCU in hosting a platform that is easy for the students to navigate. I also want to thank my Department at VCU for being supportive in every possible way.

Finally, I want to thank my caring, loving, and supportive family for willing to help with the household activities while I worked on this project. My heartfelt thanks to my son for creating the cover page for this textbook.

FUNDAMENTALS OF BUSINESS

Learning Objectives

1. Describe the concept of stakeholders and identify the stakeholder groups relevant to an organization
2. Discuss and be able to apply the PESTEL macro-business-environment model to an industry or emerging technology
3. Explain other key terms related to this chapter including: entrepreneur; profit; revenue.

1.1 Why is Apple Successful?

In 1976 Steve Jobs and Steve Wozniak created their first computer, the Apple I. They invested a mere $1,300 and set up business in Jobs' garage. Three decades later, their business—Apple Inc.—has become one of the world's most influential and successful companies. Jobs and Wozniak were successful **entrepreneurs**: those who take the risks and reap the rewards associated with starting a new business enterprise. Did you ever wonder why Apple flourished while so many other young companies failed? How did it grow from a garage start-up to a company generating over $233 billion in sales in 2015? How was it able to transform itself from a nearly bankrupt firm to a multinational corporation with locations all around the world? You might conclude that it was the company's products, such as the Apple I and II, the Macintosh, or more recently its wildly popular iPod, iPhone, and iPad. Or, you could decide that it was its dedicated employees, management's wiliness to take calculated risks, or just plain luck – that Apple simply was in the right place at the right time.

Figure 1.1: Steve Jobs.

Before we draw any conclusions about what made Apple what it is today and what will propel it into a successful future, you might like to learn more about Steve Jobs, the company's cofounder and former CEO. Jobs was instrumental in the original design of the Apple I and, after being ousted from his position with the company, returned to save the firm from destruction and lead it onto its current path. Growing up, Jobs had an interest in computers. He attended lectures at Hewlett-Packard after school and worked for the company during the summer months. He took a job at Atari after graduating from high school and saved his money to make a pilgrimage to India in search of spiritual enlightenment. Following his India trip, he attended Steve Wozniak's "Homebrew Computer Club" meetings, where the idea for building a personal computer surfaced (Angelelli, 1994). "Many colleagues describe Jobs as a brilliant man who could be a great motivator and positively charming. At the same time his drive for perfection was so strong that employees who did not meet his demands [were] faced with blistering verbal attacks" (Angelelli, 1994). Not everyone at Apple appreciated Jobs' brilliance and ability to motivate. Nor did they all go along with his willingness to do whatever it took to produce an innovative, attractive, high-quality product. So at age thirty, Jobs found himself ousted from Apple by John Sculley, whom Jobs himself had hired as president of the company several years earlier. It seems that Sculley wanted to cut costs and thought it would be easier to do so without Jobs around. Jobs sold $20 million of his stock and went on a two-month vacation to figure out what he would do for the rest of his life. His solution: start a new personal computer company

called NextStep. In 1993, he was invited back to Apple (a good thing, because neither his new company nor Apple was doing well).

Steve Jobs was definitely not known for humility, but he was a visionary and had a right to be proud of his accomplishments. Some have commented that "Apple's most successful days occurred with Steve Jobs at the helm" (Farivar, 2006).

Jobs did what many successful CEOs and managers do: he learned, adjusted, and improvised (Barkin, 2006). Perhaps the most important statement that can be made about him is this: he never gave up on the company that once turned its back on him. So now you have the facts. Here's a multiple-choice question that you'll likely get right: Apple's success is due to (a) its products, (b) its customers, (c) luck, (d) its willingness to take risks, (e) Steve Jobs, or (f) some combination of these options.

Foundations of Business

As the story of Apple suggests, today is an interesting time to study business. Advances in technology are bringing rapid changes in the ways we produce and deliver goods and services. The Internet and other improvements in communication (such as smartphones, video conferencing, and social networking) now affect the way we do business. Companies are expanding international operations, and the workforce is more diverse than ever. Corporations are being held responsible for the behavior of their executives, and more people share the opinion that companies should be good corporate citizens. Because of the role they played in the worst financial crisis since the Great Depression, businesses today face increasing scrutiny and negative public sentiment (Hilsenrath, Ng, and Paletta, 2008)

Economic turmoil that began in the housing and mortgage industries as a result of troubled subprime mortgages quickly spread to the rest of the economy. In 2008, credit markets froze up and banks stopped making loans. Lawmakers tried to get money flowing again by passing a $700 billion Wall Street bailout, now-cautious banks became reluctant to extend credit. Without money or credit, consumer confidence in the economy dropped and consumers cut back on spending. Unemployment rose as troubled companies shed the most jobs in five years, and 760,000 Americans marched to the unemployment lines (Hargreaves. 2008). The stock market reacted to the financial crisis and its stock prices dropped by 44 percent while millions of Americans watched in shock as their savings and retirement accounts took a nose dive. In fall 2008, even Apple, a company that had enjoyed strong sales growth over the past five years, began to cut production of its popular iPhone. Without jobs or cash, consumers would no longer flock to Apple's fancy retail stores or buy a prized iPhone (Gallagher, 2008). Since then, things have turned around for Apple, which continues to report blockbuster sales and profits. But not all companies or individuals are doing so well. The economy is still struggling, unemployment is high (particularly for those ages 16 to 24), and home prices have not fully rebounded from the crisis.

1.2 Getting Down to Business

A business is any activity that provides goods or services to consumers for the purpose of making a profit. Be careful not to confuse the terms *revenue* and *profit*. <mark>Revenue</mark> represents the funds an enterprise receives in exchange for its goods or services. <mark>Profit</mark> is what's left (hopefully) after all the bills are paid. When Steve Jobs and Steve Wozniak launched the Apple I, they created Apple Computer in Jobs' family garage in the hope of making a profit. Before we go on, let's make a couple of important distinctions concerning the terms in our definitions. First, whereas Apple produces and sells *goods* (Mac, iPhone, iPod, iPad, Apple Watch), many businesses provide *services*. Your bank is a service company, as is your Internet provider. Hotels, airlines, law firms, movie theaters, and hospitals are also service companies. Many companies provide both <mark>goods and services</mark>. For example, your local car dealership sells goods (cars) and also provides services (automobile repairs). Second, some organizations are not set up to make profits. Many are established to provide social or educational services. Such not-for profit (or nonprofit), organizations include the United Way of America, Habitat for Humanity, the Boys and Girls Clubs, the Sierra Club, the American Red Cross, and many colleges and universities. Most of these organizations, however, function in much the same way as a business. They establish goals and work to meet them in an effective, efficient manner. Thus, most of the business principles introduced in this text also apply to nonprofits.

Business Participants

Let's begin our discussion of business by identifying the main participants of business.

Participants

Every business must have one or more <mark>owners</mark> whose primary role is to invest money in the business. When a business is being started, it's generally the owners who polish the business idea and bring together the resources (money and people) needed to turn the idea into a business. The owners also hire employees to work for the company and help it reach its goals. Owners and employees depend on a third group of participants– customers. Ultimately, the goal of any business is to satisfy the needs of its customers in order to generate a profit for the owners.

Stakeholders

Consider your favorite restaurant. It may be an outlet or franchise of a national chain (more on franchises in a later chapter) or a local "mom and pop" without affiliation to a larger entity. Whether national or local, every business has <mark>stakeholders</mark> – those with a legitimate interest in the success or failure of the business and the policies it adopts. Stakeholders include customers, vendors, employees, landlords, bankers, and others (see Figure 1.2). All have a keen interest in how the business operates, in most cases for obvious reasons. If the business fails, employees will need new jobs, vendors will need new customers, and banks may have to write off loans they made to the business. Stakeholders do not always see things the same way – their interests sometimes conflict with each other. For example, lenders are more likely to appreciate high profit margins that ensure the loans they made will be repaid, while customers would probably appreciate the lowest possible prices. Pleasing stakeholders can be a real balancing act for any company.

Figure 1.2: Business Stakeholders

Key Takeaways

- The main participants in a **business** are its **owners**, **employees**, and **customers**.
- Every business must consider its **stakeholders**, and their sometimes conflicting interests, when making

decisions.

1.3 Functional Areas of Business

The activities needed to operate a business can be divided into a number of **functional areas**. Examples include: management, operations, marketing, accounting, and finance. Let's briefly explore each of these areas.

Management

Managers are responsible for the work performance of other people. **Management** involves planning for, organizing, leading, and controlling a company's resources so that it can achieve its goals. Managers *plan* by setting goals and developing strategies for achieving them. They *organize* activities and resources to ensure that company goals are met and staff the organization with qualified employees and managers *lead* them to accomplish organizational goals. Finally, managers design *controls* for assessing the success of plans and decisions and take corrective action when needed.

Operations

All companies must convert resources (labor, materials, money, information, and so forth) into goods or services. Some companies, such as Apple, convert resources into **tangible products**—Macs, iPhones, etc. Others, such as hospitals, convert resources into **intangible products** – e.g., health care. The person who designs and oversees the transformation of resources into goods or services is called an **operations manager**. This individual is also responsible for ensuring that products are of high quality.

Marketing

Marketing consists of everything that a company does to identify customers' needs (i.e. market research) and design products to meet those needs. Marketers develop the benefits and features of products, including price and quality. They also decide on the best method of delivering products and the best means of promoting them to attract and keep customers. They manage relationships with customers and make them aware of the organization's desire and ability to satisfy their needs.

Accounting

Managers need accurate, relevant and timely financial information, which is provided by accountants. **Accountants** measure, summarize, and communicate financial and managerial information and advise other managers on financial matters. There are two fields of accounting. **Financial accountants** prepare financial statements to help users, both inside and outside the organization, assess the financial strength of the company. **Managerial accountants** prepare information, such as reports on the cost of materials used in the production process, for internal use only.

Finance

Finance involves planning for, obtaining, and managing a company's funds. Financial managers address such questions as the following: How much money does the company need? How and where will it get the necessary money? How and when will it pay the money back? What investments should be made in plant and equipment? How much should be spent on research and development? Good financial management is particularly important when a company is first formed, because new business owners usually need to borrow money to get started.

Key Takeaways

- The activities needed to run a business can be divided into **functional areas.** The business functions correspond fairly closely to many majors found within a typical college of business.

1.4 External Forces that Influence Business Activities and PESTEL Analysis

Apple and other businesses don't operate in a vacuum; they're influenced by a number of external factors. These include the economy, government, consumer trends, technological developments, public pressure to act as good corporate citizens, and other factors. Collectively, these forces constitute what is known as the "**macro environment**" – essentially the big picture world external to a company over which the business exerts very little if any control. Figure 1.3 "Business and Its Environment" sums up the relationship between a business and the outside forces that influence its activities. One industry that's clearly affected by all these factors is the fast-food industry. Companies such as Taco Bell, McDonald's, Cook-Out and others all compete in this industry. A strong economy means people have more money to eat out. Food standards are monitored by a government agency, the Food and Drug Administration. Preferences for certain types of foods are influenced by consumer trends (fast food companies are being pressured to make their menus healthier). Finally, a number of decisions made by the industry result from its desire to be a good corporate citizen. For example, several fast-food chains have responded to environmental concerns by eliminating Styrofoam containers (Baron, 2003).

Of course, all industries are impacted by external factors, not just the food industry. As people have become more conscious of the environment, they have begun to choose new technologies, like all-electric cars to replace those that burn fossil fuels. Both established companies, like Nissan with its Nissan Leaf, and brand new companies like Tesla have entered the market for all-electric vehicles. While the market is still small, it is expected to grow at a compound annual growth rate of 19.2% between 2013 and 2019 (Transparency Market Research, 2014).
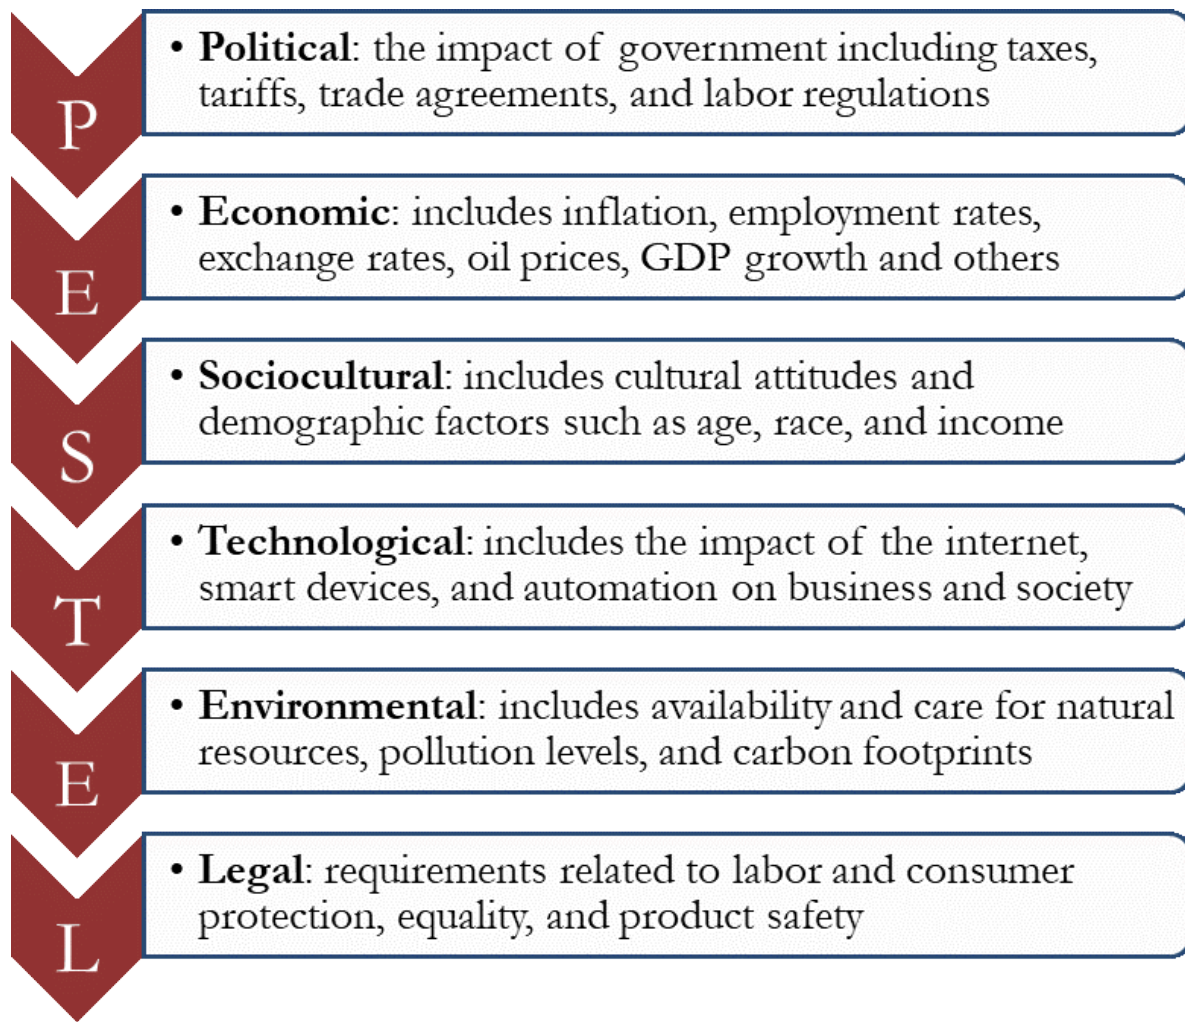

Figure 1.3: PESTEL – Business and its Environment

The PESTEL Analysis

One useful tool for analyzing the external environment in which an industry or company operates is the *PESTEL* model. PESTEL is an acronym, with each of the letters representing an aspect of the macro-environment that a business needs to consider in its planning. Let's briefly run through the meaning of each letter.

P stands for the political environment. Governments influence the environment in which businesses operate in many ways, including taxation, tariffs, trade agreements, labor regulations, and environmental regulations.

E represents the economic environment. As we will see in detail in a later chapter, whether the economy is growing or not is a major concern to business. Numerous economic indicators have been created for the specific purpose of measuring the health of the economy.

S indicates the sociocultural environment, which is a category that captures societal attitudes, trends in national demographics, and even fashion trends. The term *demographics* applies to any attribute that can be used to describe people, such as age, income level, gender, race, and so on. As a society's attitudes or its demographics change, the market for goods and services can shift right along with it.

T is for technological factors. In the last several decades, perhaps no force has impacted business more than the

emergence of the internet. Nearly instantaneous access to information, e-commerce, social media, and even the ability to control physical devices from remote locations have all come about due to technological forces.

The second E stands for environmental forces, which in this case means natural resources, pollution levels, recycling, etc. While the attitudes of a society towards the natural environment would be considered a sociocultural force, the level of pollution, the supply of oil, etc. would be grouped under this second E for environment.

Finally, the L represents legal factors. These forces often coincide with the political factors already discussed, because it is politicians (i.e., government) that enacts laws. However, there are other legal factors that can impact businesses as well, such as decisions made by courts that may have broad implications beyond the case being decided.

When conducting PESTEL analysis, it is important to remember that there can be considerable overlap from category to category. It's more important that businesses use the model to thoroughly assess its external environment, and much less important that they get all the forces covered under the "right" category. It is also important to remember that an individual force, in itself, is not inherently positive or negative but rather presents either an opportunity or a threat to different businesses. For example, societal attitudes moving in favor of green energy are an opportunity for those with capabilities in wind, solar, and other renewables, while presenting a threat, or at least a need to change, to companies whose business models depend exclusively on fossil fuels.

Key Takeaways

- Businesses are influenced by such **externalfactors** as the **economy**, **government**, and other forces external to the business. The PESTEL model is a useful tool for analyzing these forces.

References

David Baron (2003). "Facing-Off in Public." Stanford Business. August 2003, pp. 20-24. Retrieved from: https://www.gsb.stanford.edu/sites/gsb/files/2003August.pdf

Transparency Market Research (2014). "Electric Vehicles Market (on-road) (hybrid, plug-in, and battery) – Global Industry Analysis, Size, Share, Growth, Trends and Forecast, 2013 – 2019." Retrieved from: http://www.transparencymarketresearch.com/electric-vehicles-market.html

1.5 Cases and Problems

1. The Bureau of Labor Statistics compiles demographic data. Visit http://www.bls.gov/bls/demographics.htm, and describe the different types of information it provides. What kinds of changes are likely to occur in the United States over the next 25 years? Click on Spending & Time Use and select How Americans Spend Time to read about the American Time Use Survey. What trends can you identify?

2. Go to either the Red Herring (http://www.redherring.com) or Wired (http://www.wired.com) site and research technology trends. Compile a list of three trends that sound most promising to you, and describe them briefly. How will they affect businesses? What impact, if any, will they have on you personally?

3. Use the Bureau of Labor Statistics site (http://www.bls.gov) to determine the current trends in GDP growth, unemployment, and inflation. What do these trends tell you about the level of business activity and the business cycle? If you owned a staffing agency, how would this information affect your decision-making?

4. What's the latest U.S. economic news? Go to the CNBC website, and select the Economy page, which categorizes news about the world economy, the U.S. economy, and other important topics (http://www.cnbc.com/economy/). Read the various articles about the U.S. economy, and then do the same for GDP Outlook. Prepare a summary of what you learned, and use it to discuss where you think the economy is headed for the next 6 to 12 months.

5. How would you spend the national budget if you were president? Here's your chance to find out how your ideas would affect the federal budget. Go online to Committee for a Responsible Federal Budget, at http://www.crfb.org, and under Tools, click on Stabilize the Debt, which is an exercise in making difficult decisions and how government officials make trade-offs when they prepare the federal budget. Experiment with your own budget ideas at the site. What are the effects of your decisions?

Preparing for Tomorrow's Workplace Skills

1. Select a not-for-profit organization whose mission interests you. What are the organization's objectives? What resources does it need to achieve those goals? Select a for-profit business that provides a similar service, and compare the two organizations. How does each use the factors of production? (Resources, Information, Systems)

2. **Team Activity** Form seven teams. Each team is responsible for one of the sectors of the external business environment discussed in the chapter (economic, political/legal, demographic, social, competitive, global, and technological). Your boss, the company president, has asked each team to report on the changes in that area of the external environment and how they will affect the firm over the next five years. The firm is the Boeing Company. Each team should use the library, the internet, and other data

sources to make its projections. Each team member should examine at least one data source. The team should then pool the data and prepare its response. A spokesperson for each team should present the findings to the class. (Interpersonal, Resources, Information)

3.   If a friend claimed, "Economics is all theory and not very practical," how might you counter this claim? Share your rationale with the class. (Interpersonal, Information)

4.   **Team Activity** Create two teams of four people each. Have one side choose a communist economy and the other capitalism. Debate the proposition that "capitalism/a command economy is good for developing nations." (Interpersonal, Information)

5.   What are the latest actions the federal government has taken to manage the economy? Has it used monetary policy or fiscal policy to achieve its macroeconomic goals? Summarize your findings. Choose one of the following industries, and discuss how the government's actions will affect that industry: airlines, automobile manufacturers, banking, biotechnology, chemical manufacturing, home building, oil and gas, retail stores, and telecommunication services. (Information, Systems)

6.   As a manufacturer of wireless headphones, you are questioning your pricing policies. You note that over the past five years, the CPI increased an average of 3 percent per year but that the price of a pair of wireless headphones increased an average of 8 percent per year for the first three years and 2 percent per year for the next two years. What does this information tell you about demand, supply, and other factors influencing the market for these headphones? (Resources, Information)

Ethics Angle

Historically, diesel cars have not been big sellers in the U.S. auto market, mainly because their engines couldn't pass the strict emissions standards set up by the Environmental Protection Agency and the California Air Resources Board. But that all changed in 2005, when German automaker Volkswagen made a decided push to develop "clean diesel" engines, specifically manufactured to meet strict U.S. emissions standards.

By 2010, VW had introduced several models of diesel cars in the United States, and their sales helped propel Volkswagen to the number-two slot in global auto sales, after Toyota and ahead of GM. While VW was receiving major media attention for its clean diesel models, researchers from West Virginia University discovered that these so-called clean engines had been constructed with a "defeat device"–software that could actually tell when the car was being tested off road for emissions and lower the level of emissions that harm the environment.

By December 2014, Volkswagen agreed to voluntarily recall more than a half-million clean diesel cars in the United States to address the emissions issues. But the scandal continued to escalate, with accusations that senior management knew about the rigged engines, and VW's CEO resigned and several other executives were fired.

Class-action lawsuits and other litigation followed, and in April 2017, VW agreed to a $4.3 billion settlement, which included a criminal fine of $2.8 billion, as well as various buyback plans for the affected diesel cars. In addition, over the last several years, VW has experienced a significant decline in U.S. sales and is now trying to win back customers.

Using a web search tool, locate information about this topic, and then write responses to the following questions. Be sure to support your arguments and cite your sources.

Ethical Dilemma: How can VW ensure that its diesel cars now comply with U.S. emissions standards? What can VW do to regain consumers' confidence after this worldwide scandal? Do you agree with the billions of dollars in fines that VW will have to pay to move beyond the emissions debacle?

Sources: "VW Diesel Crisis: Timeline of Events," https://www.cars.com, May 19, 2017; Jack Ewing, "Inside VW's Campaign of Trickery," *The New York Times*, http://www.nytimes.com, May 7, 2017; Christoph Rauwald, "How a Top-Secret Deal Could Have Stopped VW's Diesel Scandal," *Bloomberg*, http://www.bloomberg.com, January 12, 2017; "6 VW Execs Indicted as Carmaker Agrees to $4.3 Billion Diesel Cheat Settlement," *Fortune*, http://fortune.com, January 12, 2017; Geoffrey Smith and Roger Parloff, "Hoaxwagen: Inside Volkswagen's Diesel Fraud," *Fortune*, http://fortune.com, March 7, 2016.

Creative Thinking Case

Walmart Gets Serious about E-Commerce

As the world's largest retailer, Walmart has built thousands of brick-and-mortar stores in the United States, Mexico, and elsewhere. Although a success story when it comes to traditional retail locations, Walmart has struggled with its e-commerce efforts, with recent online sales accounting for about 3 percent of the company's $300 billion in annual sales. The company has tried several different e-commerce strategies in the past, but none of them was an overwhelming success. Some company insiders objected to the pricing strategy used for online purchases; they were fearful that Walmart's lower prices online would take customers (and sales) away from the retail locations.

Doug McMillon, Walmart's CEO since 2014, believed a significant change was needed in the company's e-commerce business, and he recently made changes in a big way. Over the past two years, Walmart spent billions to acquire several online companies to expand its e-commerce business in an effort to take a small bite out of retail giant Amazon's success. In 2016, Walmart purchased Jet.com, an e-commerce site that sells a little bit of everything (books, clothing, electronics, etc.) at discount prices. Once the $3 billion acquisition was completed, Jet's cofounder and CEO, Marc Lore, who now runs Walmart's e-commerce platform, worked with McMillon to identify other established online companies to add to their e-commerce portfolio, and add they did.

First Walmart purchased footwear e-tailer ShoeBuy for $70 million in January 2017. The following month, Walmart bought outdoor specialty retailer Moosejaw for $51 million. Then in March, Walmart paid $75 million for ModCloth, an eclectic shopping site for women's fashions. Walmart is also said to be in negotiations to buy Bonobos, a hip fashion retailer geared to millennial males.

Reaction to the acquisitions has been mixed, depending on whom you ask. Retail analysts applaud the company's radical move, pointing out that several well-known traditional retailers have closed their doors or filed bankruptcy because they failed to take part in the e-commerce revolution. Fashionistas, on the other hand, are lukewarm about the move. However, McMillon's decision to allow the online retailers to operate

independently may help retain loyal customers. The new e-commerce strategy may also lure typical in-store shoppers to take advantage of the expanded offerings available through both Walmart.com and Jet.com.

Critical Thinking Questions

1. What are some advantages of Walmart purchasing established web businesses?
2. What impact is Walmart's acquisition of nontraditional retailers likely to have on the shopping habits of Walmart's customers?
3. How will the aggressive e-commerce plan implemented by Walmart affect operations at its retail locations?

Sources: Brad Stone and Matthew Boyle, "Amazon Won't Know What Hit 'Em!" *Bloomberg Businessweek*, http://www.bloomberg.com, May 8–May 14, 2017; "What an Acquisition of Bonobos Would Signal About Wal-Mart's Strategy," *Forbes*, http://www.forbes.com, May 9, 2017; "Walmart Acquires Niche Online Retailers, to the Dismay of Hipsters," *Denver Post*, http://www.denverpost.com, March 24, 2017; Alana Abramson, "Walmart Acquires Online Women's Retailer ModCloth," *Fortune*, http://fortune.com, March 17, 2017; Phil Wahba, "Walmart's 29% Online Holiday Season Growth Sends Shares Jumping," *Fortune*, http://fortune.com, February 21, 2017; Laura Heller, "Take That Amazon: Walmart Buys Moosejaw for $51 Million," *Forbes*, http://www.forbes.com, February 15, 2017; "Walmart Acquires ShoeBuy for $70 Million," *Business Insider*, http://www.businessinsider.com, January 6, 2017.

5. Want to know the current public debt per citizen, or even what it was in 1790? Go to https://www.transparency.treasury.gov/ and click on National Debt.
6. The U.S. Bureau of Economic Analysis (BEA) tracks national and regional economic statistics, including the GDP. To find the latest GDP statistics, visit the BEA at.
7. How are the job prospects in your area? Your region's unemployment statistics can give you an idea of how hard it will be to find a job. Find the most recent unemployment statistics from the Bureau of Labor Statistics at http://www.bls.gov.
8. How do the PPI and the CPI differ? Get the answers to this and other questions about the PPI by

visiting the Bureau of Labor Statistics PPI site at http://www.bls.gov/ppi.

1. Glossary

accounting cycle
    process of generating financial statements, beginning with a business transaction and ending with the preparation of the report

Selling expenses
    Include salaries and commissions paid to salespeople and the costs of advertising, sales supplies, delivery, and other items that can be linked to sales activity, such as insurance, telephone and other utilities, and postage

Trademarks
    registered names that can be sold or licensed to others

Activity ratios
    reflect the speed with which resources are converted to cash or sales

certified management accountant (CMA)
    Whereas some private accountants hold the CPA designation, managerial accountants also have a professional certification program including passing an exam

double-entry bookkeeping.
    To keep the accounting equation in balance, every transaction must be recorded as two entries.

Expenses
    costs of generating revenues.

generally accepted accounting principles (GAAP)
    To ensure accuracy and consistency in the way financial information is reported, accountants in the United States follow GAAP

gross domestic product
    the market value of all goods and services produced by the economy in a given year

gross sales,
    the total dollar amount of a company's sales

income statement
    summarizes the firm's revenues and expenses and shows its total profit or loss over a period of time

Income taxes payable
    Taxes owed for the current operating period but not yet paid

Liabilities
    amounts a firm owes to creditors

Long-term liabilities
    due more than one year after the date of the balance sheet

managerial accounting
    provides financial information that managers inside the organization can use to evaluate and make decisions about current and future operations

net profit (or net income)
    revenues are more than expenses

Revenues

dollar amount of sales plus any other income received from sources such as interest, dividends, and rents

Accounting

process of collecting, recording, classifying, summarizing, reporting, and analyzing financial activities

Accounts payable

Amounts the firm owes for credit purchases due within a year

Accounts receivable

Amounts owed to the firm by customers who bought goods or services on credit

Accrued expenses

Expenses, typically for wages and taxes, that have accumulated and must be paid at a specified future date within the year although the firm has not received a bill

acid-test (quick) ratio

used to measure the firm's ability to pay its current liabilities without selling inventory

annual report

a yearly document that describes a firm's financial status.

audit

financial statement review

balance sheet

summarizes a firm's financial position at a specific point in time

Bookkeeping

the system used to record a firm's financial transactions, is a routine, clerical process

Cash

the speed with which they can be converted to cash

certified public accountant (CPA)

an accountant must complete an approved bachelor's degree program and pass a test prepared by the American Institute of CPAs (AICPA)

cost of goods sold

total expense of buying or producing the firm's goods or services

Current liabilities

Liabilities due within a year of the date of the balance sheet

current ratio

ratio of total current assets to total current liabilities

Debt ratios

measure the degree and effect of the firm's use of borrowed funds (debt) to finance its operations

debt-to-equity ratio

measures the relationship between the amount of debt financing (borrowing) and the amount of equity financing (owners' funds)

Depreciation
allocation of the asset's original cost to the years in which it is expected to produce revenues

Earnings per share (EPS)
ratio of net profit to the number of shares of common stock outstanding

Financial accounting
focuses on preparing external financial reports that are used by outsiders; that is, people who have an interest in the business but are not part of the company's management

Financial Accounting Standards Board (FASB
To ensure accuracy and consistency in the way financial information is reported, accountants in the United States follow

financial ratio
states the relationship between financial data on a percentage basis

financial transactions
sales, payments, purchases,

Fixed assets
long-term assets used by the firm for more than a year

full employment
everyone who wants to work has a job

General and administrative expenses
salaries of top managers and office support staff; utilities; office supplies; interest expense; fees for accounting, consulting, and legal services; insurance; and rent

gross profit
The amount a company earns after paying to produce or buy its products but before deducting operating expenses

intangible
patent or trademarked name

Intangible assets
long-term assets with no physical existence

Inventory
Stock of goods being held for production or for sale to customers

inventory turnover ratio
measures the speed with which inventory moves through the firm and is turned into sales

journal
a listing of financial transactions in chronological order

ledgers
show increases and decreases in specific asset, liability, and owners' equity accounts

liquidity
the speed with which assets can be converted to cash

Liquidity ratios

measure the firm's ability to pay its short-term debts as they come due

Marketable securities

Temporary investments of excess cash that can readily be converted to cash

net loss

expenses exceed revenues

net profit margin

called return on sales. It measures the percentage of each sales dollar remaining after all expenses, including taxes, have been deducted

Net sales

amount left after deducting sales discounts and returns and allowances from gross sales

Net working capital

measure a firm's overall liquidity and is calculated by subtracting total current liabilities from total current assets

Notes payable

Short-term loans from banks, suppliers, or others that must be repaid within a year

Notes receivable

Amounts owed to the firm by customers or others to whom it lent money

operating expenses

expenses of running the business that are not related directly to producing or buying its products

Owners' equity

Assets – Liabilities

private accountants

Accountants employed to serve one particular organization

Profitability ratios

measure how well the firm is using its resources to generate profit and how efficiently it is being managed

public accountants

Independent accountants who serve organizations and individuals on a fee basis

Ratio analysis

calculating and interpreting financial ratios using data taken from the firm's financial statements in order to assess its condition and performance

Retained earnings

amounts left over from profitable operations since the firm's beginning

return on equity (ROE)

It measures the return that owners receive on their investment in the firm, a major reason for investing in a company's stock

Sales discounts

price reductions given to customers that pay their bills early

Sarbanes-Oxley Act
was designed to address the investing public's lack of trust in corporate America. It redefines the public corporation–auditor relationship and restricts the types of services auditors can provide to clients

statement of cash flows
summary of the money flowing into and out of a firm, is the financial statement used to assess the sources and uses of cash during a certain period, typically one year

tangible
cash, equipment, and buildings

trial balance
The ledger totals for each account are summarized in a trial balance, which is used to confirm the accuracy of the figures

ECONOMICS AND BUSINESS

Learning Objectives

1. Describe the foundational philosophies of capitalism and socialism.
2. Discuss private property rights and why they are key to economic development.
3. Discuss the concept of GDP (gross domestic product).
4. Explain the difference between fiscal and monetary policy.
5. Discuss the concept of the unemployment rate measurement.
6. Discuss the concepts of inflation and deflation.
7. Explain other key terms related to this chapter including: supply; demand; equilibrium price; monopoly; recession; depression.

2.1 What is Economics?

To appreciate how a business functions, we need to know something about the economic environment in which it operates. We begin with a definition of economics and a discussion of the resources used to produce goods and services.

Resources: Inputs and Outputs

Economics is the study of the production, distribution, and consumption of goods and services. **Resources** are the inputs used to produce outputs. Resources may include any or all of the following:

- Land and other natural resources
- Labor (physical and mental)
- Capital, including buildings and equipment
- Entrepreneurship
- Knowledge

Resources are combined to produce goods and services. Land and natural resources provide the needed raw materials. Labor transforms raw materials into goods and services. Capital (equipment, buildings, vehicles, cash, and so forth) are needed for the production process. Entrepreneurship provides the skill, drive and creativity needed to bring the other resources together to produce a good or service to be sold to the marketplace.

Because a business uses resources to produce things, we also call these resources **factors of production**. The factors of production used to produce a shirt would include the following:

- The land that the shirt factory sits on, the electricity used to run the plant, and the raw cotton from which the shirts are made
- The laborers who make the shirts
- The factory and equipment used in the manufacturing process, as well as the money needed to operate the factory
- The entrepreneurship skills and production knowledge used to coordinate the other resources to make the shirts and distribute them to the marketplace

Input and Output Markets

Many of the factors of production are provided to businesses by households. For example, households provide businesses with labor (as workers), land and buildings (as landlords), and capital (as investors). In turn, businesses pay households for these resources by providing them with income, such as wages, rent, and interest. The resources obtained from households are then used by businesses to produce goods and services, which are sold to provide businesses with revenue. The revenue obtained by businesses is then used to buy additional resources, and the cycle continues. This is described in Figure 2.1 "The Circular Flow of Inputs and Outputs", which illustrates the dual roles of households and businesses:

- Households not only provide factors of production (or resources) but also consume goods and services.
- Businesses not only buy resources but also produce and sell both goods and services
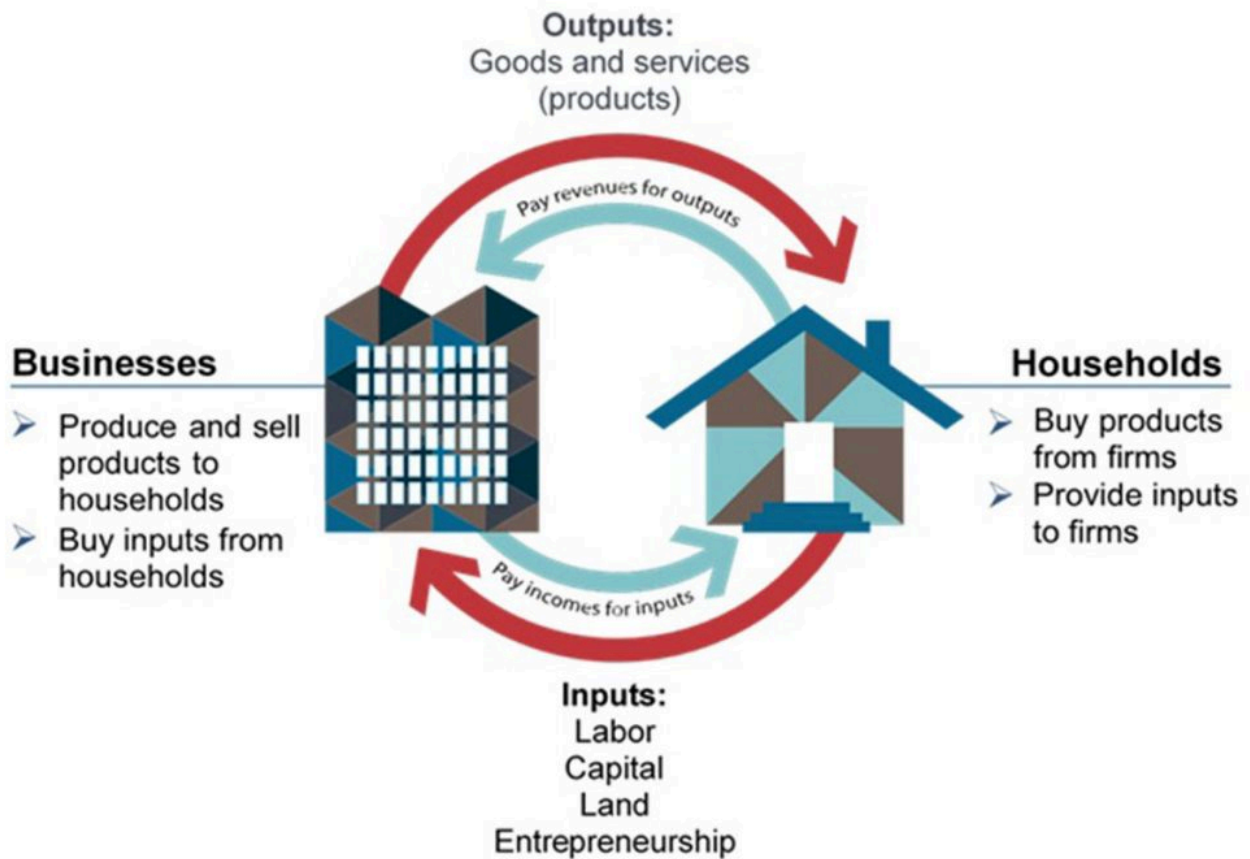

Figure 2.1: The Circular Flow of Inputs and Outputs

Economic Systems

Economists study the interactions between households and businesses and look at the ways in which the factors of production are combined to produce the goods and services that people need. Basically, economists try to answer three sets of questions:

- What goods and services should be produced to meet consumers' needs? In what quantity? When?
- How should goods and services be produced? Who should produce them, and what resources, including technology, should be combined to produce them?
- Who should receive the goods and services produced? How should they be allocated among consumers?

The answers to these questions depend on a country's ==economic system==–the means by which a society (households, businesses, and government) makes decisions about allocating resources to produce products and about distributing those products. The degree to which individuals and business owners, as opposed to the government, enjoy freedom in making these decisions varies according to the type of economic system.

Generally speaking, economic systems can be divided into two systems: planned systems and free market systems.

Planned Systems

In a **planned system**, the government exerts control over the allocation and distribution of all or some goods and services. The system with the highest level of government control is communism. In theory, a communist economy is one in which the government owns all or most enterprises. Central planning by the government dictates which goods or services are produced, how they are produced, and who will receive them. In practice, pure communism is practically nonexistent today, and only a few countries (notably North Korea and Cuba) operate under rigid, centrally planned economic systems.

Under **socialism**, industries that provide essential services, such as utilities, banking, and health care, may be government owned. Some businesses may also be owned privately. Central planning allocates the goods and services produced by government-run industries and tries to ensure that the resulting wealth is distributed equally. In contrast, privately owned companies are operated for the purpose of making a profit for their owners. In general, workers in socialist economies work fewer hours, have longer vacations, and receive more health care, education, and child-care benefits than do workers in capitalist economies. To offset the high cost of public services, taxes are generally steep. Examples of countries that lean towards a socialistic approach include Venezuela, Sweden, and France.

Free Market System

The economic system in which most businesses are owned and operated by individuals is the **free market system**, also known as **capitalism**. In a free market economy, **competition** dictates how goods and services will be allocated. Business is conducted with more limited government involvement concentrated on regulations that dictate how businesses are permitted to operate. A key aspect of a free market system is the concept of **private property rights**, which means that business owners can expect to own their land, buildings, machines, etc., and keep the majority of their profits, except for taxes. The profit incentive is a key driver of any free market system. The economies of the United States and other countries, such as Japan, are based on capitalism. However, a purely capitalistic economy is as rare as one that is purely communist. Imagine if a service such as police protection, one provided by government in the United States, were instead allocated based on market forces. The ability to pay would then become a key determinant in who received these services, an outcome that few in American society would consider to be acceptable.

How Economic Systems Compare

In comparing economic systems, it can be helpful to think of a continuum with communism at one end and pure capitalism at the other, as in Figure 3.2 on the next page. As you move from left to right, the amount of government control over business diminishes. So, too, does the level of social services, such as health care, child-care services, social security, and unemployment benefits. Moving from left to right, taxes are correspondingly lower as well.
Figure 2.2: The Economic Spectrum

Mixed Market Economies

Though it's possible to have a pure communist system, or a pure capitalist (free market) system, in reality many economic systems are mixed. A **mixed market economy** relies on both markets and the government to allocate resources. In practice, most economies are mixed, with a leaning towards either free market or socialistic principles, rather than being purely one or the other. Some previously communist economies, such as those of Eastern Europe and China, are becoming more mixed as they adopt more capitalistic characteristics and convert businesses previously owned by the government to private ownership through a process called **privatization**. By contrast, Venezuela is a country that has moved increasingly towards socialism, taking control of industries such as oil and media through a process called **nationalization**.

The U.S. Economic System

Like most countries, the United States features a mixed market system: though the U.S. economic system is primarily a free market system, the federal government controls some basic services, such as the postal service and air traffic control. The U.S. economy also has some characteristics of a socialist system, such as providing social security retirement benefits to retired workers.

The free market system was espoused by Adam Smith in his book *The Wealth of Nations*, published in 1776. According to Smith, competition alone would ensure that consumers received the best products at the best prices. In the kind of competition he assumed, a seller who tries to charge more for his product than other sellers would not be able to find any buyers. A job-seeker who asks more than the going wage won't be hired. Because the "invisible hand" of competition will make the market work effectively, there won't be a need to regulate prices or wages. Almost immediately, however, a tension developed among free market theorists between the principle of *laissez-faire*—leaving things alone—and government intervention. Today, it's common for the U.S. government to intervene in the operation of the economic system. For example, government exerts influence on the food and pharmaceutical industries through the Food and Drug Administration, which protects consumers by preventing unsafe or mislabeled products from reaching the market.

To appreciate how businesses operate, we must first get an idea of how prices are set in competitive markets. The next section, "Perfect Competition and Supply and Demand," begins by describing how markets establish prices in an environment of perfect competition.

Key Takeaways

- **Economics** is the study of the production, distribution, and consumption of goods and services.
- Economists address these three questions: (1) What goods and services should be produced to meet consumer needs? (2) How should they be produced, and who should produce them? (3) Who should receive goods and services?
- The answers to these questions depend on a country's **economic system**. The primary economic systems that exist today are planned and free-market systems.
- In a **planned system**, such as communism and socialism, the government exerts control over the production and distribution of all or some goods and services.
- In a **free-market system**, also known as capitalism, business is conducted with limited government involvement. **Competition** determines what goods and services are produced, how they are produced, and for whom.

2.2 Perfect Competition and Supply and Demand

Under a mixed economy, such as we have in the United States, businesses make decisions about which goods to produce or services to offer and how they are priced. Because there are many businesses making goods or providing services, customers can choose among a wide array of products. The competition for sales among businesses is a vital part of our economic system. Economists have identified four types of competition–perfect competition, monopolistic competition, oligopoly, and monopoly. We'll introduce the first of these–perfect competition–in this section and cover the remaining three in the following section.

Perfect Competition

Perfect competition exists when there are many consumers buying a standardized product from numerous small businesses. Because no seller is big enough or influential enough to affect price, sellers and buyers accept the going price. For example, when a commercial fisher brings his fish to the local market, he has little control over the price he gets and must accept the going market price.

The Basics of Supply and Demand

To appreciate how perfect competition works, we need to understand how buyers and sellers interact in a market to set prices. In a market characterized by perfect competition, price is determined through the mechanisms of supply and demand. Prices are influenced both by the supply of products from sellers and by the demand for products by buyers.

To illustrate this concept, let's create a *supply and demand schedule* for one particular good sold at one point in time. Then we'll define demand and create a demand curve and define *supply* and create a *supply curve.* Finally, we'll see how supply and demand interact to create an *equilibrium price*–the price at which buyers are willing to purchase the amount that sellers are willing to sell.

Demand and the Demand Curve

Demand is the quantity of a product that buyers are willing to purchase at various prices. The quantity of a product that people are willing to buy depends on its price. You're typically willing to buy *less* of a product when prices *rise* and *more* of a product when prices *fall.* Generally speaking, we find products more attractive at lower prices, and we buy more at lower prices because our income goes further.

Using this logic, we can construct a demand curve that shows the quantity of a product that will be demanded at different prices. Let's assume that the diagram in Figure 2.3 "**The Demand Curve**" represents the daily price and quantity of apples sold by farmers at a local market. Note that as the price of apples goes down, buyers' demand goes up. Thus, if a pound of apples sells for $0.80, buyers will be willing to purchase only fifteen hundred pounds per day. But if apples cost only $0.60 a pound, buyers will be willing to purchase two thousand pounds. At $0.40 a pound, buyers will be willing to purchase twenty-five hundred pounds.
Figure 2.3: The Demand Curve

Supply and the Supply Curve

Supply is the quantity of a product that sellers are willing to sell at various prices. The quantity of a product that a business is willing to sell depends on its price. Businesses are *more* willing to sell a product when the price *rises* and *less* willing to sell it when prices *fall*. Again, this fact makes sense: businesses are set up to make profits, and there are larger profits to be made when prices are high.

Now we can construct a supply curve that shows the quantity of apples that farmers would be willing to sell at different prices, regardless of demand. As you can see in Figure 2.4 "**The Supply Curve**", the supply curve goes in the opposite direction from the demand curve: as prices rise, the quantity of apples that farmers are willing to sell also goes

up. The supply curve shows that farmers are willing to sell only a thousand pounds of apples when the price is $0.40 a pound, two thousand pounds when the price is $0.60, and three thousand pounds when the price is $0.80.
Figure 2.4: The Supply Curve

Equilibrium Price

We can now see how the market mechanism works under perfect competition. We do this by plotting both the supply curve and the demand curve on one graph, as we've done in Figure 3.5 "The Equilibrium Price". The point at which the two curves intersect is the **equilibrium price**.

You can see in Figure 2.5 "The Equilibrium Price" that the supply and demand curves intersect at the price of $0.60 and quantity of two thousand pounds. Thus, $0.60 is the equilibrium price: at this price, the quantity of apples demanded by buyers equals the quantity of apples that farmers are willing to supply. If a single farmer tries to charge more than $0.60 for a pound of apples, he won't sell very many because other suppliers are making them available for less. As a result, his profits will go down. If, on the other hand, a farmer tries to charge less than the equilibrium price of $0.60 a pound, he will sell more apples but his profit per pound will be less than at the equilibrium price. With profit being the motive, there is no incentive to drop the price.
Figure 2.5: The Equilibrium Price

What have we learned in this discussion? Without outside influences, markets in an environment of perfect competition will arrive at an equilibrium point at which both buyers and sellers are satisfied. But we must be aware that this is a very simplistic example. Things are more complex in the real world. For one thing, markets don't always operate without outside influences. For example, if a government set an artificially low price ceiling on a product to keep consumers happy, we would not expect producers to produce enough to satisfy demand, resulting in a ==shortage==. If government set prices high to assist an industry, sellers would likely supply more of a product than buyers need; in that case, there would be a ==surplus==.

Circumstances also have a habit of changing. What would happen, for example, if incomes rose and buyers were willing to pay more for apples? The demand curve would change, resulting in an increase in equilibrium price. This outcome makes intuitive sense: as demand increases, prices will go up. What would happen if apple crops were larger than expected because of favorable weather conditions? Farmers might be willing to sell apples at lower prices rather than letting part of the crop spoil. If so, the supply curve would shift, resulting in another change in equilibrium price: the increase in supply would bring down prices.

- There are three other types of competition in a free market system: monopolistic competition, oligopoly, and monopoly.
- In **monopolistic competition,** there are still many sellers, but products are **differentiated,** e., differ slightly but serve similar purposes. By making consumers aware these differences, sellers exert some control over price.
- In an **oligopoly**, a few sellers supply a sizable portion of products in the market. They exert some control over price, but because their products are similar, when one company lowers prices, the others follow.
- In a **monopoly**, there is only one seller in the market. The "market" could be a specific geographical area, such as a city. The single seller is able to control prices.
- All economies share three goals: growth, high employment, and price stability.
- To get a sense of where the economy is headed in the future, we use statistics called **economic indicators**. Indicators that report the status of the economy a few months in the past are *lagging* Those that predict the status of the economy three to twelve months in the future are called *leading* indicators.

2.3 Monopolistic Competition, Oligopoly, and Monopoly

As mentioned previously, economists have identified four types of competition–perfect competition, monopolistic competition, oligopoly, and monopoly. Perfect competition was discussed in the last section; we'll cover the remaining three types of competition here.

Monopolistic Competition

In **monopolistic competition**, we still have many sellers (as we had under perfect competition). Now, however, they don't sell identical products. Instead, they sell **differentiated products**–products that differ somewhat, or are perceived to differ, even though they serve a similar purpose. Products can be differentiated in a number of ways, including quality, style, convenience, location, and brand name. An example in this case might be toothpaste. Although many people are fiercely loyal to their favorites, most products in this category are quite similar and address the same consumer need. But what if there was a substantial price difference among products? In that case, many buyers would likely be persuaded to switch brands, at least on a trial basis.

How is product differentiation accomplished? Sometimes, it's simply geographical; you probably buy gasoline at the station closest to your home regardless of the brand. At other times, perceived differences between products are promoted by advertising designed to convince consumers that one product is different from an- other–and better than it. Regardless of customer loyalty to a product, however, if its price goes too high, the seller will lose business to a competitor. Under monopolistic competition, therefore, companies have only limited control over price.

Oligopoly

Oligopoly means few sellers. In an oligopolistic market, each seller supplies a large portion of all the products sold in the marketplace. In addition, because the cost of starting a business in an oligopolistic industry is usually high, the number of firms entering it is low. Companies in oligopolistic industries include such large-scale enterprises as automobile companies and airlines. As large firms supplying a sizable portion of a market, these companies have some control over the prices they charge. But there's a catch: because products are fairly similar, when one company lowers prices, others are often forced to follow suit to remain competitive. You see this practice all the time in the airline industry: When American Airlines announces a fare decrease, Continental, United Airlines, and others do likewise. When one automaker offers a special deal, its competitors usually come up with similar promotions.

Monopoly

In terms of the number of sellers and degree of competition, a **monopoly** lies at the opposite end of the spectrum from perfect competition. In perfect competition, there are many small companies, none of which can control prices; they simply accept the market price determined by supply and demand. In a monopoly, however, there's only one seller in the

market. The market could be a geographical area, such as a city or a regional area, and doesn't necessarily have to be an entire country.

There are few monopolies in the United States because the government limits them. Most fall into one of two categories: natural and legal. **Natural monopolies** include public utilities, such as electricity and gas suppliers. Such enterprises require huge investments, and it would be inefficient to duplicate the products that they provide. They inhibit competition, but they're legal because they're important to society. In exchange for the right to conduct business without competition, they're regulated. For instance, they can't charge whatever prices they want, but they must adhere to government-controlled prices. As a rule, they're required to serve all customers, even if doing so isn't cost efficient.

A **legal monopoly** arises when a company receives a patent giving it exclusive use of an invented product or process. Patents are issued for a limited time, generally twenty years.[1] During this period, other companies can't use the invented product or process without permission from the patent holder. Patents allow companies a certain period to recover the heavy costs of researching and developing products and technologies. A classic example of a company that enjoyed a patent-based legal monopoly is Polaroid, which for years held exclusive ownership of instant-film technology.[2] Polaroid priced the product high enough to recoup, over time, the high cost of bringing it to market. Without competition, in other words, it enjoyed a monopolistic position in regard to pricing.

Key Takeaways

- There are three other types of competition in a free market system: monopolistic competition, oligopoly, and monopoly.
- In **monopolistic competition,** there are still many sellers, but products are **differentiated,** e., differ slightly but serve similar purposes. By making consumers aware these differences, sellers exert some control over price.
- In an **oligopoly**, a few sellers supply a sizable portion of products in the market. They exert some control over price, but because their products are similar, when one company lowers prices, the others follow.
- In a **monopoly**, there is only one seller in the market. The "market" could be a specific geographical area, such as a city. The single seller is able to control prices.

2.4 Measuring the Health of the Economy

Every day, we are bombarded with economic news (at least if you watch the business news stations). We're told about things like unemployment, home prices, and consumer confidence trends. As a student learning about business, and later as a business manager, you need to understand the nature of the U.S. economy and the terminology that we use to describe it. You need to have some idea of where the economy is heading, and you need to know something about the government's role in influencing its direction.

Economic Goals

The world's economies share three main goals:

- Growth
- High employment
- Price stability

Let's take a closer look at each of these goals, both to find out what they mean and to show how we determine whether they're being met.

Economic Growth

One purpose of an economy is to provide people with goods and services—cars, computers, video games, houses, rock concerts, fast food, amusement parks. One way in which economists measure the performance of an economy is by looking at a widely used measure of total output called the **gross domestic product** (GDP). The GDP is defined as the market value of all goods and services produced by the economy in a given year. The GDP includes only those goods and services produced domestically; goods produced outside the country are excluded. The GDP also includes only those goods and services that are produced for the final user; intermediate products are excluded. For example, the silicon chip that goes into a computer (an **intermediate product**) would not count directly because it is included when the finished computer is counted. By itself, the GDP doesn't necessarily tell us much about the direction of the economy. But change in the GDP does. If the GDP (after adjusting for inflation, which will be discussed later) goes up, the economy is growing. If it goes down, the economy is contracting.

The Business Cycle

The economic ups and downs resulting from expansion and contraction constitute the **business cycle**. A typical cycle runs from three to five years but could last much longer. Though typically irregular, a cycle can be divided into four general phases of prosperity, recession, depression (which the cycle generally skips), and recovery:

- During prosperity, the economy expands, unemployment is low, in- comes rise, and consumers buy more products. Businesses respond by increasing production and offering new and better products.

- Eventually, however, things slow down. GDP decreases, unemployment rises, and because people have less money to spend, business revenues decline. This slowdown in economic activity is called a **recession**.
- Economists often say that we're entering a recession when GDP goes down for two consecutive quarters.
- Generally, a recession is followed by a **recovery** in which the economy starts growing again.
- If, however, a recession lasts a long time (perhaps a decade or so), while unemployment remains very high and production is severely curtailed, the economy could sink into a **depression**. Unlike for the term recession, economists have not agreed on a uniform standard for what constitutes a depression, though they are generally characterized by their duration. Though not impossible, it's unlikely that the United States will experience another severe depression like that of the 1930s. The federal government has a number of economic tools (some of which we'll discuss shortly) with which to fight any threat of a depression.

Full Employment

To keep the economy going strong, people must spend money on goods and services. A reduction in personal expenditures for things like food, clothing, appliances, automobiles, housing, and medical care could severely reduce GDP and weaken the economy. Because most people earn their spending money by working, an important goal of all economies is making jobs available to everyone who wants one. In principle, **full employment** occurs when everyone who wants to work has a job. In practice, we say that we have full employment when about 95 percent of those wanting to work are employed.

The Unemployment Rate

The U.S. Department of Labor tracks unemployment and reports the **unemployment rate**: the percentage of the labor force that's unemployed and actively seeking work. The unemployment rate is an important measure of economic health. It goes up during recessionary periods because companies are reluctant to hire workers when demand for goods and services is low. Conversely, it goes down when the economy is expanding and there is high demand for products and workers to supply them.

Figure 2.6 "The **U.S. Unemployment Rate**, 2008-2020" traces the U.S. unemployment rate between 2008 and 2020. Please be aware that there are multiple measures of unemployment and that this graph is based on what is known as **U3**, the most commonly used measurement. Another measurement, **U6**, is considered to provide a broader picture of unemployment in the United States. It includes two groups of people that U3 doesn't: those who are not actively looking for work but would like a job and have looked for one in the last 12 months; and those who would like to work full-time jobs but have settled for part-time positions because full-time work was not available to them. Since by definition, U6 is always higher than U3, it is likely that U3 is discussed more often because it paints a more favorable, if not completely accurate, picture.

U.S. unemployment rate falls again but ...

... it's not telling the whole story
Source: Bureau of Labor Statistics via FRED

2.6-
U.S. Unemployment Rate

Price Stability

A third major goal of all economies is maintaining price stability. Price stability occurs when the average of the prices for goods and services either doesn't change or changes very little. Rapidly rising prices are troublesome for both individuals and businesses. For individuals, rising prices mean people have to pay more for the things they need. For businesses, rising prices mean higher costs, and, at least in the short run, businesses might have trouble passing on higher costs to consumers. When the overall price level goes up, we have ==inflation==. Figure 2.7 "The U.S. Inflation Rate, 1960–2010" shows inflationary trends in the U.S. economy since 1960. When the price level goes down (which rarely happens), we have ==deflation==. A deflationary situation can also be damaging to an economy. When purchasers believe they can expect lower prices in the future, they may defer making purchases, which has the effect of slowing economic growth. Japan experienced a long period of deflation which contributed to economic stagnation in that country from which it is only now beginning to recover.

During both peak periods –1974 and 1979 to 1980 –the price of oil doubled.
Figure 2.7: The U.S. Inflation Rate, 1960-2014

The Consumer Price Index

The most widely publicized measure of inflation is the **consumer price index** **(CPI)**, which is reported monthly by the Bureau of Labor Statistics. The CPI measures the rate of inflation by determining price changes of a hypothetical basket of goods, such as food, housing, clothing, medical care, appliances, automobiles, and so forth, bought by a typical household.

The CPI base period is 1982 to 1984, which has been given an average value of 100. Figure 2.8 "Selected CPI Values, 1950–2010" gives CPI values computed for selected years. The CPI value for 1950, for instance, is 24. This means that $1 of typical purchases in 1982 through 1984 would have cost $0.24 in 1950. Conversely, you would have needed $2.18 to purchase the same $1 worth of typical goods in 2010. The difference registers the effect of inflation. In fact, that's what an **inflation rate** is–the percentage change in a price index. For more information, view the current CPI graph.
Figure 2.8: Selected CPI Values, 1950–2014

Economic Forecasting

In the previous section, we introduced several measures that economists use to assess the performance of the economy at a given time. By looking at changes in the GDP, for instance, we can see whether the economy is growing. The CPI allows us to gauge inflation. These measures help us understand where the economy stands today. But what if we want to get a sense of where it's headed in the future? To a certain extent, we can forecast future economic trends by analyzing several leading economic indicators.

Economic Indicators

An **economic indicator** is a statistic that provides valuable information about the economy. There's no shortage of economic indicators, and trying to follow them all would be an overwhelming task. So in this chapter, we'll only discuss the general concept and a few of the key indicators.

Lagging and Leading Indicators

Statistics that report the status of the economy a few months in the past are called **lagging economic indicators**. One such indicator is average length of unemployment. If unemployed workers have remained out of work for a long time, we may infer that the economy has been slow. Indicators that predict the status of the economy three to twelve months into the future are called **leading economic indicators**. If such an indicator rises, the economy is more likely to expand in the coming year. If it falls, the economy is more likely to contract.

It is also helpful to look at indicators from various **sectors of the economy**– labor, manufacturing, and housing. One useful indicator of the outlook for future jobs is the number of new claims for unemployment insurance. This measure tells us how many people recently lost their jobs. If it's rising, it signals trouble ahead because unemployed consumers can't buy as many goods and services as they could if they had paychecks.

To gauge the level of goods to be produced in the future (which will translate into future sales), economists look at a statistic called average weekly manufacturing hours. This measure tells us the average number of hours worked per week by production workers in manufacturing industries. If it's on the rise, the economy will probably improve. For assessing the strength of the housing market, housing starts is often a good indicator. An increase in this statistic–which tells us how many new housing units are being built–indicates that the economy is improving. Why? Because increased building brings money into the economy not only through new home sales but also through sales of furniture and appliances to furnish them.

Since employment is such a key goal in any economy, the **Bureau of Labor Statistics** tracks total non-farm payroll employment from which the number of net new jobs created can be determined.

The Conference Board also publishes a consumer confidence index based on results of a monthly survey of five thousand U.S. households. The survey gathers consumers' opinions on the health of the economy and their plans for future purchases. It's often a good indicator of consumers' future buying intent.

Key Takeaways

- All economies share three goals: growth, high employment, and price stability.
- To get a sense of where the economy is headed in the future, we use statistics called **economic indicators**. Indicators that report the status of the economy a few months in the past are *lagging*. Those that predict the status of the economy three to twelve months in the future are called *leading* indicators.

2.5 Government's Role in Managing the Economy

Monetary Policy

Monetary policy is exercised by the Federal Reserve System ("the Fed"), which is empowered to take various actions that decrease or increase the money supply and raise or lower short-term interest rates, making it harder or easier to borrow money. When the Fed believes that inflation is a problem, it will use contractionary policy to decrease the money supply and raise interest rates. When rates are higher, borrowers have to pay more for the money they borrow, and banks are more selective in making loans. Because **money is "tighter"**—more expensive to borrow—demand for goods and services will go down, and so will prices. In any case, that's the theory.

The Fed will typically tighten or decrease the money supply during inflationary periods, making it harder to borrow money.

To counter a recession, the Fed uses expansionary policy to increase the money supply and reduce interest rates. With lower interest rates, it's cheaper to borrow money, and banks are more willing to lend it. We then say that **money is "easy**." Attractive interest rates encourage businesses to borrow money to expand production and encourage consumers to buy more goods and services. In theory, both sets of actions will help the economy escape or come out of a recession.

Fiscal Policy

Fiscal policy relies on the government's powers of spending and taxation. Both taxation and government spending can be used to reduce or increase the total supply of money in the economy—the total amount, in other words, that businesses and consumers have to spend. When the country is in a recession, government policy is typically to increase spending, reduce taxes, or both. Such expansionary actions will put more money in the hands of businesses and consumers, encouraging businesses to expand and consumers to buy more goods and services. When the economy is experiencing inflation, the opposite policy is adopted: the government will decrease spending or increase taxes, or both. Because such contractionary measures reduce spending by businesses and consumers, prices come down and inflation eases.

The National Debt

If, in any given year, the government takes in more money (through taxes) than it spends on goods and services (for things such as defense, transportation, and social services), the result is a **budget surplus**. If, on the other hand, the government spends more than it takes in, we have a **budget deficit** (which the government pays off by borrowing through the issuance of Treasury bonds). Historically, deficits have occurred much more often than surpluses; typically, the government spends more than it takes in. Consequently, the U.S. government now has a total national debt of more than $19 trillion (Note: This number is moving too quickly for the authors to keep the graph current – you can see the current debt at http://www.usdebtclock.org/).

The rise between 1940 and 1944 reflects a big increase in government spending due to World War II.

The big jump beginning in the 1980s reflects increased defense spending, ballooning interest on the debt, and lower tax revenues.

Here's what $18 trillion looks like: $18,000,000,000,000
Figure 2.9: The National Debt, 1940-2014

Key Takeaways

- **Monetary policy** is exercised by the Federal Reserve System ("the Fed"), which is empowered to take various actions that decrease or increase the money supply and raise or lower short-term interest rates

  ◦ When rates are higher, borrowers have to pay more for the money they borrow
  ◦ To counter a recession, the Fed uses expansionary policy to increase the money supply and reduce interest rates.

- **Fiscal policy** relies on the government's powers of spending and taxation. When the country is in a recession, government policy is typically to increase spending, reduce taxes, or both. When the economy is experiencing inflation, the opposite policy is adopted: the government will decrease spending or increase taxes, or both.
- **National Debt** is the total amount of money that the U.S. Federal Government owes to its creditors. As of April 2020, the U.S. debt is 24.1 trillion.

2.6 Cases and Problems

The "Economy" section of the CNNMoney Web site provides current information on a number of economic indicators. Go to http://money.cnn.com and click on "Economy" and then on "Jobs," and find answers to the following questions:

1. You read in the chapter that an important goal of all economies is to make jobs available to everyone who wants one. Review the CNNMoney discussion on job growth and then answer the following questions:

   a. Is the current level of unemployment rising or falling?
   b. What do economists expect will happen to unemployment rates in the near future?
   c. Is the current level of unemployment a burden or an asset to the economy? In what ways?

2. Do you remember the first dollar you earned? Maybe you earned it delivering newspapers, shoveling snow, mowing lawns, or babysitting. How much do you think that dollar is worth today? Go to the WestEgg site at http://www.westegg.com/inflation and find the answer to this question. After determining the current value of your first dollar, explain how the calculator was created. (*Hint*: Apply what you know about CPI.)

Career Opportunities

Is a Career in Economics for You?

Are you wondering what a career in economics would be like? Go to the U.S. Department of Labor Web site (https://www.bls.gov/ooh/life-physical-and-social-science/economists.htm?view_full) and review the occupational outlook for economists. Look for answers to the following questions:

1. What issues interest economists?
2. What kinds of jobs do government economists perform? What about those who work in private industry? In education?
3. What educational background and training is needed for these jobs?
4. What is the current job outlook for economists?
5. What is the entry-level salary for an economist with a bachelor's degree? With a master's degree?

How Much Is That CD in the Window?

The early 1990s were a good time to buy CDs, mainly because discounters such as Wal-Mart and Best Buy were accumulating customers by dropping prices from $15 to $10. They were losing money, but they figured that the policy still made good business sense. Why? They reasoned that while customers were in the store to shop for CDs, they'd find other, more profitable products.

The policy was a windfall for CD buyers, but a real problem for traditional music retailers such as Tower Records. With discounters slashing prices, CD buyers were no longer willing to pay the prices asked by traditional music retailers. Sales plummeted and companies went out of business.

Ultimately, the discounters' strategy worked: stores such as Wal-Mart and Best Buy gained customers who once bought CDs at stores like Tower Records.

Let's pause at this point to answer the following questions:

1. Does selling a product at below cost make business sense?
2. Whom does it hurt? Whom does it help?
3. Is it ethical?

Let's continue and find out how traditional music retailers responded to this situation.

They weren't happy, and neither were the record companies. Both parties worried that traditional retailers would put pressure on them to reduce the price that they charged for CDs so that retailers could lower their prices and compete with discounters. The record companies didn't want to lower prices. They just wanted things to return to "normal"—to the world in which CDs sold for $15 each.

Most of the big record companies and several traditional music retailers got together and made a deal affecting every store that sold CDs. The record companies agreed with retail chains and other CD outlets to charge a minimum advertised price for CDs. Any retailer who broke ranks by advertising below-price CDs would incur substantial financial penalties. Naturally, CD prices went up.

Now, think about the following:

1. Does the deal made between the record companies and traditional retailers make business sense?
2. Whom does it hurt? Whom does it help?
3. Is it ethical?
4. Is it legal?

Get together in groups of four selected by your instructor and pick any three items from the following list:

- Pint of milk
- Gallon of gas
- Roundtrip airline ticket between Boston and San Francisco
- Large pizza
- Monthly cost of an Internet connection
- CD by a particular musician
- Two-day DVD rental
- Particular brand of DVD player
- Quarter-pound burger

Outside of class, each member of the team should check the prices of the three items, using his or her own sources. At the next class meeting, get together and compare the prices found by team members. Based on your findings, answer the following questions as a group:

1. Are the prices of given products similar, or do they vary?
2. Why do the prices of some products vary while those of others are similar?
3. Can any price differences be explained by applying the concepts of supply and demand or types of competition?

The Global View (AACSB)

Life Is Good in France (if You Have Le Job)

A strong economy requires that people have money to spend on goods and services. Because most people earn their money by working, an important goal of all economies is making jobs available to everyone who wants one. A country has "full employment" when 95 percent of those wanting work are employed. Unfortunately, not all countries achieve this goal of full employment. France, for example, often has a 10 percent unemployment rate overall and a 20 percent unemployment rate among young people.

Does this mean that France isn't trying as hard as the United States to achieve full employment? A lot of people in France would say yes.

Let's take a quick trip to France to see what's going on economically. The day is March 19, 2006, and more than a million people are marching through the streets to protest a proposed new employment law that would make it easier for companies to lay off workers under the age of twenty-six during their first two years of employment. Granted, the plan doesn't sound terribly youth-friendly, but, as usual, economic issues are never as clear-cut as they seem (or as we'd like them to be).

To gain some further insight into what's going on in France, go to a *BusinessWeek* Web site (https://www.bloomberg.com/news/articles/2006-03-20/job-security-ignites-debate-in-france) and read the article "Job Security Ignites Debate in France." Then answer the following questions:

1. Why does the French government support the so-called First Employment Contract? Who's supposed to be helped by the law?
2. Which two groups are most vocal in protesting the law? Why?
3. If you were a long-time worker at a French company, would you support the new law? Why, or why not?
4. If you were a young French person who had just graduated from college and were looking for your first job, would you support the law? Why, or why not?
5. What do you think of France's focus on job security? Does the current system help or hurt French workers? Does it help or hurt recent college graduates?
6. Does the French government's focus on job security help or hinder its economy? Should the government be so heavily involved in employment matters?

ETHICS AND SOCIAL RESPONSIBILITY

<div style="background:green">

Learning Objectives

</div>

1. Define business ethics and explain what it means to act ethically in business.
2. Explain how you can recognize an ethical organization.
3. Specify the steps that you would take to solve an ethical dilemma and make an ethical decision.
4. Identify ethical issues that you might face in business, and analyze rationalizations for unethical behavior.
5. Specify actions that managers can take to create and sustain ethical organizations.
6. Define *corporate social responsibility* and explain how organizations are responsible to their stakeholders.
7. Identify threats to the natural environment, and explain how businesses are addressing them.
8. Define sustainability and understand why companies are now focusing on environmental and socially responsibility issues.
9. List the stages of corporate responsibility.

3.1 "Mommy, Why Do You Have to Go to Jail?"

The one question Betty Vinson would have preferred to avoid is "Mommy, why do you have to go to jail?" (Pullman, 2003). Vinson graduated with an accounting degree from Mississippi State and married her college sweetheart. After a series of jobs at small banks, she landed a mid-level accounting job at WorldCom, at the time still a small long-distance provider. Sparked by the telecom boom, however, WorldCom soon became a darling of Wall Street, and its stock price soared. Now working for a wildly successful company, Vinson rounded out her life by reading legal thrillers and watching her daughter play soccer.

Her moment of truth came in mid-2000, when company executives learned that profits had plummeted. They asked Vinson to make some accounting adjustments to boost income by $828 million. Vinson knew that the scheme was unethical (at the very least) but she gave in and made the adjustments. Almost immediately, she felt guilty and told her boss that she was quitting. When news of her decision came to the attention of CEO Bernard Ebbers and CFO Scott Sullivan, they hastened to assure Vinson that she'd never be asked to cook any more books. Sullivan explained it this way: "We have planes in the air. Let's get the planes landed. Once they've landed, if you still want to leave, then leave. But not while the planes are in the air" (Pullman, 2003). Besides, she'd done nothing illegal, and if anyone asked, he'd take full responsibility. So Vinson decided to stay. After all, Sullivan was one of the top CFOs in the country; at age thirty-seven, he was already making $19 million a year (Ripley, 2002). Who was she to question his judgment? (Clabaugh, 2005)

Six months later, Ebbers and Sullivan needed another adjustment—this time for $771 million. This scheme was even more unethical than the first: it entailed forging dates to hide the adjustment. Pretty soon, Vinson was making adjustments on a quarterly basis—first for $560 million, then for $743 million, and yet again for $941 million. Eventually, Vinson had juggled almost $4 billion, and before long, the stress started to get to her: she had trouble sleeping, lost weight, and withdrew from people at work. She decided to hang on when she got a promotion and a $30,000 raise.

By spring 2002, however, it was obvious that adjusting the books was business as usual at WorldCom. Vinson finally decided that it was time to move on, but, unfortunately, an internal auditor had already put two and two together and blown the whistle. The Securities and Exchange Commission charged WorldCom with fraud amounting to $11 billion—the largest in U.S. history. Seeing herself as a valuable witness, Vinson was eager to tell what she knew. The government, however, regarded her as more than a mere witness. When she was named a co-conspirator, she agreed to cooperate fully and pleaded guilty to criminal conspiracy and securities fraud. But she won't be the only one doing time: Scott Sullivan will be in jail for five years, and Bernie Ebbers will be locked up for twenty-five years. Both maintain that they are innocent (Reeves, 2005 and Andelman, 2005).

So where did Betty Vinson, mild-mannered midlevel executive and mother, go wrong? How did she manage to get involved in a scheme that not only bilked investors out of billions but also cost seventeen thousand people their jobs? (Pullman, 2003) Ultimately, of course, we can only guess. Maybe she couldn't say no to her bosses; perhaps she believed that they'd take full responsibility for her accounting "adjustments." Possibly she was afraid of losing her job or didn't fully understand the ramifications of what she was doing. What we do know is that she disgraced herself and went to jail (Hancock, 2002).

The WorldCom situation is not an isolated incident. Perhaps you have heard of Bernie Madoff, founder of Bernard L. Madoff Investment Securities and former chairman of the NASDAQ stock exchange (Time Magazine, 2009). Madoff is alleged to have run a giant Ponzi scheme that cheated investors of up to $65 billion (Langan ,2008). His wrongdoings won him a spot at the top of Time Magazine's Top 10 Crooked CEOs. According to the SEC charges, Madoff convinced investors to give him large sums of money. In return, he gave them an impressive 8 percent to 12 percent return a year. But Madoff never really invested their money. Instead, he kept it for himself. He got funds to pay the first investors their return (or their money back if they asked for it) by bringing in new investors. Everything was going smoothly until the fall of 2008, when the stock market plummeted and many of his investors asked for their money. As he no longer had it, the game was over and he had to admit that the whole thing was just one big lie. Thousands of investors, including many of his wealthy friends, not-so-rich retirees who trusted him with their life savings, and charitable foundations, were

financially ruined. Those harmed by Madoff either directly or indirectly were likely pleased when he was sentenced to jail for one-hundred and fifty years.

3.2 Misgoverning Corporations: An Overview

The WorldCom situation is not an isolated incident. The boom years of the 1990s were followed by revelations of massive corporate corruption, including criminal schemes at companies such as Enron, Adelphia, and Tyco. In fall 2001, executives at Enron, an energy supplier, admitted to accounting practices concocted to overstate the company's income over a period of four years. In the wake of the company's collapse, stock prices plummeted from $90 to $1 a share, inflicting massive financial losses on the investment community. Thousands of employees lost not only their jobs but their retirement funds, as well (Kadlec, 2002). Before the Enron story was off the front pages, officials at Adelphia, the nation's sixth-largest cable company, disclosed that founder and CEO John Rigas had treated the publicly owned firm as a personal piggy bank, siphoning off billions of dollars to support his family's extravagant lifestyle and bankrupting the company in the process (Lieberman, 2004). Likewise, CEO Dennis Koslowzki of conglomerate Tyco International was apparently confused about what was his and what belonged to the company. Besides treating himself to a $30 million estate in Florida and a $7 million Park Avenue apartment, Koslowzki indulged in a taste for expensive office accessories—such as a $15,000 umbrella stand, a $17,000 traveling toilette box, and a $2,200 wastebasket—that eventually drained $600 million from company coffers.[1]

As crooked as these CEOs were, Bernie Madoff, founder of Bernard L. Madoff Investment Securities and former chairman of the NASDAQ stock exchange, makes them seem like dime-store shoplifters[2]. Madoff is alleged to have run a giant Ponzi scheme (Langan, 2008) that cheated investors of up to $65 billion. His wrongdoings won him a spot at the top of *Time Magazine*'s Top 10 Crooked CEOs. According to the SEC charges, Madoff convinced investors to give him large sums of money. In return, he gave them an impressive 8 percent to 12 percent return a year. But Madoff never really invested their money. Instead, he kept it for himself. He got funds to pay the first investors their return (or their money back if they asked for it) by bringing in new investors. Everything was going smoothly until the fall of 2008, when the stock market plummeted and many of his investors asked for their money back. As he no longer had their money, the game was over and he had to admit that the whole thing was just one big lie. Thousands of investors, including many of his wealthy friends, not-so-rich retirees who trusted him with their life savings, and charitable foundations, were financially ruined. All those harmed by Madoff either directly or indirectly were pleased when he was sentenced to jail for one-hundred and fifty years.

Are these cases merely aberrations? A *Time*/CNN poll conducted in the midst of all these revelations found that 72 percent of those surveyed don't think so. They believe that breach of investor and employee trust represents an ongoing, long-standing pattern of deceptive behavior by officials at a large number of companies (Gibbs, et. al., 2002). If they're right, then a lot of questions need to be answered. Why do such incidents happen (and with such apparent regularity)? Who are the usual suspects? How long until the next corporate bankruptcy record is set? What action can be taken—by individuals, organizations, and the government—to discourage such behavior?

The Idea of Business Ethics

It's in the best interest of a company to operate ethically. Trustworthy companies are better at attracting and keeping customers, talented employees, and capital. Those tainted by questionable ethics suffer from dwindling customer bases, employee turnover, and investor mistrust.

Let's begin this section by addressing one of the questions that we posed previously: What can individuals, organizations, and government agencies do to foster an environment of ethical and socially responsible behavior in business? First, of course, we need to define two terms: *business ethics* and *social responsibility*. They're often used interchangeably, but they don't mean the same thing.

What Is Ethics?

You probably already know what it means to be <mark>ethical</mark>: to know right from wrong and to know when you're practicing one instead of the other. At the risk of oversimplifying, then, we can say that <mark>business ethics</mark> is the application of ethical behavior in a business context. Acting ethically in business means more than simply obeying applicable laws and regulations: It also means being honest, doing no harm to others, competing fairly, and declining to put your own interests above those of your company, its owners, and its workers. If you're in business you obviously need a strong sense of what's right and what's wrong (not always an easy task). You need the personal conviction to *do* what's right, even if it means doing something that's difficult or personally disadvantageous.

What Is Social Responsibility?

<mark>Corporate social responsibility</mark> deals with actions that affect a variety of parties in a company's environment. A socially responsible company shows concern for its <mark>stakeholders</mark>–anyone who, like owners, employees, customers, and the communities in which it does business, has a "stake" or interest in it. We'll discuss corporate responsibility later in the chapter. At this point, we'll focus on ethics.

How Can You Recognize an Ethical Organization?

One goal of anyone engaged in business should be to foster ethical behavior in the organizational environment. How do we know when an organization is behaving ethically? Most lists of ethical organizational activities include the following criteria:

- Treating employees, customers, investors, and the public fairly
- Making fairness a top priority
- Holding every member personally accountable for his or her action
- Communicating core values and principles to all members
- Demanding and rewarding integrity from all members in all situations (Axelrod, 2004)

Whether you work for a business or for a nonprofit organization, you probably have a sense of whether your employer is ethical or unethical. Employees at companies that consistently make *Business Ethics* magazine's list of the "100 Best Corporate Citizens" regard the items on the previous list as business as usual in the workplace. Companies that routinely win good-citizenship awards include Procter & Gamble, Hewlett-Packard, Intel, Avon Products, Cisco Systems, and Merck[3].

By contrast, employees with the following attitudes tend to suspect that their employers aren't as ethical as they should be:

- They consistently feel uneasy about the work they do.
- They object to the way they're treated.
- They're uncomfortable about the way coworkers are treated.
- They question the appropriateness of management directives and policies (Axelrod, 2004).

Figure 3.2: In the early 1990s, many Sears automotive customers were surprised by hefty repair bills. Their complaints raised red flags with law-enforcement officials and forced Sears to refund $60 million.

In the early 1990s, many workers in Sears automotive service centers shared suspicions about certain policies, including the ways in which they were supposed to deal with customers. In particular, they felt uncomfortable with a new compensation plan that rewarded them for selling alignments, brake jobs, shock absorbers, and other parts and services. Those who met quotas got bonuses; those who didn't were often fired. The results shouldn't be surprising: In their zeal to meet quotas and keep their jobs, some employees misled customers into believing they needed parts and services when, in fact, they were not needed. Before long, Sears was flooded with complaints from customers—as were law-enforcement officials—in more than forty states. Sears denied any intent to deceive customers but was forced not only to eliminate sales commissions but also to pay out $60 million in refunds.

Why Study Ethics?

Ideally, prison terms, heavy fines, and civil suits should put a damper on corporate misconduct, but, unfortunately, many experts suspect that this assumption may be a bit optimistic. Whatever the condition of the ethical environment in the near future, one thing seems clear: The next generation entering business—which includes most of you—will find a world much different than the one that waited for the previous generation. Recent history tells us in no uncertain terms that today's business students, many of whom are tomorrow's business leaders, need a much sharper understanding of the difference between what is and isn't ethically acceptable. As a business student, one of your key tasks is learning how to recognize and deal with the ethical challenges that will confront you.

Moreover, knowing right from wrong will make you more marketable as a job candidate. Asked what he looked for in a new hire, Warren Buffet, the world's most successful investor, replied: "I look for three things. The first is personal integrity, the second is intelligence, and the third is a high energy level." He paused and then added: "But if you don't have the first, the second two don't matter."[4]

- It's in a company's best interest to act ethically. Trustworthy companies are better able to attract and keep customers, talented employees, and capital.
- **Business ethics** is the application of ethical behavior in a business context.
- Acting ethically in business means more than just obeying laws and regulations. It also means being honest, doing no harm to others, competing fairly, and declining to put your own interests above those of your employer and coworkers.
- To act ethically in business situations, you need a good idea of what's right and wrong (not always an easy task).
- You also need the personal conviction to do what's right even if it means doing something that's difficult or personally disadvantageous.
- Ethical organizations treat employees, customers, investors, and the public fairly. They make fairness a top priority, communicate core values to those in the organization, and demand and reward integrity from all members while holding them accountable for their actions.

Exercise

Is Honesty Academic?

Just as businesses have codes of conduct for directing employee behavior in job-related activities, so, too, do colleges and universities have codes of conduct to guide students' academic behavior. They're called various things—*honor codes*, *academic integrity policies*, *policies on academic honesty*, *student codes of conduct*—but they all have the same purpose: to promote academic integrity and to create a fair and ethical environment for all students.

At most schools, information on academic integrity is available from one of the following sources:

- The school Web site (probably under the tab "Dean of Students" or "Student Life")
- The student handbook
- Printed materials available through the Dean of Students' office

Assignment

Locate information on your school's academic integrity policies and answer the following questions:

1. What behaviors violate academic integrity?
2. What happens if you're accused of academic dishonesty?

3. What should you do if you witness an incident of academic dishonesty?

3.3 The Individual Approach to Ethics

Betty Vinson didn't start out at WorldCom with the intention of going to jail. She undoubtedly knew what the right behavior was, but the bottom line is that she didn't *do* it. How can you make sure that you do the right thing in the business world? How should you respond to the kinds of challenges that you'll be facing? Because your actions in the business world will be strongly influenced by your moral character, let's begin by assessing your current moral condition. Which of the following best applies to you (select one)?

1. I'm always ethical.
2. I'm mostly ethical.
3. I'm somewhat ethical.
4. I'm seldom ethical.
5. I'm never ethical.

Now that you've placed yourself in one of these categories, here are some general observations. Few people put themselves below the second category. Most of us are ethical most of the time, and most people assign themselves to category number two—"I'm *mostly* ethical." Why don't more people claim that they're *always* ethical? Apparently, most people realize that being ethical all the time takes a great deal of moral energy. If you placed yourself in category number two, ask yourself this question: How can I change my behavior so that I can move up a notch? The answer to this question may be simple. Just ask yourself an easier question: How would I like to be treated in a given situation (Maxwell, 2003)?

Unfortunately, practicing this philosophy might be easier in your personal life than in the business world. Ethical challenges arise in business because business organizations, especially large ones, have multiple stakeholders and because stakeholders make conflicting demands. Making decisions that affect multiple stakeholders isn't easy even for seasoned managers; and for new entrants to the business world, the task can be extremely daunting. Many managers need years of experience in an organization before they feel comfortable making decisions that affect various stakeholders. You can, however, get a head start in learning how to make ethical decisions by looking at two types of challenges that you'll encounter in the business world: *ethical dilemmas* and *ethical decisions*.

Addressing Ethical Dilemmas

An **ethical dilemma** is a morally problematic situation: You have to pick between two or more acceptable but often opposing alternatives that are important to different groups. Experts often frame this type of situation as a "right-versus-right" decision. It's the sort of decision that Johnson & Johnson (known as J&J) CEO James Burke had to make in 1982 (Kaplan, 2012). On September 30, twelve-year-old Mary Kellerman of Chicago died after her parents gave her Extra-Strength Tylenol. That same morning, twenty-seven-year-old Adam Janus, also of Chicago, died after taking Tylenol for minor chest pain. That night, when family members came to console his parents, Adam's brother and his wife took Tylenol from the same bottle and died within forty-eight hours. Over the next two weeks, four more people in Chicago died after taking Tylenol. The actual connection between Tylenol and the series of deaths wasn't made until an off-duty fireman realized from news reports that every victim had taken Tylenol. As consumers panicked, J&J pulled Tylenol off Chicago-area retail shelves. Researchers discovered Tylenol capsules containing large amounts of deadly cyanide. Because the poisoned bottles came from batches originating at different J&J plants, investigators determined that the tampering had occurred after the product had been shipped.

So J&J wasn't at fault. But CEO Burke was still faced with an extremely serious dilemma: Was it possible to respond to the tampering cases without destroying the reputation of a highly profitable brand? Burke had two options:

- He could recall only the lots of Extra-Strength Tylenol that were found to be tainted with cyanide. This was the path followed by Perrier executives in 1991 when they discovered that cases of bottled water had been poisoned with benzine. This option favored J&J financially but possibly put more people at risk.
- Burke could order a nationwide recall–of all bottles of Extra-Strength Tylenol. This option would reverse the priority of the stakeholders, putting the safety of the public above stakeholders' financial interests.

Burke opted to recall all 31 million bottles of Extra-Strength Tylenol on the market. The cost to J&J was $100 million, but public reaction was quite positive. Less than six weeks after the crisis began, Tylenol capsules were reintroduced in new tamper-resistant bottles, and by responding quickly and appropriately, J&J was eventually able to restore the Tylenol brand to its previous market position. When Burke was applauded for moral courage, he replied that he'd simply adhered to the long-standing J&J credo that put the interests of customers above those of other stakeholders. His only regret was that the tamperer was never caught (Weber, 1999).

If you're wondering what your thought process should be if you're confronted with an ethical dilemma, you could do worse than remember the mental steps listed in Figure 3.3: How to Face an Ethical Dilemma–which happen to be the steps that James Burke took in addressing the Tylenol crisis:

1. **Define the problem:** How to respond to the tampering case without destroying the reputation of the Tylenol brand.
2. **Identify feasible options:** (1) Recall only the lots of Tylenol that were found to be tainted with cyanide or (2) order a nationwide recall of all bottles of Extra-Strength Tylenol.
3. **Assess the effect of each option on stakeholders:** Option 1 (recalling only the tainted lots of Tylenol) is cheaper but puts more people at risk. Option 2 (recalling all bottles of Extra-Strength Tylenol) puts the safety of the public above stakeholders' financial interests.
4. **Establish criteria for determining the most appropriate action:** Adhere to the J&J credo, which puts the interests of customers above those of other stakeholders.
5. **Select the best option based on the established criteria:** In 1982, Option 2 was selected, and a nationwide recall of all bottles of Extra-Strength Tylenol was conducted.

Figure 3.3: How to Face an Ethical Dilemma

Making Ethical Decisions

In contrast to the "right-versus-right" problem posed by an ethical dilemma, an **ethical decision** entails a "right-versus-wrong" decision—one in which there is a right (ethical) choice and a wrong (unethical or illegal) choice. When you make a decision that's unmistakably unethical or illegal, you've committed an **ethical lapse**. Betty Vinson, for example, had an ethical lapse when she caved in to her bosses' pressure to cook the WorldCom books. If you're presented with what appears to be this type of choice, asking yourself the questions in Figure 3.4: How to Avoid an Ethical Lapse will increase your odds of making an ethical decision.

Ask yourself:

1. Is the action illegal?

2. Is it unfair to some parties?

3. If I take it, will I feel badly about it?

4. Will I be ashamed to tell my family, friends, coworkers, or boss?

5. Will I be embarrassed if my action is written up in the local newspaper?

Figure 3.4: How to Avoid an Ethical Lapse

To test the validity of this approach, let's take a point-by-point look at Betty Vinson's decisions:

1. Her actions were clearly illegal.
2. They were unfair to the workers who lost their jobs and to the investors who suffered financial losses (and also to her family, who shared her public embarrassment).
3. She definitely felt bad about what she'd done.
4. She was embarrassed to tell other people what she had done.
5. Reports of her actions appeared in her local newspaper (and just about every other newspaper in the country).

So Vinson could have answered our five test questions with five yeses. To simplify matters, remember the following rule of thumb: If you answer yes to *any one of these five questions*, odds are that you're about to do something you shouldn't.

Revisiting Johnson & Johnson

As discussed earlier in this section, Johnson & Johnson received tremendous praise for the actions taken by its CEO, James Burke, in response to the 1982 Tylenol catastrophe. But things change. To learn how a company can destroy its good reputation, let's fast forward to 2008 and revisit J&J and its credo, which states, "We believe our first responsibility is to the doctors, nurses and patients, to mothers and fathers and all others who use our products and services. In meeting their needs everything we do must be of high quality" (Credo, Johnson & Johnson, 2011). How could a company whose employees believed so strongly in its credo find itself under criminal and congressional investigation for a series of recalls due to defective products? (Kimes, 2010) In a three-year period, the company recalled twenty-four products, including Children's, Infants' and Adults' Tylenol, Motrin, and Benadryl (McNeil Product Recall Informations, 2011); 1-Day Acuvue TruEye contact lenses sold outside the U.S. (Berkrot, 2010); and hip replacements (New York Times, 2010).

Unlike the 1982 J&J Tylenol recall, no one died from the defective products, but customers were certainly upset to find they had purchased over-the-counter medicines for themselves and their children that were potentially contaminated with dark particles or tiny specks of metal (Kimes, 2010); contact lenses that contained a type of acid that caused stinging or pain when inserted in the eye (Rockoff & Kamp, 2010); and defective hip implants that required patients to undergo a second hip replacement (Singer, 2010).

Who bears the responsibility for these image-damaging blunders? We'll identify two individuals who were at least partially responsible for the decline of J&J's reputation: The first is the current CEO—William Weldon—who has been criticized for being largely invisible and publicly absent during the recalls (Kimes, 2010). Additionally, he admitted that he did not understand the consumer division where many of the quality control problems originated (Kimes, 2010). Some members of the board of directors were not pleased with his actions (or inactions) and were upset at the revenue declines from the high-profile recalls. Consequently, Weldon was given only a 3 percent raise for 2011, and his end-of-year bonus was cut by 45 percent. But don't cry for him: His annual compensation for the year (including salary, bonus, and stock options) was $23 million—down from $26 million in the previous year (Perrone, 2011).

The second individual who was at least partially responsible for the decline of J&J's reputation is Colleen Goggins, Worldwide Chairman of J&J's Consumer Group, who was in charge of the factories that produced many of the recalled products. She was heavily criticized by fellow employees for her excessive cost-cutting measures and her propensity to replace experienced scientists with new hires (Kimes, 2010). In addition, she was implicated in an unbelievably foolish and extremely unethical behavior to avoid publically disclosing another J&J recall of a defective product.

Here is the story behind the unethical scheme: After learning that J&J had released packets of Motrin that did not dissolve correctly, the company hired contractors to go into convenience stores and secretly buy up every pack of Motrin on the shelves. The instructions given to the contractors were the following: "You should simply 'act' like a regular customer while making these purchases. THERE MUST BE NO MENTION OF THIS BEING A RECALL OF THE PRODUCT!" (Kimes, 2010) In May 2010, when Goggins appeared before a congressional committee investigating the "phantom recall," she testified that she was not aware of the behavior of the contractors (Silverman, 2010) and that she had "no knowledge of instructions to contractors involved in the phantom recall to not tell store employees what they were doing." In her September 2010 testimony to the House Committee on Oversight and Government Reform, she acknowledged that the company wrote those instructions. She also told the committee she was retiring. This had to be a major disappointment for her. Before J&J started falling apart, she was a contender to take over as CEO when Weldon retired. But, as is true with Weldon, don't shed too many tears for her. Goggins departed from J&J a wealthy woman after cashing in one-third of her shares of company stock for $3 million[1].

From a right-versus-wrong point of view, both Weldon and Goggins acted inappropriately. Their actions caused harm to others, including consumers, employees, and investors. They most likely felt badly about what happened, were embarrassed to discuss the situation with others, and regretted the fact that almost every newspaper in the country carried the story of J&J's downfall.

Regardless of whom is to blame, the bottom line is this: What was once an admired company is tarnished. J&J went from a most admired company to a struggling company that will require more than a Band-Aid to heal its business

wounds (Kimes, 2010). Whether J&J can regain the public's trust is a question that no one can answer at this time. At this point, consumers have a right to ask the questions: Should I pay a premium for J&J products given the company's recent track record of poor quality control?

What to Do When the Light Turns Yellow

Like our five questions, some ethical problems are fairly straightforward. Others, unfortunately, are more complicated, but it will help to think of our five-question test as a set of signals that will warn you that you're facing a particularly tough decision—that you should think carefully about it and perhaps consult someone else. The situation is like approaching a traffic light. Red and green lights are easy; you know what they mean and exactly what to do. Yellow lights are trickier. Before you decide which pedal to hit, try posing our five questions. If you get a single yes, you'll be much better off hitting the brake (Online Ethics Center for Engineering and Science, 2006).

Key Takeaways

- Businesspeople face two types of ethical challenges: ethical dilemmas and ethical decisions.
- An **ethical dilemma** is a morally problematic situation in which you must choose between two or more alternatives that aren't equally acceptable to different groups.

- Such a dilemma is often characterized as a "right-versus-right" decision and is usually solved in a series of five steps:

  1. Define the problem and collect the relevant facts.
  2. Identify feasible options.
  3. Assess the effect of each option on **stakeholders** (owners, employees, customers, communities).
  4. Establish criteria for determining the most appropriate option.
  5. Select the best option, based on the established criteria.

- An **ethical decision** entails a "right-versus-wrong" decision—one in which there's a right (ethical) choice and a wrong (unethical or downright illegal) choice.
- When you make a decision that's unmistakably unethical or illegal, you've committed an **ethical lapse**.

- If you're presented with what appears to be an ethical decision, asking yourself the following questions will improve your odds of making an ethical choice:

  1. Is the action illegal?
  2. Is it unfair to some parties?
  3. If I take it, will I feel bad about it?
  4. Will I be ashamed to tell my family, friends, coworkers, or boss about my action?
  5. Would I want my decision written up in the local newspaper?

- If you answer yes to any one of these five questions, you're probably about to do something that you shouldn't.

Exercise

Explain the difference between an ethical dilemma and an ethical decision. Then provide an example of each. Describe an ethical lapse and provide an example.

3.4 Identifying Ethical Issues

Make no mistake about it: When you enter the business world, you'll find yourself in situations in which you'll have to choose the appropriate behavior. How, for example, would you answer questions like the following?

- Is it OK to accept a pair of sports tickets from a ==supplier==?
- Can I buy office supplies from my brother-in-law?
- Is it appropriate to donate company funds to my local community center?
- If I find out that a friend is about to be fired, can I warn her?
- Will I have to lie about the quality of the goods I'm selling?
- Can I take personal e-mails and phone calls at work?
- What do I do if I discover that a ==coworker== is committing fraud?

Obviously, the types of situations are numerous and varied. Fortunately, we can break them down into a few basic categories: *bribes*, *conflicts of interest*, *conflicts of loyalty*, *issues of honesty and integrity*, and *whistle-blowing*. Let's look a little more closely at each of these categories.

Bribes versus Gifts

It's not uncommon in business to give and receive small gifts of appreciation. But when is a gift unacceptable? When is it really a ==bribe==? If it's OK to give a bottle of wine to a corporate client during the holidays, is it OK to give a case of wine? If your company is trying to get a big contract, is it appropriate to send a gift to the key decision maker? If it's all right to invite a business acquaintance to dinner or to a ball game, is it also all right to offer the same person a fully paid weekend getaway?

There's often a fine line between a gift and a bribe. The questions that we've just asked, however, may help in drawing it, because they raise key issues in determining how a gesture should be interpreted: the cost of the item, the timing of the gift, the type of gift, and the connection between the giver and the receiver. If you're on the receiving end, it's a good idea to refuse any item that's overly generous or given for the purpose of influencing a decision. But because accepting even small gifts may violate company rules, the best advice is to check on company policy.

JCPenney's "Statement of Business Ethics," for instance, states that employees can't accept any cash gifts or any ==noncash gifts== except those that have a value below $50 and that are generally used by the giver for ==promotional purposes==. Employees can attend paid-for business functions, but other forms of entertainment, such as sports events and golf outings, can be accepted only if it's practical for the Penney's employee to reciprocate. Trips of several days can't be accepted under any circumstances (JCPenney Co., 2006).

Conflicts of Interest

==Conflicts of interest== occur when individuals must choose between taking actions that promote their personal interests over the interests of others or taking actions that don't. A conflict can exist, for example, when an employee's own interests interfere with, or have the potential to interfere with, the best interests of the company's stakeholders (management, customers, owners). Let's say that you work for a company with a contract to cater events at your college

and that your uncle owns a local bakery. Obviously, this situation could create a conflict of interest (or at least give the appearance of one—which, by the way, is a problem in itself). When you're called on to furnish desserts for a luncheon, you might be tempted to throw some business your uncle's way even if it's not in the best interest of the catering company that you work for.

What should you do? You should probably disclose the connection to your boss, who can then arrange things so that your personal interests don't conflict with the company's. You may, for example, agree that if you're assigned to order products like those that your uncle makes, you're obligated to find another supplier. Or your boss may make sure that someone else orders bakery products.

The same principle holds that an employee shouldn't use private information about an employer for personal financial benefit. Say that you learn from a coworker at your pharmaceutical company that one of its most profitable drugs will be pulled off the market because of dangerous side effects. The recall will severely hurt the company's financial performance and cause its stock price to plummet. Before the news becomes public, you sell all the stock you own in the company. What you've done isn't merely unethical: It's called ==**insider trading**==, it's illegal, and you could go to jail for it.

Conflicts of Loyalty

Sometimes you find yourself in a bind between being loyal either to your employer or to a friend or family member. Perhaps you just learned that a coworker, a friend of yours, is about to be downsized out of his job. You also happen to know that he and his wife are getting ready to make a deposit on a house near the company headquarters. From a work standpoint, you know that you shouldn't divulge the information. From a friendship standpoint, though, you feel it's your duty to tell your friend. Wouldn't he tell you if the situation were reversed? So what do you do? As tempting as it is to be loyal to your friend, you shouldn't. As an employee, your primary responsibility is to your employer. You might be able to soften your dilemma by convincing a manager with the appropriate authority to tell your friend the bad news before he puts down his deposit.

Issues of Honesty and Integrity

Master investor Warren Buffet once told a group of business students the following:

> I cannot tell you that honesty is the best policy. I can't tell you that if you behave with perfect honesty and integrity somebody somewhere won't behave the other way and make more money. But honesty is a good policy. You'll do fine, you'll sleep well at night and you'll feel good about the example you are setting for your coworkers and the other people who care about you" (Gostick & Telford, 2003).

If you work for a company that settles for its employees' merely obeying the law and following a few internal regulations, you might think about moving on. If you're being asked to deceive customers about the quality or value of your product, you're in an ethically unhealthy environment.

Think about this story:

> A chef put two frogs in a pot of warm soup water. The first frog smelled the onions, recognized the danger, and immediately jumped out. The second frog hesitated: The water felt good, and he decided to stay and relax for a minute. After all, he could always jump out when things got too hot (so to speak). As the water got hotter,

however, the frog adapted to it, hardly noticing the change. Before long, of course, he was the main ingredient in frog-leg soup" (Gostick & Telford, 2003).

So, what's the moral of the story? Don't sit around in an ethically toxic environment and lose your integrity a little at a time; get out before the water gets too hot and your options have evaporated.

Fortunately, a few rules of thumb can guide you. We've summed them up in Figure 3.5: How to Maintain Honesty and Integrity.

Figure 3.5: How to Maintain Honesty and Integrity

Whistle-Blowing

As we've seen, the misdeeds of Betty Vinson and her accomplices at WorldCom didn't go undetected. They caught the eye of Cynthia Cooper, the company's director of internal auditing. Cooper, of course, could have looked the other way, but instead she summoned up the courage to be a **whistle-blower**—an individual exposes illegal or unethical behavior in an organization. Like Vinson, Cooper had majored in accounting at Mississippi State and was a hard-working, dedicated

employee. Unlike Vinson, however, she refused to be bullied by her boss, CFO Scott Sullivan. In fact, she had tried to tell not only Sullivan but also auditors from the huge Arthur Andersen accounting firm that there was a problem with WorldCom's books. The auditors dismissed her warnings, and when Sullivan angrily told her to drop the matter, she started cleaning out her office. But she didn't relent. She and her team worked late each night, conducting an extensive, secret investigation. Two months later, Cooper had evidence to take to Sullivan, who told her once again to back off. Again, however, she stood up to him, and though she regretted the consequences for her WorldCom coworkers, she reported the scheme to the company's board of directors. Within days, Sullivan was fired and the largest ==accounting fraud== in history became public.

As a result of Cooper's actions, executives came clean about the company's financial situation. The conspiracy of fraud was brought to an end, and though public disclosure of WorldCom's problems resulted in massive stock-price declines and employee layoffs, investor and employee losses would have been greater without Cooper's intervention.

Even though Cooper did the right thing, the experience wasn't exactly gratifying. A lot of people applauded her action, but many coworkers shunned her; some even blamed *her* for the company's troubles. She's never been thanked by any senior executive at WorldCom. Five months after the fraud went public, new CEO Michael Capellas assembled what was left of the demoralized workforce to give them a pep talk on the company's future. The senior management team mounted the stage and led the audience in a rousing rendition of "If you're happy and you know it, clap your hands!" Cynthia Cooper wasn't invited (Gostick & Telford, 2003).

Whistle-blowing often means ==career suicide==. A survey of two hundred whistle-blowers conducted by the National Whistleblower Center found that half of them had been fired for blowing the whistle (National Whistleblower Center, 2002). Even those who get to keep their jobs experience painful repercussions. As long as they stay, some people will treat them (as one whistle-blower puts it) "like skunks at a picnic"; if they leave, they're frequently blackballed in the industry (Dwyer, et. al., 2002). On a positive note, there's the 2002 Sarbanes-Oxley Act, which protects whistle-blowers under federal law.

For her own part, Cynthia Cooper doesn't regret what she did. As she told a group of students at Mississippi State: "Strive to be persons of honor and integrity. Do not allow yourself to be pressured. Do what you know is right even if there may be a price to be paid" (Waller, 2003). If your company tells employees to do whatever it takes, push the envelope, look the other way, and "be sure that we make our numbers," you have three choices: go along with the policy, try to change things, or leave. If your personal integrity is part of the equation, you're probably down to the last two choices (Gostick & Telford, 2003).

Refusing to Rationalize

Despite all the good arguments in favor of doing the right thing, why do many reasonable people act unethically (at least at times)? Why do good people make bad choices? According to one study, there are four common rationalizations for justifying misconduct: (Gellerman, 2003)

1. *My behavior isn't really ==illegal== or ==immoral==.* Rationalizers try to convince themselves that an action is OK if it isn't downright illegal or blatantly immoral. They tend to operate in a gray area where there's no clear evidence that the action is wrong.
2. *My action is in everyone's best interests.* Some rationalizers tell themselves: "I know I lied to make the deal, but it'll bring in a lot of business and pay a lot of bills." They convince themselves that they're expected to act in a certain way, forgetting the classic parental parable about jumping off a cliff just because your friends are (Gostick & Telford, 2003).
3. *No one will find out what I've done.* Here, the self-questioning comes down to "If I didn't get caught, did I really do it?" The answer is yes. There's a simple way to avoid succumbing to this rationalization: Always act as if you're

being watched.

4. *The company will condone my action and protect me.* This justification rests on a fallacy. Betty Vinson may honestly have believed that her actions were for the good of the company and that her boss would, therefore, accept full responsibility (as he promised). When she goes to jail, however, she'll go on her own.

Here's another rule of thumb: If you find yourself having to rationalize a decision, it's probably a bad one. Over time, you'll develop and hone your ethical decision-making skills.

Key Takeaways

- When you enter the business world, you'll find yourself in situations in which you'll have to choose the appropriate behavior.
- You'll need to know how to distinguish a bribe from an acceptable gift.
- You'll encounter situations that give rise to a **conflict of interest**—situations in which you'll have to choose between taking action that promotes your personal interest and action that favors the interest of others.
- Sometimes you'll be required to choose between loyalty to your employer and loyalty to a friend or family member.
- In business, as in all aspects of your life, you should act with honesty and integrity.
- At some point in your career, you might become aware of wrongdoing on the part of others and will have to decide whether to report the incident and become a **whistle-blower**—an individual who exposes illegal or unethical behavior in an organization.

- Despite all the good arguments in favor of doing the right thing, some businesspeople still act unethically (at least at times). Sometimes they use one of the following rationalizations to justify their conduct:

  1. The behavior isn't really illegal or immoral.
  2. The action is in everyone's best interests.
  3. No one will find out what I've done.
  4. The company will condone my action and protect me.

Exercises

1. Each December, *Time* magazine devotes its cover to the person who has made the biggest impact on the world that year. *Time*'s 2002 pick was not one person, but three: Cynthia Cooper (WorldCom), Coleen Rowley (the FBI), and Sherron Watkins (Enron). All three were whistle-blowers. We detailed Cynthia Cooper's courage in exposing fraud at WorldCom in this chapter, but the stories of the other two whistle-blowers are equally worthwhile. Go to the Time.com Web site (http://www.time.com/time/magazine/article/0,9171,1003988,00.html) and read a posted story about Rowley, or visit the Time.com Web site (http://www.time.com/time/magazine/article/0,9171,1003992,00.html) and read a posted story about

Watkins. Then answer the following questions:

- ◦ What wrongdoing did the whistle-blower expose?
- ◦ What happened to her when she blew the whistle? Did she experience retaliation?
- ◦ Did she do the right thing? Would you have blown the whistle? Why or why not?

2. You own a tax-preparation company with ten employees who prepare tax returns. In walking around the office, you notice that several of your employees spend a lot of time making personal use of their computers, checking personal e-mails, or shopping online. After doing an Internet search on employer computer monitoring, respond to these questions:

- ◦ Is it unethical for your employees to use their work computers for personal activities?
- ◦ Is it ethical for you to monitor computer usage?
- ◦ Do you have a legal right to do it?
- ◦ If you decide to monitor computer usage in the future, what rules would you make, and how would you enforce them?

3.5 The Organizational Approach to Ethics

Ethics is more than a matter of individual behavior; it's also about organizational behavior. Employees' actions aren't based solely on personal values alone: They're influenced by other members of the organization, from top managers and supervisors to coworkers and subordinates. So how can ethical companies be created and sustained? In this section, we'll examine some of the most reasonable answers to this question.

Ethical Leadership

Organizations have unique ==*cultures*==—ways of doing things that evolve through shared values and beliefs. An organization's culture is strongly influenced by senior executives, who tell members of the organization what's considered acceptable behavior and what happens if it's violated. In theory, the tone set at the top of the organization promotes ethical behavior, but sometimes (as at Enron) it doesn't.

Before its sudden demise, Enron fostered a growth-at-any-cost culture that was defined by the company's top executives. Said one employee, "It was all about taking profits now and worrying about the details later. The Enron system was just ripe for corruption." Coupled with the relentless pressure to generate revenue—or at least to look as if you were generating it—was a climate that discouraged employees from questioning the means by which they were supposed to do it. There may have been chances for people to speak up, but no one did. "I don't think anyone started out with a plan to defraud the company," reflects another ex-employee. "Everything at Enron seemed to start out right, but somewhere something slipped. People's mentality switched from focusing on the future good of the company to 'let's just do it today.'" (Fowler, 2002)

Exercising Ethical Leadership

Leaders should keep in constant touch with subordinates about ethical policies and expectations. They should be available to help employees identify and solve ethical problems, and should encourage them to come forward with concerns. They're responsible for minimizing opportunities for wrongdoing and for exerting the controls needed to enforce company policies. They should also think of themselves as role models. Subordinates look to their supervisors to communicate policies and practices regarding ethical behavior, and as a rule, actions speak more loudly than words: If managers behave ethically, subordinates will probably do the same.

This is exactly the message that senior management at Martin Marietta (now a part of Lockheed Martin) sent to members of their organization. A leading producer of construction components, the company at the time was engaged in a tough competitive battle over a major contract. Because both Martin Marietta and its main competitor were qualified to do the work, the job would go to the lower bid. A few days before bids were due, a package arrived at Martin Marietta containing a copy of the competitor's bid sheet (probably from a disgruntled employee trying to sabotage his or her employer's efforts). The bid price was lower than Martin Marietta's. In a display of ethical backbone, executives immediately turned the envelope over to the government and informed the competitor. No, they didn't change their own bid in the meantime, and, no, they didn't get the job. All they got was an opportunity to send a clear message to the entire organization (Augustine, 2006).

By the same token, leaders must be willing to hold subordinates accountable for their conduct and to take appropriate action. The response to unethical behavior should be prompt and decisive. One CEO of a large company discovered that some of his employees were "dumpster diving" in the trash outside a competitor's offices (which is to say, they

were sifting around for information that would give them a competitive advantage). The manager running the espionage operation was a personal friend of the CEO's, but he was immediately fired, as were his "operatives." The CEO then informed his competitor about the venture and returned all the materials that had been gathered. Like the top managers at Martin Marietta, this executive sent a clear message to people in his organization: namely, that deviations from accepted behavior would not be tolerated (Austine, 2006).

It's always possible to send the wrong message. In August 2004, newspapers around the country carried a wire-service story titled "Convicted CEO Getting $2.5 Million Salary While He Serves Time." Interested readers found that the board of directors of Fog Cutter Capital Group had agreed to pay CEO Andrew Wiederhorn (and give him a bonus) while he served an eighteen-month federal-prison term for bribery, filing false tax returns, and financially ruining his previous employer (from which he'd also borrowed $160 million). According to the board, they couldn't afford to lose a man of Wiederhorn's ability. The entire episode ended up on TheStreet.com's list of "The Five Dumbest Things on Wall Street This Week." (McCall, 2006)

Tightening the Rules

In response to the recent barrage of corporate scandals, more large companies have taken additional steps to encourage employees to behave according to specific standards and to report wrongdoing. Even companies with excellent reputations for integrity have stepped up their efforts.

Codes of Conduct

Like many firms, Hershey Foods now has a formal code of conduct: a document describing the principles and guidelines that all employees must follow in the course of all job-related activities. It's available on the company intranet and in printed form and, to be sure that everyone understands it, the company offers a training program. The Hershey code covers such topics as the use of corporate funds and resources, conflict of interest, and the protection of proprietary information. It explains how the code will be enforced, emphasizing that violations won't be tolerated. It encourages employees to report wrongdoing and provides instructions on reporting violations (which are displayed on posters and printed on wallet-size cards). Reports can be made though a Concern Line, by e-mail, or by regular mail; they can be anonymous; and retaliation is also a serious violation of company policy (Hershey Foods, 2006).

Key Takeaways

- Ethics is more than a matter of individual behavior; it's also about organizational behavior. Employees' actions aren't based solely on personal values; they're also influenced by other members of the organization.
- Organizations have unique *cultures*—ways of doing things that evolve through shared values and beliefs.
- An organization's culture is strongly influenced by top managers, who are responsible for letting members of the organization know what's considered acceptable behavior and what happens if it's violated.
- Subordinates look to their supervisors as role models of ethical behavior. If managers act ethically,

subordinates will probably do the same.

- Those in positions of leadership should hold subordinates accountable for their conduct and take appropriate action.
- Many organizations have a formal **code of conduct** that describes the principles and guidelines that all members must follow in the course of job-related activities.

Exercises

1. You're the CEO of a company that sells golf equipment, including clubs, bags, and balls. When your company was started and had only a handful of employees, you were personally able to oversee the conduct of your employees. But with your current workforce of nearly fifty, it's time to prepare a formal code of conduct in which you lay down some rules that employees must follow in performing job-related activities. As a model for your own code, you've decided to use Macy's Code of Business Conduct and Ethics. Go to the company's Web site (**https://hr.macys.net/csw/u/pub/pdfs/1221.pdf**) to view its posted code of business conduct. Your document won't be as thorough as Macy's, but it will cover the following areas: (1) conflicts of interest; (2) acceptance of gifts, services, or entertainment; (3) protection of confidential information; (4) use of company funds or assets for personal purposes; (5) competing fairly and ethically; and (6) adherence to code. Draw up a code of conduct for your company.
2. Think of someone whom you regard as an ethical leader. It can be anyone connected with you—a businessperson, educator, coach, politician, or family member. Explain why you believe the individual is ethical in his or her leadership.

3.6 Corporate Social Responsibility

Corporate social responsibility refers to the approach that an organization takes in balancing its responsibilities toward different stakeholders when making legal, economic, ethical, and social decisions. What motivates companies to be "socially responsible" to their various stakeholders? We hope it's because they want to do the right thing, and for many companies, "doing the right thing" is a key motivator. The fact is, it's often hard to figure out what the "right thing" is: What's "right" for one group of stakeholders isn't necessarily just as "right" for another. One thing, however, is certain: Companies today are held to higher standards than ever before. Consumers and other groups consider not only the quality and price of a company's products but also its character. If too many groups see a company as a poor corporate citizen, it will have a harder time attracting qualified employees, finding investors, and selling its products. Good corporate citizens, by contrast, are more successful in all these areas.

Figure 3.6 "The **Corporate Citizen**" presents a model of corporate responsibility based on a company's relationships with its *stakeholders*. In this model, the focus is on managers—not owners—as the principals involved in all these relationships. Here, owners are the stakeholders who invest risk capital in the firm in expectation of a financial return. Other stakeholders include employees, suppliers, and the communities in which the firm does business. Proponents of this model hold that customers, who provide the firm with revenue, have a special claim on managers' attention. The arrows indicate the two-way nature of corporation-stakeholder relationships: All stakeholders have some claim on the firm's resources and returns, and it's management's job to make decisions that balance these claims (Baron, D. P., 2003).
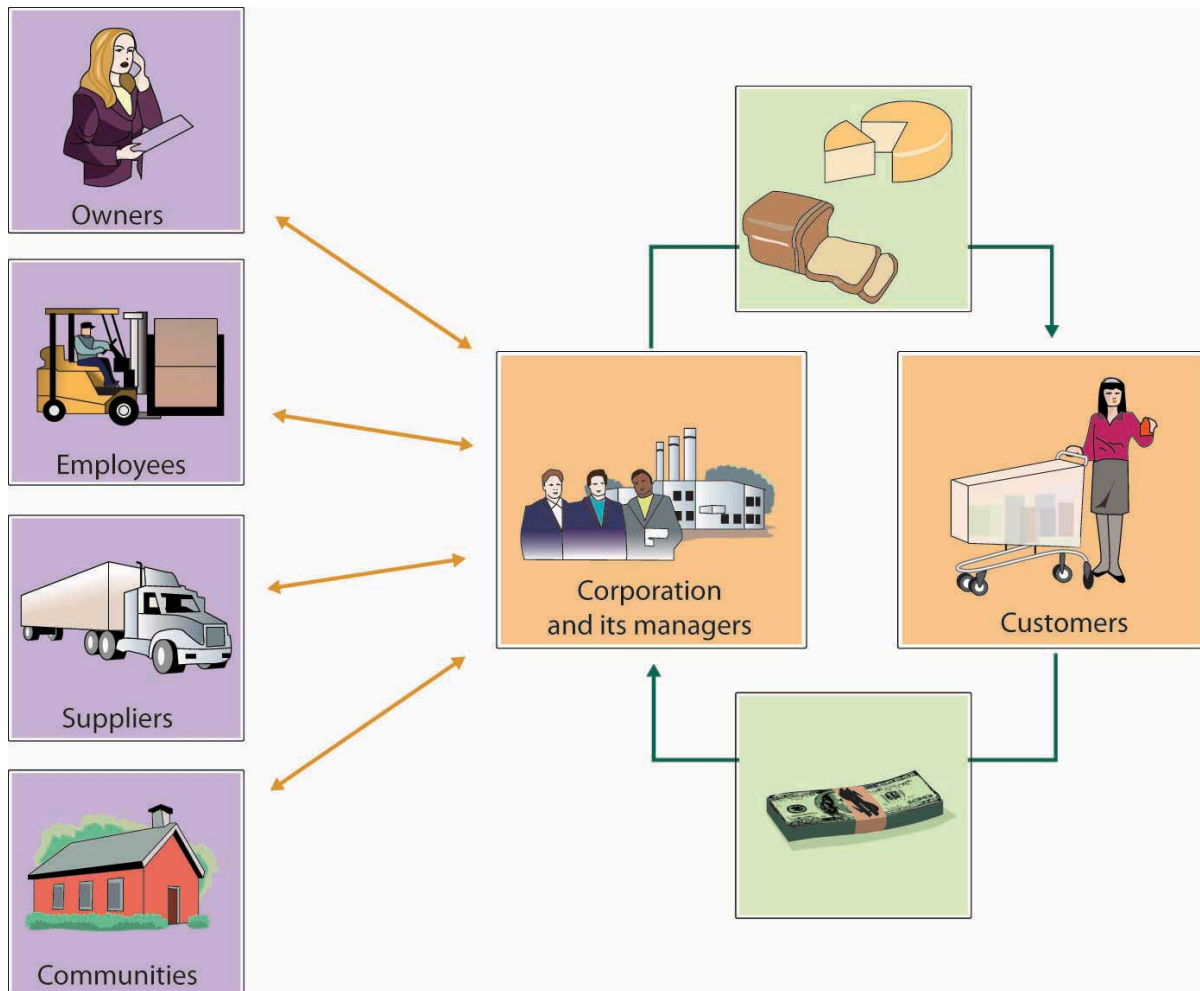

Figure 3.6: The Corporate Citizen

Let's look at some of the ways in which companies can be "socially responsible" in considering the claims of various stakeholders.

Owners

<mark>Owners</mark> invest money in companies. In return, the people who run a company have a responsibility to increase the value of owners' investments through profitable operations. Managers also have a responsibility to provide owners (as well as other stakeholders having financial interests, such as creditors and suppliers) with accurate, reliable information about the performance of the business. Clearly, this is one of the areas in which WorldCom managers fell down on the job. Upper-level management purposely deceived shareholders by presenting them with fraudulent financial statements.

Fiduciary Responsibilities

Finally, managers have a <mark>fiduciary responsibility</mark> to owners: They're responsible for safeguarding the company's assets and handling its funds in a trustworthy manner. This is a responsibility that was ignored by top executives at both Adelphia and Tyco, whose associates and families virtually looted company assets. To enforce managers' fiduciary responsibilities for a firm's financial statements and accounting records, the Sarbanes-Oxley Act of 2002 requires CEOs and CFOs to attest to their accuracy. The law also imposes penalties on corporate officers, auditors, board members, and any others who commit fraud.

Employees

Companies are responsible for providing employees with safe, healthy places to work—as well as environments that are free from sexual harassment and all types of discrimination. They should also offer appropriate wages and benefits. In the following sections, we'll take a closer look at each of these areas of responsibility.

Safety and Health
Figure 3.7: Workplace Deaths by Event or Exposure, 2010

Though it seems obvious that companies should guard workers' safety and health, a lot of them simply don't. For over four decades, for example, executives at Johns Manville suppressed evidence that one of its products, asbestos, was responsible for the deadly lung disease developed by many of its workers (Gellerman, 2003). The company concealed chest X-rays from stricken workers, and executives decided that it was simply cheaper to pay workers' compensation claims (or let workers die) than to create a safer work environment. A New Jersey court was quite blunt in its judgment: Johns Manville, it held, had made a deliberate, cold-blooded decision to do nothing to protect at-risk workers, in blatant disregard of their rights (Gellerman, 2003).

About four in one hundred thousand U.S. workers die in workplace "incidents" each year. The Department of Labor categorizes deaths caused by conditions like those at Johns Manville as "exposure to harmful substances or environments." How prevalent is this condition as a cause of workplace deaths? See Figure 3.7: Workplace Deaths by Event or Exposure, 2010, which breaks down workplace fatalities by cause. Some jobs are more dangerous than others. For a comparative overview based on workplace deaths by occupation, see Figure 3.8: Workplace Deaths by Industry, 2010.
Figure 3.8: Workplace Deaths by Industry, 2010

For most people, fortunately, things are better than they were at Johns Manville. Procter & Gamble (P&G), for example, considers the safety and health of its employees paramount and promotes the attitude that "Nothing we do is worth getting hurt for." With nearly one hundred thousand employees worldwide, P&G uses a measure of worker safety called "total incident rate per employee," which records injuries resulting in loss of consciousness, time lost from work, medical transfer to another job, motion restriction, or medical treatment beyond first aid. The company attributes the low rate of such incidents—less than one incident per hundred employees—to a variety of programs to promote workplace safety (Procter & Gamble, 2003).

Figure 3.9. Requiring workers to wear protective clothing like gloves, hard hats, and goggles cuts down on accidents. It also helps the firm reduce time lost from work due to injuries.

Freedom from Sexual Harassment

What is **sexual harassment**? The law is quite precise:

- Sexual harassment occurs when an employee makes "unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature" to another employee who doesn't welcome the advances.
- It's also sexual harassment when "submission to or rejection of this conduct explicitly or implicitly affects an individual's employment, unreasonably interferes with an individual's work performance or creates an intimidating, hostile or offensive work environment." (U.S. Equal Employment Opportunity Commission, 2012)

To prevent sexual harassment—or at least minimize its likelihood—a company should adopt a formal **anti-harassment** policy describing prohibited conduct, asserting its objections to the behavior, and detailing penalties for violating the policy (Grossman, 2012). Employers also have an obligation to investigate harassment complaints. Failure to enforce anti-harassment policies can be very costly. In 1998, for example, Mitsubishi paid $34 million to more than three hundred fifty female employees of its Normal, Illinois, plant to settle a sexual harassment case supported by the Equal Employment Opportunity Commission. The EEOC reprimanded the company for permitting an atmosphere of verbal and physical abuse against women, charging that female workers had been subjected to various forms of harassment, ranging from exposure to obscene graffiti and vulgar jokes to fondling and groping (Grossman, 2012).

Equal Opportunity and Diversity

People must be hired, evaluated, promoted, and rewarded on the basis of merit, not personal characteristics. This, too, is the law—namely, Title VII of the 1964 Civil Rights Act. Like most companies, P&G has a formal policy on hiring and promotion that forbids discrimination based on race, color, religion, gender, age, national origin, citizenship, sexual orientation, or disability. P&G expects all employees to support its commitment to equal employment opportunity and warns that those who violate company policies will face strict disciplinary action, including termination of employment (Procter & Gamble, 2012).

Equal Pay and the Wage Gap

The Equal Pay Act of 1963 requires equal pay for both men and women in jobs that entail equal skill, equal effort, equal responsibility, or similar working conditions. What has been the effect of the law after forty years? In 1963, women earned, on average, $0.589 for every $1 earned by men. By 2010, that difference—which we call the *wage gap*—has been closed to $0.812 to $1, or approximately 81 percent (Aamodt, 2011). Figure 3.10: Median Annual Earnings by Gender and Race provides some interesting numbers on the differences in annual earnings based not only on gender but on race, as well. Figure 3.11: Median Annual Earnings by Level of Education throws further light on the wage and unemployment gap when education is taken into consideration.
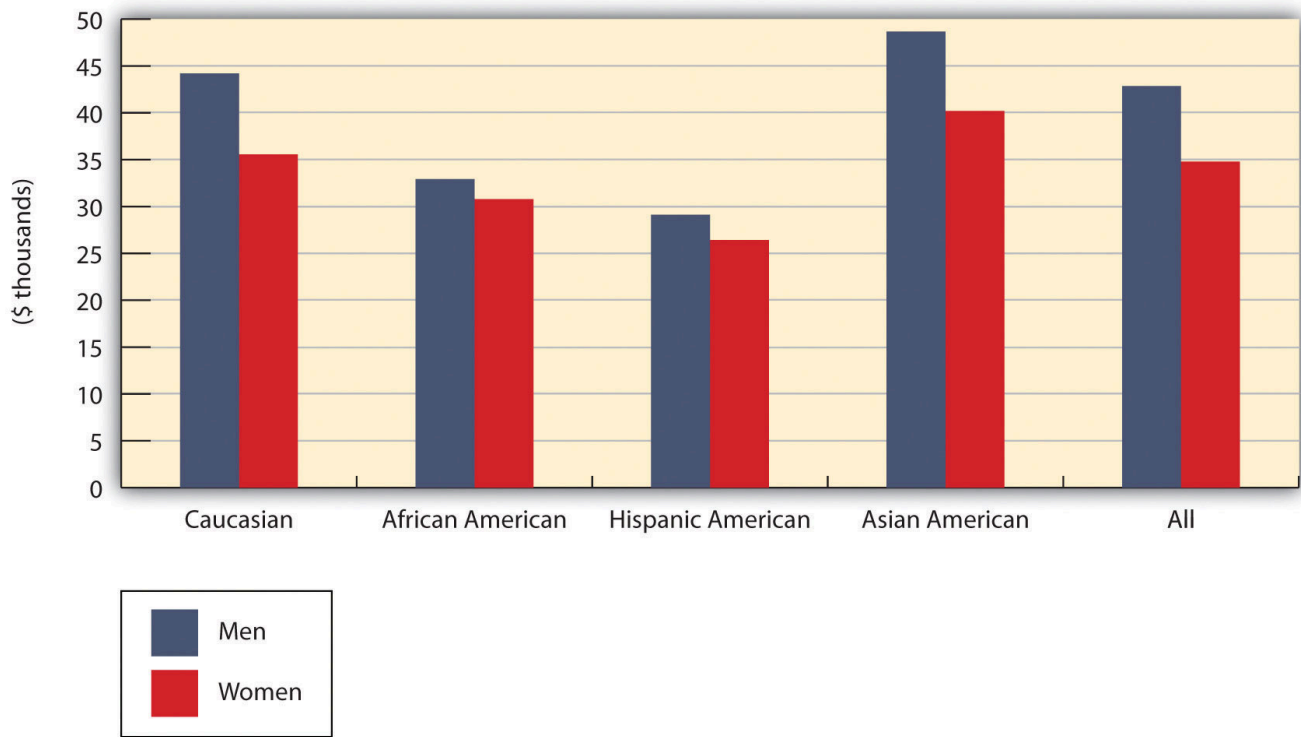

Figure 3.10: Median Annual Earnings by Gender and Race

What accounts for the difference, despite the mandate of federal law? For one thing, the jobs typically held by women tend to pay less than those typically held by men. In addition, men often have better job opportunities. For example, a man newly hired at the same time as a woman will often get a higher-paying assignment at the entry level. Coupled with the fact that the same sort of discrimination applies when it comes to training and promotions, women are usually relegated to a lifetime of lower earnings.
Figure 3.11: Median Annual Earnings by Level of Education. Education pays in higher earnings and lower unemployment rates. Note: Data are 2010 annual averages for persons age 25 and over. Earnings are for full-time wage and salary workers.

Building Diverse Workforces

In addition to complying with equal employment opportunity laws, many companies make special efforts to recruit employees who are underrepresented in the workforce according to sex, race, or some other characteristic. In helping to build more diverse workforces, such initiatives contribute to competitive advantage for two reasons: (1) People from diverse backgrounds bring new talents and fresh perspectives to an organization, typically enhancing creativity in the development of new products. (2) By reflecting more accurately the changing demographics of the marketplace, a diverse workforce improves a company's ability to serve an ethnically diverse population.

Wages and Benefits

At the very least, employers must obey laws governing minimum wage and overtime pay. A minimum wage is set by the federal government, though states can set their own rates. The current federal rate, for example, is $7.25, while the rate in the state of Washington is $8.67. When there's a difference, the higher rate applies (U.S. Department of Labor, 2012). By law, employers must also provide certain benefits—social security (which provides retirement benefits), unemployment insurance (which protects against loss of income in case of job loss), and workers' compensation (which covers lost wages and medical costs in case of on-the-job injury). Most large companies pay most of their workers more than minimum wage and offer considerably broader benefits, including medical, dental, and vision care, as well as pension benefits.

Customers

The purpose of any business is to satisfy customers, who reward businesses by buying their products. Sellers are also responsible—both ethically and legally—for treating customers fairly. The rights of consumers were first articulated by President John F. Kennedy in 1962 when he submitted to Congress a presidential message devoted to consumer issues (Waxman, 1993). Kennedy identified four consumer rights:

1. *The right to safe products.* A company should sell no product that it suspects of being unsafe for buyers. Thus, producers have an obligation to safety-test products before releasing them for public consumption. The automobile industry, for example, conducts extensive safety testing before introducing new models (though recalls remain common).
2. *The right to be informed about a product.* Sellers should furnish consumers with the product information that they need to make an informed purchase decision. That's why pillows have labels identifying the materials used to make them, for instance.
3. *The right to choose what to buy.* Consumers have a right to decide which products to purchase, and sellers should let them know what their options are. Pharmacists, for example, should tell patients when a prescription can be filled with a cheaper brand-name or generic drug. Telephone companies should explain alternative calling plans.
4. *The right to be heard.* Companies must tell customers how to contact them with complaints or concerns. They should also listen and respond.

Companies share the responsibility for the legal and ethical treatment of consumers with several government agencies: the Federal Trade Commission (FTC), which enforces consumer-protection laws; the Food and Drug Administration (FDA), which oversees the labeling of food products; and the Consumer Product Safety Commission, which enforces laws protecting consumers from the risk of product-related injury.

Communities

For obvious reasons, most communities see getting a new business as an asset and view losing one—especially a large employer—as a detriment. After all, the economic impact of business activities on local communities is substantial: They provide jobs, pay taxes, and support local education, health, and recreation programs. Both big and small businesses donate funds to community projects, encourage employees to volunteer their time, and donate equipment and products for a variety of activities. Larger companies can make greater financial contributions. Let's start by taking a quick look at the philanthropic activities of a few U.S. corporations.

Financial Contributions

Many large corporations donate a percentage of sales or profits to worthwhile causes. Retailer Target, for example, donates 5 percent of its profits—about $2 million per week—to schools, neighborhoods, and local projects across the country; its store-based grants underwrite programs in early childhood education, the arts, and family-violence prevention (Target Brands Inc., 2011). The late actor Paul Newman donated 100 percent of the profits from "Newman's Own" foods (salad dressing, pasta sauce, popcorn, and other products sold in eight countries). His company continues his legacy of donating all profits and distributing them to thousands of organizations, including the Hole in the Wall Gang camps for seriously ill children (Barrett, 2003; Newman, 2011).

Volunteerism

Many companies support employee efforts to help local communities. Patagonia, for example, a maker of outdoor gear and clothing, lets employees leave their jobs and work full-time for any environmental group for two months—with full salary and benefits; so far, more than 850 employees have taken advantage of the program (Patagonia, 2011).

Supporting Social Causes

Companies and executives often take active roles in initiatives to improve health and social welfare in the United States and elsewhere. Microsoft's former CEO Bill Gates intends to distribute more than $3 billion through the Bill and Melinda Gates Foundation, which funds global health initiatives, particularly vaccine research aimed at preventing infectious diseases, such as polio (Bill and Melinda Gates Foundation, 2011), in undeveloped countries (Ackman, 2012). Noting that children from low-income families have twice as many cavities and often miss school because of dental-related diseases, P&G invested $1 million a year to set up "cavity-free zones" for 3.3 million economically disadvantaged children at Boys and Girls Clubs nationwide. In addition to giving away toothbrushes and toothpaste, P&G provided educational programs on dental hygiene. At some locations, the company even maintained clinics providing affordable oral care to poor children and their families (Kotler & Lee, 2004). Proctor & Gamble recently committed to provide more than two billion liters of clean drinking water to adults and children living in poverty in developing countries. The company believes that this initiative will save an estimated ten thousand lives (Procter & Gamble web site, 2011).

Key Takeaways

- **Corporate social responsibility** refers to the approach that an organization takes in balancing its responsibilities toward different stakeholders when making legal, economic, ethical, and social decisions.
- Companies are socially responsible to their various stakeholders—owners, employees, customers, and the communities in which they conduct business.
- Owners invest money in companies. In return, the people who manage companies have a responsibility to increase the value of owners' investments through profitable operations.
- Managers have a responsibility to provide owners and other stakeholders with accurate, reliable financial information.
- They also have a **fiduciary responsibility** to safeguard the company's assets and handle its funds in a trustworthy manner.
- Companies have a responsibility to guard workers' safety and health and to provide them with a work environment that's free from sexual harassment.
- Businesses should pay appropriate wages and benefits, treat all workers fairly, and provide equal opportunities for all employees.
- Many companies have discovered the benefits of valuing diversity. People with diverse backgrounds bring new talents and fresh perspectives, and improve a company's ability to serve an ethically diverse population.
- Sellers are responsible—both ethically and legally—for treating customers fairly. Consumers have certain rights: to use safe products, to be informed about products, to choose what to buy, and to be

heard.

- Companies also have a responsibility to the communities in which they produce and sell their products. The economic impact of businesses on local communities is substantial. Companies have the following functions:

    1. Provide jobs
    2. Pay taxes
    3. Support local education, health, and recreation activities
    4. Donate funds to community projects
    5. Encourage employees to volunteer their time
    6. Donate equipment and products for a variety of activities

Exercises

1. Nonprofit organizations (such as your college or university) have social responsibilities to their stakeholders. Identify your school's stakeholders. For each category of stakeholder, indicate the ways in which your school is socially responsible to that group.
2. Pfizer is one of the largest pharmaceutical companies in the United States. It's in the business of discovering, developing, manufacturing, and marketing prescription drugs. While it's headquartered in New York, it sells products worldwide, and its corporate responsibility initiatives also are global. Go to the Pfizer Web site (http://www.pfizer.com/responsibility/global_health/global_health.jsp) and read about the firm's global corporate-citizenship initiatives (listed on the left sidebar). Write a brief report describing the focus of Pfizer's efforts and identifying a few key programs. In your opinion, why should U.S. companies direct corporate-responsibility efforts at people in countries outside the United States?

3.7 Environmentalism

Today, virtually everyone agrees that companies must figure out how to produce products without compromising the right of future generations to meet their own needs. Clearly, protecting natural resources is the right thing to do, but it also has become a business necessity. Companies' customers demand that they respect the environment. Let's identify some key environmental issues and highlight the ways in which the business community has addressed them.

Land Pollution

The land we live on has been polluted by the dumping of waste and increasing reliance on agricultural chemicals. It's pockmarked by landfills stuffed with the excess of a throwaway society. It's been strip-mined and deforested, and urban sprawl on every continent has squeezed out wetlands and farmlands and destroyed wildlife habitats.

Figure 3.12. Did you know your cozy fleece jacket is most likely made from recycled plastic bottles?

Protecting the land from further damage, then, means disposing of waste in responsible ways (or, better yet, reducing the amount of waste). At both national and global levels, we must resolve the conflicts of interest between those who benefit economically from logging and mining and those who argue that protecting the environment is an urgent matter. Probably municipalities must step in to save open spaces and wetlands.

Clothing manufacturer Patagonia has for years been in the forefront of efforts to protect the land. Each year, the company pledges either 1 percent of sales revenue or 10 percent of profits (whichever is larger) to protect and restore the natural environment (Patagonia Web site, 2011). According to its "Statement of Purpose," "Patagonia exists as a business to inspire and implement solutions to the environmental crisis." Instead of traditional materials for making clothes (such as regular cotton and fleece), Patagonia relies on organically grown cotton, which is more expensive,

because it doesn't requires harmful chemicals (Patagonia Web site "Fabric", 2011). Its fleece products are made with *postconsumer recycled* (PCR) fleece, which is actually made with recycled plastic bottles. So far, the company's efforts to build a more sustainable system has saved 86 million plastic bottles from ending up in landfills (Patagonia Web site, "Fabric", 2011).

Air Pollution

It's amazing what we can do to something as large as the atmosphere. Over time, we've managed to pollute the air with emissions of toxic gases and particles from factories, power plants, office buildings, cars, trucks, and even farms. In addition, our preferred method of deforestation is burning, a major source of air pollution. In some places, polluted air causes respiratory problems, particularly for the young and elderly. Factory emissions, including sulfur and other gases, mix with air and rain to produce *acid rain*, which returns to the earth to pollute forests, lakes, and streams. Perhaps most importantly, many experts—scientists, government officials, and businesspeople—are convinced that the heavy emission of carbon dioxide is altering the earth's climate. Predictions of the effect of unchecked global warming include extreme weather conditions, flooding, oceanic disruptions, shifting storm patterns, droughts, reduced farm output, and even animal extinctions (Carey, 2004).

Curbing global warming will require international cooperation. More than 190 nations (though not the United States) have stated their support for this initiative by endorsing the Kyoto Protocol, an agreement to slow global warming by reducing worldwide carbon-dioxide emissions.

What can business do? They can reduce greenhouse emissions by making vehicles, factories, and other facilities more energy efficient. In response to a government ban on chlorofluorocarbons, which damage the ozone layer, DuPont has cut its own greenhouse emissions by 72 percent over the last twenty years through improvements in manufacturing processes and a commitment to increased energy efficiency (Carey, 2004; DuPont Web site, 2011).

Several U.S. and Japanese car manufacturers now market electric and hybrid gas-electric cars (HybridCars, 2011). General Electric is designing more energy-efficient appliances (General Electric Web site, 2011) and investing heavily to research wind power (Carey, 2004).

Water Pollution

Water makes up more than 70 percent of the earth's surface, and it's no secret that without it we wouldn't be here. Unfortunately, that knowledge doesn't stop us from polluting our oceans, rivers, and lakes and generally making our water unfit for use. Massive pollution occurs when such substances as oil and chemicals are dumped into bodies of water. The damage to the water, to the marine ecosystem, and to coastal wildlife from the accidental spilling of oil from supertankers and offshore drilling operations can be disastrous, and the cleanup can cost billions. Most contaminants, however, come from agricultural fertilizers, pesticides, wastewater, raw sewage, and silt that make their way into water systems over time (Krantz & Kifferstein, 2006). In some parts of the world—including certain areas in this country—water supplies are dwindling, partly because of diminishing rainfall and partly because of increased consumption.

The Environmental Protection Agency (EPA) has been a major force in cleaning up U.S. waters. Companies are now held to stricter standards in the discharge of wastes into water treatment systems. In some places, particularly where water supplies are dangerously low, such as the Southwest, local governments have instituted conservation programs. In Arizona (which suffers a severe shortage), Home Depot works with governmental and nongovernmental agencies on a $1.8 million water-conservation campaign. From its forty stores, the company runs weekend workshops to educate consumers on conservation basics, including drought-resistant gardening techniques (Kotler & Lee, 2004).

Sustainability

Did you ever read (or have read to you) *The Lorax*, a well-known children's book, written by Dr. Seuss in 1971?[1] It tells the story of how a business owners' greed destroyed an ecosystem. To manufacture and sell a product that the owner argued everyone needed, he cut down the trees in the forest, polluted the river, and fouled the air. These actions destroyed the habitat for the bears that lived on the fruit that fell from the trees, the fish that swam in the streams and the birds that flew high up in the sky. In 1971, these actions were not viewed negatively; business owners believed that the purpose of business was to make a profit without regard for the effect on the environment.

This book was written for young people, but it sends an important message to today's business executives. When it was written in 1971, few business people listened to its message. But, they seem to be listening now. Over the past ten to fifteen years, most of our large corporations have adopted measures that would have pleased environmentalists. These initiatives fall under the umbrella called "sustainability." But what does sustainability mean? There are, of course, many definitions, but here is one that should work for us: **sustainability**—the principle of providing products today that don't compromise the ability of future generations to meet their needs[2]. Companies that undertake sustainability initiatives believe that meeting business needs and protecting the environment are not mutually exclusive. They must do both.

How would you like a job in the sustainability field? Well twenty-six-year-old Robyn Beavers has one. As Google's Chief Sustainability Officer she runs the company's "Green Biz Ops" [Green Business Operations] and is responsible for reducing Google's impact on the environment (Keefe, 2011).

The 9,200 solar panels that were recently installed at the company's corporate headquarters (the world's biggest solar power system) will certainly reduce the company's use of electricity supplied from fossil fuels. When she's not finding ways to reduce Google's footprint on the world, she keeps busy making sure Google's offices are green—energy efficient, built with cradle-to-cradle products, and healthy. She gets to pick out carpeting that can be returned to the manufacturer when it's worn out so it can be ground up and used to make other rugs, rather than sit in a landfill decaying. She OKs window shades and other textiles used in the cubicles only after she is assured they are toxin-free. And she makes sure there is plenty of filtered water for everyone and 90 percent fresh air coming into the building during the day. Although she has a lot of leeway in making decisions, each project has to be reviewed to be sure it adds value and makes financial sense.

Google, like many other companies who are proactive in environmental and social responsibility issues often have a "triple bottom line" focus. They believe that the current reporting model of one bottom line—profit—does not capture all the dimensions of performance. They argue instead that companies should measure performance using three separate bottom lines: profit, people, and planet (or the 3Ps). In addition to reporting *profit* through their income statement, companies should also report their progress in being socially responsible to other *people* (stakeholders, including employee, customers, owners) and to the *planet* (the environment)[3].

Key Takeaways

- Companies bear a responsibility to produce products without compromising the right of future generations to meet their needs.
- Customers demand that companies respect the environment. Our land, air, and water all face environmental threats.
- Land is polluted by the dumping of waste and an increasing reliance on agricultural chemicals. It's pockmarked by landfills, shredded by strip mining, and laid bare by deforestation.
- Urban sprawl has squeezed out wetlands and farmlands and destroyed wildlife habitats.

- To protect the land from further damage, we must dispose of waste in responsible ways, control strip mining and logging, and save open spaces and wetlands.
- Emissions of toxic gases and particles from factories, power plants, office buildings, cars, trucks, and even farms pollute the air, which is also harmed by the burning associated with deforestation.
- Many experts believe that the heavy emission of carbon dioxide by factories and vehicles is altering the earth's climate: carbon dioxide and other gases, they argue, act as a "greenhouse" over the earth, producing global warming—a heating of the earth that could have dire consequences. Many companies have taken actions to reduce air pollution.
- Water is polluted by such substances as oil and chemicals. Most of the contaminants come from agricultural fertilizers, pesticides, wastewater, raw sewage, and silt.
- Also of concern is the dwindling supply of water in some parts of the world brought about by diminishing rainfall and increased consumption.
- The Environmental Protection Agency has been a major force in cleaning up U.S. waters.
- Many companies have joined with governmental and nongovernmental agencies alike in efforts to help people protect and conserve water.
- Sustainability can be defined as the principle of providing products today that don't compromise the ability of future generations to meet their needs.
- Companies that undertake sustainability initiatives believe that meeting business needs and protecting the environment are not mutually exclusive. They must do both.
- Those who support a "triple bottom line" approach to corporate performance evaluation believe that the current reporting model of one bottom line—profit—does not capture all the dimensions of performance. They argue instead that companies should measure performance using three separate bottom lines: profit, people, and planet (or the 3Ps).

Exercise

It's very popular today for company spokespersons to brag about the great things their companies are doing to help the environment. Condé Nast, a worldwide *magazine publishing* company, questioned whether many of these vocal companies have earned bragging rights or whether they're merely engaging in self-serving marketing stunts. After extensive research, Condé Nast created two lists: the "Green 11 roster of good guys" and the "Toxic 10" list of offenders that could be doing more to help the environment. Review Condé Nast's findings in its article "The Toxic Ten" (at http://www.portfolio.com/news-markets/national-news/portfolio/2008/02/19/10-Worst-Corporate-Polluters). Select one of the companies spotlighted. Go to that company's Web site and read about its environmental efforts. Then answer the following questions:

- Based on the information provided in the Condé Nast article and on your selected company's Web site, how would you rate the company's environmental initiatives?
- Do the statements on the company's Web site mesh with the criticism voiced by Condé Nast?
- In your opinion, does the company deserve to be on Condé Nast's "Toxic 10" list? Why, or why not?
- Why does the company promote its environmental efforts? Is this promotion effective?

3.8 Stages of Corporate Responsibility

We expect companies to recognize issues of social importance and to address them responsibly. The companies that do this earn reputations as good corporate citizens and enjoy certain benefits, such as the ability to keep satisfied customers, to attract capital, and to recruit and retain talented employees. But companies don't become good corporate citizens overnight. Learning to identify and develop the capacity to address social concerns takes time and requires commitment. The task is arduous because so many different issues are important to so many different members of the public—issues ranging from the environment, to worker well-being (both at home and abroad), to fairness to customers, to respect for the community in which a company operates.

The Five Faces of Corporate Responsibility

Faced with public criticism of a particular practice, how does a company respond? What actions does it take to demonstrate a higher level of corporate responsibility? According to Harvard University's Simon Zadek, exercising greater corporate responsibility generally means going through the series of five different stances summarized in Figure 3.13: Stages of Corporate Responsibility (Zadek, 2004).

Figure 3.13: Stages of Corporate Responsibility

1. **Defensive.** When companies are first criticized over some problem or issue, they tend to take a defensive, often legalistic stance. They reject allegations of wrongdoing and refuse to take responsibility, arguing that fixing the problem or addressing the issue isn't their job.
2. **Compliant**. During this stage, companies adopt policies that acknowledge the wishes of the public. As a rule, however, they do only what they have to do to satisfy their critics, and little more. They're acting mainly to protect brands or reputations and to reduce the risk of litigation.
3. **Managerial**. When it becomes clear that the problem won't go away, companies admit that they need to take responsibility and action, so they look for practical long-term solutions.
4. **Strategic**. At this point, they may start to reap the benefits of acting responsibly. They often find that responding to public needs gives them a competitive edge and enhances long-term success.
5. **Civil**. Ultimately, many companies recognize the importance of getting other companies to follow their lead. They may promote participation by other firms in their industries, endorsing the principle that the public is best served through collective action.

Here's Your Salad—How About Fries?

Several years ago, McDonald's found itself in a public relations nightmare. The fast-food giant faced massive public criticism for serving unhealthy food that contributed to a national epidemic of obesity. Let's look at McDonald's responses to these criticisms and assess how far along the five-stage process the company has progressed.

The Defensive Stage

As the documentary film *Super Size Me* demonstrated, a steady diet of McDonald's burgers and fries will cause you to gain weight. It was certainly inevitable that one day the public would make a connection between the rising level of obesity in the United States and a diet heavy in fat-laden fast foods. McDonald's fast food/obesity link got a lot of attention in 2002 when obese adults and teenagers filed suits against the company, claiming it was responsible for their excess pounds. McDonald's reaction to the public outcry against the company's menu items was defensive. For example, an owner of seven McDonald's in midtown Manhattan said, "We offer healthy choices. It is up to individuals to set limits and to be informed….McDonald's discloses nutritional information about its foods in its restaurants" (Burritt, 2005).

The Compliant Stage

In early 2004, the public's attention was drawn to McDonald's "super-size" options. Despite the fact that a super-sized meal delivered more than fifteen hundred calories, one in ten customers went for the upgrade. McDonald's faced daily criticisms on its super-sizing campaign, from nutritionists, doctors, advocacy groups, and lawyers who held it up as a "grossly overweight" poster child for U.S. obesity concerns. And the company feared public criticism would escalate when the movie *Super Size Me* hit the theaters. The documentary tells the story of a young man who gained twenty-four pounds and wrecked his health by eating only McDonald's food for a month. Even worse, one scene shows him getting sick in his car after trying to wolf down a super-size meal. So McDonald's immediately moved from the defensive stage to the compliant stage and announced that it was eliminating its super-size option by the end of 2004. The move, though small, was in the right direction. It was touted by the company as a "menu simplification" process, but a spokesman did state, "It certainly is consistent with and on a parallel path with our ongoing commitment to a balanced lifestyle" (Horovitz, 2004).

The Managerial Stage

Criticism of McDonald's continued as customers stayed away and its profits plummeted. The company searched for ways to win back customers and keep them long-term. To do this, it would have to come up with a healthier menu. Though McDonald's had served salads for years, they weren't very good. The company got serious about salads and introduced new, improved "premium salads," complete with Newman's Own salad dressing (a nice public relations touch, as all profits on the salad dressings are donated to charities). The company also improved the Happy Meal by letting kids substitute apple slices and low-fat milk for the usual fries and soda. Oprah Winfrey's personal trainer was brought in to promote an adult version of the Happy Meal, called the GoActive meal, which includes a salad, a bottle of water, a book on nutrition, and a clip-on pedometer that measures the number of steps you take. The fat calories in Chicken McNuggets were lowered by coming out with all-white-meat McNuggets. And to appease those between-meal

munchies, the company added a fruit-and-walnut salad to its menu. McDonald's goal was to convince customers that it had turned a corner and would forever more offer healthy choices to both adults and children.

The Strategic Stage

The new focus on healthy choices worked, and customers started returning. McDonald's salads were well received and accounted for about 10 percent of sales. Overall, things improved financially for the company: Sales increased and profits rose. To complete the transition to a healthier image, McDonald's came up with a new theme: helping adults and children live a balanced, active lifestyle. To go along with the theme, it launched a new active-life public-awareness campaign with the tagline "It's what I eat and what I do…I'm lovin' it." McDonald's demonstrated its concern for the health of its customers through permanent menu changes and an emphasis on the value of physical fitness. Even Ronald McDonald, the company's mascot, helped out by shooting hoops with NBA basketball star Yao Ming. The company launched a program called GoActive to help people find fun ways to build physical activity and fitness into their daily lives.

The Civil Stage

McDonald's hasn't advanced to the final stage yet; it hasn't enlisted the cooperation of other fast-food companies in encouraging children and adults to eat healthier foods. It's difficult to predict whether it will assume this role in the future, or even whether the company will stick with its healthier lifestyle theme. Indeed, it's hard to reconcile McDonald's commitment to helping people eat healthier with a promotion in the Chicago area that gave a free forty-two-ounce "super-size" soda to anyone buying a Big Mac and fries. Given that a Big Mac and medium fries deliver 910 calories, it's hard to justify encouraging customers to pile on an additional 410 calories for a big drink (at least, it's hard to justify this if you're promoting yourself as a company helping people eat better) (Herman, 2005).

Key Takeaways

Faced with public criticism of a particular practice, a company is likely to progress through five different stages:

1. *Defensive*. When first criticized over some problem, companies take a defensive stance. They reject allegations of wrongdoing and refuse to take responsibility.
2. *Compliant*. During this stage, companies do only what they have to do to satisfy their critics, protect brands or reputations, and reduce the risk of litigation.
3. *Managerial*. When it's clear that the problem won't go away, companies take responsibility and look for long-term solutions.
4. *Strategic*. At this point, they may start to reap the benefits of acting responsibly. Responding to public needs gives them a competitive edge and enhances long-term success.
5. *Civil*. Ultimately, companies recognize the importance of getting other companies to follow their lead. They enlist the cooperation of other companies in supporting the issue of concern to the public.

This chapter discusses a five-stage process that companies go through in responding to public criticism. Consider the situation in which McDonald's found itself when it faced massive public criticism for serving unhealthy food that contributed to a national epidemic of obesity. Given what you know about the company's reaction, identify the steps that it took in response to this criticism. In particular, show how its responses do or don't reflect the five stages of corporate responsibility outlined in the chapter. In your opinion, how far along the five-stage process has McDonald's progressed?

3.9 Cases and Problems

those directives called for setting up an ethics office. Nancy Higgins, a corporate attorney and onetime vice president for ethics at Lockheed Martin, was brought in with the title of chief ethics officer.

Higgins's primary responsibility is to ensure that MCI lives up to new CEO Michael Capellas's assertion that the company is dedicated to integrity and its employees are committed to high ethical standards. Her tasks are the same as those of most people with the same job title, but she's under more pressure because MCI can't afford any more ethical lapses. She oversees the company's ethics initiatives, including training programs and an ethics hotline. She spends a lot of her time with employees, listening to their concerns and promoting company values.

Higgins is a member of the senior executive team and reports to the CEO and board of directors. She attends all board meetings and provides members with periodic updates on the company's newly instituted ethics program (including information gleaned from the new ethics hotline).

Answer the following questions:

1. Would you be comfortable in Higgins's job? Does the job of ethics officer appeal to you? Why, or why not?
2. Would you find it worthwhile to work in an ethics office for a few years at some point in your career? Why, or why not?
3. What qualities would you look for if you were hiring an ethics officer?
4. What factors will help (or hinder) Higgins's ability to carry out her mandate to bolster integrity and foster ethical standards?
5. Would the accounting scandals have occurred at WorldCom if Higgins had been on the job back when Vinson, Sullivan, and Ebbers were still there? Explain your opinion.

Team-Building Skills (AACSB)

What Are the Stakes When You Play with Wal-Mart?

In resolving an ethical dilemma, you have to choose between two or more opposing alternatives, both of which, while acceptable, are important to different groups. Both alternatives may be ethically legitimate, but you can act in the interest of only one group.

This project is designed to help you learn how to analyze and resolve ethical dilemmas in a business context. You'll work in teams to address three ethical dilemmas involving Wal-Mart, the world's largest company. Before meeting as a group, every team member should go to the *BusinessWeek* Web site (http://www.businessweek.com/magazine/content/03_40/b3852001_mz001.htm) and read "Is Wal-Mart Too Powerful?" The article discusses Wal-Mart's industry dominance and advances arguments for why the company is both admired and criticized.

Your team should then get together to analyze the three dilemmas that follow. Start by reading the overview of the dilemma and any assigned material. Then debate the issues, working to reach a resolution through the five-step process summarized in Figure 3.3: How to Face an Ethical Dilemma:

1. Define the problem and collect the relevant facts.
2. Identify feasible options.
3. Assess the effect of each option on stakeholders.
4. Establish criteria for determining the most appropriate action.
5. Select the best option based on the established criteria.

Finally, prepare a report on your deliberations over each dilemma, making sure that each report contains all the following items:

- The team's recommendation for resolving the dilemma
- An explanation of the team's recommendation
- A summary of the information collected for, and the decisions made at, each step of the dilemma-resolution process

Three Ethical Dilemmas

Ethical Dilemma 1: Should Wal-Mart Close a Store because It Unionizes?

In February 2005, Wal-Mart closed a store in Quebec, Canada, after its workers voted to form a union. The decision has ramifications for various stakeholders, including employees, customers, and stockholders. In analyzing and arriving at a resolution to this dilemma, assume that you're the CEO of Wal-Mart, but *ignore the decision already made by the real* CEO. Arrive at your own recommendation, which may or may not be the same as that reached by your real-life counterpart.

Before analyzing this dilemma, go to the *Washington Post* Web site (http://www.washingtonpost.com/wp-dyn/articles/A15832-2005Feb10.html) and read the article "Wal-Mart Chief Defends Closing Unionized Store."

Ethical Dilemma 2: Should Levi Strauss Go into Business with Wal-Mart?

For years, the words *jeans* and *Levi's* were synonymous. Levi Strauss, the founder of the company that carries his name, invented blue jeans in 1850 for sale to prospectors in the gold fields of California. Company sales peaked at $7 billion in 1996 but then plummeted to $4 billion by 2003. Management has admitted that the company must reverse this downward trend if it hopes to retain the support of its twelve thousand employees, operate its remaining U.S. factories, and continue its tradition of corporate-responsibility initiatives. At this point, Wal-Mart made an attractive offer: Levi Strauss could develop a low-cost brand of jeans for sale at Wal-Mart. The decision, however, isn't as simple as it may seem: Wal-Mart's relentless pressure to offer "everyday low prices" can have wide-ranging ramifications for its suppliers' stakeholders—in this case, Levi Strauss's shareholders, employees, and customers, as well as the beneficiaries of its various social-responsibility programs. Assume that, as the CEO of Levi Strauss, you have to decide whether to accept Wal-Mart's offer.

Again, ignore any decision already made by your real-life counterpart, and instead work toward an independent recommendation.

Before you analyze this dilemma, go to the *Fast Company* Web site (http://www.fastcompany.com/magazine/77/walmart.html) and read the article "The Wal-Mart You Don't Know."

Ethical Dilemma 3: Should You Welcome Wal-Mart into Your Neighborhood?

In 2002, Wal-Mart announced plans to build forty "supercenters" in California—a section of the country that has traditionally resisted Wal-Mart's attempts to dot the landscape with big-box stores. Skirmishes soon broke out in California communities between those in favor of welcoming Wal-Mart and those determined to fend off mammoth retail outlets.

You're a member of the local council of a California city, and you'll be voting next week on whether to allow Wal-Mart to build in your community. The council's decision will affect Wal-Mart, as well as many local stakeholders, including residents, small business owners, and employees of community supermarkets and other retail establishments. As usual, ignore any decisions already made by your real-life counterparts.

Before working on this dilemma, go to the *USA Today* Web site (http://www.usatoday.com/money/industries/retail/2004-03-02-wal-mart_x.htm) and read the article "California Tries to Slam Lid on Big-Boxed Wal-Mart."

The Global View (AACSB)

Was Nike Responsible for Compensating Honduran Factory Workers?

Honduras is an impoverished country in which 70% of its residents live in poverty. Jobs are scarce, particularly those that pay decent wages along with benefits, such as health care. It is not surprising then that workers at two Honduran factories making products for U.S. companies, including Nike, were extremely upset when their factories closed down and they lost their jobs. Even worse, the owners of the factories refused to pay the 1,800 workers $2 million in severance pay and other benefits due to them by law. Although the factory owners had been paid in full by Nike for the apparel they produced, the workers argued that Nike should be responsible for paying the $2 million in severance that the factory owners had not received.

Nike's original response was to sympathize with the workers but refuse to pay the workers the severance pay they had not received from the factory owners. This stance did not settle well with student groups around the country who rallied in support of the unpaid workers. In the end Nike gave into pressure from the students and paid $1.5 million to a relief fund for the employees. In addition, the company said it would provide vocational training and health coverage for the unemployed workers.

Answer the following questions:

1. Do you think Nike was responsible for compensating the workers in Honduras? Why did it change its stance?
2. Did the students, universities, and workers themselves have all of the information they needed before becoming involved in the protest? Are their facts accurate?
3. Should students be activists? Do companies such as Nike ignore them at their own peril?

PART IV
FORMS OF BUSINESS OWNERSHIP

4.1 The Ice Cream Men

Who would have thought it? Two ex-hippies with strong interests in social activism would end up starting one of the best-known ice cream companies in the country—Ben & Jerry's. Perhaps it was meant to be. Ben Cohen (the "Ben" of Ben & Jerry's) always had a fascination with ice cream. As a child, he made his own mixtures by smashing his favorite cookies and candies into his ice cream. But it wasn't until his senior year in high school that he became an official "ice cream man," happily driving his truck through neighborhoods filled with kids eager to buy his ice cream pops. After high school, Ben tried college but it wasn't for him. He attended Colgate University for a year and a half before he dropped out to return to his real love: being an ice cream man. He tried college again—this time at Skidmore, where he studied pottery and jewelry making—but, in spite of his selection of courses, still didn't like it.

Figure 6.1: Ben Cohen and Jerry Greenfield in 2010

In the meantime, Jerry Greenfield (the "Jerry" of Ben & Jerry's) was following a similar path. He majored in pre-med at Oberlin College in the hopes of one day becoming a doctor. But he had to give up on this goal when he was not accepted into medical school. On a positive note, though, his college education steered him into a more lucrative field: the world of ice cream making. He got his first peek at the ice cream industry when he worked as a scooper in the student cafeteria at Oberlin. So, fourteen years after they first met on the junior high school track team, Ben and Jerry reunited and decided to go into ice cream making big time. They moved to Burlington, Vermont—a college town in need of an ice cream parlor—and completed a $5 correspondence course from Penn State on making ice cream. After getting an A in the course—not surprising, given that the tests were open book—they took the plunge: with their life savings of $8,000 and $4,000 of borrowed funds they set up an ice cream shop in a made-over gas station on a busy street corner in Burlington (Lager, 1994). The next big decision was which form of business ownership was best for them. This chapter introduces you to their options.

4.2 Factors to Consider and Sole Proprietorship

Factors to Consider

If you're starting a new business, you have to decide which legal form of ownership is best for you and your business. Do you want to own the business yourself and operate as a sole proprietorship? Or, do you want to share ownership, operating as a partnership or a corporation? Before we discuss the pros and cons of these three types of ownership, let's address some of the questions that you'd probably ask yourself in choosing the appropriate legal form for your business.

1. In setting up your business, do you want to minimize the costs of getting started? Do you hope to avoid complex government regulations and reporting requirements?
2. How much control would you like? How much responsibility for running the business are you willing to share? What about sharing the profits?
3. Do you want to avoid special taxes?
4. Do you have all the skills needed to run the business?
5. Are you likely to get along with your co-owners over an extended period of time?
6. Is it important to you that the business survive you?
7. What are your financing needs and how do you plan to finance your company?
8. How much personal exposure to liability are you willing to accept? Do you feel uneasy about accepting personal liability for the actions of fellow owners?

No single form of ownership will give you everything you desire. You'll have to make some trade-offs. Because each option has both advantages and disadvantages, your job is to decide which one offers the features that are most important to you. In the following sections we'll compare three ownership options (sole proprietorship, partnership, corporation) on these eight dimensions.

Sole Proprietorship and its Advantages

In a **sole proprietorship**, as the owner, you have complete control over your business. You make all important decisions and are generally responsible for all day-to-day activities. In exchange for assuming all this responsibility, you get all the income earned by the business. Profits earned are taxed as personal income, so you don't have to pay any special federal and state income taxes.

Disadvantages of Sole Proprietorships

For many people, however, the sole proprietorship is not suitable. The flip side of enjoying complete control is having to supply all the different talents that may be necessary to make the business a success. And when you're gone, the business dissolves. You also have to rely on your own resources for financing: in effect, you are the business and any money borrowed by the business is loaned to you personally. Even more important, the sole proprietor bears **unlimited liability** for any losses incurred by the business. The principle of unlimited personal liability means that if the business

incurs a debt or suffers a catastrophe (say, getting sued for causing an injury to someone), the owner is personally liable. As a sole proprietor, you put your personal assets (your bank account, your car, maybe even your home) at risk for the sake of your business. You can lessen your risk with insurance, yet your liability exposure can still be substantial. Given that Ben and Jerry decided to start their ice cream business together (and therefore the business was not owned by only one person), they could not set their company up as a sole proprietorship.

Key Takeaways

- A **sole proprietorship,** a business owned by only one person, accounts for 72% of all U.S. businesses.
- Advantages include: complete control for the owner, easy and inexpensive to form, and owner gets to keep all of the profits.
- Disadvantages include: unlimited liability for the owner, complete responsibility for talent and financing, and business dissolves if the owner dies.

4.3 Partnership

A **partnership** (or general partnership) is a business owned jointly by two or more people. About 10 percent of U.S. businesses are partnerships (IRS, 2015) and though the vast majority are small, some are quite large. For example, the big four public accounting firms are partnerships. Setting up a partnership is more complex than setting up a sole proprietorship, but it's still relatively easy and inexpensive. The cost varies according to size and complexity. It's possible to form a simple partnership without the help of a lawyer or an accountant, though it's usually a good idea to get professional advice.

Professionals can help you identify and resolve issues that may later create disputes among partners.

The Partnership Agreement

The impact of disputes can be lessened if the partners have executed a well-planned **partnership agreement** that specifies everyone's rights and responsibilities. The agreement might provide such details as the following:

- Amount of cash and other contributions to be made by each partner
- Division of partnership income (or loss)
- Partner responsibilities—who does what
- Conditions under which a partner can sell an interest in the company
- Conditions for dissolving the partnership
- Conditions for settling disputes

Unlimited Liability and the Partnership

A major problem with partnerships, as with sole proprietorships, is **unlimited liability**: in this case, each partner is personally liable not only for his or her own actions but also for the actions of all the partners. If your partner in an architectural firm makes a mistake that causes a structure to collapse, the loss your business incurs impacts you just as much as it would him or her. And here's the really bad news: if the business doesn't have the cash or other assets to cover losses, you can be personally sued for the amount owed. In other words, the party who suffered a loss because of the error can sue you for your personal assets. Many people are understandably reluctant to enter into partnerships because of unlimited liability. Certain forms of businesses allow owners to limit their liability. These include limited partnerships and corporations.

Limited Partnerships

The law permits business owners to form a **limited partnership** which has two types of partners: a single general partner who runs the business and is responsible for its liabilities, and any number of limited partners who have limited involvement in the business and whose losses are limited to the amount of their investment.

Advantages and Disadvantages of Partnerships

The partnership has several advantages over the sole proprietorship. First, it brings together a diverse group of talented individuals who share responsibility for running the business. Second, it makes financing easier: the business can draw on the financial resources of a number of individuals. The partners not only contribute funds to the business but can also use personal resources to secure bank loans. Finally, continuity needn't be an issue because partners can agree legally to allow the partnership to survive if one or more partners die.

Still, there are some negatives. First, as discussed earlier, partners are subject to unlimited liability. Second, being a partner means that you have to share decision making, and many people aren't comfortable with that situation. Not surprisingly, partners often have differences of opinion on how to run a business, and disagreements can escalate to the point of jeopardizing the continuance of the business. Third, in addition to sharing ideas, partners also share profits. This arrangement can work as long as all partners feel that they're being rewarded according to their efforts and accomplishments, but that isn't always the case. While the partnership form of ownership is viewed negatively by some, it was particularly appealing to Ben Cohen and Jerry Greenfield. Starting their ice cream business as a partnership was inexpensive and let them combine their limited financial resources and use their diverse skills and talents. As friends they trusted each other and welcomed shared decision making and profit sharing. They were also not reluctant to be held personally liable for each other's actions.

Key Takeaways

- A **general partnership** is a business owned jointly by two or more people, and accounts for about 10% of all U.S. businesses.
- Advantages include: more resources and talents come with an increase in partners, and the business can continue even after the death of a partner.
- Disadvantages include: partnership disputes, unlimited liability, and shared profits.
- A **limited partnership** has a single general partner who runs the business and is responsible for its liabilities, plus any number of limited partners who have limited involvement in the business and whose losses are limited to the amount of their investment.

4.4 Corporation

A **corporation** (sometimes called a regular or C-corporation) differs from a sole proprietorship and a partnership because it's a legal entity that is entirely separate from the parties who own it. It can enter into binding contracts, buy and sell property, sue and be sued, be held responsible for its actions, and be taxed. Once businesses reach any substantial size, it is advantageous to organize as a corporation so that its owners can limit their liability. Corporations, then, tend to be far larger, on average, than businesses using other forms of ownership. As Figure 4.2 shows, corporations account for 18 percent of all U.S. businesses but generate almost 82 percent of the revenues (United States Census Bureau, 2011). Most large well-known businesses are corporations, but so are many of the smaller firms with which likely you do business.
Figure 4.2: Types of U.S. Businesses

Ownership and Stock

Corporations are owned by **shareholders** who invest money in the business by buying shares of **stock**. The portion of the corporation they own depends on the percentage of stock they hold. For example, if a corporation has issued 100 shares of stock, and you own 30 shares, you own 30 percent of the company. The shareholders elect a **board of directors**, a group of people (primarily from outside the corporation) who are legally responsible for governing the corporation. The board oversees the major policies and decisions made by the corporation, sets goals and holds management accountable for achieving them, and hires and evaluates the top executive, generally called the CEO (**chief executive officer**). The board also approves the distribution of income to shareholders in the form of cash payments called dividends.

Benefits of Incorporation

The corporate form of organization offers several advantages, including limited liability for shareholders, greater access to financial resources, specialized management, and continuity.

Limited Liability

The most important benefit of incorporation is the **limited liability** to which shareholders are exposed: they are not responsible for the obligations of the corporation, and they can lose no more than the amount that they have personally invested in the company. Limited liability would have been a big plus for the unfortunate individual whose business partner burned down their dry cleaning establishment. Had they been incorporated, the corporation would have been liable for the debts incurred by the fire. If the corporation didn't have enough money to pay the debt, the individual shareholders would not have been obligated to pay anything. They would have lost all the money that they'd invested in the business, but no more.

Financial Resources

Incorporation also makes it possible for businesses to raise funds by selling stock. This is a big advantage as a company grows and needs more funds to operate and compete. Depending on its size and financial strength, the corporation also has an advantage over other forms of business in getting bank loans. An established corporation can borrow its own funds, but when a small business needs a loan, the bank usually requires that it be guaranteed by its owners.

Specialized Management

Because of their size and ability to pay high sales commissions and benefits, corporations are generally able to attract more skilled and talented employees than are proprietorships and partnerships.

Continuity and Transferability

Another advantage of incorporation is **continuity**. Because the corporation has a legal life separate from the lives of its owners, it can (at least in theory) exist forever.

Transferring ownership of a corporation is easy: shareholders simply sell their stock to others. Some founders, however, want to restrict the transferability of their stock and so choose to operate as a privately-held corporation. The stock in these corporations is held by only a few individuals, who are not allowed to sell it to the general public.

Companies with no such restrictions on stock sales are called public corporations; stock is available for sale to the general public.

Drawbacks to Incorporation

Like sole proprietorships and partnerships, corporations have both positive and negative aspects. In sole proprietorships and partnerships, for instance, the individuals who own and manage a business are the same people. Corporate managers, however, don't necessarily own stock, and shareholders don't necessarily work for the company. This situation can be troublesome if the goals of the two groups differ significantly.

Managers, for example, are often more interested in career advancement than the overall profitability of the company.

Stockholders might care more about profits without regard for the well-being of employees. This situation is known as the **agency problem**, a conflict of interest inherent in a relationship in which one party is supposed to act in the best interest of the other. It is often quite difficult to prevent self-interest from entering into these situations.

Another drawback to incorporation–one that often discourages small businesses from incorporating–is the fact that corporations are more costly to set up. When you combine filing and licensing fees with accounting and attorney fees, incorporating a business could set you back by $1,000 to $6,000 or more depending on the size and scope of your business (AllBusiness Editors, 2016). Additionally, corporations are subject to levels of regulation and governmental oversight that can place a burden on small businesses. Finally, corporations are subject to what's generally called "**double taxation**." Corporations are taxed by the federal and state governments on their earnings. When these earnings are distributed as dividends, the shareholders pay taxes on these dividends. Corporate profits are thus taxed twice–the corporation pays the taxes the first time and the shareholders pay the taxes the second time.

Five years after starting their ice cream business, Ben Cohen and Jerry Greenfield evaluated the pros and cons of the corporate form of ownership, and the "pros" won. The primary motivator was the need to raise funds to build a $2 million manufacturing facility. Not only did Ben and Jerry decide to switch from a partnership to a corporation, but they also decided to sell shares of stock to the public (and thus become a public corporation). Their sale of stock to the public was a bit unusual: Ben and Jerry wanted the community to own the company, so instead of offering the stock to anyone interested in buying a share, they offered stock to residents of Vermont only. Ben believed that "business has a responsibility to give back to the community from which it draws its support" (Lager, 1994). He wanted the company to be owned by those who lined up in the gas station to buy cones. The stock was so popular that one in every hundred Vermont families bought stock in the company (Lager, 1994). Eventually, as the company continued to expand, the stock was sold on a national level.

Key Takeaways

- A **corporation** is a legal entity that's separate from the parties who own it, the shareholders who invest by buying shares of stock. Corporations are governed by a Board of Directors, elected by the shareholders.
- Advantages include: limited liability, easier access to financing, and unlimited life for the corporation.
- Disadvantages include: the agency problem, double taxation, and incorporation expenses and regulations.

4.5 Other Types of Business Ownership

In addition to the three commonly adopted forms of business organization—sole proprietorship, partnership, and regular corporations—some business owners select other forms of organization to meet their particular needs. We'll look at two of these options:

- Limited-liability companies
- Not-for-profit corporations

Limited-Liability Companies

How would you like a legal form of organization that provides the attractive features of the three common forms of organization (corporation, sole proprietorship and partnership) and avoids the unattractive features of these three organization forms? The **limited-liability company(LLC)** accomplishes exactly that. This form provides business owners with limited liability (a key advantage of corporations) and no "double taxation" (a key advantage of sole proprietorships and partnerships). Let's look at the LLC in more detail.

In 1977, Wyoming became the first state to allow businesses to operate as limited-liability companies. Twenty years later, in 1997, Hawaii became the last state to give its approval to the new organization form. Since then, the limited-liability company has increased in popularity. Its rapid growth was fueled in part by changes in state statutes that permit a limited-liability company to have just one member. The trend to LLCs can be witnessed by reading company names on the side of trucks or on storefronts in your city. It is common to see names such as Jim Evans Tree Care, LLC, and For-Cats-Only Veterinary Clinic, LLC. But LLCs are not limited to small businesses. Companies such as Crayola, Domino's Pizza, Ritz-Carlton Hotel Company, and iSold It (which helps people sell their unwanted belongings on eBay) are operating under the limited-liability form of organization.

In a limited-liability company, owners (called members rather than shareholders) are not personally liable for debts of the company, and its earnings are taxed only once, at the personal level (thereby eliminating double taxation).

We have touted the benefits of limited liability protection for an LLC. We now need to point out some circumstances under which an LLC member (or a shareholder in a corporation) might be held personally liable for the debts of his or her company. A business owner can be held personally liable if he or she:

- Personally guarantees a business debt or bank loan which the company fails to pay.
- Fails to pay employment taxes to the government.
- Engages in fraudulent or illegal behavior that harms the company or someone else.
- Does not treat the company as a separate legal entity, for example, uses company assets for personal uses.

Not-for-Profit Corporations

A **not-for-profit corporation** (sometimes called a nonprofit) is an organization formed to serve some public purpose rather than for financial gain. As long as the organization's activity is for charitable, religious, educational, scientific, or literary purposes, it can be exempt from paying income taxes. Additionally, individuals and other organizations that contribute to the not-for-profit corporation can take a tax deduction for those contributions. The types of groups

that normally apply for nonprofit status vary widely and include churches, synagogues, mosques, and other places of worship; museums; universities; and conservation groups.

There are more than 1.5 million not-for-profit organizations in the United States. (Urban Institute National Center for Charitable Statistics, 2010). Some are extremely well funded, such as the Bill and Melinda Gates Foundation, which has an endowment of approximately $40 billion and has given away $36.7 billion since its inception (Gates Foundation, 2016). Others are nationally recognized, such as United Way, Goodwill Industries, Habitat for Humanity, and the Red Cross. Yet the vast majority is neither rich nor famous, but nevertheless makes significant contributions to society.

Key Takeaways

- A **limited-liability company** (LLC) is a business structure that combines the tax treatment of a partnership with the liability protection of a corporation.
- A **not-for-profit corporation** is an organization formed to serve some public purpose rather than for financial gain. It enjoys favorable tax treatment.

4.6 Mergers and Acquisitions

The headline read, "Wanted: More than 2,000 in Google Hiring Spree" (Oreskovic, 2010). The largest Web search engine in the world was disclosing its plans to grow internally and increase its workforce by more than 2,000 people, with half of the hires coming from the United States and the other half coming from other countries. The added employees will help the company expand into new markets and battle for global talent in the competitive Internet information providers industry. When properly executed, internal growth benefits the firm.

An alternative approach to growth is to merge with or acquire another company. The rationale behind growth through merger or acquisition is that 1 + 1 = 3: the combined company is more valuable than the sum of the two separate companies. This rationale is attractive to companies facing competitive pressures. To grab a bigger share of the market and improve profitability, companies will want to become more cost efficient by combining with other companies.

Mergers and Acquisitions

Though they are often used as if they're synonymous, the terms merger and acquisition mean slightly different things. A **merger** occurs when two companies combine to form a new company. An **acquisition** is the purchase of one company by another. An example of a merger is the merging in 2013 of US Airways and American Airlines. The combined company, the largest carrier in the world, flies under the name American Airlines.

Another example of an acquisition is the purchase of Reebok by Adidas for $3.8 billion (Howard, 2005). The deal was expected to give Adidas a stronger presence in North America and help the company compete with rival Nike. Once this acquisition was completed, Reebok as a company ceased to exist, though Adidas still sells shoes under the Reebok brand.

Motives behind Mergers and Acquisitions

Companies are motivated to merge or acquire other companies for a number of reasons, including the following.

Gain Complementary Products

Acquiring **complementary products** was the motivation behind Adidas's acquisition of Reebok. As Adidas CEO Herbert Hainer stated in a conference call, "This is a once-in- a-lifetime opportunity. This is a perfect fit for both companies, because the companies are so complementary.… Adidas is grounded in sports performance with such products as a motorized running shoe and endorsement deals with such superstars as British soccer player David Beckham. Meanwhile, Reebok plays heavily to the melding of sports and entertainment with endorsement deals and products by Nelly, Jay-Z, and 50 Cent. The combination could be deadly to Nike." Of course, Nike has continued to thrive, but one can't blame Hainer for his optimism (Howard, 2005).

Attain New Markets or Distribution Channels

Gaining new markets was a significant factor in the 2005 merger of US Airways and America West. US Airways was a major player on the East Coast, the Caribbean, and Europe, while America West was strong in the West. The expectations were that combining the two carriers would create an airline that could reach more markets than either carrier could do on its own (CNN, 2005).

Realize Synergies

The purchase of Pharmacia Corporation (a Swedish pharmaceutical company) by Pfizer (a research-based pharmaceutical company based in the United States) in 2003 created one of the world's largest drug makers and pharmaceutical companies, by revenue, in every major market around the globe (Frank and Hensey, 2002). The acquisition created an industry giant with more than $48 billion in revenue and a research-and-development budget of more than $7 billion. Each day, almost forty million people around the globe are treated with Pfizer medicines (Pfizer, 2003). Its subsequent $68 billion purchase of rival drug maker Wyeth further increased its presence in the pharmaceutical market (Sorkin and Wilson, 2009).

In pursuing these acquisitions, Pfizer likely identified many **synergies**: quite simply, a whole that is greater than the sum of its parts. There are many examples of synergies. A merger typically results in a number of redundant positions; the combined company does not likely need two vice-presidents of marketing, two chief financial officers, and so on. Eliminating the redundant positions leads to significant cost savings that would not be realized if the two companies did not merge. Let's say each of the companies was operating factories at 50% of capacity, and by merging, one factory could be closed and sold. That would also be an example of a synergy. Companies bring different strengths and weaknesses into the merged entity. If the newly-combined company can take advantage of the marketing capabilities of the stronger entity and the distribution capabilities of the other (assuming they are stronger), the new company can realize synergies in both of these functions.

Hostile Takeover

What happens, though, if one company wants to acquire another company, but that company doesn't want to be acquired? The outcome could be a **hostile takeover**—an act of assuming control that's resisted by the targeted company's management and its board of directors. Ben Cohen and Jerry Greenfield found themselves in one of these situations: Unilever—a very large Dutch/British company that owns three ice cream brands—wanted to buy Ben & Jerry's, against the founders' wishes. Most of the Ben & Jerry's stockholders sided with Unilever. They had little confidence in the ability of Ben Cohen and Jerry Greenfield to continue managing the company and were frustrated with the firm's social-mission focus. The stockholders liked Unilever's offer to buy their Ben & Jerry's stock at almost twice its current market price and wanted to take their profits. In the end, Unilever won; Ben & Jerry's was acquired by Unilever in a hostile takeover (CNN, 2000). Despite fears that the company's social mission would end, it didn't happen. Though neither Ben Cohen nor Jerry Greenfield are involved in the current management of the company, they have returned to their social activism roots and are heavily involved in numerous social initiatives sponsored by the company.

4.7 Cases and Problems

1. Consult *Entrepreneur* at http://www.entrepreneur.com. Search for "business legal structures" to read articles about S corporations and LLCs. If you were starting a company, which would you choose and why?

2. Research how to form a corporation and LLC in your state using search engines to find relevant sites. Here are two to get you started: http://www.incorporate.com and http://www.usa-corporate.com. Find out what steps are necessary to set up a corporation in your state. How do the fees compare with other states? If you were incorporating a business, what state would you choose and why?

3. The Federal Trade Commission is the government agency that monitors and regulates franchises. Visit the FTC site (http://www.ftc.gov), and explore the links to its resources on franchising, including details on the legal responsibilities of franchisors and franchisees. What kinds of problems should a prospective franchisee look out for when considering a franchise? What kinds of scams are typical in the franchise industry?

4. Select three franchises that interest you. Research them at sites such as the Franchise Handbook Online (http://www.franchisehandbook.com), *Entrepreneur* magazine's Franchise 500 (http://www.entrepreneur.com), and Be the Boss (http://www.betheboss.com). Prepare a chart comparing your selections, including history, number and location of units, financial requirements (initial franchise fee, other start-up costs, royalty and advertising fees), and any other information that would help you evaluate the franchises.

5. *Inc.* magazine (http://www.inc.com) has many franchising articles in its section on Startup. It offers insights into how franchisors and franchisees can better manage their businesses. Using the site's resources, discuss ways the owner of a franchise can motivate employees. What specific revenue items and expenses should you monitor daily in a franchise restaurant business to ensure that you are profitable?

1. Suppose you are considering two job offers for a computer programming position, one at a two-year-old consulting firm with 10 employees owned by a sole proprietor and one at a publicly traded software developer with sales of $500 million. In addition to comparing the specific job responsibilities, consider the following:

    ◦ Which company offers better training? Do you prefer the on-the-job training you'll get at the small company, or do you want formal training programs as well?

    ◦ Which position offers the chance to work on a variety of assignments?

- ◦ What are the opportunities for advancement? Employee benefits?
- ◦ What happens if the owner of the young company gets sick or decides to sell the company?
- ◦ Which company offers a better working environment for you?

Answering these and similar questions will help you decide which job meets your particular needs. (Resources, Information)

2. Before starting your own company, you should know the legal requirements in your area. Call the appropriate city or county departments, such as licensing, health, and zoning, to find out what licenses and permits you need and any other requirements you must meet. Do the requirements vary depending on the type of company? Are there restrictions on starting a home-based business? Contact your secretary of state or other agency that handles corporations to get information on how to incorporate. (Information)

3. Bridget Jones wants to open her own business selling her handmade chocolates over the internet. Although she has some money saved and could start the business on her own, she is concerned about her lack of bookkeeping and management experience. A friend mentions he knows an experienced businessperson seeking involvement with a start-up company. As Bridget's business consultant, prepare recommendations for Bridget regarding an appropriate form of business organization, outlining the issues she should consider and the risks involved, supported by reasons for your suggestions. (Interpersonal, Information)

4. You and a partner co-own Swim-Clean, a successful pool supply and cleaning service. Because sales have tapered off, you want to expand your operations to another town 10 miles away. Given the high costs of expanding, you decide to sell Swim-Clean franchises. The idea takes off, and soon you have 25 units throughout the region. Your success results in an invitation to speak at a local Rotary Club luncheon. Prepare a brief presentation describing how you evaluated the benefits and risks of becoming a franchisor, the problems you encountered, and how you established good working relationships with your franchisees. (Information)

5. Do you have what it takes to be a successful franchisee? Start by making a list of your interests and skills, and do a self-assessment using some of the suggestions in this chapter. Next you need to narrow the field of thousands of different franchise systems. At Franchise Handbook Online (http://www.franchisehandbook.com), you'll find articles with checklists to help you thoroughly research a franchise and its industry, as well as a directory of franchise opportunities. Armed with this information, develop a questionnaire to evaluate a prospective franchise. (Resources, Interpersonal, Information)

6. Find news of a recent merger using an online search or a business periodical such as *Bloomberg Businessweek*, *Fortune*, or *The Wall Street Journal*. Research the merger using a variety of sources including the company's website and news articles. Discover the motives behind the merger, the problems facing the new entity, and the company's progress toward achieving its objectives. (Information)

7. **Team Activity** After pulling one too many all-nighters, you realize your college needs an on-campus coffee/food delivery service and decide this might be a good business opportunity for you and some friends. Split the class into small groups. Start by outlining the management, technical, and financial resources that are needed to start this company. Then evaluate what resources your group brings to the table and what you will need from partners. Develop a list of questions for potential partners. After each group presents its findings to the class, it should pair up with another group that seems to offer additional resources. Interview the other group's members using your questions to decide if the teams could work together and if you would proceed with this venture. (Resources, Interpersonal)

After seeing a Quiznos franchise recruitment infomercial to recruit franchisees, you are tempted to apply to open your own Quiznos sub shop. However, your research on the company turns up some disturbing information. Many current franchisees are unhappy with the company's management and practices, among them excessive food costs, lack of promised support, and selling new franchise locations that are too close to existing stores. A group of New Jersey franchisees sued Quiznos for selling them franchises but not providing locations 18 months after taking their franchise fees. Some franchise owners question Quiznos's purchasing tactics, choosing food and beverage suppliers based on the referral fees it receives instead of the lowest-cost provider. Other franchisees have suffered major financial losses.

Quiznos, which owned or operated more than 5,000 sub shops at one time and now has less than 1,500 locations worldwide with less than 900 in the United States, disputes the various claims. The president of the company points out that in a franchise operation, there will always be unhappy franchisees and those who can't make a success of their units. Besides, Quiznos's franchise offering materials clearly state that the company may open stores in any locations it selects.

Using a web search tool, locate articles about this topic, and then write responses to the following questions. Be sure to support your arguments and cite your sources.

Ethical Dilemma: What are Quiznos's obligations to its franchisees? Is it ethical for the company to open new franchises very close to existing units and to choose vendors based on fees to the parent company rather than the cost to franchisees?

K1; Dina Berta, "Quiznos Denies Franchisees' Charges of Cost Gouging, Encroachment Problems," *Nation's Restaurant News*, June 20, 2005, P. 1+; "Quiznos Denies Fraud Suit Charges by 17 Franchisees," *Nation's Restaurant News*, May 16, 2005, p. 102.

I'm an Owner of a Professional Sports Team!

Many of the richest individuals have added professional sports teams to their ownership portfolios. Paul Allen owns the Seattle Seahawks after founding Microsoft, and another Microsoft alumnus, Steve Balmer, now owns the Los Angeles Clippers. They, like most other owners of sports teams, including Shahid Khan (Jacksonville Jaguars), Jerry Jones (Dallas Cowboys), the Rickets family (Chicago Cubs of Major League Baseball), and Geoff Molson (Montreal Canadiens of the National Hockey League), all have corporate structures that operate as for-profit organizations. There is one exception to the corporate structure, however.

The Green Bay Packers are unique among North American sports teams in that they are a community-owned not-for-profit. They do have shareholders, but the shareholders have limited rights and most shares are bought so that fans can claim ownership and use the stock certificate as a piece of pride of ownership in a unique community treasure. The shares do not pay dividends, and any proceeds from any possible sale or liquidation of the team go to a charity, not the shareholders. This system, plus transfer restrictions and a cap on the number of shares that any single individual can own, ensures that the team remains in public hands and will never leave the city of Green Bay.

Every shareholder in the Green Bay Packers received a ballot for electing the team's board of directors, who then select an executive committee of seven individuals who will meet with chief executive officer Mark Murphy, a former NFL player who also served as the athletic director at Northwestern University prior to joining the Packers. Murphy is charged with hiring other leadership positions, such as the general manager, who then hires the head coach, who is charged with hiring the assistant coaches.

So, what are the negatives to what seems like a perfect organizational structure? Many owners in other cities are able to price their tickets to the market and also able to create revenue streams from corporate advertising in the stadium as well as stadium-naming rights. The Packers have some of the lowest-priced tickets in the league despite 80,000 requests on their season ticket waiting list. Also, teams in other cities can negotiate with city, county, and other government agencies for subsidies and tax breaks for building new stadiums and use the threat of a move to another city as a bargaining chip. For instance, the St. Louis Rams and San Diego Chargers recently moved to Los Angeles while the Oakland Raiders will soon call Las Vegas home.

Another potential drawback is that the organizational structure of the Packers restricts the ability to make organizational changes such as changing the general manager or head coach quickly if things are going badly. Luckily for the Packers, this has not been much of a problem lately having had success with star quarterbacks such as Brett Favre and Aaron Rodgers!

Critical Thinking Questions

1. Is the not-for-profit form of business organization appropriate for the Green Bay Packers? Why or why not?
2. Why has this form of ownership not been replicated in other cities?
3. What are the limitations and constraints that this form of business has on the operations of the Green Bay Packers?

THE CHALLENGES OF STARTING A BUSINESS

Learning Objectives

1.   Define *entrepreneur*.
2.   Describe the three characteristics of entrepreneurial activity.
3.   Identify five potential advantages to starting your own business.
4.   Explain the differences among three types of start-up firms.
5.   Define a *small business*.
6.   Explain the importance of small businesses to the U.S. economy.
7.   Explain why small businesses tend to foster innovation more effectively than large ones.
8.   Describe some of the ways in which small companies work with big ones.
9.   Describe the *goods-producing* and *service-producing* sectors of an economy.
10.   Identify the industries in which small businesses are concentrated.
11.   Summarize the advantages and disadvantages of business ownership.
12.   Explain what it takes to start a business.
13.   Evaluate the advantages and disadvantages of several small business ownership options—starting a business from scratch, buying an existing business, and obtaining a franchise.
14.   Discuss the importance of planning for your business, and identify the key sections of a business plan.
15.   Discuss ways to succeed in managing a business, and explain why some businesses fail.
16.   Identify sources of small business assistance from the Small Business Administration.

5.1 Build a Better Baby and They Will Come

One balmy San Diego evening in 1993, Mary and Rick Jurmain were watching a TV program about teenage pregnancy (Realityworks Inc., 2008; Horizons Solutions Site, 2007; Bredahl, 2004; Horizons Solutions, 2008; Education World, 1998; Lombardi, 1998; L., MD, 1996; Cohen, 1994; New York Times, 1994). To simulate the challenge of caring for an infant, teens on the program were assigned to tend baby-size sacks of flour. Rick, a father of two young children, remarked that trundling around a sack of flour wasn't exactly a true-to-life experience. In particular, he argued, sacks of flour simulated only abnormally happy babies–babies who didn't cry, especially in the middle of the night. Half-seriously, Mary suggested that her husband–a between-jobs aerospace engineer–build a better baby, and within a couple of weeks, a prototype was born. Rick's brainchild was a bouncing 6.5-pound bundle of vinyl-covered joy with an internal computer to simulate infant crying at realistic, random intervals. He also designed a drug-affected model to simulate tremors from withdrawal, and each model monitored itself for neglect or ill treatment.

The Jurmains patented Baby Think It Over (aka BTIO) and started production in 1994 as Baby Think It Over Inc. Their first "factory" was their garage, and the "office" was the kitchen table–"a little business in a house," as Mary put it. With a boost from articles in USA *Today*, *Newsweek*, *Forbes*, and *People*–plus a "Product of the Year" nod from *Fortune*–news of the Jurmains' "infant simulator" eventually spread to the new company's targeted education market, and by 1998, some forty thousand simulators had been babysat by more than a million teenagers in nine countries. By that time, the company had moved to Wisconsin, where it had been rechristened BTIO Educational Products Inc. to reflect an expanded product line that now includes not only dolls and equipment, like the Shaken Baby Syndrome Simulator, but also simulator-based programs like ySTART Addiction Education and Realityworks Pregnancy Profile. BTIO was retired and replaced by the new and improved RealCare Baby and, ultimately, by RealCare Baby II–*plus*, which requires the participant to determine what the "baby" needs when it cries and downloads data to record mishaps (such as missed-care events) and misconduct (like baby shaking). If RealCare Baby II–*plus* shows signs of fatigue, you can plug him or her into the nearest wall outlet. In 2003, the name of the Jurmains' company was changed once again, this time to Realityworks Inc. The change, explains the company Web site, reflects its decision "to focus on what the company does best–providing realistic learning experiences."

5.2 What Is an Entrepreneur?

In developing BTIO and Realityworks Inc., the Jurmains were doing what entrepreneurs do (and doing it very well). In fact, Mary was nominated three times for the Ernst & Young Entrepreneur of the Year Award and named 2001 Wisconsin Entrepreneurial Woman of the Year by the National Association of Women Business Owners. So what, exactly, is an *entrepreneur*? What does an entrepreneur do? According to one definition, an entrepreneur is an "individual who starts a new business," and that's true as far as it goes. Another definition identifies an entrepreneur as someone who uses "resources to implement innovative ideas for new, thoughtfully planned ventures," (Canadian Foundation for Economic Education, 2008) which is also true as far as it goes. But an important component of a satisfactory definition is still missing. To appreciate fully what it is, let's go back to the story of the Jurmains, for whom entrepreneurship seems to have worked out quite well. We hasten to point out that, in 1993, the Jurmains were both unemployed—Rick had been laid off by General Dynamics Corp., and Mary by the San Diego Gas and Electric Company. While they were watching the show about teenagers and flour sacks, they were living off a loan from her father and the returns from a timely investment in coffee futures. Rick recalls that the idea for a method of creating BTIO came to him while "I was awake in bed, worrying about being unemployed." He was struggling to find a way to feed his family. He had to make the first forty simulators himself, and at the end of the first summer, BTIO had received about four hundred orders—a promising start, perhaps, but, at $250 per baby (less expenses), not exactly a windfall. "We were always about one month away from bankruptcy," recalls Mary.

At the same time, it's not as if the Jurmains started up BTIO simply because they had no "conventional" options for improving their financial prospects. Rick, as we've seen, was an aerospace engineer, and his résumé includes work on space-shuttle missions at NASA. Mary, who has not only a head for business but also a degree in industrial engineering, has worked at the Johnson Space Center. Therefore, the idea of replacing a sack of flour with a computer-controlled simulator wasn't necessarily rocket science for the couple. But taking advantage of that idea—choosing to start a new business and to commit themselves to running it—was a risk. *Risk taking* is the missing component that we're looking for in a definition of *entrepreneurship*, and so we'll define an **entrepreneur** as someone who identifies a business opportunity and assumes *the risk of creating and running a business* to take advantage of it.

The Nature of Entrepreneurship

If we look a little more closely at the definition of entrepreneurship, we can identify three characteristics of entrepreneurial activity (Dollinger, 2003):

1. *Innovation.* Entrepreneurship generally means offering a new product, applying a new technique or technology, opening a new market, or developing a new form of organization for the purpose of producing or enhancing a product.
2. *Running a business.* A *business* combines resources to produce goods or services. Entrepreneurship means setting up a business to make a profit.
3. *Risk taking.* The term **risk** means that the outcome of the entrepreneurial venture can't be known. Entrepreneurs, therefore, are always working under a certain degree of *uncertainty*, and they can't know the outcomes of many of the decisions that they have to make. Consequently, many of the steps they take are motivated mainly by their confidence in the innovation and in their understanding of the business environment in which they're operating.

It isn't hard to recognize all three of these characteristics in the entrepreneurial experience of the Jurmains. They certainly had an *innovative* idea. But was it a *good* business idea? In a practical sense, a "good" business idea has to

become something more than just an idea. If, like the Jurmains, you're interested in generating income from your idea, you'll probably need to turn it into a *product*–something that you can market because it satisfies a need. If–again, like the Jurmains–you want to develop a product, you'll need some kind of organization to coordinate the resources necessary to make it a reality (in other words, a *business*). Risk enters the equation when, like the Jurmains, you make the decision to start up a business and when you commit yourself to managing it.

A Few Things to Know about Going into Business for Yourself

Figure 5.1. Mark Zuckerberg founded Facebook while a student at Harvard and, by age 27, has built up a personal wealth of $13.5 billion.

So what about you? Do you ever wonder what it would be like to start your own business? Maybe you want to try your hand at entrepreneurship. You could be the next Larry Page or Sergey Brin, cofounders of Google. Or the next David Marcks, a golf course manager who came up with the idea of Geese Police–training dogs to chase geese from golf courses, corporate parks, and municipal playgrounds (Isidro, 2008). Or even the next Pierre Omidyar, the French-born software developer who built an online venue for person-to-person auctions, known as eBay (American Academy of Achievement, 2005).

You might even turn into a "serial entrepreneur" like Marcia Kilgore (Encyclopedia of World Biography, 2011). After high school, she moved from Canada to New York City to attend Columbia University. But when her financial aid was delayed, she abandoned her plans to attend college and took a job as a personal trainer (a natural occupation for a former bodybuilder and middleweight title holder). But things got boring in the summer when her wealthy clients left the city for the Hamptons. To keep busy, she took a skin care course at a Manhattan cosmetology institute. As a teenager, she was self-conscious about her bad complexion and wanted to know how to treat it herself. She learned how to give facials and work with natural remedies. Her complexion improved, and she started giving facials to her fitness clients who were thrilled with the results. As demand for her services exploded, she started her first business–Bliss Spa–and picked up

celebrity clients, including Madonna, Oprah Winfrey, and Jennifer Lopez. The business went international, and she sold it for more than $30 million (Bruder, 2010).

But the story doesn't end here; she didn't just sit back and enjoy her good fortune. Instead, she launched two more companies: Soap and Glory, a supplier of affordable beauty products sold at Target, and FitFlops, which sells sandals that tone and tighten your leg muscles as you walk. And by the way, remember how Oprah loved Kilgore's skin care products? She also loves Kilgore's sandals and plugged them on her talk show. You can't get a better endorsement than that. Kilgore never did finish college, but when asked if she would follow the same path again, she said, "If I had to decide what to do all over again, I would make the same choices…I found by accident what I'm good at, and I'm glad I did."

For the sake of argument, let's say that you would like to know a little more about going into business for yourself—in which case, you'll want some answers to questions like the following:

- Should I start a business?
- What are the advantages and disadvantages of starting a business?
- How do I come up with a business idea?
- Should I build a business from scratch, buy an existing business, or invest in a franchise?
- How do I go about planning a business?
- What steps are involved in developing a business plan?
- Where would I find help in getting my business started and operating it through the start-up phase?
- How can I increase the likelihood that I'll succeed?

In this chapter, we'll provide some answers to questions like these.

Why Start Your Own Business?

Let's say that you are interested in the idea of going into business for yourself. Not everyone, of course, has a desire to take the risks and put in the work involved in starting up a business. What sort of characteristics distinguishes those who do from those who don't want to start a business? Or, more to the point, why do some people actually follow through on the desire to start up their own businesses? According to the ==Small Business Administration (SBA)==, a government agency that provides assistance to small businesses, the most common reasons for starting a business are the following (U.S. Small Business Administration, 2006):

- To be your own boss
- To accommodate a desired lifestyle
- To achieve financial independence
- To enjoy creative freedom
- To use your skills and knowledge

The Small Business Administration points out, though, that these are likely to be advantages only "for the right person." And how do you know if you're one of the "right people"? The SBA suggests that you assess your strengths and weaknesses by asking yourself a few relevant questions (U.S. Small Business Administration, 2011):

- *Am I a self-starter*? You'll need to develop and follow through on your ideas. You'll need to be able to organize your time.
- *How well do I get along with different personalities*? You'll need to develop working relationships with a variety of people, including unreliable vendors and sometimes cranky customers.
- *How good am I at making decisions*? You'll be making decisions constantly—often under pressure.

- *Do I have the physical and emotional stamina*? Can you handle six or seven workdays of as long as twelve hours every week?
- *How well do I plan and organize*? If you can't stay organized, you'll get swamped by the details. In fact, poor planning is the culprit in most business failures.
- *Is my drive strong enough*? You'll need to be highly motivated to withstand bad periods in your business, and simply being responsible for your business's success can cause you to burn out.
- *How will my business affect my family*? Family members need to know what to expect before you begin a business venture, such as financial difficulties and a more modest standard of living.

Later in this chapter, we'll take up the question of why businesses fail, but since we're still talking about the pros and cons of starting a business in the first place, we should consider one more issue: in addition to the number of businesses that start and then fail, a huge number of business ideas never even make it to the grand opening. One business analyst cites four reservations (or *fears*) that prevent people from starting businesses (Waters, 2008):

- *Money*. Granted, without the cash, you can't get very far. *What to do*: Conduct some research to find out where funding is available.
- *Security*. A lot of people don't want to sacrifice the steady income that comes with the nine-to-five job. *What to do*: Don't give up your day job. At least at first, think about hiring someone to run your business while you're gainfully employed elsewhere.
- *Competition*. A lot of people don't know how to distinguish their business ideas from similar ideas. *What to do*: Figure out how to do something cheaper, faster, or better.
- *Lack of ideas*. Some people simply don't know what sort of business they want to get into. *What to do*: Find out what trends are successful. Turn a hobby into a business. Think about a franchise.

If you're still interested in going into business for yourself, feel free to regard these potential drawbacks as mere obstacles to be overcome by a combination of planning and creative thinking.

Distinguishing Entrepreneurs from Small Business Owners

Figure 5.2. These bakers are not entrepreneurs. They run their small bakery for the sole purpose of providing an income for themselves and their families (a salary-substitute firm) or to earn a living while pursuing their hobby of baking (a lifestyle firm).

Though most entrepreneurial ventures begin as small businesses, not all small business owners are entrepreneurs. Entrepreneurs are innovators who start companies to create new or improved products. They strive to meet a need that's not being met, and their goal is to grow the business and eventually expand into other markets.

In contrast, many people either start or buy small businesses for the sole purpose of providing an income for themselves and their families. They do not intend to be particularly innovative, nor do they plan to expand significantly. This desire to operate is what's sometimes called a "lifestyle business" (Allen, 2001). The neighborhood pizza parlor or beauty shop, the self-employed consultant who works out of the home, and even a local printing company—all of these are typical lifestyle businesses. In the next section, we discuss the positive influences that both lifestyle and entrepreneurial businesses have on the U.S. economy.

Key Takeaways

- An **entrepreneur** is someone who identifies a business opportunity and assumes the risk of creating and running a business to take advantage of it.

- There are three characteristics of entrepreneurial activity:

  1. *Innovating*. An entrepreneur offers a new product, applies a new technique or technology, opens a new market, or develops a new form of organization for the purpose of producing or enhancing a product.
  2. *Running a business*. Entrepreneurship means setting up a business to make a profit from an innovative product or process.
  3. *Risk taking*. Risk means that an outcome is unknown. Entrepreneurs, therefore, are always working under a certain degree of uncertainty, and they can't know the outcomes of many of the decisions that they have to make.

- According to the **SBA**, a government agency that provides assistance to small businesses, there are five advantages to starting a business—"for the right person":

  1. Be your own boss.
  2. Accommodate a desired lifestyle.
  3. Achieve financial independence.
  4. Enjoy creative freedom.
  5. Use your skills and knowledge.

- To determine whether you're one of the "right people" to exploit the advantages of starting your own business, the SBA suggests that you assess your strengths and weaknesses by asking yourself the following questions:

  1. Am I a self-starter?
  2. How well do I get along with different personalities?
  3. How good am I at making decisions?
  4. Do I have the physical and emotional stamina?
  5. How well do I plan and organize?
  6. Is my drive strong enough?
  7. How will my business affect my family?

- Though most entrepreneurial ventures begin as small businesses, not all small business owners are entrepreneurs. Entrepreneurs are innovators who start companies to create new or improved products. In contrast, many people start businesses for the purpose of providing an income for themselves and

their families. This type of business is sometimes called a "lifestyle business."

Exercise

Do you have what it takes to be an entrepreneur? To find out, start by reviewing the following list of characteristics commonly attributed to entrepreneurs:

- They are creative people who sometimes accomplish extraordinary things because they're passionate about what they're doing.
- They are risk-taking optimists who commit themselves to working long hours to reach desired goals.
- They take pride in what they're doing and get satisfaction from doing something they enjoy.
- They have the flexibility to adjust to changing situations to achieve their goals.

We'll also add that entrepreneurs usually start small. They begin with limited resources and build their businesses through personal effort. At the end of the day, their success depends on their ability to manage and grow the organization that they created to implement their vision.

Now use the following three-point scale to indicate the extent to which each of these attributes characterizes you:

1. It doesn't sound like me.
2. It sounds like me to a certain extent.
3. It sounds a lot like me.

Based on your responses, do you think that you have the attributes of an entrepreneur? Do you think you could be a successful entrepreneur? Why, or why not?

5.3 The Importance of Small Business to the U.S. Economy

What Is a "Small Business"?

To assess the value of small businesses to the U.S. economy, we first need to know what constitutes a small business. Let's start by looking at the criteria used by the Small Business Administration. According to the SBA, a **small business** is one that is independently owned and operated, exerts little influence in its industry, and (with a few exceptions) has fewer than five hundred employees (U.S. Small Business Administration, 2011).

Why Are Small Businesses Important?

Small business constitutes a major force in the U.S. economy. There are more than twenty-seven million small businesses in this country, and they generate about 50 percent of our gross domestic product (GDP) (Office of Advocacy, 2010). The millions of individuals who have started businesses in the United States have shaped the business world as we know it today. Some small business founders like Henry Ford and Thomas Edison have even gained places in history. Others, including Bill Gates (Microsoft), Sam Walton (Wal-Mart), Steve Jobs (Apple Computer), Michael Dell (Dell, Inc.), Steve Case (AOL), Pierre Omidyar (eBay), and Larry Page and Sergey Brin (Google), have changed the way business is done today. Still millions of others have collectively contributed to our standard of living.

Aside from contributions to our general economic well-being, founders of small businesses also contribute to growth and vitality in specific areas of economic and socioeconomic development. In particular, small businesses do the following:

- Create jobs
- Spark innovation
- Provide opportunities for many people, including women and minorities, to achieve financial success and independence

In addition, they complement the economic activity of large organizations by providing them with components, services, and distribution of their products.

Let's take a closer look at each of these contributions.

Job Creation

The majority of U.S. workers first entered the business world working for small businesses. Today, half of all U.S. adults either are self-employed or work for businesses with fewer than five hundred employees (U.S. Small Business Administration, 2011). Although the split between those working in small companies and those working in big companies is about even, small firms hire more frequently and fire more frequently than do big companies (Headd, 2011). Why is this true? At any given point in time, lots of small companies are started and some expand. These small companies need

workers and so hiring takes place. But the survival and expansion rates for small firms is poor, and so, again at any given point in time, many small businesses close or contract and workers lose their jobs. Fortunately, over time more jobs are added by small firms than are taken away, which results in a net increase in the number of workers. Table 5.1: Small Firm Job Gains and Losses, 1993–2008 (in millions of jobs) reports the net increase in jobs generated by small firms for the fifteen-year period of 1993 to 2008 and breaks it down into job gains from openings and expansions and job losses from closings and contractions.

Table 5.1 Small Firm Job Gains and Losses, 1993–2008 (in millions of jobs)

	Job Gains From		Job Losses From	
Net Change	Openings	Expansions	Closings	Contractions
20.7	105.2	398.3	97.7	385.1

The size of the net increase in the number of workers for any given year depends on a number of factors, with the economy being at the top of the list. A strong economy encourages individuals to start small businesses and expand existing small companies, which adds to the workforce. A weak economy does just the opposite: discourages start-ups and expansions, which decreases the workforce through layoffs.

Innovation

Given the financial resources available to large businesses, you'd expect them to introduce virtually all the new products that hit the market. According to the SBA, small companies develop more patents per employee than do larger companies. During a recent four-year period, large firms generated 1.7 patents per hundred employees, whereas small firms generated an impressive 26.5 patents per employee (Breitzman & Hicks, 2011). Over the years, the list of important innovations by small firms has included the airplane and air-conditioning, the defibrillator and DNA fingerprinting, oral contraceptives and overnight national delivery, the safety razor, strobe lights, and the zipper (Baumol, 2005).

Small business owners are also particularly adept at finding new ways of doing old things. In 1994, for example, a young computer-science graduate working on Wall Street came up with the novel idea of selling books over the Internet. During the first year of operations, sales at Jeff Bezos's new company—Amazon.com—reached half a million dollars. In less than twenty years, annual sales had topped $34 billion (Yahoo.com, 2011). Not only did his innovative approach to online retailing make Bezos enormously rich, but it also established a viable model for the e-commerce industry.

Why are small businesses so innovative? For one thing, they tend to offer environments that appeal to individuals with the talent to invent new products or improve the way things are done. Fast decision making is encouraged, their research programs tend to be focused, and their compensation structures typically reward top performers. According to one SBA study, the supportive environments of small firms are roughly thirteen times more innovative per employee than the less innovation-friendly environments in which large firms traditionally operate (Baumol, 2005).

The success of small businesses in fostering creativity has not gone unnoticed by big businesses. In fact, many large companies have responded by downsizing to act more like small companies. Some large organizations now have separate work units whose purpose is to spark innovation. Individuals working in these units can focus their attention on creating new products that can then be developed by the company.

Opportunities for Women and Minorities

Small business is the portal through which many people enter the economic mainstream. Business ownership allows individuals, including women and minorities, to achieve financial success, as well as pride in their accomplishments. While the majority of small businesses are still owned by white males, the past two decades have seen a substantial increase in the number of businesses owned by women and minorities. Figure 5.3: Businesses Owned by Women and Minorities gives you an idea of how many American businesses are owned by women and minorities, and indicates how much the numbers grew between 1982 and 2007 (U.S. Census Bureau, 2011).
Figure 5.3: Businesses Owned by Women and Minorities. Source: Data obtained from http://www.census.gov/econ/sbo/#PR

What Small Businesses Do for Big Businesses

Small firms complement large firms in a number of ways. They supply many of the components needed by big companies. For example, the U.S. automakers depend on more than 1,700 suppliers to provide them with the parts needed to make their cars. While many of the suppliers are large, there are hundreds of smaller companies that provide a substantial portion of the 8,000 to 12,000 parts that go into each vehicle (Canis & Yacobucci, 2011). Small firms also provide large ones with such services as accounting, legal, and insurance. Many small firms provide *outsourcing* services to large firms—that is, they hire themselves out to help with special projects or handle certain business functions. A large firm, for example, might hire a small one to handle its billing or collection services or to manage its health care benefits. A large company might contract with a small information technology firm to manage its Web site or oversee software upgrades.

Small companies provide another valuable service to large companies by acting as sales agents for their products. For example, automobile dealerships, which are generally small businesses, sell vehicles for the big car makers. Local sporting goods stores sell athletic shoes made by industry giants, such as Adidas and Nike. Your corner deli sells products made by large companies, such as Coca-Cola and Frito-Lay.

- According to the SBA, a **small business** is independently owned and operated, exerts little influence in its industry, and (with minimal exceptions) has fewer than five hundred employees.
- The nearly twenty-seven million small businesses in the United States generate about 50 percent of our GDP. They also contribute to growth and vitality in several important areas of economic and socioeconomic development. In particular, small businesses do the following:

  - Create jobs
  - Spark innovation

- Provide opportunities for women and minorities to achieve financial success and independence
- Small businesses tend to foster environments that appeal to individuals with the talent to invent new products or improve the way things are done. They typically make faster decisions, their research programs often are focused, and their compensation structures frequently reward top performers.
- Small firms supply many of the components needed by big companies. They also provide large firms with such services as accounting, legal, and insurance, and many provide *outsourcing* services to large companies—that is, they hire themselves out to help with special projects or handle certain business functions. Small companies (such as automotive dealerships) often act as sales agents for the products of large businesses (for example, car makers).

Exercise

How "small" is a small business? If a substantial portion of small businesses in the United States suddenly closed, what would be the impact on the U.S. economy? How would all these closings affect workers, consumers, and other businesses?

5.4 What Industries Are Small Businesses In?

If you want to start a new business, you probably should avoid certain types of businesses. You'd have a hard time, for example, setting up a new company to make automobiles or aluminum, because you'd have to make tremendous investments in property, plant, and equipment, and raise an enormous amount of capital to pay your workforce.

Fortunately, plenty of opportunities are still available if you're willing to set your sights a little lower. Many types of businesses require reasonable initial investments, and not surprisingly, these are the ones that usually present attractive small business opportunities.

Industries by Sector

We'll have more to say about industries and how to analyze them in later chapters. Here, we'll simply define an *industry* as a group of companies that compete with one another to sell similar products, and we'll focus on the relationship between a small business and the industry in which it operates. First, we'll discuss the industries in which small businesses tend to be concentrated. To do this, we'll divide businesses into two broad types of industries, or sectors: the goods-producing sector and the service-producing sector.

- The **goods-producing sector** includes all businesses that produce tangible goods. Generally speaking, companies in this sector are involved in manufacturing, construction, and agriculture.
- The **service-producing sector** includes all businesses that provide services but don't make tangible goods. They may be involved in retail and wholesale trade, transportation, finance, insurance, real estate, arts, entertainment, recreation, accommodations, food service, education, and such professional activities as technical services, health care, advertising, accounting, and personal services.

Figure 5.4. A high percentage of small businesses are in the retail sector.

About 20 percent of small businesses in the United States are concentrated in the goods-producing sector. The remaining 80% are in the service sector (Small Business Administration, 2010). The high concentration of small businesses in the service-producing sector reflects the makeup of the overall U.S. economy. Over the past fifty years, the service-producing sector has been growing at an impressive rate. In 1960, for example, the goods-producing sector accounted for 38 percent of GDP, the service-producing sector for 62 percent. By 2010, the balance had shifted dramatically, with the goods-producing sector accounting for only 22 percent of GDP, while the service-producing sector had grown to 77 percent (The World Fact Book, 2011).

Goods-Producing Sector

The largest areas of the goods-producing sector are construction and manufacturing. Construction businesses are often started by skilled workers, such as electricians, painters, plumbers, and home builders. They tend to be small and generally work on local projects. Though manufacturing is primarily the domain of large businesses, there are exceptions. BTIO/Realityworks, for example, is a manufacturing enterprise (components come from Ohio and China, and assembly is done in Wisconsin).

Another small manufacturer is Reveal Entertainment, which was founded in 1996 to make and distribute board games. Founder Jeffrey Berndt started with a single award-winning game—a three-dimensional finance and real estate game called "Tripoly"—and now boasts a product line of dozens of board games. There are strategy games, like "Squad Seven," which uses a CD soundtrack to guide players through a jungle in search of treasure; children's games, like "Portfolio Junior," which teaches kids the rudiments of personal finances; and party games, like "So Sue Me," in which players get to experience the fun side of suing their neighbors and taking their possessions (Reveal Entertainment, 2011).

How about making something out of trash? Daniel Blake never followed his mother's advice at dinner when she told

him to eat everything on his plate. When he served as a missionary in Puerto Rico, Aruba, Bonaire, and Curacao after his first year in college, he noticed that the families he stayed with didn't follow her advice either. But they didn't throw their uneaten food into the trash. Instead they put it on a compost pile and used the mulch to nourish their vegetable gardens and fruit trees. While eating at an all-you-can-eat breakfast buffet back home at Brigham Young University, Blake was amazed to see volumes of uneaten food in the trash. This triggered an idea: why not turn the trash into money. Two years later, he was running his company—EcoScraps—that collects 40 tons of food scraps a day from 75 grocers (including Costco) and turns it into high-quality potting soil that he sells online and to nurseries and garden supply stores. What's his profit from this venture? Almost half a million dollars on sales of $1.5 million. Beats cleaning your plate. One person's trash is another person's treasure.

Service-Producing Sector

Many small businesses in this sector are *retailers*—they buy goods from other firms and sell them to consumers, in stores, by phone, through direct mailings, or over the Internet. In fact, entrepreneurs are turning increasingly to the Internet as a venue for start-up ventures. Take Tony Roeder, for example, who had a fascination with the red Radio Flyer wagons that many of today's adults had owned as children. In 1998, he started an online store through Yahoo! to sell red wagons from his home. In three years, he turned his online store into a million-dollar business (Isidro, 2011). When we talk about Internet entrepreneurs, we have to mention Mark Zuckerberg, the king of Internet entrepreneurship. As is well known, he founded Facebook while a student at Harvard and, by age 27, had built up a personal wealth of $13.5 billion (Forbes, 2011).

Other small business owners in this sector are wholesalers—they sell products to businesses that buy them for resale or for company use. A local bakery, for example, is acting as a wholesaler when it sells desserts to a restaurant, which then resells them to its customers. A small business that buys flowers from a local grower (the manufacturer) and resells them to a retail store is another example of a wholesaler.

A high proportion of small businesses in this sector provide professional, business, or personal services. Doctors and dentists are part of the service industry, as are insurance agents, accountants, and lawyers. So are businesses that provide personal services, such as dry cleaning and hairdressing.

David Marcks, for example, entered the service industry about fourteen years ago when he learned that his border collie enjoyed chasing geese at the golf course where he worked. Anyone who's been on a golf course recently knows exactly what the goose problem is. While they are lovely to look at, they answer the call of nature on tees, fairways, and greens. That's where Marcks's company, Geese Police, comes in: Marcks employs specially trained dogs to chase the geese away. He now has twenty-seven trucks, thirty-two border collies, and five offices. Golf courses account for only about 5 percent of his business, as his dogs now patrol corporate parks and playgrounds as well (Isidro, 2008)[1].

Figure 5.5: Small Business by Industry provides a more detailed breakdown of small businesses by industry.
Figure 5.5: Small Business by Industry

<div style="background:orange">

Key Takeaways

- An *industry* is a group of companies that compete with one another to sell similar products. There are two broad types of industries, or *sectors*:
    1. The **goods-producing sector** includes all businesses that produce tangible goods.
    2. The **service-producing sector** includes all businesses that provide services but don't make tangible goods.
- The largest areas of the goods-producing sector are construction and manufacturing. Construction businesses are often started by skilled workers, such as electricians, painters, plumbers, and home builders. These businesses tend to be small and generally focused on local projects. Though manufacturing is primarily the domain of large businesses, there are exceptions.
- Many small businesses in the service-producing sector are *retailers*—they buy goods from other firms and resell them to consumers, in stores, by phone, through direct mailings, or over the Internet. Other small business owners in this sector are *wholesalers*—they sell products to businesses that buy them for resale or for company use. A high proportion of small businesses in this sector provide professional,

</div>

business, or personal services.

Exercise

Why are most small businesses found in the service-producing sector? Identify five small service-producing businesses that you patronize frequently. What kinds of small businesses are found in the goods-producing sector? What small goods-producing firms do you do business with regularly?

5.5 Advantages and Disadvantages of Business Ownership

Do you want to be a business owner someday? Before deciding, you might want to consider the following advantages and disadvantages of business ownership (Small Business Development Center, 2006).

Advantages of Small Business Ownership

Being a business owner can be extremely rewarding. Having the courage to take a risk and start a venture is part of the American dream. Success brings with it many advantages:

- *Independence.* As a business owner, you're your own boss. You can't get fired. More importantly, you have the freedom to make the decisions that are crucial to your own business success.
- *Lifestyle.* Owning a small business gives you certain lifestyle advantages. Because you're in charge, you decide when and where you want to work. If you want to spend more time on nonwork activities or with your family, you don't have to ask for the time off. If it's important that you be with your family all day, you might decide to run your business from your home. Given today's technology, it's relatively easy to do. Moreover, it eliminates commuting time.
- *Financial rewards.* In spite of high financial risk, running your own business gives you a chance to make more money than if you were employed by someone else. You benefit from your own hard work.
- *Learning opportunities.* As a business owner, you'll be involved in all aspects of your business. This situation creates numerous opportunities to gain a thorough understanding of the various business functions.
- *Creative freedom and personal satisfaction.* As a business owner, you'll be able to work in a field that you really enjoy. You'll be able to put your skills and knowledge to use, and you'll gain personal satisfaction from implementing your ideas, working directly with customers, and watching your business succeed.

Disadvantages of Small Business Ownership

As the little boy said when he got off his first roller-coaster ride, "I like the ups but not the downs!" Here are some of the risks you run if you want to start a small business:

- *Financial risk.* The financial resources needed to start and grow a business can be extensive. You may need to commit most of your savings or even go into debt to get started. If things don't go well, you may face substantial financial loss. In addition, there's no guaranteed income. There might be times, especially in the first few years, when the business isn't generating enough cash for you to live on.
- *Stress.* As a business owner, you *are* the business. There's a bewildering array of things to worry about—competition, employees, bills, equipment breakdowns, customer problems. As the owner, you're also responsible for the well-being of your employees.
- *Time commitment.* People often start businesses so that they'll have more time to spend with their families. Unfortunately, running a business is extremely time-consuming. In theory, you have the freedom to take time off,

but in reality, you may not be able to get away. In fact, you'll probably have less free time than you'd have working for someone else. For many entrepreneurs and small business owners, a forty-hour workweek is a myth; see Figure 5.6: The Entrepreneur's Workweek. Vacations will be difficult to take and will often be interrupted. In recent years, the difficulty of getting away from the job has been compounded by cell phones, iPhones, Internet-connected laptops and iPads, and many small business owners have come to regret that they're always reachable.

- *Undesirable duties.* When you start up, you'll undoubtedly be responsible for either doing or overseeing just about everything that needs to be done. You can get bogged down in detail work that you don't enjoy. As a business owner, you'll probably have to perform some unpleasant tasks, like firing people.

In spite of these and other disadvantages, most small business owners are pleased with their decision to start a business. A survey conducted by the *Wall Street Journal* and Cicco and Associates indicates that small business owners and top-level corporate executives agree overwhelmingly that small business owners have a more satisfying business experience. Interestingly, the researchers had fully expected to find that small business owners were happy with their choices; they were, however, surprised at the number of corporate executives who believed that the grass was greener in the world of small business ownership (Cicco and Associates Inc., 2006).
Figure 5.6: The Entrepreneur's Workweek

Key Takeaways

- There are several advantages that, generally speaking, come with success in business ownership:

  1. *Independence.* As a business owner, you're your own boss.
  2. *Lifestyle.* Because you're in charge, you decide when and where you want to work.
  3. *Financial rewards.* In spite of high financial risk, running your own business gives you a chance to make more money than if you were employed by someone else.
  4. *Learning opportunities.* As a business owner, you'll be involved in all aspects of your business.

5. *Creative freedom and personal satisfaction.* As a business owner, you'll be able to work in a field that you really enjoy, and you'll gain personal satisfaction from watching your business succeed.

- There are also a number of potential disadvantages to consider in deciding whether to start a small business:

    1. *Financial risk.* The financial resources needed to start and grow a business can be extensive, and if things don't go well, you may face substantial financial loss. In addition, you'll have no guaranteed income.
    2. *Stress.* You'll have a bewildering array of things to worry about—competition, employees, bills, equipment breakdowns, customer problems.
    3. *Time commitment.* Running a business is extremely time-consuming. In fact, you'll probably have less free time than you'd have working for someone else.
    4. *Undesirable duties.* You'll be responsible for either doing or overseeing just about everything that needs to be done, and you'll probably have to perform some unpleasant tasks, like firing people.

Exercises

1. First, identify five advantages of small business ownership. Next, rank these advantages according to their importance to you. Why did you rank them as you did? What factors discourage individuals from small business ownership? Indicate which of these factors might discourage you from starting a business. Explain why.

2. Because you're convinced that the best way to get rich is to work for yourself, you're thinking about starting your own business. You have an idea and $100,000 that you just inherited from a great-aunt. You even have a location: Palo Alto, California, which (according to a *Forbes* magazine article) is the best place in the United States to get rich. But there's a downside: to move to California and start your own business, you'll have to drop out of college. What financial risks should you consider in making your decision? What are your chances of succeeding with your plan? Are you willing to take the financial risk needed to start a business? Why, or why not? Are you really likely to make more money running your own business than working for someone else?

5.6 Starting a Business

Starting a business takes talent, determination, hard work, and persistence. It also requires a lot of research and planning. Before starting your business, you should appraise your strengths and weaknesses and assess your personal goals to determine whether business ownership is for you (Allen, 2001).

Questions to Ask Before You Start a Business

If you're interested in starting a business, you need to make decisions even before you bring your talent, determination, hard work, and persistence to bear on your project. Here are the basic questions you'll need to address:

- What, exactly, is my business idea? Is it feasible?
- What type of business is right for me? What industry do I want to get into? Do I want to be a manufacturer, a retailer, or a wholesaler? Do I want to provide professional or personal services? Do I want to start a business that I can operate out of my home?
- Do I want to run a business that's similar to many existing businesses? Do I want to innovate—to create a new product or a new approach to doing business?
- Do I want to start a new business, buy an existing one, or buy a franchise?
- Do I want to start the business by myself or with others?
- What form of business organization do I want?

After making these decisions, you'll be ready to take the most important step in the entire process of starting a business: you must describe your future business in the form of a **business plan**—a document that identifies the goals of your proposed business and explains how these goals will be achieved. Think of a business plan as a blueprint for a proposed company: it shows how you intend to build the company and how you intend to make sure that it's sturdy. You must also take a second crucial step before you actually start up your business: You need to get financing—the money from individuals, banks, or both, that you'll need to get your business off the ground. (Obviously, if you already have the necessary funds, you're one of the fortunate few who can skip this step.)

The Business Idea

For some people, coming up with a great business idea is a gratifying adventure. For most, however, it's a daunting task. The key to coming up with a business idea is identifying something that customers want—or, perhaps more importantly, filling an unmet need. Your business will probably survive only if its purpose is to *satisfy its customers*—the ultimate users of its goods or services. In coming up with a business idea, don't ask, "What do we want to sell?" but rather, "What does the customer want to buy?" (Thurm & Lublin, 2005)

To come up with an innovative business idea, you need to be creative. The idea itself can come from various sources. Prior experience accounts for the bulk of new business ideas. Many people generate ideas for industries they're already working in. Past experience in an industry also increases your chances of success. Take Sam Walton, the late founder of Wal-Mart. He began his retailing career at JCPenney and then became a successful franchiser of a Ben Franklin five-and-dime store. In 1962, he came up with the idea of opening large stores in rural areas, with low costs and heavy discounts.

He founded his first Wal-Mart store in 1962, and when he died thirty years later, his family's net worth was $25 billion (Krass, 2006).

Industry experience also gave Howard Schultz, a New York executive for a housewares company, his breakthrough idea. In 1981, Schultz noticed that a small customer in Seattle—Starbucks Coffee, Tea and Spice—ordered more coffeemaker cone filters than Macy's and many other large customers. So he flew across the country to find out why. His meeting with the owner-operators of the original Starbucks Coffee Co. resulted in his becoming part-owner of the company, and changed his life and the life of coffee lovers forever. Schultz's vision for the company far surpassed that of its other owners. While they wanted Starbucks to remain small and local, Schultz saw potential for a national business that not only sold world-class-quality coffee beans but also offered customers a European coffee-bar experience. After attempting unsuccessfully to convince his partners to try his experiment, Schultz left Starbucks and started his own chain of coffee bars, which he called Il Giornale (after an Italian newspaper). Two years later, he bought out the original owners and reclaimed the name Starbucks (Schultz & Yang, 1997).

Other people come up with business ideas because of hobbies or personal interests. This was the case with Nike founder Phil Knight, who was an avid runner. He was convinced that it was possible to make high-quality track shoes that cost less than the European shoes dominating the market at the time. His track experience, coupled with his knowledge of business (Knight holds an MBA from Stanford and worked as an accountant), inspired him to start Nike. Michael Dell also turned a personal interest into a business. From a young age, he was obsessed with taking computers apart and putting them back together again, and it was this personal interest that led to his great business idea. At college, instead of attending classes, he spent his time assembling computers and, eventually, founded Dell, Inc.

We will expand on this important topic of idea generation and creativity in other chapters.

Ownership Options

As we've already seen, you can become a small business owner in one of three ways—by starting a new business, buying an existing one, or obtaining a franchise. Let's look more closely at the advantages and disadvantages of each option.

Starting from Scratch

Figure 5.7. SUBWAY, the largest franchise in the world, grew from a tiny sandwich shop started in 1965 by seventeen-year-old Fred DeLuca hoping to put himself through college.

The most common—and the riskiest—option is starting from scratch. This approach lets you start with a clean slate and allows you to build the business the way you want. You select the goods or services that you're going to offer, secure your location, and hire your employees, and then it's up to you to develop your customer base and build your reputation. This is the path taken by Andres Mason who figured out how to inject hysteria into the process of bargain hunting on the Web. The result is an overnight success story called Groupon (Steiner, 2011). Here is how Groupon (a blend of the words "group" and "coupon") works: A daily email is sent to 6.5 million people in 70 cities across the United States offering a deeply discounted deal to buy something or to do something in their city. If the person receiving the email likes the deal, he or she commits to buying it. But, here's the catch, if not enough people sign up for the deal, it is cancelled. Groupon makes money by keeping half of the revenue from the deal. The company offering the product or service gets exposure. But stay tuned: the "daily deals website isn't just unprofitable—it's bleeding hundreds of millions of dollars" (The Week, 2011). As with all start-ups cash is always a problem.

Buying an Existing Business

If you decide to buy an existing business, some things will be easier. You'll already have a proven product, current customers, active suppliers, a known location, and trained employees. You'll also find it much easier to predict the business's future success. There are, of course, a few bumps in this road to business ownership. First, it's hard to determine how much you should pay for a business. You can easily determine how much things like buildings and equipment are worth, but how much should you pay for the fact that the business already has steady customers?

In addition, a business, like a used car, might have performance problems that you can't detect without a test drive (an option, unfortunately, that you don't get when you're buying a business). Perhaps the current owners have disappointed

customers; maybe the location isn't as good as it used to be. You might inherit employees that you wouldn't have hired yourself. Finally, what if the previous owners set up a competing business that draws away their former—and your current—customers?

Getting a Franchise

Lastly, you can buy a **franchise**. Under this setup, a *franchiser* (the company that sells the franchise) grants the *franchisee* (the buyer—you) the right to use a brand name and to sell its goods or services. Franchises market products in a variety of industries, including food, retail, hotels, travel, real estate, business services, cleaning services, and even weight-loss centers and wedding services. There are thousands of franchises, many of which are quite familiar—SUBWAY, McDonald's, 7-Eleven, Holiday Inn, Budget Car Rental, RadioShack, and Jiffy Lube.

   As you can see from Figure 5.8: The Growth of Franchising, 1980–2007, franchising has become an extremely popular way to do business. A new franchise outlet opens once every eight minutes in the United States, where one in ten businesses is now a franchise. Franchises employ eight million people (13 percent of the workforce) and account for 17 percent of all sales in this country ($1.3 trillion) (U.S. Census Bureau, 2010).
Figure 5.8: The Growth of Franchising, 1980–2007

In addition to the right to use a company's brand name and sell its products, the franchisee gets help in picking a location, starting and operating the business, and advertising. In effect, you've bought a prepackaged, ready-to-go business that's proven successful elsewhere. You also get ongoing support from the franchiser, which has a vested interest in your success.

   Not surprisingly, these advantages don't come cheaply. Franchises can be very expensive, usually depending on the amount of business that a franchisee is expected to do. KFC franchises, for example, require a total investment of $1.3 million to $2.5 million each. This fee includes the cost of the property, equipment, training, start-up costs, and the *franchise fee*—a one-time charge for the right to operate as a KFC outlet. McDonald's is in the same price range ($1.1 million to $1.9 million). SUBWAY sandwich shops are more affordable, with expected total investment ranging from $84,000 to $258,000. If you'd prefer teaching dance and exercise classes, you could get a Jazzercise franchise for anywhere from $3,000 to $76,000. If you don't want to deal in food or dance, you might want to buy a dating service.

The Right One® franchises go for an initial investment of $98,000 to $254,000, depending on location (Entrepreneur, 2011).

In addition to your initial investment, you'll have to pay two other fees on a monthly basis—a *royalty fee* (typically from 3 to 12 percent of sales) for continued support from the franchiser and the right to keep using the company's trade name, plus an *advertising fee* to cover your share of national and regional advertising. You'll also be expected to buy your products from the franchiser (Seid & Ainsley, 2006).

Why do would-be business owners like franchises? For one thing, buying a franchise lets you start up under fairly safe conditions, with a proven model for running a company and a permanent support team. You can profit from name recognition without having to develop your own image in the marketplace, and you can be your own boss (as long as you comply with the standards set by the franchiser).

But there are disadvantages. The cost of obtaining and running a franchise can be high, and you have to play by the franchiser's rules, even when you disagree with them. The franchiser maintains a great deal of control over its franchisees. For example, if you own a fast-food franchise, the franchise agreement will likely dictate the food and beverages you can sell; the methods used to store, prepare, and serve the food; and the prices you'll charge. In addition, the agreement will dictate what the premises will look like and how they'll be maintained.

Finally, franchisers don't always keep their promises. What do you do if the promised advertising or employee training doesn't materialize? What do you do if you're forced to make unnecessary and costly alterations to your premises, or the franchising company sets up a competing establishment nearby? What if the franchising company gets bad press, which, in turn, hurts your sales? You always have the option of suing the franchiser, but this is time-consuming and costly. As with any business venture, you need to do your homework before investing in a franchise.

Key Takeaways

- Before starting a business, you need to ask yourself a few basic questions:

  1. What, exactly, is my *business idea*? Is it feasible?
  2. What type of business is right for me? What *industry* do I want to get into?
  3. Do I want to run a business that's similar to many existing businesses, or do I want to innovate?
  4. Do I want to start a new business, take over an existing one, or buy a franchise?
  5. Do I want to start the business by myself, or do I want company?
  6. What form of *business organization* do I want?

- After you've addressed these basic questions, you'll be ready to describe your future business in the form of a **business plan**—a document that identifies the goals of your proposed business and explains how it will achieve them. Before you actually start up your business, you must also get financing.

- The key to coming up with a business idea is identifying something that customers want. Your business will probably survive only if its "purpose" is *to satisfy its customers*—the ultimate users of its goods or services.

- You can become a small business owner in one of three ways, each of which has advantages and disadvantages:

  1. *Starting from scratch.* This is the most common—and riskiest—option. *Advantage*: You start with a clean slate and build the business the way you want. *Disadvantage*: It's up to you to develop your customer base and build your reputation.
  2. *Buying an existing business.* This option is not as risky as starting a business from scratch, but it

has some drawbacks. *Advantages*: You'll already have a proven product, current customers, active suppliers, a known location, and trained employees. *Disadvantages*: It's hard to determine how much to pay for a business; perhaps the current owners have disappointed customers; maybe the location isn't as good as it used to be.

3.   *Buying a franchise*. Under a **franchise** setup, a *franchiser* (the company that sells the franchise) grants the *franchisee* (the buyer) the right to use a brand name and to sell its goods or services. *Advantages*: You've bought a prepackaged, ready-to-go business that's proven successful elsewhere; you also get ongoing support from the franchiser. *Disadvantages*: The cost can be high; you have to play by the franchiser's rules; and franchisers don't always keep their promises.

Exercises

1.   If business ownership interests you, you can start a new business, buy an existing one, or obtain a franchise. Evaluate the advantages and disadvantages of each option. Which option do you find most appealing, and why? Describe the business you would probably start.

2.   How would you like to spend your summer collecting trash in a used pickup? Doesn't sound very appealing, does it? Would you quit college to do it full time? Probably not. But that's exactly what Brian Scudamore did. And he got very rich doing it. His summer job turned into the company known as 1-800-GOT-JUNK, one of the fastest-growing franchises in the United States and Canada. Go to http://www.1800gotjunk.com to link to the Web site and learn more about the company. After looking at the Web site, answer the following questions:

As a reward for working hard, take a break and click on the Junk Genie icon on the bottom of the company's home page (http://www.1800gotjunk.com). Can you figure out the trick? Pass it along to your friends.

5.7 The Business Plan

If you want to start a business, you must prepare a business plan. This essential document should tell the story of your business concept, provide an overview of the industry in which you will operate, describe the goods or services you will provide, identify your customers and proposed marketing activities, explain the qualifications of your management team, and state your projected income and borrowing needs.

Purpose of a Business Plan

The business plan is a plan or blueprint for the company, and it's an indispensable tool in attracting investors, obtaining loans, or both. Remember, too, that the value of your business plan isn't limited to the planning stages of your business and the process of finding start-up money. Once you've acquired start-up capital, don't just stuff your plan in a drawer. Treat it as an ongoing guide to your business and its operations, as well as a yardstick by which you can measure your performance. Keep it handy, update it periodically, and use it to assess your progress.

In developing and writing your business plan, you must make strategic decisions in the areas of management, operations, marketing, accounting, and finance—in short, in all the functional areas of business that we described in Chapter 1. Granted, preparing a business plan takes a lot of time and work, but it's well worth the effort. A business plan forces you to think critically about your proposed business and reduces your risk of failure. It forces you to analyze your business concept and the industry in which you'll be operating, and it helps you determine how you can grab a percentage of sales in that industry.

The most common use of a business plan is persuading investors, lenders, or both, to provide financing. These two groups look for different things. Investors are particularly interested in the quality of your business concept and the ability of management to make your venture successful. Bankers and other lenders are primarily concerned with your company's ability to generate cash to repay loans. To persuade investors and lenders to support your business, you need a professional, well-written business plan that paints a clear picture of your proposed business.

Sections of the Business Plan

Though formats can vary, a business plan generally includes the following sections: executive summary, description of proposed business, industry analysis, mission statement and core values, management plan, goods or services and (if applicable) production processes, marketing, global issues, and financial plan. Let's explore each of these sections in more detail. (*Note*: More detailed documents and an Excel template are available for those classes in which the optional business plan project is assigned.)

Executive Summary

The **executive summary** is a one- to three-page overview of the business plan. It's actually the most important part of the business plan: it's what the reader looks at first, and if it doesn't capture the reader's attention, it might be the only

thing that he or she looks at. It should therefore emphasize the key points of the plan and get the reader excited about the prospects of the business.

Even though the executive summary is the first thing read, it's written *after* the other sections of the plan are completed. An effective approach in writing the executive summary is to paraphrase key sentences from each section of the business plan. This process will ensure that the key information of each section is included in the executive summary.

Description of Proposed Business

Here, you present a *brief* description of the company and tell the reader why you're starting your business, what benefits it provides, and why it will be successful. Some of the questions to answer in this section include the following:

- What will your proposed company do? Will it be a manufacturer, a retailer, or a service provider?
- What goods or services will it provide?
- Why are your goods or services unique?
- Who will be your main customers?
- How will your goods or services be sold?
- Where will your business be located?

Because later parts of the plan will provide more detailed discussions of many of these issues, this section should provide only an overview of these topics.

Industry Analysis

This section provides a brief introduction to the industry in which you propose to operate. It describes both the current situation and the future possibilities, and it addresses such questions as the following:

- How large is the industry? What are total sales for the industry, in volume and dollars?
- Is the industry mature or are new companies successfully entering it?
- What opportunities exist in the industry? What threats exist?
- What factors will influence future expansion or contraction of the industry?
- What is the overall outlook for the industry?
- Who are your major competitors in the industry?
- How does your product differ from those of your competitors?

Mission Statement and Core Values

This portion of the business plan states the company's *mission statement* and *core values*. The strong mission statement describes the purpose or *mission* of your organization—its reason for existence. It tells the reader what the organization is committed to doing. For example, one mission statement reads, "The mission of Southwest Airlines is dedication to the highest quality of customer service delivered with a sense of warmth, friendliness, individual pride, and company spirit" (Southwest Airline's, 2011).

Core values are fundamental beliefs about what's important and what is (and isn't) appropriate in conducting company activities. Core values are not about profits, but rather about ideals. They should help guide the behavior of individuals in the organization. Coca-Cola, for example, intends that its core values—leadership, passion, integrity, collaboration, diversity, quality, and accountability—will let employees know what behaviors are (and aren't) acceptable (The Coca-Cola Company, 2011).

Management Plan

Management makes the key decisions for the business, such as its legal form and organizational structure. This section of the business plan should outline these decisions and provide information about the qualifications of the key management personnel.

A. Legal Form of Organization

This section dentifies the chosen legal form of business ownership: sole proprietorship (personal ownership), partnership (ownership shared with one or more partners), or corporation (ownership through shares of stock).

B. Qualifications of Management Team and Compensation Package

It isn't enough merely to have a good business idea: you need a talented management team that can turn your concept into a profitable venture. This part of the management plan section provides information about the qualifications of each member of the management team. Its purpose is to convince the reader that the company will be run by experienced, well-qualified managers. It describes each individual's education, experience, and expertise, as well as each person's responsibilities. It also indicates the estimated annual salary to be paid to each member of the management team.

C. Organizational Structure

This section of the management plan describes the relationships among individuals within the company, listing the major responsibilities of each member of the management team.

Goods, Services, and the Production Process

To succeed in attracting investors and lenders, you must be able to describe your goods or services clearly (and enthusiastically). Here, you describe all the goods and services that you will provide the marketplace. This section explains why your proposed offerings are better than those of competitors and indicates what market needs will be met by your goods or services. In other words, it addresses a key question: What *competitive advantage* will the company's goods and services have over similar products on the market?

This section also indicates how you plan to obtain or make your products. Naturally, the write-up will vary, depending

on whether you're proposing a service company, a retailer, or a manufacturer. If it's a service company, describe the process by which you'll deliver your services. If it's a retail company, tell the reader where you'll purchase products for resale.

If you're going to be a manufacturer, you must furnish information on product design, development, and production processes. You must address questions such as the following:

- How will products be designed?
- What technology will be needed to design and manufacture products?
- Will the company run its own production facilities, or will its products be manufactured by someone else?
- Where will production facilities be located?
- What type of equipment will be used?
- What are the design and layout of the facilities?
- How many workers will be employed in the production process?
- How many units will be produced?
- How will the company ensure that products are of high quality?

Marketing

This critical section focuses on four marketing-related areas—target market, pricing, distribution, and promotion:

1. *Target market.* Describe future customers and profile them according to age, gender, income, interests, and so forth. If your company will sell to other companies, describe your typical business customer.
2. *Pricing.* State the proposed price for each product. Compare your pricing strategy to that of competitors.
3. *Distribution.* Explain how your goods or services will be distributed to customers. Indicate whether they'll be sold directly to customers or through retail outlets.
4. *Promotion.* Explain your promotion strategy, indicating what types of advertising you'll be using.

In addition, if you intend to use the Internet to promote or sell your products, also provide answers to these questions:

- Will your company have a Web site? Who will visit the site?
- What will the site look like? What information will it supply?
- Will you sell products over the Internet?
- How will you attract customers to your site and entice them to buy from your company?

Global Issues

In this section, indicate whether you'll be involved in international markets, by either buying or selling in other countries. If you're going to operate across borders, identify the challenges that you'll face in your global environment, and explain how you'll meet them. If you don't plan initially to be involved in international markets, state what strategies, if any, you'll use to move into international markets when the time comes.

Financial Plan

In preparing the financial section of your business plan, specify the company's cash needs and explain how you'll be able to repay debt. This information is vital in obtaining financing. It reports the amount of cash needed by the company for start-up and initial operations and provides an overview of proposed funding sources. It presents financial projections, including expected sales, costs, and profits (or losses). It refers to a set of financial statements included in an appendix to the business plan.

Appendices

Here, you furnish supplemental information that may be of interest to the reader. In addition to a set of financial statements, for example, you might attach the résumés of your management team.

Key Takeaways

- A **business plan** tells the story of your business concept, provides an overview of the industry in which you will operate, describes the goods or services you will provide, identifies your customers and proposed marketing activities, explains the qualifications of your management team, and states your projected income and borrowing needs.
- In your business plan, you make strategic decisions in the areas of management, operations, marketing, accounting, and finance. Developing your business plan forces you to analyze your business concept and the industry in which you'll be operating. Its most common use is persuading investors and lenders to provide financing.

- A business plan generally includes the following sections:

  1. **Executive summary**. One- to three-page overview.
  2. *Description of proposed business*. Brief description of the company that answers such questions as what your proposed company will do, what goods or services it will provide, and who its main customers will be.
  3. *Industry analysis*. Short introduction to the industry in which you propose to operate.
  4. *Mission statement and core values*. Declaration of your **mission statement**, which are fundamental beliefs about what's important and what is (and isn't) appropriate in conducting company activities.
  5. *Management plan*. Information about management team qualifications and responsibilities, and designation of your proposed legal form of organization.
  6. *Goods, services, and the production process*. Description of the goods and services that you'll provide in the marketplace; explanation of how you plan to obtain or make your products or of the process by which you'll deliver your services.
  7. *Marketing*. Description of your plans in four marketing-related areas: target market, pricing, distribution, and promotion.
  8. *Global issues*. Description of your involvement, if any, in international markets.

9. *Financial plan.* Report on the cash you'll need for start-up and initial operations, proposed funding sources, and means of repaying your debt.
10. *Appendices.* Supplemental information that may be of interest to the reader.

Exercise

Let's start with three givens: (1) college students love chocolate chip cookies, (2) you have a special talent for baking cookies, and (3) you're always broke. Given these three conditions, you've come up with the idea of starting an on-campus business—selling chocolate chip cookies to fellow students. As a business major, you want to do things right by preparing a business plan. First, you identified a number of specifics about your proposed business. Now, you need to put these various pieces of information into the relevant section of your business plan. Using the business plan format described in this chapter, indicate the section of the business plan into which you'd put each of the following:

1. You'll bake the cookies in the kitchen of a friend's apartment.
2. You'll charge $1 each or $10 a dozen.
3. Your purpose is to make the best cookies on campus and deliver them fresh. You value integrity, consideration of others, and quality.
4. Each cookie will have ten chocolate chips and will be superior to those sold in nearby bakeries and other stores.
5. You expect sales of $6,000 for the first year.
6. Chocolate chip cookies are irresistible to college students. There's a lot of competition from local bakeries, but your cookies will be superior and popular with college students. You'll make them close to campus using only fresh ingredients and sell them for $1 each. Your management team is excellent. You expect first-year sales of $6,000 and net income of $1,500. You estimate start-up costs at $600.
7. You'll place ads for your product in the college newspaper.
8. You'll hire a vice president at a salary of $100 a week.
9. You can ship cookies anywhere in the United States and in Canada.
10. You need $600 in cash to start the business.
11. There are six bakeries within walking distance of the college.
12. You'll bake nothing but cookies and sell them to college students. You'll make them in an apartment near campus and deliver them fresh.

5.8 How to Succeed in Managing a Business

Why Do Businesses Succeed?

Being successful as a business owner requires more than coming up with a brilliant idea and working hard. You need to learn how to manage and grow your business. In the process, you'll face numerous challenges, and your ability to meet them will be a major factor in your success (or failure) (D&B, 2008). To give yourself a fighting chance in making a success of your business, you should do the following:

- *Know your business*. It seems obvious, but it's worth mentioning: successful businesspeople know what they're doing. They're knowledgeable about the industry in which they operate (both as it stands today and where it's headed), and they know who their competitors are. They know how to attract customers and who the best suppliers and distributors are, and they understand the impact of technology on their business.
- *Know the basics of business management*. You might be able to *start* a business on the basis of a great idea, but to *manage* it you need to understand the functional areas of business—accounting, finance, management, marketing, and production. You need to be a salesperson, as well as a decision maker and a planner.
- *Have the proper attitude*. When you own a business, you *are* the business. If you're going to devote the time and energy needed to transform an idea into a successful venture, you need to have a passion for your work. You should believe in what you're doing and make a strong personal commitment to your business.
- *Get adequate funding*. It takes a lot of money to start a business and guide it through the start-up phase (which can last for over a year). You can have the most brilliant idea in the world, the best marketing approach, and a talented management team, yet if you run out of cash, your career as a business owner could be brief. Plan for the long term and work with lenders and investors to ensure that you'll have sufficient funds to get open, stay open during the start-up phase, and, ultimately, expand.
- *Manage your money effectively*. You'll be under constant pressure to come up with the money to meet payroll and pay your other bills. That's why you need to keep an eye on *cash flow*—money coming in and money going out. You need to control costs and collect money that's owed you, and, generally, you need to know how to gather the financial information that you require to run your business.
- *Manage your time efficiently*. A new business owner can expect to work sixty hours a week. If you want to grow a business and have some type of nonwork life at the same time, you'll have to give up some control—to let others take over some of the work. Thus, you must develop time-management skills and learn how to delegate responsibility.
- *Know how to manage people*. Hiring, keeping, and managing good people are crucial to business success. As your business grows, you'll depend more on your employees. You need to develop a positive working relationship with them, train them properly, and motivate them to provide quality goods or services.
- *Satisfy your customers*. You might attract customers through impressive advertising campaigns, but you'll keep them only by providing quality goods or services. Commit yourself to satisfying—or even exceeding—customer needs.
- *Know how to compete*. Find your niche in the marketplace, keep an eye on your competitors, and be prepared to react to changes in the marketplace. The history of business (and much of life) can be summed up in three words: "Adapt or perish."

Why Do Businesses Fail?

If you've paid attention to the occupancy of shopping malls over a few years, you've noticed that retailers come and go with surprising frequency. The same thing happens with restaurants—indeed, with all kinds of businesses. By definition, starting a business—small or large—is risky, and though many businesses succeed, a large proportion of them don't. One-third of small businesses that have employees go out of business within the first two years. More than half of small businesses have closed by the end of their fourth year, and 70 percent do not make it past their seventh year (Knaup & Piazza, 2011; Knaup & Piazza, 2007).

Table 5.2: Survival Rate of New Companies

Number of Years after Start-up	Rate of Survival
1	81.2%
2	65.8%
3	54.3%
4	44.4%
5	38.3%
6	34.4%
7	31.2%

Note: Percentages based on a total of 212,182 businesses that started up in the second quarter of 1998.

Source: "Characteristics of Survival: Longevity of Business Establishments in the Business Employment Dynamics Data: *Extension*." http://www.bls.gov/osmr/pdf/st060040.pdf.

As bad as these statistics on business survival are, some industries are worse than others. If you want to stay in business for a long time, you might want to avoid some of these risky industries. Even though your friends think you make the best macaroni and cheese pizza in the world, this doesn't mean you can succeed as a pizza parlor owner. Opening a restaurant or a bar is one of the riskiest ventures (and, therefore, start-up funding is hard to get). You might also want to avoid the transportation industry. Owning a taxi might appear lucrative until you find out what a taxi license costs. It obviously varies by city, but in New York City the price tag is upward of $400,000. And setting up a shop to sell clothing can be challenging. Your view of "what's in" may be off, and one bad season can kill your business. The same is true for stores selling communication devices: every mall has one or more cell phone stores so the competition is steep, and business can be very slow (Farrell, 2011).

  Businesses fail for any number of reasons, but many experts agree that the vast majority of failures result from some combination of the following problems:

- *Bad business idea.* Like any idea, a business idea can be flawed, either in the conception or in the execution. If you tried selling snowblowers in Hawaii, you could count on little competition, but you'd still be doomed to failure.
- *Cash problems.* Too many new businesses are underfunded. The owner borrows enough money to set up the business but doesn't have enough extra cash to operate during the start-up phase, when very little money is coming in but a lot is going out.
- *Managerial inexperience or incompetence.* Many new business owners have no experience in running a business; many have limited management skills. Maybe an owner knows how to make or market a product but doesn't know how to manage people. Maybe an owner can't attract and keep talented employees. Maybe an owner has poor leadership skills and isn't willing to plan ahead.
- *Lack of customer focus.* A major advantage of a small business is the ability to provide special attention to

customers. But some small businesses fail to seize this advantage. Perhaps the owner doesn't anticipate customers' needs or keep up with changing markets or the customer-focused practices of competitors.

- *Inability to handle growth.* You'd think that a sales increase would be a good thing. Often it is, of course, but sometimes it can be a major problem. When a company grows, the owner's role changes. He or she needs to delegate work to others and build a business structure that can handle the increase in volume. Some owners don't make the transition and find themselves overwhelmed. Things don't get done, customers become unhappy, and expansion actually damages the company.

Help from the SBA

If you had your choice, which cupcake would you pick—vanilla Oreo, tripple chocolate, or latte? In the last few years, cupcake shops are popping up in almost every city. Perhaps the bad economy has put people in the mood for small, relatively inexpensive treats. Whatever the reason, you're fascinated with the idea of starting a cupcake shop. You have a perfect location, have decided what equipment you need, and have tested dozens of recipes (and eaten lots of cupcakes). You are set to go with one giant exception: you don't have enough savings to cover your start-up costs. You have made the round of most local banks, but they are all unwilling to give you a loan. So what do you do? Fortunately, there is help available. It is through your local Small Business Administration (SBA), which offers an array of programs to help current and prospective small business owners. The SBA won't actually loan you the money, but it will increase the liklihood that you will get funding from a local bank by guaranteeing the loan. Here's how the SBA's loan guaranty program works: You apply to a bank for financing. A loan officer decides if the bank will loan you the money without an SBA guarantee. If the answer is no (because of some weakness in your application), the bank then decides if it will loan you the money if the SBA guarantees the loan. If the bank decides to do this, you get the money and make payments on the loan. If you default on the loan, the government reimburses the bank for its loss, up to the amount of the SBA guarantee.

In the process of talking with someone at the SBA, you will discover other programs it offers that will help you start your business and manage your organization. For example, to apply for funding you will need a well-written business plan. Once you get the loan and move to the business start-up phase, you will have lots of questions that need to be answered (including setting up a computer system for your company). And you are sure you will need help in a number of areas as you operate your cupcake shop. Fortunately, the SBA can help with all of these management and technical-service tasks.

This assistance is available through a number of channels, including the SBA's extensive Web site, online courses, and training programs. A full array of individualized services is also available. The **Small Business Development Center (SBDC)** assists current and prospective small business owners with business problems and provides free training and technical information on all aspects of small business management. These services are available at approximately one thousand locations around the country, many housed at colleges and universities (U.S. Small Business Administration, 2011).

If you need individualized advice from experienced executives, you can get it through the **Service Corps of Retired Executives (SCORE)**. Under the SCORE program, a businessperson needing advice is matched with someone on a team of retired executives who work as volunteers. Together, the SBDC and SCORE help more than a million small businesspersons every year (U.S. Small Business Administration, 2011; SBDC Economic Impact, 2011).

Key Takeaways

- Business owners face numerous challenges, and the ability to meet them is a major factor in success (or failure). As a business owner, you should do the following:

  1. *Know your business.* Successful businesspeople are knowledgeable about the industry in which they operate, and they know who their competitors are.
  2. *Know the basics of business management.* To *manage* a business, you need to understand the functional areas of business—accounting, finance, management, marketing, and production.
  3. *Have the proper attitude.* You should believe in what you're doing and make a strong personal commitment to it.
  4. *Get adequate funding.* Plan for the long term and work with lenders and investors to ensure that you'll have sufficient funds to get open, stay open during the start-up phase, and, ultimately, expand.
  5. *Manage your money effectively.* You need to pay attention *to cash flow*—money coming in and money going out—and you need to know how to gather the financial information that you require to run your business.
  6. *Manage your time efficiently.* You must develop time-management skills and learn how to delegate responsibility.
  7. *Know how to manage people.* You need to develop a positive working relationship with your employees, train them properly, and motivate them to provide quality goods or services.
  8. *Satisfy your customers.* Commit yourself to satisfying—or even exceeding—customer needs.
  9. *Know how to compete.* Find your niche in the marketplace, keep an eye on your competitors, and be prepared to react to changes in your business environment.

- Businesses fail for any number of reasons, but many experts agree that the vast majority of failures result from some combination of the following problems:

  1. *Bad business idea.* Like any idea, a business idea can be flawed, either in the conception or in the execution.
  2. *Cash problems.* Too many new businesses are underfunded.
  3. *Managerial inexperience or incompetence.* Many new business owners have no experience in running a business, and many have limited management skills.
  4. *Lack of customer focus.* Some owners fail to make the most of a small business's advantage in providing special attention to customers.
  5. *Inability to handle growth.* When a company grows, some owners fail to delegate work or to build an organizational structure that can handle increases in volume.

- Services available to current and prospective small business owners from the SBA include assistance in developing a business plan, starting a business, obtaining financing, and managing an organization.
- The **SBDC (Small Business Development Centers)** matches businesspeople needing advice with teams of retired executives who work as volunteers through the SCORE program.

1. It's the same old story: you want to start a small business but don't have much money. Go to http://entrepreneurs.about.com/cs/businessideas/a/10startupideas.htm and read the article titled "Business Ideas on a Budget." Identify a few businesses that you can start for $20 or less (that's right—$20 or less). Select one of these business opportunities that interests you. Why did you select this business? Why does the idea interest you? What would you do to ensure that the business was a success? If you needed assistance starting up or operating your business, where could you find help, and what type of assistance would be available?
2. Why do some businesses succeed while others fail? Identify three factors that you believe to be the most critical to business success. Why did you select these factors? Identify three factors that you believe to be primarily responsible for business failures, and indicate why you selected these factors.

2. What's the downside of being an entrepreneur?
3. What challenges do entrepreneurs face?
4. Is entrepreneurship for you? Why, or why not?

Ethics Angle (AACSB)

Term Papers for Sale

You and some fellow classmates are sitting around over pizza one night when someone comes up with an idea for a business. All of you have old term papers and essays lying around, and a couple of you know how to set up a Web page. What if you combine these two assets and start a business selling term papers over the Internet? Over time, you could collect or buy additional inventory from other students, and since some of you are good at research and others are good writers, you could even offer "student clients" the option of customized papers researched and written just for them. You figure that you can charge $15 for an "off-the-rack" paper, and for customized jobs, $10 per double-spaced page seems reasonable.

You all agree that the idea is promising, and you and a partner volunteer to put together a business plan. You have no difficulty with the section describing your proposed business: you know what your business will do, what products it will offer, who your customers will be, how your products will be sold, and where you'll be located. So far, so good.

Let's pause at this point to consider the following questions:

1. Does selling term papers over the Internet make business sense? Is it a good business idea?
2. Could the venture be profitable?

Let's continue and find out how the business plan proceeds.

Now you're ready to write your section on industry analysis and the first question you need to answer is, who are the players in the industry? To get some answers, you go online, log on to Google, and enter the search term "term papers for sale." Much to your surprise, up pop dozens of links to companies that have beaten you to market. The first company you investigate claims to have a quarter-million papers in stock, plus a team of graduate students on hand to write papers for anyone needing specialized work.

There's also a statement that says something like this: "Our term papers and essays are intended to help students write their own papers. They should be used for research purposes only. Students using our term papers and essays should write their own papers and cite our work."

You realize now that you're facing not only stiff competition but an issue that, so far, you and your partners have preferred to ignore: Is the business that you have in mind even ethical? It occurs to you that you could probably find the answer to this question in at least one of the 8,484 term papers on ethics available on your competitor's Web site, but you decide that it would be more efficient to give the question some thought on your own.

At this point, then, let's pause again to identify a couple of questions that you need to ask yourself as you prepare a report of your findings for your partners:

1. Is the sole purpose of running a business to make a profit, or do you need to be concerned about what your products will be used for? Explain your reasoning.
2. Do you need to consider the ethics of what other people do with your product? Explain your reasoning.

When you report on the problem that you've uncovered, your would-be partners are pretty discouraged, some by the prospect of competition and some by the nagging ethical issue. Just as you're about to dissolve the partnership, one person speaks up: "How about selling software that lets faculty search to see if students have plagiarized material on the Web?"

"Sorry," says someone else. "It's already out there. Two students at Berkeley have software that compares papers to a hundred million Web pages."

Team-Building Skills (AACSB)

Knowing how to be an effective team member is a vital lifetime skill. It will help you in your academic career, in the business world, and in nonwork activities as well. It takes time and effort to learn how to work in a team. Part of the challenge is learning how to adjust your behavior to the needs of the group. Another part is learning how to motivate members of a group. A well-functioning team allows members to combine knowledge and skills, and this reliance on diverse backgrounds and strengths often results in team decisions that are superior to those made by individuals working alone.

Are You a Team Player?

As a first step, you should do a self-assessment to evaluate whether you possess characteristics that will help you be a successful team member. You can do this by taking a "Team Player" quiz available at the Quintessential Careers Web site. Go to https://www.livecareer.com/resources/jobs/networking/team-player-quiz to link to this quiz. You'll get feedback that helps you identify the characteristics you need to work on if you want to improve your teamwork skills.

Working Together as a Team

The best approach to specifying appropriate behavior for team members is for the team to come up with some ground rules. Get together with three other students selected by your instructor, and establish working guidelines for your team. Prepare a team report in which you identify the following:

1. Five things that team members can do to increase the likelihood of group success
2. Five things that team members can do to jeopardize group success

Global Versions of MySpace

When Andrew Mason founded Groupon in November 2008, he had no idea that he was headed for an overnight success, but two years after he set out on his entrepreneurial adventure (which, admittedly, isn't actually overnight), Groupon had more than fifty million registered users and nine million customers who had purchased at least one "daily deal" (http://www.digital-dd.com/wp-content/uploads/2011/06/groupon-ipo-s-1.pdf).

What's ahead for Groupon? Can its business model be exported to even more locations outside the United States? If you were in charge of global expansion for Groupon, what country would you enter next? What country would you avoid? To identify promising and not-so-promising foreign markets, go to the Groupon Wikipedia article (http://en.wikipedia.org/wiki/Groupon) and click on "Geographic Markets" to obtain a list of counties in which Groupon operates. Also go to http://news.bbc.co.uk/1/hi/country_profiles/default.stm to link to the Country Profiles Web site maintained by BBC News. Study the economic and political profiles of possible overseas locations, and answer the following questions:

1. Why do you think Groupon has been so successful in the United States? Cite some of the challenges that it still faces in this country.
2. If you were in charge of global expansion at Groupon, which country would you enter next? Why do you think the Groupon business concept will succeed in this country? What challenges will the company face there?
3. What country would you avoid? Why is it incompatible with the Groupon business concept?

Agency provides for small-business owners, check out http://www.mbda.gov.

MANAGING FOR BUSINESS SUCCESS

Learning Objectives

1. Identify the four interrelated functions of management: planning, organizing, directing, and controlling.
2. Understand the process by which a company develops and implements a strategic plan.
3. Discuss various options for organizing a business, and create an organization chart.
4. Explain how managers direct others and motivate them to achieve company goals.
5. Describe the process by which a manager monitors operations and assesses performance.
6. Describe the skills needed to be a successful manager.

6.1 Noteworthy Management

Consider this scenario. You're about halfway through the semester and ready for your first round of midterms. You open up your class notes and declare them "pathetic." You regret scribbling everything so carelessly (and skipping class so many times). You wish you had better notes. That's when it hits you: What if there was a note-taking service on campus? When you were ready to study for a big test, you could buy complete (and completely legible) class notes. You've heard that there are class-notes services at some larger schools, but there's no such thing on your campus. So you ask yourself, why don't I start a note-taking business? My upcoming set of exams may not be salvageable, but after that, I'd always have great notes. And while I was at it, I could learn how to manage a business (isn't that what majoring in business is all about?).

Figure 6.1. Would you be willing to pay someone for a complete set of class notes for this course?

So you sit down to work on your great business idea. First, you'll hire a bunch of students to take class notes and type them out. Then the notetakers will e-mail the notes to your assistant, who'll get them copied (on a special type of blue paper that can't be duplicated). The last step will be assembling packages of notes and, of course, selling them. You decide to name your company "Notes-4-You."

It sounds like a great idea, but you're troubled by one question: Why does this business need *you*? Do the notetakers need a boss? Couldn't they just sell the notes themselves? This process *could* work, but it would probably work a lot *better* if there was someone to oversee the operations: a manager—someone like you—to make sure that the operations involved in preparing and selling notes were performed in both an effective and an efficient manner. You'd make the process *effective* by ensuring that the right things got done and that they all contributed to the success of the enterprise. You'd make the process *efficient* by ensuring that activities were performed in the right way and used the fewest possible resources. That's the job that you perform as a **manager**: making a group of people more *effective* and *efficient* with you than they would be without you.

Figure 6.2: Managerial Efficiency and Effectiveness

6.2 What Do Managers Do?

You'll accomplish this task through ==management==: the process of planning, organizing, directing, and controlling resources to achieve specific goals. A ***plan*** enables you to take your business concept beyond the idea stage. It does not, however, get the work *done*. You have to *organize* things if you want your plan to become a reality. You have to put people and other resources in place to make things happen. And because your note-taking venture is supposed to be better off with you in charge, you need to be a ***leader*** who can motivate your people to do well. Finally, to know whether things are in fact going well, you'll have to *control* your operations—that is, measure the results and compare them with the results that you laid out in your plan. Figure 6.3: The Role of Planning gives you a good idea of the interrelationship between planning and the other functions that managers perform.
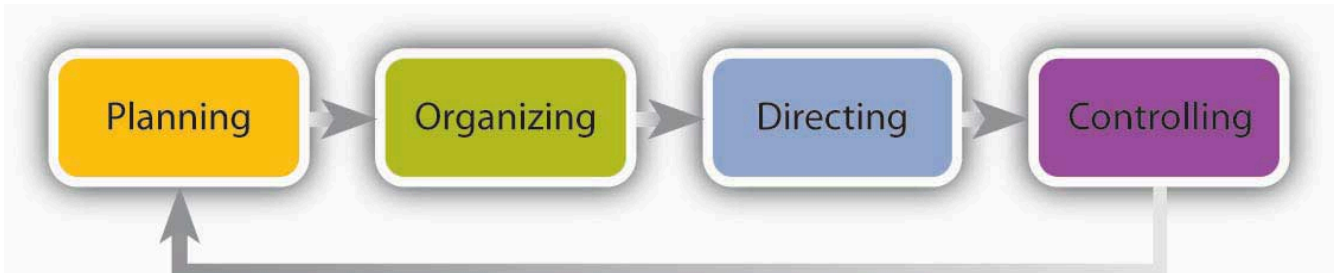

Figure 6.3: The Role of Planning

Functions of Management

If you visit any small or large company, not-for-profit organization, or government agency, you'll find managers doing the same things you'd be doing to run your note-taking business—*planning*, *organizing*, *directing*, and *controlling*. In the rest of the chapter, we'll look at these four interrelated functions in detail.

> ### *Key Takeaways*
>
> - Managers plan, organize, direct, and control resources to achieve specific goals.
> - In **planning**, they set goals and determine the best way to achieve them.
> - **Organizing** means allocating resources (people, equipment, and money) to carry out the company's plans.
> - **Directing** is the process of providing focus for employees and motivating them to achieve organizational goals.
> - **Controlling** involves comparing actual to expected performance and taking corrective action when necessary.

Consider the things that the principal of your old high school had to do to ensure that the school met the needs of its students. Identify these activities and group them by the four functions of management: planning, organizing, directing, and controlling.

6.3 Planning

Without a plan, it's hard to succeed at anything. The reason is simple: if you don't know where you're going, you can't really move forward. Successful managers decide where they want to be and then figure out how to get there. In ==planning==, managers set goals and determine the best way to achieve them. As a result of the planning process, everyone in the organization knows what should be done, who should do it, and how it should be done.

Developing a Strategic Plan

Coming up with an idea—say, starting a note-taking business—is a good start, but it's only a start. Planning for it is a step forward. Planning begins at the highest level and works its way down through the organization. Step one is usually called ==strategic planning==, which is the process of establishing an overall course of action. To begin this process, you should ask yourself a couple of very basic questions: Why, for example, does the organization exist? What value does it create? Sam Walton posed these questions in the process of founding Wal-Mart: his new chain of stores would exist to offer customers the lowest prices with the best possible service (Scott, 2006).

After you've identified the purpose of your company, you're ready to take the remaining steps in the strategic-planning process:

- Write a mission statement that tells customers, employees, and others why your organization exists.
- Identify core values or beliefs that will guide the behavior of members of the organization.
- Assess the company's strengths, weaknesses, opportunities, and threats.
- Establish goals and objectives, or performance targets, to direct all the activities that you'll perform to achieve your mission.
- Develop and implement tactical and operational plans to achieve goals and objectives.

In the next few sections, we'll examine these components of the strategic-planning process.

Mission Statement

As we saw in an earlier chapter, the ==*mission statement*== describes the purpose of your organization—the reason for its existence. It tells the reader what the organization is committed to doing. It can be very concise, like the one from Mary Kay Inc. (the cosmetics company): "To enrich the lives of women around the world." (Mary Kay Inc., 2011) Or it can be as detailed as the one from Harley-Davidson: "We fulfill dreams inspired by the many roads of the world by providing extraordinary motorcycles and customer experiences. We fuel the passion for freedom in our customers to express their own individuality." (Harley-Davidson, 2011)

Figure 6.4. Harley-Davidson has a very focused mission statement—it's all about the motorcycles.

What about Notes-4-You? What should your mission statement say? A simple, concise mission statement for your enterprise could be the following: "To provide high-quality class notes to college students." On the other hand, you could prepare a more detailed statement that explains what the company is committed to doing, who its customers are, what its focus is, what goods or services it provides, and how it serves its customers. In that case, your mission statement might be the following:

> Notes-4-You is committed to earning the loyalty of college students through its focus on customer service. It provides high-quality, dependable, competitively priced class notes that help college students master complex academic subjects.

Core Values

Having defined your mission, your next step is to ask, what does this organization stand for? What values will define it? What principles should guide our actions as we build and operate the business? In Chapter 3: Ethics and Social Responsibility, we explained that the small set of guiding principles that you identify as crucial to your company are known as *core values*—fundamental beliefs about what's important and what is and isn't appropriate in conducting company activities. Core values affect the overall planning processes and operations. At Volvo, for example, three core values—safety, quality, and environmental care—define the firm's "approach to product development, design and production." (Volvo Group Global, 2011) Core values should also guide the behavior of every individual in the organization. Coca-Cola, for instance, reports that its stated core values—leadership, collaboration, integrity, accountability, passion, diversity and quality—tell employees exactly what behaviors are acceptable (The Coca-Cola

Company, 2011). How do companies communicate core values to employees and hold them accountable for putting those values into practice? They link core values to performance evaluations and compensation.

In choosing core values for Notes-4-You, you're determined not to fall back on some list of the world's most popular core values: ethics/integrity, accountability, respect for others, and open communication (allBusiness, 2011). You want yours to be unique to Notes-4-You. After some thought, you settle on *teamwork*, *trust*, and *dependability*. Why these three? As you plan your business, you realize that it will need a workforce that functions as a team, trusts each other, and can be depended on to satisfy customers. In building your workforce, you'll seek employees who'll embrace these values.

Conduct a SWOT Analysis

The next step in the strategic-planning process is to assess your company's fit with its environment. A common approach to *environmental analysis* is matching the strengths of your business with the opportunities available to it. It's called ==SWOT analysis== because it calls for analyzing an organization's Strengths, Weaknesses, Opportunities, and Threats. It begins with an examination of *external* factors that could influence the company in either a positive or a negative way. These could include economic conditions, competition, emerging technologies, laws and regulations, and customers' expectations.

One purpose of assessing the external environment is to identify both *opportunities* that could benefit the company and *threats* to its success. For example, a company that manufactures children's bicycle helmets would view a change in federal law requiring all children to wear helmets as an opportunity. The news that two large sports-equipment companies were coming out with bicycle helmets would be a threat.

The next step is to evaluate the company's strengths and weaknesses. S*trengths* might include a motivated workforce, state-of-the-art technology, impressive managerial talent, or a desirable location. The opposite of any of these strengths (poor workforce, obsolete technology, incompetent management, or poor location) could signal a potential *weakness*. Armed with a good idea of external opportunities and threats, as well as internal strengths and weaknesses, managers want to capitalize on opportunities by taking advantage of organizational strengths. Likewise, they want to protect the organization from both external threats and internal weaknesses.

Let's start with our strengths. Now that we know what they are, how do we match them with our available opportunities (while also protecting ourselves from our threats and overcoming our weaknesses)? Here's a possibility: By providing excellent service and price while we're still small (with few customers and low costs), we can solidify our position on campus. When the market grows (as it will, because of the increase in the number of classes—especially those at 8:00 a.m.—and increases in student enrollment), we'll have built a strong reputation and will put ourselves in a position to grow. So even if a competitor comes to campus (a threat), we'll be the preferred supplier of class notes. This strategy will work only if we make sure that our notetakers are dependable and that we don't alienate the faculty or administration.

Set Goals and Objectives

Your mission statement affirms what your organization is *generally* committed to doing, but it doesn't tell you *how* to do it. So the next step in the strategic-planning process is establishing goals and objectives. ==Goals== are major accomplishments that the company wants to achieve over a long period (say, five years). ==Objectives== are shorter-term performance targets that direct the activities of the organization toward the attainment of a goal. They should be clearly stated, attainable, and measurable: they should give target dates for the completion of tasks and stipulate who's responsible for taking necessary actions (Safranski & Kwon, 1991).

An organization will have a number of goals and related objectives. Some will focus on financial measures, such as profit maximization and sales growth. Others will target operational efficiency or quality control. Still others will govern the company's relationships with its employees, its community, its environment, or all three.

Finally, goals and objectives change over time. As a firm reassesses its place in its business environment, it rethinks not only its mission but also its approach to fulfilling it. The reality of change was a major theme when the late McDonald's CEO Jim Cantalupo explained his goal to revitalize the company:

> The world has changed. Our customers have changed. We have to change too. Growth comes from being better, not just expanding to have more restaurants. The new McDonald's is focused on building sales at existing restaurants rather than on adding new restaurants. We are introducing a new level of discipline and efficiency to all aspects of the business and are setting a new bar for performance." (McDonald's Corp., 2011)

This change in focus was accompanied by specific performance objectives—annual sales growth of 3 to 5 percent and income growth of 6 to 7 percent at existing restaurants, plus a five-point improvement (based on customer surveys) in speed of service, friendliness, and food quality.

In setting strategic goals and performance objectives for Notes-4-You, you should keep things simple. Because you know you need to make money to stay in business, you could include a financial goal (and related objectives). Your mission statement promises "high-quality, dependable, competitively priced class notes," so you could focus on the quality of the class notes that you'll be taking and distributing. Finally, because your mission is to serve students, one goal could be customer oriented. When all's said and done, your list of goals and objectives might look like this:

- **Goal 1**: Achieve a 10 percent return on profits in your first five years.
  - *Objective*: Sales of $20,000 and profit of $2,000 for the first twelve months of operations.

- **Goal 2**: Produce a high-quality product.
  - *Objective*: First-year satisfaction scores of 90 percent or higher on quality of notes (based on survey responses to three measures—understandability, readability, and completeness).

- **Goal 3**: Attain 98 percent customer satisfaction by the end of your fifth year.
  - *Objective*: Making notes available within two days after class, 95 percent of the time.

Develop Tactical and Operational Plans

The planning process begins at the top of the organization, where upper-level managers create a strategic plan, but it doesn't end there. The *execution* of the strategic plan involves managers at all levels.

Tactical Plans

The overall plan is broken down into more manageable, shorter-term components called **tactical plans**. These plans specify the activities and allocation of resources (people, equipment, money) needed to implement the overall strategic plan over a given period. Often, a long-range strategic plan is divided into several tactical plans; a five-year strategic plan, for instance, might be implemented as five one-year tactical plans.

Operational Plans

The tactical plan is then broken down into various <mark>operational plans</mark> that provide detailed action steps to be taken by individuals or groups to implement the tactical plan and, consequently, the strategic plan. Operational plans cover only a brief period—say, a week or a month. At Notes-4-You, for example, notetakers might be instructed to turn in typed class notes five hours earlier than normal on the last day of the semester (an operational guideline). The goal is to improve the customer-satisfaction score on dependability (a *tactical goal*) and, as a result, to earn the loyalty of students through attention to customer service (a *strategic goal*).

Plan for Contingencies and Crises

Even with great planning, things don't always turn out the way they're supposed to. Perhaps your plans were flawed, or maybe you had great plans but something in the environment shifted unexpectedly. Successful managers anticipate and plan for the unexpected. Dealing with uncertainty requires *contingency planning* and *crisis management*.

Contingency Planning

With <mark>contingency planning</mark>, managers identify those aspects of the business that are most likely to be adversely affected by change. Then, they develop alternative courses of action in case an anticipated change does occur. You probably do your own contingency planning: for example, if you're planning to take in a sure-fire hit movie on its release date, you may decide on an alternative movie in case you can't get tickets to your first choice.

Crisis Management

Organizations also face the risk of encountering crises that require immediate attention. Rather than waiting until such a crisis occurs and then scrambling to figure out what to do, many firms practice **crisis management**. Some, for instance, set up teams trained to deal with emergencies. Members gather information quickly and respond to the crisis while everyone else carries out his or her normal duties. The team also keeps the public, the employees, the press, and government officials informed about the situation and the company's response to it (Perkins, 2000).

    An example of how to handle crisis management involves Wendy's. After learning that a woman claimed she found a fingertip in a bowl of chili she bought at a Wendy's restaurant in San Jose, California, the company's public relations team responded quickly. Within a few days, the company announced that the finger didn't come from an employee or a supplier. Soon after, the police arrested the woman and charged her with attempted grand larceny for lying about how the finger got in her bowl of chili and trying to extort $2.5 million from the company. But the crisis wasn't over for Wendy's. The incident was plastered all over the news as a grossed-out public sought an answer to the question, "Whose finger is (or was) it?" A $100,000 reward was offered by Wendy's to anyone with information that would help the police answer this question. The challenge Wendy's faced was how to entice customers to return to its fifty San Francisco–area restaurants (where sales had plummeted) while keeping a low profile nationally. It accomplished this by giving out free milkshakes and discount coupons to customers in the affected regions and, to avoid calling attention to the missing finger, by making no changes in its national advertising. The crisis-management strategy worked and the

story died down (though it flared up temporarily when the police arrested the woman's husband, who allegedly bought the finger from a coworker who had severed it in an accident months earlier) (Elliott, 2005).

The response to the BP oil spill by its former CEO, Tony Hayward, is an example of poor crisis management.

Even with crisis-management plans in place, however, it's unlikely that most companies will emerge from a damaging or potentially damaging episode as unscathed as Wendy's did. For one thing, the culprits in the Wendy's case were caught, and the public is willing to forgive an organization it views as a victim. Given the current public distrust of corporate behavior, however, companies whose reputations have suffered due to questionable corporate judgment don't fare as well. These companies include the international oil company, BP, whose CEO, Tony Hayward, did a disastrous job handling the crisis created when a BP controlled oil rig exploded in the Gulf Coast killing eleven workers and creating the largest oil spill in U.S. history. Hayward's lack of sensitivity will be remembered forever; particularly his response to a reporter's question on what he would tell those whose livelihoods were ruined: "We're sorry for the massive disruption it's caused their lives. There's no one who wants this over more than I do. I would like my life back." His comment was obviously upsetting to the families of the eleven men who lost their lives on the rig and had no way to get their lives back (The Times of London, 2010).

Then, there are the companies at which executives have crossed the line between the unethical to the downright illegal—Arthur Andersen, Enron, and Bernard L. Madoff Investment Securities, to name just a few. Given the high risk associated with a crisis, it should come as no surprise that contemporary managers spend more time anticipating crises and practicing their crisis-management responses.

Key Takeaways

- Successful managers decide where they want the organization to go and then determine how to get there.
- **Planning** for a business starts at the top and works its way down.
- It begins with **strategic planning**—the process of establishing an overall course of action.
- Step one is identifying the purpose of the organization.

- Then, management is ready to take the remaining steps in the strategic planning process:

  1. Prepare a *mission statement* that describes the purpose of the organization and tells customers, employees, and others what it's committed to doing.
  2. Select the *core values* that will guide the behavior of members of the organization by letting them know what is and isn't appropriate and important in conducting company activities.
  3. Use **SWOT analysis** to assess the company's strengths and weaknesses and its fit with the external environment.
  4. Set **goals** and **objectives**, or performance targets, to direct all the activities needed to achieve the organization's mission.
  5. Develop **tactical plans** and **operational plans** to implement objectives.

Exercises

1. (AACSB) Reflective Skills: Without a plan, it's hard to succeed. Successful managers set goals and determine the best ways to reach them. Successful students do the same thing. Develop a strategic plan for succeeding in this course that includes the following steps:

   - Assess your strengths, weaknesses, opportunities, and threats as they relate to this course.
   - Establish goals and objectives, or performance targets, to direct all the activities that you'll perform to earn a high grade in this course.
   - Describe tactical and operational plans for achieving your stated goals and objectives.

2. If you were the CEO of a large organization, what core values would you want to guide the behavior of your employees? First, assume that you oversee a large company that manufactures and sells medical devices, such as pacemakers, defibrillators, and insulin pumps. Your company was a pioneer in bringing these products to the market. Identify six core values that you would want to guide the behavior of your employees. For each core value, be sure to do the following:

   - Indicate why it's important to the functioning of the organization.
   - Explain how you'll communicate it to your employees and encourage them to embrace it.
   - Outline the approaches that you'll take in holding employees accountable for embracing it.

3. Now, repeat the process. This time, however, assume that you're the CEO of a company that rents movies and games at more than eight thousand outlets across the country.

6.4 Organizing

Now that you've developed a strategic plan for Notes-4-You, you need to organize your company so that it can implement your plan. A manager engaged in **organizing** allocates *resources* (people, equipment, and money) to achieve a company's plans. Successful managers make sure that all the activities identified in the planning process are assigned to some person, department, or team and that everyone has the resources needed to perform assigned activities.

Levels of Management: How Managers Are Organized

A typical organization has several layers of management. Think of these layers as forming a pyramid like the one in Figure 6.5: Levels of Management, with top managers occupying the narrow space at the peak, first-line managers the broad base, and middle-managers the levels in between. As you move up the pyramid, management positions get more demanding, but they carry more authority and responsibility (along with more power, prestige, and pay). Top managers spend most of their time in planning and decision making, while first-line managers focus on day-to-day operations. For obvious reasons, there are far more people with positions at the base of the pyramid than there are with jobs at the other two levels (as you get to the top, there are only a few positions). Let's look at each management level in more detail.
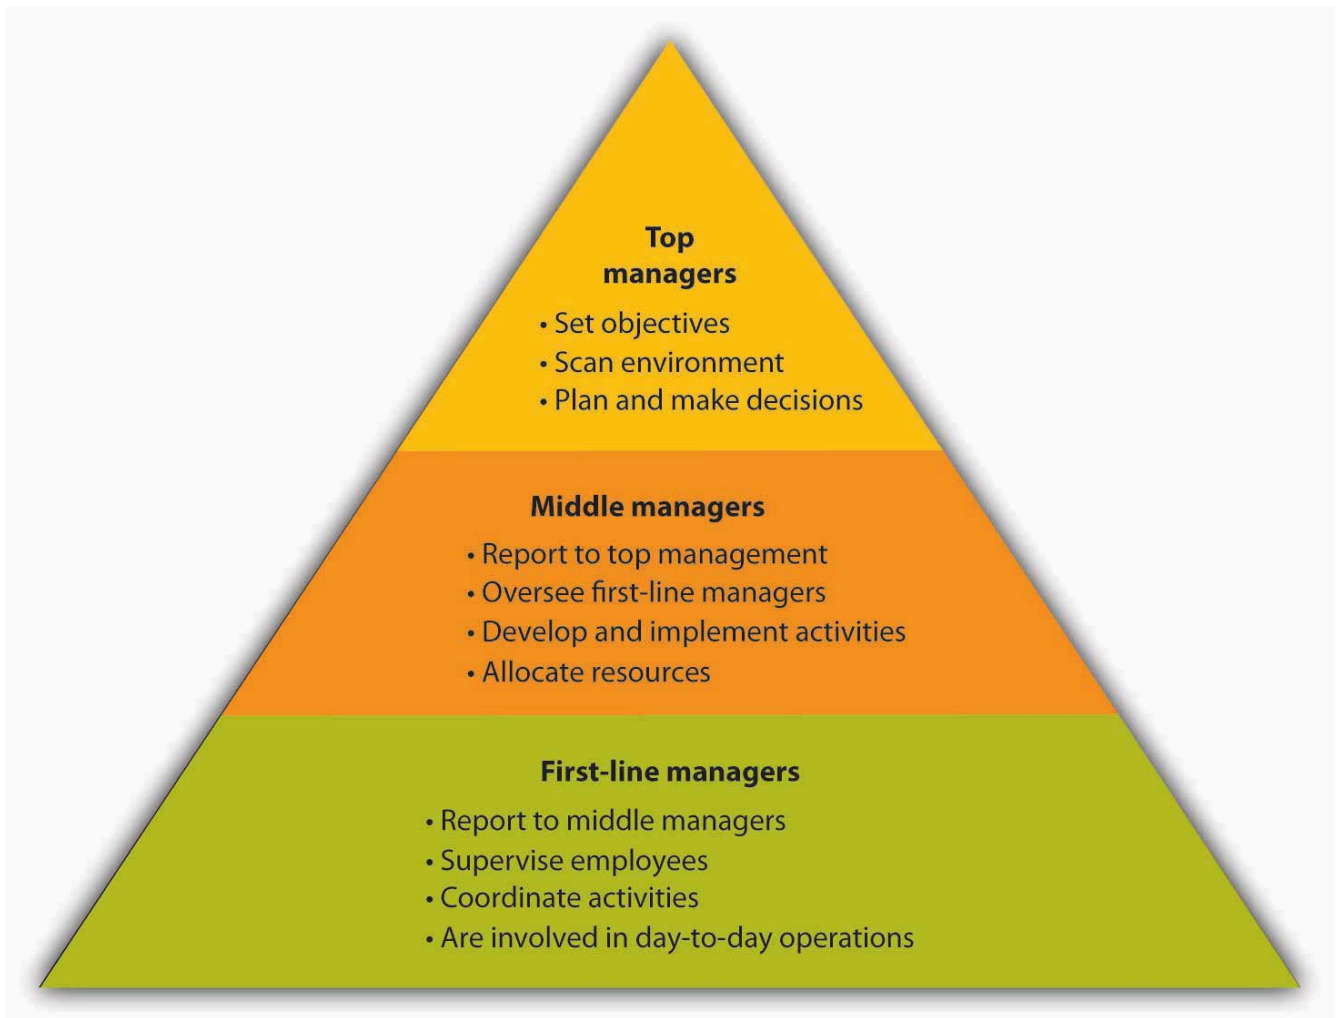

Figure 6.5: Levels of Management

Top Managers

Top managers are responsible for the health and performance of the organization. They set the objectives, or performance targets, designed to direct all the activities that must be performed if the company is going to fulfill its mission. Top-level executives routinely scan the external environment for opportunities and threats, and they redirect company efforts when needed. They spend a considerable portion of their time planning and making major decisions. They represent the company in important dealings with other businesses and government agencies, and they promote it to the public. Job titles at this level typically include *chief executive officer* (CEO), *chief financial officer* (CFO), *chief operating officer* (COO), *president*, and *vice president*.

Middle Managers

As the name implies, **middle managers** are in the "middle" of the management hierarchy: They report to top management and oversee the activities of first-line managers. They're responsible for developing and implementing

activities and allocating the resources needed to achieve the objectives set by top management. Common job titles include *operations manager*, *division manager*, *plant manager*, and *branch manager*.

First-Line Managers

First-line managers supervise employees and coordinate their activities to make sure that the work performed throughout the company is consistent with the plans of both top and middle management. They're less involved in planning than higher-level managers and more involved in day-to-day operations. It's at this level that most people acquire their first managerial experience. The job titles vary considerably but include such designations as *department head*, *group leader*, *office manager*, *foreman*, and *supervisor*.

Let's take a quick survey of the management hierarchy at Notes-4-You. As president, you are, of course, a member of *top management*, and you're responsible for the overall performance of your company. You spend much of your time setting objectives, or performance targets, to ensure that the company meets the goals you've set for it—increased sales, higher-quality notes, and timely distribution.

Several *middle managers* report to you, including your operations manager. As a middle manager, this individual focuses on implementing two of your objectives: producing high-quality notes and distributing them to customers in a timely manner. To accomplish this task, the operations manager oversees the work of two *first-line managers*—the note-taking supervisor and the copying supervisor. Each first-line manager supervises several non-managerial employees to make sure that their work is consistent with the plans devised by top and middle management.

Organizational Structure: How Companies Get the Job Done

The organizing process raises some important questions: What jobs need to be done? Who does what? Who reports to whom? What are the formal relationships among people in the organization? You provide answers to these questions by developing an **organizational structure**: an arrangement of positions that's most appropriate for your company at a specific point in time. Remember, given the rapidly changing environment in which businesses operate, a structure that works today might be outdated tomorrow. That's why you hear so often about companies **restructuring**—altering existing organizational structures to become more competitive under conditions that have changed. In building an organizational structure, you engage in two activities: *job specialization* (dividing tasks into jobs) and *departmentalization* (grouping jobs into units). We'll now see how these two processes are accomplished.

Specialization

The first step in designing an organizational structure is twofold:

1. Identifying the activities that need to be performed in order to achieve organizational goals.
2. Breaking down these activities into tasks that can be performed by individuals or groups of employees.

This twofold process of organizing activities into clusters of related tasks that can be handled by certain individuals or groups is called **specialization**. Its purpose is to improve efficiency.

Would specialization make Notes-4-You more efficient? You could have each employee perform all tasks entailed by taking and selling notes. Each employee could take notes in an assigned class, type them up, get them copied, and

sell them outside the classroom at the start of the next class meeting. The same person would keep track of all sales and copying costs and give any profit—sales minus copying costs minus compensation—to you. The process seems simple, but is it really *efficient*? Will you earn the maximum amount of profit? Probably not. Even a company as small as Notes-4-You can benefit from specialization. It would function more efficiently if some employees specialized in taking notes, others in copying and packaging them, and still others in selling them. Higher-level employees could focus on advertising, accounting, finance, and human resources.

Obviously, specialization has advantages. In addition to increasing efficiency, for example, it results in jobs that are easier to learn. But it has disadvantages, too. Doing the same thing over and over bores people and will eventually leave employees dissatisfied with their jobs. Before long, you'll notice decreased performance and increased absenteeism and turnover.

Departmentalization

The next step in designing an organizational structure is ==departmentalization—grouping== specialized jobs into meaningful units. Depending on the organization and the size of the work units, they may be called *divisions*, *departments*, or just plain *groups*. Traditional groupings of jobs result in different organizational structures, and for the sake of simplicity, we'll focus on two types—*functional* and *divisional organizations*.

Functional Organization

A ==functional organization== groups together people who have comparable skills and perform similar tasks. This form of organization is fairly typical for small to medium-size companies, which group their people by business functions: accountants are grouped together, as are people in finance, marketing and sales, human resources, production, and research and development. Each unit is headed by an individual with expertise in the unit's particular function. The head of an accounting department, for example, will be a senior accountant; the head of a hospital nursing unit will obviously be an experienced nurse. This structure is also appropriate for nonprofits. Think about your school, for instance: mathematics teachers are in the math department, history teachers are in the history department, those who run athletic programs are in the athletic department, and librarians work at the library.

If Notes-4-You adopted a functional approach to departmentalization, jobs might be grouped into four clusters:

- Human resources (hiring, training, and evaluating employees)
- Operations (overseeing notetakers and copiers)
- Marketing (arranging for advertising, sales, and distribution)
- Accounting (handling cash collection and disbursement)

There are a number of advantages to the functional approach. The structure is simple to understand and enables the staff to specialize in particular areas; everyone in the marketing group would probably have similar interests and expertise. But homogeneity also has drawbacks: it can hinder communication and decision making between units and even promote interdepartmental conflict. The marketing department, for example, might butt heads with the accounting department because marketers want to spend as much as possible on advertising, while accountants want to control costs. Marketers might feel that accountants are too tight with funds, and accountants might regard marketers as spendthrifts.

Divisional Organization

Large companies often find it unruly to operate as one large unit under a functional organizational structure. Sheer size makes it difficult for managers to oversee operations and serve customers. To rectify this problem, most large companies are structured as **divisional organizations** made up of several smaller, self-contained units, or divisions, which are accountable for their own performance. Each division functions autonomously because it contains all the functional expertise (production, marketing, accounting, finance, human resources) needed to meet its objectives. The challenge is to find the most appropriate way of structuring operations to achieve overall company goals. Toward this end, divisions can be formed according to *products*, *customers*, *processes*, or *geography*.

Product Division

Product division means that a company is structured according to its product lines. General Motors, for example, has four product-based divisions: Buick, Cadillac, Chevrolet, and GMC (Associated Press, 2010). Each division has its own research and development group, its own manufacturing operations, and its own marketing team. This allows individuals in the division to focus all their efforts on the products produced by their division. A downside is that it results in higher costs as corporate support services (such as accounting and human resources) are duplicated in each of the four divisions.

Customer Division
Figure 6.6. If you had a question about a Johnson & Johnson product, you'd be directed to its consumer business customer division.

Some companies prefer a **customer division** structure because it enables them to better serve their various categories

of customers. Thus, Johnson & Johnson's two hundred or so operating companies are grouped into three customer-based business segments: consumer business (personal-care and hygiene products sold to the general public), pharmaceuticals (prescription drugs sold to pharmacists), and professional business (medical devices and diagnostics products used by physicians, optometrists, hospitals, laboratories, and clinics) (Johnson & Johnson Services, 2011).

Process Division

If goods move through several steps during production, a company might opt for a **process division** structure. This form works well at Bowater Thunder Bay, a Canadian company that harvests trees and processes wood into newsprint and pulp. The first step in the production process is harvesting and stripping trees. Then, large logs are sold to lumber mills and smaller logs chopped up and sent to Bowater's mills. At the mill, wood chips are chemically converted into pulp. About 90 percent is sold to other manufacturers (as raw material for home and office products), and the remaining 10 percent is further processed into newspaper print. Bowater, then, has three divisions: tree cutting, chemical processing, and finishing (which makes newsprint) (Northwest Forest Industry, 2011).

Geographical Division

Geographical division enables companies that operate in several locations to be responsive to customers at a local level. McDonald's, for example, is organized according to the regions of the world in which it operates. In the United States, the national unit is further subdivided into three geographic operating divisions: east, west and central (McDonald's Corp., 2011). (This approach might be appealing to Notes-4-You if it expands to serve schools around the country.)

There are pluses and minuses associated with divisional organization. On the one hand, divisional structure usually enhances the ability to respond to changes in a firm's environment. If, on the other hand, services must be duplicated across units, costs will be higher. In addition, some companies have found that units tend to focus on their own needs and goals at the expense of the organization as a whole.

The Organization Chart

Once an organization has set its structure, it can represent that structure in an **organization chart**: a diagram delineating the interrelationships of positions within the organization. Having decided that Notes-4-You will adopt a functional structure, you might create the organization chart shown in Figure 6.7: Organization Chart for Notes-4-You.
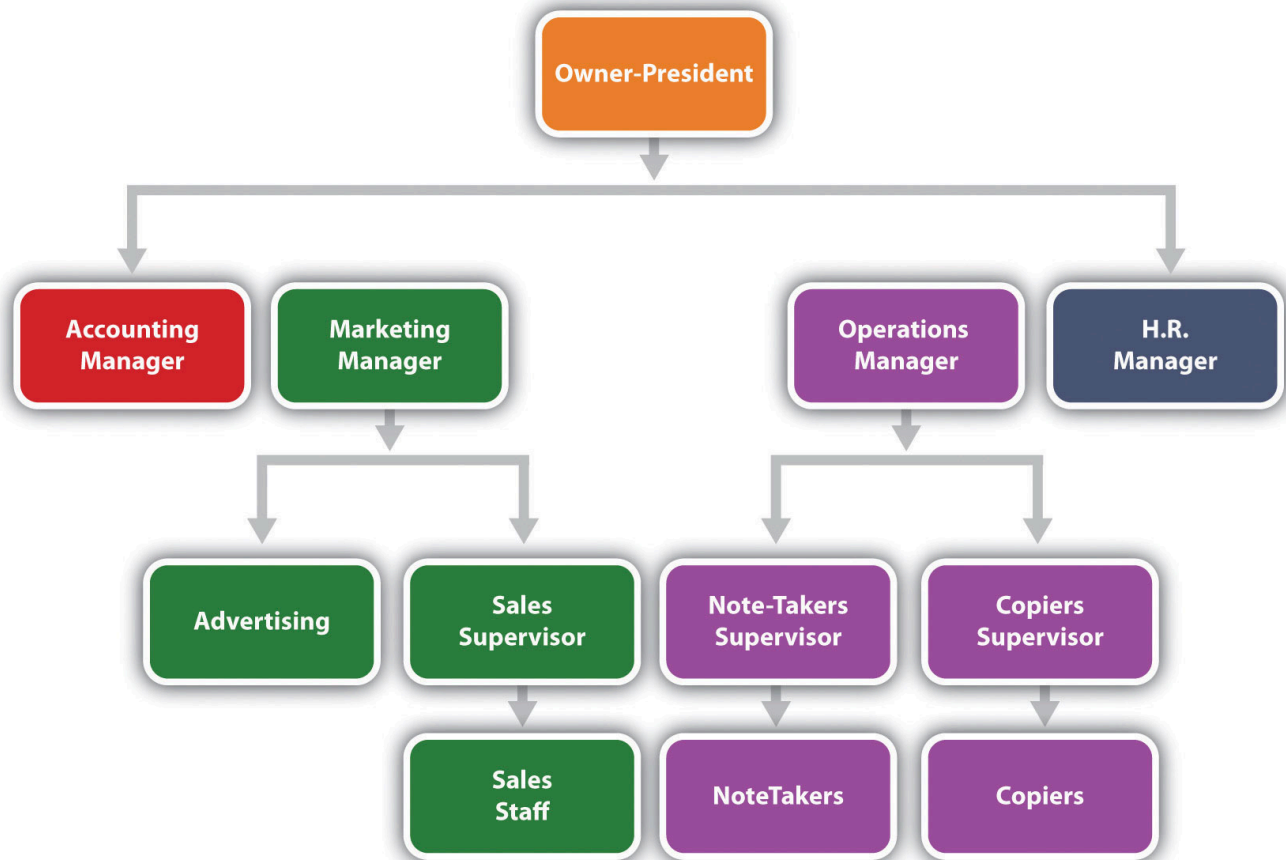

Figure 6.7: Organization Chart for Notes-4-You

Begin by putting yourself at the top of the chart, as the company's president. Then fill in the level directly below your name with the names and positions of the people who work directly *for you*—your accounting, marketing, operations, and human resources managers. The next level identifies the people who work for these managers. Because you've started out small, neither your accounting manager nor your human resources manager will be currently managing anyone directly. Your marketing manager, however, will oversee one person in advertising and a sales supervisor (who, in turn, oversees the sales staff). Your operations manager will oversee two individuals—one to supervise notetakers and one to supervise the people responsible for making copies.

Reporting Relationships

With these relationships in mind, you can now draw lines to denote **reporting relationships**, or patterns of formal communication. Because four managers report to you, you'll be connected to four positions; that is, you'll have four direct "reports." Your marketing and operations managers will each be connected to two positions and their supervisors to one position each. The organization chart shows that if a member of the sales staff has a problem, he or she will report it to the sales supervisor. If the sales supervisor believes that the problem should be addressed at a higher level, then he or she will report it to the marketing manager.

Theoretically, you will communicate only with your four direct reports, but this isn't the way things normally work. Behind every formal communication network there lies a network of informal communications—unofficial relationships

among members of an organization. You might find that over time, you receive communications directly from members of the sales staff; in fact, you might encourage this line of communication.

Now let's look at the chart of an organization that relies on a divisional structure based on goods or services produced—say, a theme park. The top layers of this company's organization chart might look like the one in Figure 6.8: Organization Charts for Divisional Structures(a). We see that the president has two direct reports—a vice president in charge of rides and a vice president in charge of concessions. What about a bank that's structured according to its customer base? The bank's organization chart would begin like the one in Figure 6.8: Organization Charts for Divisional Structures(b). Once again, the company's top manager has two direct reports, in this case a VP of retail-customer accounts and a VP of commercial-customer accounts.
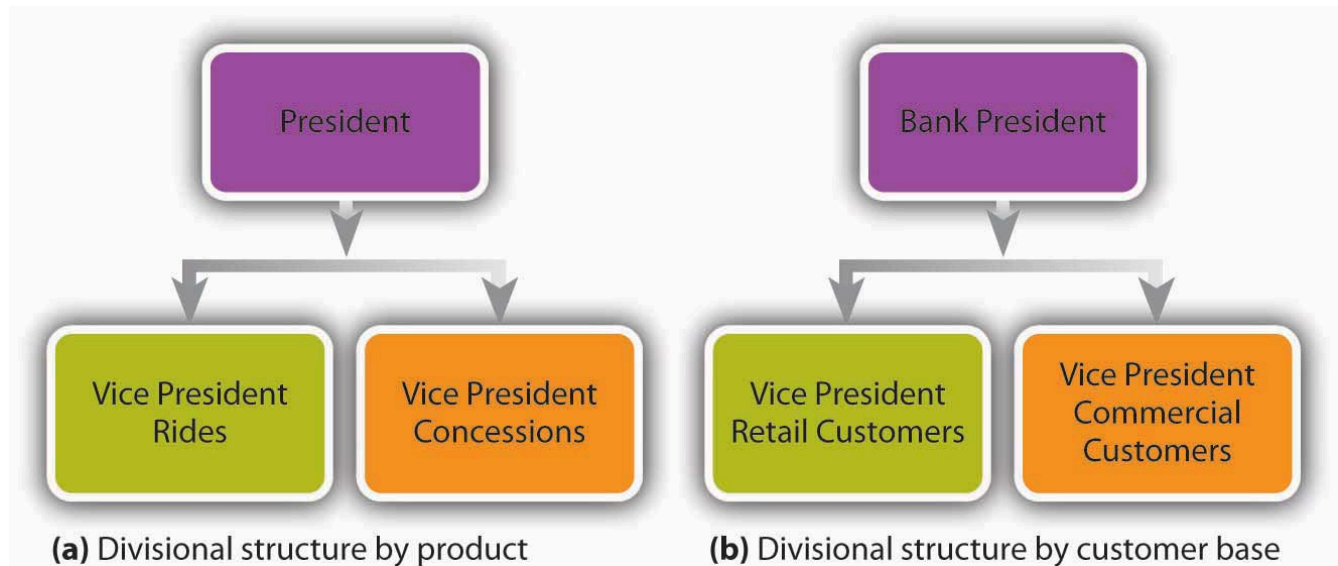

Figure 6.8: Organization Charts for Divisional Structures

Over time, companies revise their organizational structures to accommodate growth and changes in the external environment. It's not uncommon, for example, for a firm to adopt a functional structure in its early years. Then, as it becomes bigger and more complex, it might move to a divisional structure—perhaps to accommodate new products or to become more responsive to certain customers or geographical areas. Some companies might ultimately rely on a combination of functional and divisional structures. This could be a good approach for a credit card company that issues cards in both the United States and Europe. A skeleton of this firm's organization chart might look like the one in Figure 6.9: Organization Chart: Combination Divisional and Functional Structures.
Figure 6.9: Organization Chart: Combination Divisional and Functional Structures

Lines of Authority

You can learn a lot about a firm's reporting and authority relationships by looking at its organization chart. To whom does a particular person report? Does each person report to one or more supervisors? How many people does a manager supervise? How many layers are there, for example, between the top managerial position and the lowest managerial level?

Chain of Command

The vertical connecting lines in the organization chart show the firm's **chain of command**: the authority relationships among people working at different levels of the organization. That is to say, they show *who reports to whom*. When you're examining an organization chart, you'll probably want to know whether each person reports to one or more supervisors: to what extent, in other words, is there *unity of command*? To understand why unity of command is an important organizational feature, think about it from a personal standpoint. Would you want to report to more than one boss? What happens if you get conflicting directions? Whose directions would you follow?

There are, however, conditions under which an organization and its employees can benefit by violating the unity-of-command principle. Under a **matrix structure**, for example, employees from various functional areas (product design, manufacturing, finance, marketing, human resources, etc.) form teams to combine their skills in working on a specific project or product. This matrix organization chart might look like the one in the following figure.
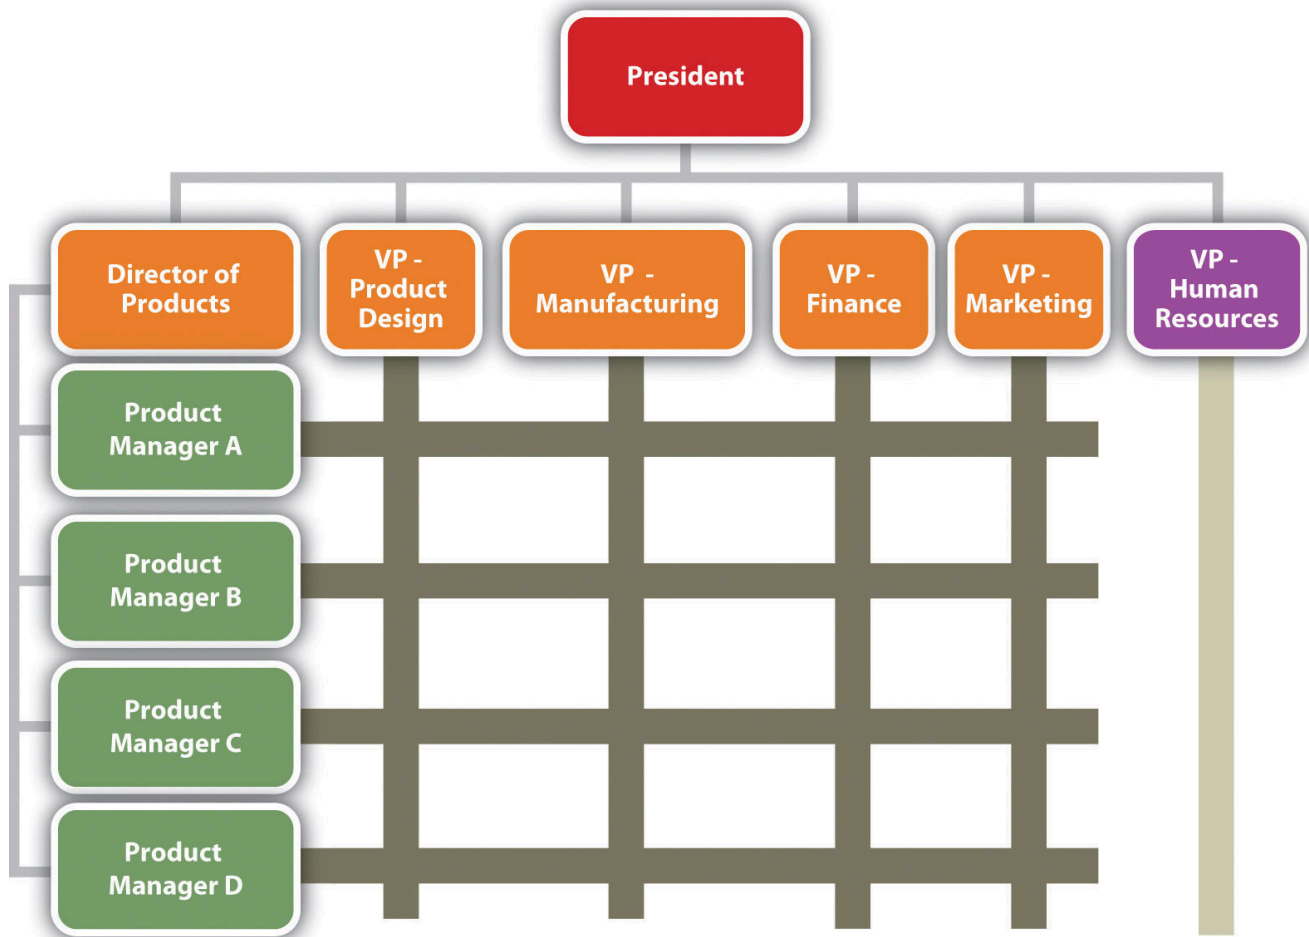

Figure 6.10: Organization Chart: Matrix Structure

Nike sometimes uses this type of arrangement. To design new products, the company may create product teams made up of designers, marketers, and other specialists with expertise in particular sports categories—say, running shoes or basketball shoes. Each team member would be evaluated by both the team manager and the head of his or her functional department.

Span of Control

Another thing to notice about a firm's chain of command is the number of layers between the top managerial position and the lowest managerial level. As a rule, new organizations (such as Notes-4-You) have only a few layers of management—an organizational structure that's often called *flat*. Let's say, for instance, that a member of the Notes-4-You sales staff wanted to express concern about slow sales among a certain group of students. That person's message would have to filter upward through only two management layers—the sales supervisor and the marketing manager—before reaching the president.

As a company grows, however, it tends to add more layers between the top and the bottom; that is, it gets *taller*.

Added layers of management can slow down communication and decision making, causing the organization to become less efficient and productive. That's one reason why many of today's organizations are restructuring to become flatter.

There are trade-offs between the advantages and disadvantages of flat and tall organizations. Companies determine which trade-offs to make according to a principle called **span of control**, which measures the number of people reporting to a particular manager. If, for example, you remove layers of management to make your organization flatter, you end up increasing the number of positions reporting to a particular supervisor. If you refer back to the organization chart in Figure 6.7: Organization Chart for Notes-4-You, you'll recall that, under your present structure, four managers report to you as the president of Notes-4-You: the heads of accounting, marketing, operations, and human resources. In turn, two of these managers have positions reporting to them: the advertising manager and sales supervisor report to the marketing manager, while the notetaker's supervisor and the copier's supervisor report to the operations manager. Let's say that you remove a layer of management by getting rid of the marketing and operations managers. Your organization would be flatter, but what would happen to your workload? As president, you'd now have six direct reports rather than four: accounting manager, advertising manager, sales manager, notetaker supervisor, copier supervisor, and human resources manager.

What's better—a *narrow* span of control (with few direct reports) or a *wide* span of control (with many direct reports)? The answer to this question depends on a number of factors, including frequency and type of interaction, proximity of subordinates, competence of both supervisor and subordinates, and the nature of the work being supervised. For example, you'd expect a much wider span of control at a nonprofit call center than in a hospital emergency room.

Delegating Authority

Given the tendency toward flatter organizations and wider spans of control, how do managers handle increased workloads? They must learn how to handle **delegation**—the process of entrusting work to subordinates. Unfortunately, many managers are reluctant to delegate. As a result, they not only overburden themselves with tasks that could be handled by others, but they also deny subordinates the opportunity to learn and develop new skills.

Responsibility and Authority

As owner of Notes-4-You, you'll probably want to control every aspect of your business, especially during the start-up stage. But as the organization grows, you'll have to assign responsibility for performing certain tasks to other people. You'll also have to accept the fact that *responsibility* alone—the duty to perform a task—won't be enough to get the job done. You'll need to grant subordinates the *authority* they require to complete a task—that is, the power to make the necessary decisions. (And they'll also need sufficient resources.) Ultimately, you'll also hold your subordinates accountable for their performance.

Centralization and Decentralization

If and when your company expands (say, by offering note-taking services at other schools), you'll have to decide whether most decisions should still be made by individuals at the top or delegated to lower-level employees. The first option, in which most decision making is concentrated at the top, is called **centralization**. The second option, which spreads decision making throughout the organization, is called **decentralization**.

Let's say that you favor decentralizing Notes-4-You some four or five years down the road, when the company has expanded. Naturally, there are some decisions—such as strategic planning—that you won't delegate to lower-level employees, but you could certainly delegate the management of copy-center operations. In fact, putting someone in charge of this function would probably improve customer satisfaction, because copy-center customers would be dealing directly with the manager. It would also give the manager valuable decision-making experience, and while he or she is busy making daily decisions about the copy center, you'll have more time to work on higher-level tasks. The more you think about the possibility of decentralizing your company, the more you like the idea. First, though, you have to see it through its difficult start-up years.

Key Takeaways

- Managers coordinate the activities identified in the planning process among individuals, departments, or other units and allocate the resources needed to perform them.
- Typically, there are three levels of management: **top managers**, who are responsible for overall performance; **middle managers**, who report to top managers and oversee lower-level managers; and **first-line managers**, who supervise employees to make sure that work is performed correctly and on time.
- Management must develop an **organizational structure**, or arrangement of people within the organization, that will best achieve company goals.
- The process begins with **specialization**—dividing necessary tasks into jobs; the principle of grouping jobs into units is called **departmentalization**.
- Units are then grouped into an appropriate organizational structure. **Functional organization** groups people with comparable skills and tasks; **divisional organization** creates a structure composed of self-contained units based on **product**, **customer**, **process**, or **geographical division**. Forms of organizational division are often combined.
- An organization's structure is represented in an **organization chart**—a diagram showing the interrelationships of its positions.
- This chart highlights the **chain of command**, or authority relationships among people working at different levels.
- It also shows the number of layers between the top and lowest managerial levels. An organization with few layers has a wide **span of control**, with each manager overseeing a large number of subordinates; with a narrow span of control, only a limited number of subordinates reports to each manager.

Exercises

1. Define *organizational structure* and identify five different forms that it can take. For each form, identify a type of company that might use it and explain why it would be appropriate for the company. Use examples other than those mentioned in the chapter.
2. How would you like to work at the "Sweetest Place on Earth"? Then, consider a career at Hershey Foods, the chocolate and candy maker. Your career path at Hershey Foods might follow a typical path:

When you finish college, you may enter the business world as a first-line manager. After about ten years, you will probably have advanced to the middle-management level. Perhaps you'll keep moving up and eventually find yourself in a top-level management position with a big salary. Examining job opportunities may be an opportunity to start identifying the kinds of positions that interest you. Go to http://www.hersheys.com to link to the Hershey Foods Web site, click on "careers" at the bottom of the home page, and check out available positions. Then, take the following steps:

- Find an interesting entry-level management position. Describe the duties of the job and explain why you'd classify it as a first-line management position.
- Pick a middle-level position to which you might advance after ten years with the company. Describe the duties of the job and explain why you'd classify it as a middle-level management position.
- Finally, identify a top-level management position that you'd like to attain later in your career. To find these positions, you'll have to click on "Investors," "Corporate Governance," and "Management Team." Because Hershey Foods doesn't describe its management-team positions, you'll have to fill in a few blanks. Start by listing what you imagine to be the duties of a given position; then, explain why these duties qualify it as a top-level management position.

6.5 Directing

The third management function is <mark>directing</mark>—providing focus and direction to others and motivating them to achieve organizational goals. As owner and president of Notes-4-You, you might think of yourself as an orchestra leader. You have given your musicians (employees) their sheet music (plans). You've placed them in sections (departments) and arranged the sections (organizational structure) so the music will sound as good as possible. Now your job is to tap your baton and lead the orchestra so that its members make beautiful music together (Reh, 2011).

Leadership Styles

Actually, it's fairly easy to pick up a baton, cue each section, and strike up the band. But it doesn't follow that the music will sound good. What if your cues are ignored or misinterpreted or ambiguous? Maybe your musicians don't like your approach to making music and will just walk away. On top of everything else, you don't simply want to make music: you want to inspire your musicians to make *great* music. How do you accomplish this goal? How do you become an effective leader? What style, or approach, should you use to motivate others to achieve organizational goals?

Unfortunately, there are no definitive answers to questions like these. Over time, every manager refines his or her own **leadership style**, or way of interacting with and influencing others. Despite a vast range of personal differences, leadership styles tend to reflect one of the following approaches to directing and motivating people: the *autocratic*, the *democratic*, or the *laissez-faire*. Let's see how managerial styles reflect each of them in a work situation.

- *Autocratic style*. Managers who have developed an <mark>autocratic leadership style</mark> tend to make decisions without soliciting input from subordinates. They exercise authority and expect subordinates to take responsibility for performing the required tasks without undue explanation.
- *Democratic style*. Managers who favor a <mark>democratic leadership style</mark> generally seek input from subordinates while retaining the authority to make the final decisions. They're also more likely to keep subordinates informed about things that affect their work.
- *Laissez-faire style*. In practicing a <mark>laissez-faire leadership style</mark>, managers adopt a "hands-off" approach and provide relatively little direction to subordinates. They may advise employees but usually give them considerable freedom to solve problems and make decisions on their own.

At first glance, you'd probably not want to work for an autocratic leader. After all, you certainly don't want to be told what to do without having any input. You probably like the idea of working for a democratic leader; it's flattering to be asked for your input. Though working in a laissez-faire environment might seem a little unsettling at first, the opportunity to make your own decisions is appealing.

In general, your assessments of the three leadership styles would be accurate. Employees generally dislike working for autocratic leaders; they like working for democratic leaders, and they find working for laissez-faire leaders rewarding (as long as they feel they can handle the job). But there are situations when these generalities don't hold.

To learn what these situations are, let's turn things around and pretend you're the leader. To make it applicable to your current life, we'll say that you're leading a group of fellow students in a team project for your class. Are there times when it would be best for you to use an autocratic leadership style? What if your team was newly formed, unfamiliar with what needs to be done, under a tight deadline, and looking to you for direction? In this situation, you might find it appropriate to follow an autocratic leadership style (on a temporary basis) and assign tasks to each member of the group.

Now let's look at the leadership style you probably prefer—the democratic leadership style. Can you think of a situation where this style would *not* work for your team? What if the members of your team are unmotivated, don't seem

interested in providing input, and aren't getting along? It might make sense to move away from a democratic style of leadership (temporarily) and delegate specific tasks to each member of the group that they can do on their own.

How about laissez-faire leadership? Will this always work with your group? Not always. It will work if your team members are willing and able to work independently and welcome the chance to make decisions. Otherwise, it could cause the team to miss deadlines or do poorly on the project.

The point being made here is that no one leadership style is effective all the time for all people. While the democratic style is viewed as the most appropriate (as is the laissez-faire style, to a lesser extent), there are times when following an autocratic style is better. Good leaders learn how to adjust their styles to fit both the situation and the individuals being directed.

Transformational Leadership

Theories on what constitutes effective leadership evolve over time. One theory that has received a lot of attention in the last decade contrasts two leadership styles: *transactional* and *transformational*. So-called ==transactional leaders== exercise authority based on their rank in the organization. They let subordinates know what's expected of them and what they will receive if they meet stated objectives. They focus their attention on identifying mistakes and disciplining employees for poor performance. By contrast, ==transformational leaders== mentor and develop subordinates, providing them with challenging opportunities, working one-on-one to help them meet their professional and personal needs, and encouraging people to approach problems from new perspectives. They stimulate employees to look beyond personal interests to those of the group.

Figure 6.9. Transformational leaders work one-on-one with subordinates to encourage and motivate them.

So, which leadership style is more effective? You probably won't be surprised by the opinion of most experts. In today's organizations, in which team building and information sharing are important and projects are often collaborative in nature, transformational leadership has proven to be more effective. Modern organizations look for managers who can develop positive relationships with subordinates and motivate employees to focus on the interests of the organization (Collins, 1997).

Key Takeaways

- A manager's **leadership style** varies depending on the manager, the situation, and the people being directed. There are three common styles.
- Using an **autocratic style**, a manager tends to make decisions without soliciting input and expects subordinates to follow instructions without undue explanation.
- Managers who prefer a **democratic style** seek input into decisions.
- Exercising a **laissez-faire style**, the manager provides no more guidance than necessary and lets subordinates make decisions and solve problems.
- One current leadership theory focuses on two contrasting leadership styles: transactional and transformational.
- Managers adopting a **transactional style** exercise authority according to their rank in the organization, let subordinates know what's expected of them, and step in when mistakes are made.
- Practicing a **transformational style**, managers mentor and develop subordinates and motivate them to achieve organizational rather than merely personal goals. Transformational leadership is effective in organizations that value team building and information sharing.

Exercise

Compare and contrast three forms of leadership—democratic, autocratic, and laissez-faire. Which style would you prefer to use yourself? Which would you prefer your boss to use? Explain your answers in both cases. Next, compare and contrast the transactional-leadership style with the transformational-leadership style? Which style would you adopt as a manager, and why?

6.6 Controlling

Let's pause for a minute and reflect on the management functions that we've discussed so far—planning, organizing, and directing. As founder of Notes-4-You, you began by establishing plans for your new company. You defined its mission and set objectives, or performance targets, which you needed to meet in order to achieve your mission. Then, you organized your company by allocating the people and resources required to carry out your plans. Finally, you provided focus and direction to your employees and motivated them to achieve organizational objectives. Is your job finished? Can you take a well-earned vacation? Unfortunately, the answer is no: your work has just begun. Now that things are rolling along, you need to monitor your operations to see whether everything is going according to plan. If it's not, you'll need to take corrective action. This process of comparing actual to planned performance and taking necessary corrective action is called **controlling**.

A Five-Step Control Process

You can think of the control function as the five-step process outlined in Figure 6.12: Five-Step Control Process.

1. Set standards by which performance will be measured.

2. Measure performance.

3. Compare actual performance with standards and identify any deviations.

4. Determine the reasons for the deviations.

5. Take corrective action if needed.

Figure 6.12: Five-Step Control Process

Let's see how this process might work at Notes-4-You. Let's assume that, after evaluating class enrollments, you estimate that you can sell one hundred notes packages per month to students taking the sophomore-level geology course popularly known as "Rocks for Jocks." So you set your standard at a hundred units. At the end of the month, however, you look over your records and find that you sold only eighty. Comparing your actual performance with your planned performance, you realize that you came up twenty packages short. In talking with your salespeople, you learn why: it turns out that the copy machine broke down so often that packages frequently weren't ready on time. You immediately take corrective action by increasing maintenance on the copy machine.

Now, let's try a slightly different scenario. Let's say that you still have the same standard (one hundred packages) and that actual sales are still eighty packages. In investigating the reason for the shortfall, you find that you overestimated the number of students taking "Rocks for Jocks." Calculating a more accurate number of students, you see that your original standard—estimated sales—was too high by twenty packages. In this case, you should adjust your standards to reflect expected sales of eighty packages.

In both situations, your control process has been helpful. In the first instance, you were alerted to a problem that cut into your sales. Correcting this problem would undoubtedly increase sales and, therefore, profits. In the second case, you encountered a defect in your planning and learned a good managerial lesson: plan more carefully.

- The process of comparing actual to planned performance and taking corrective action is called **controlling**. The control function can be viewed as a five-step process:

  1. Establish standards
  2. Measure performance
  3. Compare actual performance with standards and identify any deviations
  4. Determine the reason for deviations, and
  5. Take corrective action if needed.

Exercise

Have you ever gone to an ice cream stand and noticed that the "double dipper" ice cream cone the customer beside you bought has a lot more ice cream than does your "double dipper?" If you were the supervisor of the ice cream stand, how would you ensure that all cones received the same amount of ice cream? What if, instead of being the supervisor of the ice cream stand, you are the manager of a professional baseball team? How would you apply the five-step control process to your job as manager?

6.7 Managerial Skills

To be a successful manager, you'll have to master a number of skills. To get an entry-level position, you'll have to be technically competent at the tasks you're asked to perform. To advance, you'll need to develop strong interpersonal and conceptual skills. The relative importance of different skills varies from job to job and organization to organization, but to some extent, you'll need them all to forge a managerial career. Throughout your career, you'll also be expected to communicate ideas clearly, use your time efficiently, and reach sound decisions.

Technical Skills

You'll probably be hired for your first job based on your ==technical skills==—the ones you need to perform specific tasks—and you'll use them extensively during your early career. If your college major is accounting, you'll use what you've learned to prepare financial statements. If you have a marketing degree and you join an ad agency, you'll use what you know about promotion to prepare ad campaigns. Technical skills will come in handy when you move up to a first-line managerial job and oversee the task performance of subordinates. Technical skills, though developed through job training and work experience, are generally acquired during the course of your formal education.

Interpersonal Skills

As you move up the corporate ladder, you'll find that you can't do everything yourself: you'll have to rely on other people to help you achieve the goals for which you're responsible. That's why ==interpersonal skills==—the ability to get along with and motivate other people—are critical for managers in mid-level positions. These managers play a pivotal role because they report to top-level managers while overseeing the activities of first-line managers. Thus, they need strong working relationships with individuals at all levels and in all areas. More than most other managers, they must use "people skills" to foster teamwork, build trust, manage conflict, and encourage improvement (Perkins, 2000).

Conceptual Skills

Managers at the top, who are responsible for deciding what's good for the organization from the broadest perspective, rely on ==conceptual skills==—the ability to reason abstractly and analyze complex situations. Senior executives are often called on to "think outside the box"—to arrive at creative solutions to complex, sometimes ambiguous problems. They need both strong analytical abilities and strong creative talents.

Communication Skills

Effective communication skills are crucial to just about everyone. At all levels of an organization, you'll often be judged

on your ability to communicate, both orally and in writing. Whether you're talking informally or making a formal presentation, you must express yourself clearly and concisely. Talking too loudly, rambling, and using poor grammar reduce your ability to influence others, as does poor written communication. Confusing and error-riddled documents (including e-mails) don't do your message any good, and they will reflect poorly on you (Davis, et. al., 1992).

Time-Management Skills

Managers face multiple demands on their time, and their days are usually filled with interruptions. Ironically, some technologies that were supposed to save time, such as voicemail and e-mail, have actually increased workloads. Unless you develop certain **time-management skills**, you risk reaching the end of the day feeling that you've worked a lot but accomplished little. What can managers do to ease the burden? Here are a few common-sense suggestions:

- Prioritize tasks, focusing on the most important things first.
- Set aside a certain time each day to return phone calls and answer e-mail.
- Delegate routine tasks.
- Don't procrastinate.
- Insist that meetings start and end on time, and stick to an agenda.
- Eliminate unnecessary paperwork (Davis, et. al., 1992).

Figure 6.13. Developing good time management skills is essential to being a successful manager.

Decision-Making Skills

Every manager is expected to make decisions, whether alone or as part of a team. Drawing on your **decision-making skills** is often a process in which you must define a problem, analyze possible solutions, and select the best outcome.

As luck would have it, because the same process is good for making personal decisions, we'll use a personal example to demonstrate the process approach to decision making. Consider the following scenario: You're upset because your midterm grades are much lower than you'd hoped. To make matters worse, not only are you in trouble academically, but also the other members of your business-project team are annoyed because you're not pulling your weight. Your lacrosse coach is very upset because you've missed too many practices, and members of the mountain-biking club of which you're supposed to be president are talking about impeaching you if you don't show up at the next meeting. And your significant other says you're ignoring them.

A Six-Step Approach to Problem Solving

Assuming that your top priority is salvaging your GPA, let's tackle your problem by using a six-step approach to solving problems that don't have simple solutions. We've summarized this model in Figure 6.14: How to Solve a Problem (Caudron, 1998).

Figure 6.14: How to Solve a Problem

1. *Identify the problem you want to work on.* Step one is getting to know your problem, which you can formulate by asking yourself a basic question: How can I improve my grades?
2. *Gather relevant data.* Step two is gathering information that will shed light on the problem. Let's rehash some of the relevant information that you've already identified: (a) you did poorly on your finals because you didn't spend enough time studying; (b) you didn't study because you went to see your significant other (who lives about three hours from campus) over the weekend before your exams (and on most other weekends, as a matter of fact); (c) what little studying you got in came at the expense of your team project and lacrosse practice; and (d) while you were away for the weekend, you forgot to tell members of the mountain-biking club that you had to cancel the planned meeting.
3. *Clarify the problem.* Once you review all the given facts, you should see that your problem is bigger than simply

getting your grades up; your life is pretty much out of control. You can't handle everything to which you've committed yourself. Something has to give. You clarify the problem by summing it up with another basic question: What can I do to get my life back in order?

4. *Generate possible solutions.* If you thought defining the problem was tough, wait until you've moved on to this stage. Let's say that you've come up with the following possible solutions to your problem: (a) quit the lacrosse team, (b) step down as president of the mountain-biking club, (c) let team members do your share of work on the business project, and (d) stop visiting your significant other so frequently. The solution to your main problem—how to get your life back in order—will probably require multiple actions.

5. *Select the best option.* This is clearly the toughest part of the process. Working your way through your various options, you arrive at the following conclusions: (a) you can't quit the lacrosse team because you'd lose your scholarship; (b) you can resign your post in the mountain-biking club, but that won't free up much time; (c) you can't let your business-project team down (and besides, you'd just get a low grade); and (d) they wouldn't like the idea, but you could visit your significant other, say, once a month rather than once a week. So what's the most feasible (if not necessarily perfect) solution? Probably visiting your significant other once a month and giving up the presidency of the mountain-biking club.

6. *Implement your decision and monitor your choice.* When you call your significant other, you're pleasantly surprised to find that they understand. The vice president is happy to take over the mountain-biking club. After the first week, you're able to attend lacrosse practice, get caught up on your team business project, and catch up in all your other classes. The real test of your solution will be the results of the semester's finals.

Applying Your Skills at Notes-4-You

So, what types of skills will managers at Notes-4-You need? To oversee note-taking and copying operations, first-line managers will require technical skills, probably in operations and perhaps in accounting. Middle managers will need strong interpersonal skills to maintain positive working relationships with subordinates and to motivate them. As president, because you have to solve problems and come up with creative ways to keep the business growing, you'll need conceptual skills. And everyone will have to communicate effectively: after all, because you're in the business of selling written notes, it would look pretty bad if your employees wrote poorly. Finally, everyone will have to use time efficiently and call on problem-solving skills to handle the day-to-day crises that seem to plague every new company.

Key Takeaways

- The skills needed by managers vary according to level.
- Top managers need strong **conceptual skills**, while those at midlevels need good **interpersonal skills** and those at lower levels need **technical skills**.
- All managers need strong **communication**, **decision-making**, and **time-management skills**.

1. If you were to ask a job recruiter what skills he or she looks for in a candidate, one of the first things you'll hear is "communication skills." Strong communication skills not only will help you get a good job but also will help you move up the ladder. How can you strengthen your written and oral communication skills while you're still a college student? Here are a few steps you can take:

   - Look for courses (or course components) designed to strengthen communication skills, such as writing (or composition) or speech classes.
   - Find out whether your college has a writing program.
   - Check into nonacademic programs designed to strengthen communication skills, such as courses on interview techniques offered by the career services office.
   - Find out how you can do some writing for the school newspaper or, if you're a little more outgoing, how you can appear in theatrical productions.

   By following these suggestions, you should get a very good idea of what your college can do to help you develop both written and oral communication skills. Write a brief report detailing your findings.

2. Do you ever reach the end of the day and wonder what you've accomplished? To succeed in management, you need to learn how to manage your time. The Internet is an interesting place to start. For many college students, surfing the Net takes up a lot of time that could be put to better use. How much time do you spend online, instant-messaging, shopping, playing games, blogging, or indulging in some other enjoyable but time-consuming activity? One approach to solving the problem of wasted online time is to apply the six-step, problem-solving procedure that we outlined in the chapter. Write a brief report detailing each of the steps that you take to solve the problem and implement a solution.

6.8 Cases and Problems

Mission "Improvisable"

A mission statement tells customers, employees, and stakeholders why the organization exists–its purpose. It can be concise, like the one from Mary Kay Cosmetics–"To enrich the lives of women around the world"–or it can be more detailed, such as the following from FedEx:

> FedEx Corporation will produce superior financial returns for its shareowners by providing high value-added logistics, transportation and related business services through focused operating companies. Customer requirements will be met in the highest quality manner appropriate to each market segment served. FedEx will strive to develop mutually rewarding relationships with its employees, partners and suppliers. Safety will be the first consideration in all operations. Corporate activities will be conducted to the highest ethical and professional standards.

Mission statements are typically constructed to communicate several pieces of information: what the company strives to accomplish, what it's known for, and how it serves its customers. Here are a few examples:

- The Hershey Company: Bringing sweet moments of Hershey happiness to the world every day.
- Microsoft: Our Mission At Microsoft, we work to help people and businesses throughout the world realize their full potential. This is our mission. Everything we do reflects this mission and the values that make it possible.
- Google: Google's mission is to organize the world's information and make it universally accessible and useful.

Assignment

Create hypothetical mission statements for each of these four companies: Outback Steakhouse, Tesoro, Got Junk?, and Staples. To find descriptions of all four, go to the Web site for each of the companies: https://www.outback.com/, http://www.1800gotjunk.com/us_en, http://www.staples.com.

In composing your four mission statements, follow the format suggested previously: each statement should be about two or three sentences long and should provide several pieces of information–what the company strives to accomplish, what it's known for, and how it serves its customers (and perhaps its employees and shareholders, too).

One last thing: *your statements should be originals, not duplicates of the companies' official statements.*

Career Opportunities

To Manage or Not to Manage?

Are you interested in a career that pays well and offers power, prestige, and a feeling of accomplishment? A career in management may be for you, but be forewarned that there's a downside: you have to make tough decisions, other people will be after your job, and it can be lonely at the top. To find out more about the pros and cons of a management career, go to http://management.about.com/cs/yourself/a/ManagementForMe.htm to link to the About.com Website and read the article "Is Management for Me?" Then, answer the following questions, being sure to provide an explanation for each of your answers:

- Which of the pros of being a manager are important to you? Which are not?
- Which of the cons might discourage you from pursuing a management career? Which might not?
- Considering balance, does a career in management appeal to you? Why, or why not?

Ethics Angle (AACSB)

Sugarcoating the News at Krispy Kreme

According to Krispy Kreme's "Code of Ethics for Chief Executive and Senior Financial Officers," the company's top executives are expected to practice and promote honest, ethical conduct. They're also responsible for the health and overall performance of the company. Recently, however, things have gone wrong in the top echelons of the doughnut-shop chain.

First, a little background. Founded as one small doughnut shop in Winston-Salem, North Carolina, in 1937, the brand became increasingly popular over the next six decades, taking off in the 1980s and 1990s. By 2003, Krispy Kreme (which went public in 2000) was selling more than a billion doughnuts a year. That's when things started to go stale. (For more details on the company's ups and downs read the article "Krispy Kreme: The Rise, Fall, Rise and Fall of a Southern Icon.")

When sales first started to decline in the fall of 2003, CEO Scott Livengood offered a variety of creative explanations, mostly for the benefit of anxious investors: high gas prices discouraged people from driving to doughnut shops; supermarket sales were down because grocery stores were losing business to Wal-Mart; people were cutting back on carbohydrates because of the popular Atkins diet. Unfortunately, other (more plausible) explanations were beginning to surface. To complete this exercise, you'll need to find out what they were. Go to both to the *BusinessWeek* and USA *Today* Web sites, and then read these articles: "The Best and Worst Managers of the Year" and "Krispy Kreme Must Restate Earnings by $25.6M." Once you have a good grasp of the company's problems and you've read about the people who are responsible, answer the following questions, being sure to provide explanations for your responses:

1. What factors contributed to the problems at Krispy Kreme? What happened to the company? Who was hurt?
2. Should the firm's problems be attributed to poor management, unethical behavior on the part of the executive team, or both?
3. Judging from the lessons of the Krispy Kreme case, how important do you think it is for a firm to have strong top-down leadership?
4. If you'd been the CEO of Krispy Kreme, what things would you have done differently?

Team-Building Skills (AACSB)

Assessing Your School's Strengths, Weaknesses, Opportunities, and Threats

How can you and other members of your team help your college or university assess its fit with its environment? For one thing, you could apply SWOT analysis.

Begin by picking a member of the team to write down ideas generated by the group using brainstorming (a technique used to generate ideas that have no right or wrong answers and are accepted by the group without criticism). Pick a different member of the team to complete the SWOT analysis in the format listed subsequently. Then follow these steps:

1. Using brainstorming, identify *internal* factors, either positive or negative, that are unique to your school. List all items suggested by group members on a large sheet of paper or a blackboard.
2. Based on your analysis of the items listed (in step 1), the team should select at least five factors that are *strengths* and five that are *weaknesses*.
3. List the selected strengths and weaknesses in the SWOT analysis form.
4. Using brainstorming, identify *external* factors that could influence your school in either a positive or a negative way. Include all items suggested by group members. List the ideas on a large sheet of paper or a blackboard.
5. Based on your analysis of the items listed (in step 4), select at least five *opportunities* that could benefit your school and five *threats* to its success.
6. List the selected opportunities and threats in the SWOT analysis form.
7. Analyze the selected opportunities and strengths (which have been listed on the SWOT analysis form) and identify several ways in which your school can take advantage of opportunities by making the most of its strengths. Record your suggestions on the SWOT analysis form.

8. Analyze the selected threats and weaknesses (which have been listed on the SWOT analysis form) and identify several ways in which your school can protect itself from threats and overcome its weaknesses. Record your suggestions on the SWOT analysis form.

The Global View (AACSB)

The Art and Science of Organizational Evolution

A company's organizational structure defines the formal relationships among the people in it. It also reflects an arrangement of positions that's most appropriate for the company at a specific point in time. As the business expands or changes directions, its organizational structure should also change.

With these principles in mind, let's trace the evolution of a hypothetical company called High-Tech Cases, which manufactures and sells DVD cases made out of a special high-tech material.

Stage 1

When the company was founded, it operated under a functional organizational structure, with the following key positions and reporting relationships:

Position	Reports to
CEO	No one
VP of Sales and Marketing	CEO
VP of Production	CEO
VP of Finance	CEO
Director of Sales	VP Sales/Marketing
Director of Advertising	VP Sales/Marketing
Director of Operations	VP Production
Director of Engineering	VP Production
Treasurer	VP Finance
Controller	VP Finance

In addition, two salespeople reported to the director of sales. The directors of advertising, operations, and engineering each had two assistants, as did the treasurer and the controller.

Stage 2

About three years after the company's founding, the management team decided to expand sales into Asia. The director of sales retained responsibility for the United States, while a new director was added for Asia. The two salespeople who had been with the company since its beginning focused on U.S. sales, and two new salespeople were hired to handle Asia. No other position changed, and for the next two years, all personnel worked out of the U.S. headquarters.

Stage 3

By the beginning of the fifth year of operations, Asian and U.S. sales were about the same. At this point, management decided to set up two separate operations—one in the United States and the other in China. A senior VP was hired to head each operation—senior VP of U.S. operations and senior VP of Asian operations. Both would report to the CEO. Each operational unit would run its own production facilities, arrange its own financing, and be in charge of its sales and marketing activities. As a result, High-Tech Cases almost doubled in size, but management believed that the restructuring was appropriate and would increase profits in the long run.

Assignment

Create three organization charts—one for each stage in High-Tech's development. Ideally, you should make your charts with some type of organization-chart software. To use the tool available in Microsoft Word, go to the *Standard Toolbar* in Microsoft Word, click on "Help," and type in *organization chart*. Then select "create a chart."

RECRUITING, MOTIVATING, AND KEEPING QUALITY EMPLOYEES

Learning Objectives

1. Define *human resource management* and explain how managers develop and implement a human resource plan.
2. Explain how companies train and develop employees, and discuss the importance of a diverse workforce.
3. Define *motivation* and describe several theories of motivation.
4. Identify factors that make an organization a good place to work, including competitive compensation and benefits packages.
5. Explain how managers evaluate employee performance and retain qualified employees.
6. Explain why workers unionize and how unions are structured, and describe the collective-bargaining process

7.1 The Grounds of a Great Work Environment

Howard Schultz has vivid memories of his father slumped on the couch with his leg in a cast[1]. The ankle would heal, but his father had lost another job—this time as a driver for a diaper service. It was a crummy job; still, it put food on the table, and if his father couldn't work, there wouldn't be any money. Howard was seven, but he understood the gravity of the situation, particularly because his mother was seven months pregnant, and the family had no insurance.

This was just one of the many setbacks that plagued Schultz's father throughout his life—an honest, hard-working man frustrated by a system that wasn't designed to cater to the needs of common workers. He'd held a series of blue-collar jobs (cab driver, truck driver, factory worker), sometimes holding two or three at a time. Despite his willingness to work, he never earned enough money to move his family out of Brooklyn's federally subsidized housing projects. Schultz's father died never having found fulfillment in his work life—or even a meaningful job. It was the saddest day of Howard's life.

Figure 7.1. Howard Schultz toasts at the launch of their new "everyday" brew, Pike Place Roast, April 8, 2008, in Bryant Park in New York City.

As a kid, did Schultz ever imagine that one day he'd be the founder and chairman of Starbucks Coffee Company? Of course not. But he did decide that if he was ever in a position to make a difference in the lives of people like his father, he'd do what he could. Remembering his father's struggles and disappointments, Schultz has tried to make Starbucks the kind of company where he wished his father had worked. "Without even a high school diploma," Schultz admits, "my father probably could never have been an executive. But if he had landed a job in one of our stores or roasting plants, he wouldn't have quit in frustration because the company didn't value him. He would have had good health benefits, stock options, and an atmosphere in which his suggestions or complaints would receive a prompt, respectful response" (Schultz & Yang, 1997)

Schultz is motivated by both personal and business considerations: "When employees have self-esteem and self-respect," he argues, "they can contribute so much more: to their company, to their family, to the world" (Schultz & Yang, 1997). His commitment to his employees is embedded in Starbuck's mission statement, whose first objective is to "provide a great work environment and treat each other with respect and dignity" (Starbucks, 2011). Those working at Starbucks are called partners because Schultz believes working for his company is not just a job, it's a passion (Starbucks, 2011).

A major piece of the Starbucks success story has been the superior service provided by its motivated employees.

7.2 Human Resource Management

Employees at Starbucks are vital to the company's success. They are its public face, and every dollar of sales passes through their hands (Schultz & Yang, 1997). According to Howard Schultz, they can make or break the company. If a customer has a positive interaction with an employee, the customer will come back. If an encounter is negative, the customer is probably gone for good. That's why it's crucial for Starbucks to recruit and hire the right people, train them properly, motivate them to do their best, and encourage them to stay with the company. Thus, the company works to provide satisfying jobs, a positive work environment, appropriate work schedules, and fair compensation and benefits. These activities are part of Starbucks's strategy to deploy human resources in order to gain competitive advantage. The process is called **human resource management (HRM)**, which consists of all actions that an organization takes to attract, develop, and retain quality employees. Each of these activities is complex. Attracting talented employees involves the recruitment of qualified candidates and the selection of those who best fit the organization's needs. Development encompasses both new-employee orientation and the training and development of current workers. Retaining good employees means motivating them to excel, appraising their performance, compensating them appropriately, and doing what's possible to retain them.

Human Resource Planning

How does Starbucks make sure that its worldwide retail locations are staffed with just the right number of committed employees? How does Walt Disney World ensure that it has enough qualified "cast members" to provide visitors with a "magical" experience? How does Norwegian Cruise Lines make certain that when the *Norwegian Dawn* pulls out of New York harbor, it has a complete, fully trained crew on board to feed, entertain, and care for its passengers? Managing these tasks is a matter of **strategic human resource planning**—the process of developing a plan for satisfying an organization's human resources (HR) needs.

A strategic HR plan lays out the steps that an organization will take to ensure that it has the right number of employees with the right skills in the right places at the right times. HR managers begin by analyzing the company's mission, objectives, and strategies. Starbucks's objectives, for example, include the desire to "develop enthusiastically satisfied customers" (Starbucks, 2011) as well as to foster an environment in which employees treat both customers and each other with respect. Thus, the firm's HR managers look for people who are "adaptable, self-motivated, passionate, creative team members" (CNNMoney, 2011). Likewise, Disney's overall objectives include not only making all visitors feel as if they're special in a special place but also ensuring that employees' appearance reflects a special image (there's even a forty-seven-page book on the subject) (Vault, 2006). Disney looks for people who best fulfill these job requirements. The main goal of Norwegian Cruise Lines—to lavish passengers with personal attention—determines not only the type of employee desired (one with exceptionally good customer-relation skills and a strong work ethic) but also the number needed (one for every two passengers on the *Norwegian Dawn*) (Career Prospects in Virginia, 2006).

Job Analysis

To develop an HR plan, HR managers must obviously be knowledgeable about the jobs that the organization needs performed. They organize information about a given job by performing a **job analysis** to identify the tasks, responsibilities, and skills that it entails, as well as the knowledge and abilities needed to perform it. Managers also use the information collected for the job analysis to prepare two documents:

- A **job description**, which lists the duties and responsibilities of a position
- A **job specification**, which lists the qualifications–skills, knowledge, and abilities–needed to perform the job

HR Supply and Demand Forecasting

Once they've analyzed the jobs within the organization, HR managers must forecast future hiring (or firing) needs. This is the three-step process summarized in Figure 7.2: How to Forecast Hiring (and Firing) Needs.

Figure 7.2: How to Forecast Hiring (and Firing) Needs

Starbucks, for instance, might find that it needs three hundred new employees to work at stores scheduled to open in the next few months. Disney might determine that it needs two thousand new cast members to handle an anticipated surge in visitors. The *Norwegian Dawn* might be short two dozen restaurant workers because of an unexpected increase in reservations.

After calculating the disparity between supply and future demand, HR managers must draw up plans for bringing the two numbers into balance. If the demand for labor is going to outstrip the supply, they may hire more workers, encourage current workers to put in extra hours, subcontract work to other suppliers, or introduce labor-saving initiatives. If the supply is greater than the demand, they may deal with overstaffing by not replacing workers who leave, encouraging early retirements, laying off workers, or (as a last resort) firing workers.

Recruiting Qualified Employees

Armed with information on the number of new employees to be hired and the types of positions to be filled, the HR manager then develops a strategy for recruiting potential employees. **Recruiting** is the process of identifying suitable candidates and encouraging them to apply for openings in the organization.

Before going any further, we should point out that, in recruiting and hiring, managers must comply with antidiscrimination laws; violations can have legal consequences. **Discrimination** occurs when a person is treated unfairly on the basis of a characteristic unrelated to ability. Under federal law, it's illegal to discriminate in recruiting and hiring on the basis of race, color, religion, sex, national origin, age, or disability. (The same rules apply to other employment activities, such as promoting, compensating, and firing.) (The U.S. Equal Employment Opportunity Commission, 2011) The **Equal Employment Opportunity Commission (EEOC)** enforces a number of federal employment laws, including the following:

- Title VII of the Civil Rights Act of 1964, which prohibits employment discrimination based on race, color, religion, sex, or national origin. Sexual harassment is also a violation of Title VII.
- The Equal Pay Act of 1963, which protects both women and men who do substantially equal work from sex-based pay discrimination.
- The Age Discrimination in Employment Act of 1964, which protects individuals who are forty or older.
- Title I and Title V of the Americans with Disabilities Act of 1990, which prohibits employment discrimination against individuals with disabilities (The U.S. Equal Employment Opportunity Commission, 2011).

Where to Find Candidates

The first step in recruiting is to find qualified candidates. Where do you look for them, and how do you decide whether they're qualified? Let's start with the second part of the question first. A qualified person must be able to perform the duties listed in the job description and must possess the skills, knowledge, and abilities detailed in the job specification. In addition, he or she must be a good "fit" for the company. A Disney recruiter, for example, wants a candidate who fits a certain image—someone who's clean-cut and "wholesome" looking. The same recruiter might also favor candidates with certain qualities—someone who has a "good attitude," who's a "go-getter" and a "team player," and who's smart, responsible, and stable (Nelson & Economy, 2003).

Internal versus External Recruiting

Where do you find people who satisfy so many criteria? Basically, you can look in two places: inside and outside your own organization. Both options have pluses and minuses. Hiring internally sends a positive signal to employees that they can move up in the company—a strong motivation tool and a reward for good performance. In addition, because an internal candidate is a known quantity, it's easier to predict his or her success in a new position. Finally, it's cheaper to recruit internally. On the other hand, you'll probably have to fill the promoted employee's position. Going outside gives you an opportunity to bring fresh ideas and skills into the company. In any case, it's often the only alternative, especially if no one inside the company has just the right combination of skills and experiences. Entry-level jobs usually have to be filled from the outside.

How to Find Candidates

Whether you search inside or outside the organization, you need to publicize the opening. If you're looking internally in a small organization, you can alert employees informally. In larger organizations, HR managers generally post openings

on bulletin boards (often online) or announce them in newsletters. They can also seek direct recommendations from various supervisors.

Recruiting people from outside is more complicated. It's a lot like marketing a product to buyers: in effect, you're marketing the virtues of working for your company. Starbucks uses the following outlets to advertise openings:

- A dedicated section of the corporate Web site ("Job Center," which lists openings, provides information about the Starbucks experience, and facilitates the submission of online applications)
- College campus recruiting (holding on-campus interviews and information sessions and participating in career fairs)
- Internships designed to identify future talent among college students
- Announcements on employment Web sites like Monster.com, Vault.com, Glassdoor.com, and SimplyHired.com
- Newspaper classified ads
- Facebook and Twitter
- Local job fairs
- In-store recruiting posters
- Informative "business cards" for distribution to customers (InFocus, 2011)

When asked what it takes to attract the best people, Starbucks's senior executive Dave Olsen replied, "Everything matters." Everything Starbucks does as a company bears on its ability to attract talent. Accordingly, everyone is responsible for recruiting, not just HR specialists. In fact, the best source of quality applicants is the company's own labor force (Lee, 2011).

The Selection Process

Recruiting gets people to apply for positions, but once you've received applications, you still have to select the best candidate—another complicated process. The ==selection== process entails gathering information on candidates, evaluating their qualifications, and choosing the right one. At the very least, the process can be time-consuming—particularly when you're filling a high-level position—and often involves several members of an organization.

Let's examine the selection process more closely by describing the steps that you'd take to become a special agent for the Federal Bureau of Investigation (FBI)[1]. Most business students don't generally aspire to become FBI agents, but the FBI is quite interested in business graduates—especially if you have a major in accounting or finance. With one of these backgrounds, you'll be given priority in hiring. Why? Unfortunately, there's a lot of white-collar crime that needs to be investigated, and people who know how to follow the money are well suited for the task.

Application

The first step in becoming a gun-toting accountant is, obviously, applying for the job. Don't bother unless you meet the minimum qualifications: you must be a U.S. citizen, be age twenty-three to thirty-seven, be physically fit, and have a bachelor's degree. To provide factual information on your education and work background, you'll submit an application, which the FBI will use as an initial screening tool.

Employment Tests

Next comes a battery of tests (a lot more than you'd take in applying for an everyday business position). Like most organizations, the FBI tests candidates on the skills and knowledge entailed by the job. Unlike most businesses, however, the FBI will also measure your aptitude, evaluate your personality, and assess your writing ability. You'll have to take a polygraph (lie-detector) test to determine the truthfulness of the information you've provided, uncover the extent of any drug use, and disclose potential security problems.

Interview

Figure 7.3. Interviewing candidates is the main way to gather the information necessary to make good hiring decisions.

If you pass all these tests (with sufficiently high marks), you'll be granted an interview. It serves the same purpose as it does for business recruiters: it allows the FBI to learn more about you and gives you a chance to learn more about your prospective employer and your possible future in the organization. The FBI conducts *structured interviews*—a series of standard questions. You're judged on both your answers and your ability to communicate orally.

Physical Exam and Reference Checks

Let's be positive and say you passed the interview. What's next? You still have to pass a rigorous physical examination (including a drug test), as well as background and reference checks. Given its mission, the FBI sets all these hurdles a little higher than the average retail clothing chain. Most businesses will ask you to take a physical exam, but you probably won't have to meet the fitness standards set by the FBI. Likewise, many businesses check references to verify

that applicants haven't lied about (or exaggerated) their education and work experience. The FBI goes to great lengths to ensure that candidates are suitable for law-enforcement work.

Final Decision

The last stage in the process is out of your control. Will you be hired or rejected? This decision is made by one or more people who work for the prospective employer. For a business, the decision maker is generally the line manager who oversees the position being filled. At the FBI, the decision is made by a team at FBI headquarters. If you're hired as a special agent, you'll spend twenty-one weeks of intensive training at the FBI Academy in Quantico, Virginia.

Contingent Workers

Though most people hold permanent, full-time positions, there's a growing number of individuals who work at temporary or part-time jobs. Many of these are **contingent workers** hired to supplement a company's permanent workforce. Most of them are independent contractors, consultants, or freelancers who are paid by the firms that hire them. Others are *on-call workers* who work only when needed, such as substitute teachers. Still others are *temporary workers* (or "temps") who are employed and paid by outside agencies or contract firms that charge fees to client companies.

The Positives and Negatives of Temp Work

The use of contingent workers provides companies with a number of benefits. Because they can be hired and fired easily, employers can better control labor costs. When things are busy, they can add temps, and when business is slow, they can release unneeded workers. Temps are often cheaper than permanent workers, particularly because they rarely receive costly benefits. Employers can also bring in people with specialized skills and talents to work on special projects without entering into long-term employment relationships. Finally, companies can "try out" temps: if someone does well, the company can offer permanent employment; if the fit is less than perfect, the employer can easily terminate the relationship. There are downsides to the use of contingent workers, including increased training costs and decreased loyalty to the company. Also, many employers believe that because temps are usually less committed to company goals than permanent workers, productivity suffers.

What about you? Does temporary work appeal to you? On the plus side, you can move around to various companies and gain a variety of skills. You can see a company from the inside and decide up front whether it's the kind of place you'd like to work at permanently. If it is, your temporary position lets you showcase your skills and talents and grab the attention of management, which could increase the likelihood you'll be offered a permanent position. There are also some attractive lifestyle benefits. You might, for example, work at a job or series of jobs for, say, ten months and head for the beach for the other two. On the other hand, you'll probably get paid less, receive no benefits, and have no job security. For most people, the idea of spending two months a year on the beach isn't *that* appealing.

7.3 Developing Employees

Because companies can't survive unless employees do their jobs well, it makes economic sense to train them and develop their skills. This type of support begins when an individual enters the organization and continues as long as he or she stays there.

New-Employee Orientation

Have you ever started your first day at a new job feeling upbeat and optimistic only to walk out at the end of the day thinking that maybe you've taken the wrong job? If this happens too often, your employer may need to revise its approach to **orientation**—the way it introduces new employees to the organization and their jobs. Starting a new job is a little like beginning college; at the outset, you may be experiencing any of the following feelings:

- Somewhat nervous but enthusiastic
- Eager to impress but not wanting to attract too much attention
- Interested in learning but fearful of being overwhelmed with information
- Hoping to fit in and worried about looking new or inexperienced (HRM Guide Network, 2011)

The employer who understands how common such feelings are is more likely not only to help newcomers get over them but also to avoid the pitfalls often associated with new-employee orientation:

- Failing to have a workspace set up for you
- Ignoring you or failing to supervise you
- Neglecting to introduce you to coworkers (or introducing you to so many people that you have no chance of remembering anybody's name)
- Assigning you no work or giving you busywork unrelated to your actual job
- Swamping you with facts about the company (Heathfield, 2011)

A good employer will take things slowly, providing you with information about the company and your job on a need-to-know basis while making you feel as comfortable as possible. You'll get to know the company's history, traditions, policies, and culture over time. You'll learn more about salary and benefits and how your performance will be evaluated. Most importantly, you'll find out how your job fits into overall operations and what's expected of you.

Training and Development

It would be nice if employees came preprogrammed with all the skills they need to do their jobs. It would also be nice if job requirements stayed the same: once you've learned how to do a job (or been preprogrammed), you'd know how to do it forever. In reality, new employees must be trained; moreover, as they grow in their jobs or as their jobs change, they'll need additional training. Unfortunately, training is costly and time-consuming.

How costly? On average, for every $1 in payroll, large companies spend close to $0.03 in employee training and development (Training Magazine, 2010). The consulting firm Booz Allen Hamilton invests almost $0.08 in employee training and development. At Pfizer, the world's largest pharmaceutical company, the total is is $0.14 out of every payroll

dollar (Training Magazine, 2004). What's the payoff? Why are such companies willing to spend so much money on their employees? Pfizer, whose motto is "Succeed through People," regards employee growth and development as its top priority. At Booz Allen Hamilton, consultants specialize in finding innovative solutions to client problems, and their employer makes sure that they're up-to-date on all the new technologies by maintaining a "technology petting zoo" at its training headquarters. It's called a "petting zoo" because employees get to see, touch, and interact with new and emerging technologies. For example, those attending the "petting zoo" several years ago got to try out the Segway Human Transporter even before it hit the market (Galvin, 2003).

   At Booz Allen Hamilton's technology "petting zoo," employees are receiving **off-the-job training**. This approach allows them to focus on learning without the distractions that would occur in the office. More common, however, is informal on-the-job training, which may be supplemented with formal training programs. This is the method, for example, by which you'd move up from mere coffee maker to a full-fledged "barista" if you worked at Starbucks (Locascio, 2004). You'd begin by reading a large spiral book (titled *Starbucks University*) on the responsibilities of the barista. After you've passed a series of tests on the reading material, you'll move behind the coffee bar, where a manager or assistant manager will give you hands-on experience in making drinks. According to the rules, you can't advance to a new drink until you've mastered the one you're working on; the process, therefore, may take a few days (or even weeks). Next, you have to learn enough about different types of coffee to be able to describe them to customers. (Because this course involves drinking a lot of coffee, you don't have to worry about staying awake.) Eventually, you'll be declared a coffee connoisseur, but there's still one more set of skills to master: you must complete a customer-service course, which trains you in making eye contact with customers, anticipating their needs, and making them feel welcome (Schultz & Yang, 1997).

Diversity in the Workplace

The makeup of the U.S. workforce has changed dramatically over the past 50 years. In the 1950s, more than 60 percent was composed of white males (Lindenberger & Stoltz-Loike, 2011). Today's workforce, however, reflects the broad range of differences in the population—differences in gender, race, ethnicity, age, physical ability, religion, education, and lifestyle. As you can see in Table 7.1: Employment by Gender and Ethnic Group, more women and minorities have entered the workforce, and white males now make up only 36 percent of the workforce (U.S. Equal Employment Opportunity Commission, 2006). Their percentage representation diminished as more women and minorities entered the workforce.

   Most companies today strive for diverse workforces. HR managers work hard to recruit, hire, develop, and retain a workforce that's representative of the general population. In part, these efforts are motivated by legal concerns: discrimination in recruiting, hiring, advancement, and firing is illegal under federal law and is prosecuted by the EEOC (U.S. Equal Employment Opportunity Commission, 2011). Companies that violate antidiscrimination laws not only are subject to severe financial penalties but also risk damage to their reputations. In November 2004, for example, the EEOC charged that recruiting policies at Abercrombie & Fitch, a national chain of retail clothing stores, had discriminated against minority and female job applicants between 1999 and 2004. The employer, charged the EEOC, had hired a disproportionate number of white salespeople, placed minorities and women in less visible positions, and promoted a virtually all-white image in its marketing efforts. Six days after the EEOC filed a lawsuit, the company settled the case at a cost of $50 million, but the negative publicity will hamper both recruitment and sales for some time to come (U.S. Equal Employment Opportunity Commission, 2011).

Table 7.1 Employment by Gender and Ethnic Group

Group	Total (%)	Males (%)	Females (%)
All employees	100	52	48
White	68	36	32
African American	14	6	8
Hispanic or Latino	13	7	5
Asian/Pacific Islander/Other	5	3	3

There's good reason for building a diverse workforce that goes well beyond mere compliance with legal standards. It even goes beyond commitment to ethical standards. It's good business. People with diverse backgrounds bring fresh points of view that can be invaluable in generating ideas and solving problems. In addition, they can be the key to connecting with an ethnically diverse customer base. If a large percentage of your customers are Hispanic, it might make sense to have a Hispanic marketing manager. In short, capitalizing on the benefits of a diverse workforce means that employers should view differences as assets rather than liabilities.

Key Takeaways

- The process of introducing new employees to their jobs and to the company is called **orientation**.
- An effective approach is to take things slowly, providing new employees with information on a need-to-know basis while making them feel as comfortable as possible.
- New employees will need initial training to start their jobs, and they'll need additional training as they grow in or change their jobs.
- **Off-the-job training** allows them to focus on learning without the distractions that would occur in the office, but **on-the-job training** is more common.
- In addition to having well-trained employees, it's important that a workforce reflects the broad range of differences in the population.
- The efforts of HR managers to build a workforce that's representative of the general population are driven in part by legal concerns: discrimination is illegal, and companies that violate antidiscrimination laws are subject to prosecution.
- But ensuring a diverse workforce goes well beyond both legal compliance and ethical commitment. It's good business, because a diverse group of employees can bring fresh points of view that may be valuable in generating ideas and solving problems.
- Additionally, people from varied backgrounds can help an organization connect with an ethnically diverse customer base.

Exercises

1. Think about a full-time or part-time job that you've held. Was your orientation to the job satisfactory? If not, how would you have improved the process? Did you receive any training? Was it useful? What additional training would have helped you do a better job? How would it have benefited the company?

2. While visiting a mall in Los Angeles, you noticed two stores located side by side selling electronic-entertainment products—CDs, DVDs, and so on. All the employees in one store were white males. The mix of workers in the other store—which happened to be more profitable—was more diverse. Why do you think the store with the diverse workforce did more business? In terms of diversity, what would be your ideal workforce in a store similar to these in Los Angeles?

7.4 Motivating Employees

Motivation refers to an internally generated drive to achieve a goal or follow a particular course of action. Highly motivated employees focus their efforts on achieving specific goals; those who are unmotivated don't. It's the manager's job, therefore, to motivate employees—to get them to try to do the best job they can. But what motivates employees to do well? How does a manager encourage employees to show up for work each day and do a good job? Paying them helps, but many other factors influence a person's desire (or lack of it) to excel in the workplace. What are these factors? Are they the same for everybody? Do they change over time? To address these questions, we'll examine four of the most influential theories of motivation: *hierarchy-of-needs theory*, *two-factor theory*, *expectancy theory*, and *equity theory*.

Hierarchy-of-Needs Theory

Psychologist Abraham Maslow's <mark>hierarchy-of-needs theory</mark> proposed that we are motivated by the five unmet needs, arranged in the hierarchical order shown in Figure 7.4: Maslow's Hierarchy-of-Needs Theory, which also lists examples of each type of need in both the personal and work spheres of life. Look, for instance, at the list of personal needs in the left-hand column. At the bottom are *physiological* needs (such life-sustaining needs as food and shelter). Working up the hierarchy we experience *safety* needs (financial stability, freedom from physical harm), *social* needs (the need to belong and have friends), *esteem* needs (the need for self-respect and status), and *self-actualization* needs (the need to reach one's full potential or achieve some creative success).
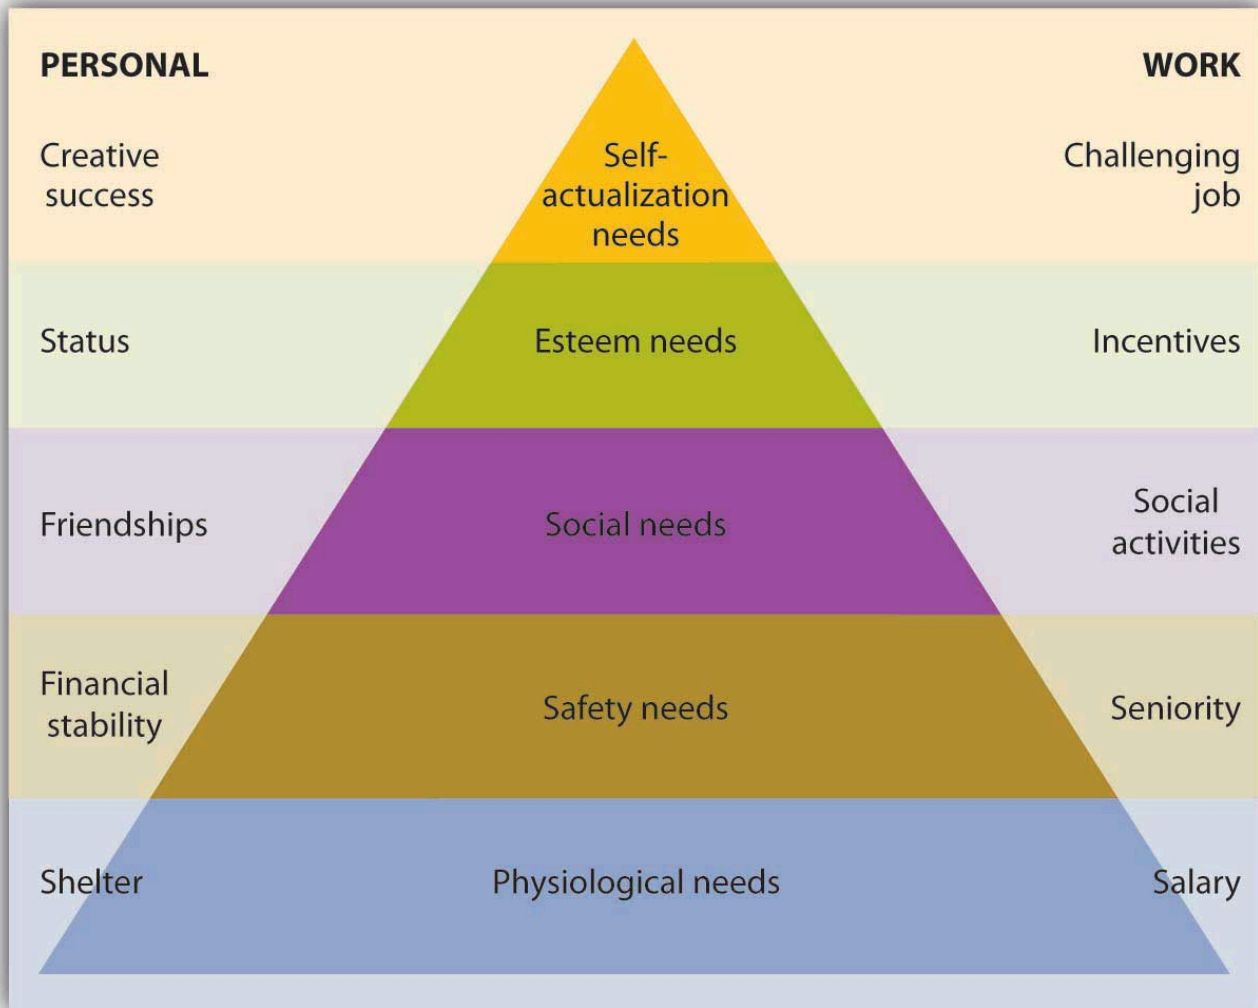

Figure 7.4: Maslow's Hierarchy-of-Needs Theory

There are two things to remember about Maslow's model:

1. We must satisfy lower-level needs before we seek to satisfy higher-level needs.
2. Once we've satisfied a need, it no longer motivates us; the next higher need takes its place.

Let's say, for example, that you've just returned to college and that for a variety of reasons that aren't your fault, you're broke, hungry, and homeless. Because you'll probably take almost any job that will pay for food and housing (*physiological* needs), you go to work repossessing cars. Fortunately, your student loan finally comes through, and with enough money to feed yourself, you can look for a job that's not so risky (a *safety* need). You find a job as a night janitor in the library, and though you feel secure, you start to feel cut off from your friends, who are active during daylight hours. You want to work among people, not books (a *social* need). So now you join several of your friends selling pizza in the student center. This job improves your social life, but even though you're very good at making pizzas, it's not terribly satisfying. You'd like something that will let you display your intellectual talents (an *esteem* need). So you study hard and land a job as an intern in the governor's office. On graduation, you move up through a series of government appointments and

eventually run for state senator. As you're sworn into office, you realize that you've reached your full potential (a *self-actualization* need) and you comment to yourself, "It doesn't get any better than this."

Needs Theory and the Workplace

Figure 7.5. Employees are motivated by different factors. For some, the ability to have fun at work is a priority.

What implications does Maslow's theory have for business managers? There are two key points:

1. Not all employees are driven by the same needs, and
2. the needs that motivate individuals can change over time.

Managers should consider which needs different employees are trying to satisfy and should structure rewards and other forms of recognition accordingly. For example, when you got your first job repossessing cars, you were motivated by the need for money to buy food. If you'd been given a choice between a raise or a plaque recognizing your accomplishments, you'd undoubtedly have opted for the money. As a state senator, by contrast, you may prefer public recognition of work well done (say, election to higher office) to a pay raise.

Two-Factor Theory

Another psychologist, Frederick Herzberg, set out to determine which work factors (such as wages, job security, or

advancement) made people feel good about their jobs and which factors made them feel bad about their jobs. He surveyed workers, analyzed the results, and concluded that to understand employee *satisfaction* (or *dissatisfaction*), he had to divide work factors into two categories:

- **Motivation factors**. Those factors that are strong contributors to job satisfaction
- **Hygiene factors.** Those factors that are *not* strong contributors to satisfaction but that must be present to meet a worker's expectations and prevent job dissatisfaction

Figure 7.6: Herzberg's Two-Factor Theory illustrates Herzberg's two-factor theory. Note that motivation factors (such as promotion opportunities) relate to *the nature of the work itself and the way the employee performs it*. Hygiene factors (such as physical working conditions) relate to *the environment in which it's performed*. (Note, too, the similarity between Herzberg's motivation factors and Maslow's esteem and self-actualization needs.)
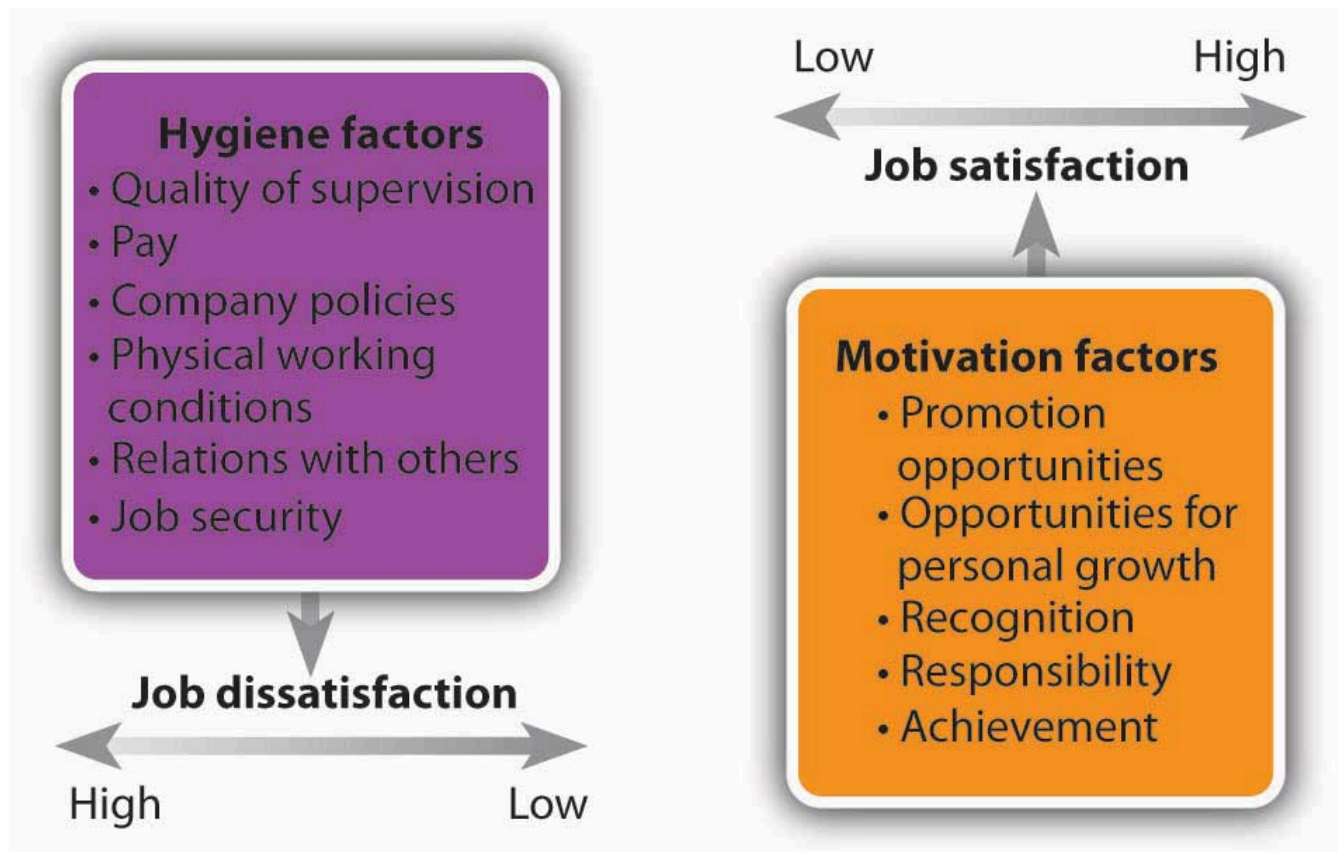

Figure 7.6: Herzberg's Two-Factor Theory

Two-Factor Theory and the Workplace

We'll ask the same question about Herzberg's model as we did about Maslow's: What does it mean for managers? Suppose you're a senior manager in an accounting firm, where you supervise a team of accountants, each of whom has been with the firm for five years. How would you use Herzberg's model to motivate the employees who report to you? Let's start with hygiene factors. Are salaries reasonable? What about working conditions? Does each accountant have his or her own workspace, or are they crammed into tiny workrooms? Are they being properly supervised or are they left on their own to sink or swim? If hygiene factors like these don't meet employees' expectations, they may be dissatisfied

with their jobs.

As you can see in Figure 7.6: Herzberg's Two-Factor Theory, fixing problems related to hygiene factors may alleviate job *dissatisfaction*, but it won't necessarily improve anyone's job *satisfaction*. To increase satisfaction (and motivate someone to perform better), you must address motivation factors. Is the work itself challenging and stimulating? Do employees receive recognition for jobs well done? Will the work that an accountant has been assigned help him or her to advance in the firm? According to Herzberg, motivation requires a twofold approach: eliminating dissatisfiers and enhancing satisfiers.

Expectancy Theory

If you were a manager, wouldn't you like to know how your employees decide to work hard or goof off? Wouldn't it be nice to know whether a planned rewards program will have the desired effect—namely, motivating them to perform better in their jobs? Wouldn't it be helpful if you could measure the effect of bonuses on employee productivity? These are the issues considered by psychologist Victor Vroom in his ==expectancy theory==, which proposes that employees will work hard to earn rewards that they value and that they consider obtainable.

As you can see from Figure 7.7: Vroom's Expectancy Theory, Vroom argues that an employee will be motivated to exert a high level of effort to obtain a reward under three conditions:

1. The employee believes that his or her efforts will result in acceptable performance.
2. The employee believes that acceptable performance will lead to the desired outcome or reward.
3. The employee values the reward.
Figure 7.7: Vroom's Expectancy Theory

Expectancy Theory and the Workplace

To apply expectancy theory to a real-world situation, let's analyze an automobile-insurance company with one hundred agents who work from a call center. Assume that the firm pays a base salary of $2,000 a month, plus a $200 commission on each policy sold above ten policies a month. In terms of expectancy theory, under what conditions would an agent be motivated to sell more than ten policies a month?

1. The agent would have to believe that his or her efforts would result in policy sales (that, in other words, there's a positive link between effort and performance).
2. The agent would have to be confident that if he or she sold more than ten policies in a given month, there would indeed be a bonus (a positive link between performance and reward).
3. The bonus per policy—$200—would have to be of value to the agent.

Now let's alter the scenario slightly. Say that the company raises prices, thus making it harder to sell the policies. How will agents' motivation be affected? According to expectancy theory, motivation will suffer. Why? Because agents may be less confident that their efforts will lead to satisfactory performance. What if the company introduces a policy whereby agents get bonuses only if buyers don't cancel policies within ninety days? How will this policy affect motivation? Now agents may be less confident that they'll get bonuses even if they do sell more than ten policies. Motivation will decrease because the link between performance and reward has been weakened. Finally, what will happen if bonuses are cut from $200 to $25? Obviously, the reward would be of less value to agents, and, again, motivation will suffer. The message of expectancy theory, then, is fairly clear: managers should offer rewards that employees value, set performance levels that they can reach, and ensure a strong link between performance and reward.

Equity Theory

What if you spent thirty hours working on a class report, did everything you were supposed to do, and handed in an excellent assignment (in your opinion). Your roommate, on the other hand, spent about five hours and put everything together at the last minute. You know, moreover, that he ignored half the requirements and never even ran his assignment through a spell-checker. A week later, your teacher returns the reports. You get a C and your roommate gets a B+. In all likelihood, you'll feel that you've been treated unfairly relative to your roommate.

Your reaction makes sense according to the **equity theory** of motivation, which focuses on our perceptions of how fairly we're treated *relative to others*. Applied to the work environment, this theory proposes that employees analyze their contributions or job inputs (hours worked, education, experience, work performance) and their rewards or job outcomes (salary, benefits, recognition). Then they create a contributions/rewards ratio and compare it to those of other people. The basis of comparison can be any one of the following:

- Someone in a similar *position*
- Someone holding a different position in the same *organization*
- Someone with a similar *occupation*
- Someone who shares certain *characteristics* (such as age, education, or level of experience)
- Oneself at another point in time

When individuals perceive that the ratio of their contributions to rewards is comparable to that of others, they perceive that they're being treated equitably; when they perceive that the ratio is out of balance, they perceive inequity. Occasionally, people will perceive that they're being treated better than others. More often, however, they conclude that

others are being treated better (and that they themselves are being treated worse). This is what you concluded when you saw your grade. You've calculated your ratio of contributions (hours worked, research and writing skills) to rewards (project grade), compared it to your roommate's ratio, and concluded that the two ratios are out of balance.

What will an employee do if he or she perceives an inequity? The individual might try to bring the ratio into balance, either by decreasing inputs (working fewer hours, refusing to take on additional tasks) or by increasing outputs (asking for a raise). If this strategy fails, an employee might complain to a supervisor, transfer to another job, leave the organization, or rationalize the situation (perhaps deciding that the situation isn't so bad after all). Equity theory advises managers to focus on treating workers fairly, especially in determining compensation, which is, naturally, a common basis of comparison.

Key Takeaways

- **Motivation** describes an internally generated drive that propels people to achieve goals or pursue particular courses of action.
- There are four influential theories of motivation: hierarchy-of-needs theory, two-factor theory, expectancy theory, and equity theory.
- **Hierarchy-of-needs theory** proposes that we're motivated by five unmet needs—physiological, safety, social, esteem, and self-actualization— and must satisfy lower-level needs before we seek to satisfy higher-level needs.
- **Two-factor theory** divides work factors into motivation factors (those that are strong contributors to job satisfaction) and hygiene factors (those that, though not strong contributors to satisfaction, must be present to prevent job dissatisfaction). To increase satisfaction (and motivate someone to perform better), managers must address motivation factors.
- **Expectancy theory** proposes that employees work hard to obtain a reward when they value the reward, believe that their efforts will result in acceptable performance, and believe that acceptable performance will lead to a desired outcome or reward.
- **Equity theory** focuses on our perceptions of how fairly we're treated relative to others. This theory proposes that employees create contributions/rewards ratios that they compare to those of others. If they feel that their ratios are comparable to those of others, they'll perceive that they're being treated equitably.

Exercise

This chapter describes four theories of motivation: hierarchy-of-needs theory, two-factor theory, expectancy theory, and equity theory. Briefly describe each theory. Which one makes the most intuitive sense to you? Why do you find it appealing?

7.5 What Makes a Great Place to Work?

Every year, the Great Places to Work Institute analyzes comments from thousands of employees and compiles a list of "The 100 Best Companies to Work for in America," which is published in *Fortune* magazine. Having compiled its list for more than twenty years, the institute concludes that the defining characteristic of a great company to work for is trust between managers and employees. Employees overwhelmingly say that they want to work at a place where employees "trust the people they work for, have pride in what they do, and enjoy the people they work with" (Great Place to Work Institute, 2011). They report that they're motivated to perform well because they're challenged, respected, treated fairly, and appreciated. They take pride in what they do, are made to feel that they make a difference, and are given opportunities for advancement (Great Place to Work Institute, 2006). The most effective motivators, it would seem, are closely aligned with Maslow's higher-level needs and Herzberg's motivating factors.

Job Redesign

The average employee spends more than two thousand hours a year at work. If the job is tedious, unpleasant, or otherwise unfulfilling, the employee probably won't be motivated to perform at a very high level. Many companies practice a policy of **job redesign** to make jobs more interesting and challenging. Common strategies include *job rotation*, *job enlargement*, and *job enrichment*.

Job Rotation

Specialization promotes efficiency because workers get very good at doing particular tasks. The drawback is the tedium of repeating the same task day in and day out. The practice of **job rotation** allows employees to rotate from one job to another on a systematic basis, eventually cycling back to their original tasks. A computer maker, for example, might rotate a technician into the sales department to increase the employee's awareness of customer needs and to give the employee a broader understanding of the company's goals and operations. A hotel might rotate an accounting clerk to the check-in desk for a few hours each day to add variety to the daily workload. Rotated employees develop new skills and gain experience that increases their value to the company, which benefits management because cross-trained employees can fill in for absentees, thus providing greater flexibility in scheduling.

Job Enlargement

Instead of a job in which you performed just one or two tasks, wouldn't you prefer a job that gave you many different tasks? In theory, you'd be less bored and more highly motivated if you had a chance at **job enlargement**—the policy of enhancing a job by adding tasks at similar skill levels (see Figure 7.8: Job Enlargement versus Job Enrichment). The job of sales clerk, for example, might be expanded to include gift-wrapping and packaging items for shipment. The additional duties would add variety without entailing higher skill levels.
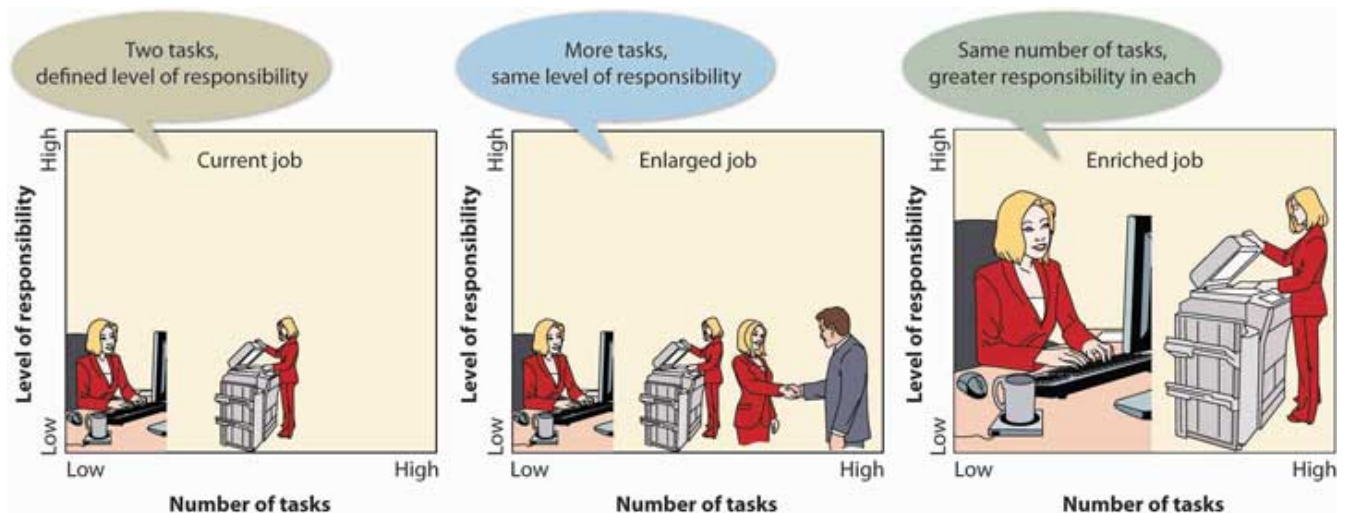

Figure 7.8: Job Enlargement versus Job Enrichment

Job Enrichment

As you can see from Figure 7.8, merely expanding a job by adding similar tasks won't necessarily "enrich" it by making it more challenging and rewarding. **Job enrichment** is the practice of adding tasks that increase both responsibility and opportunity for growth. It provides the kinds of benefits that, according to Maslow and Herzberg, contribute to job satisfaction: stimulating work, sense of personal achievement, self-esteem, recognition, and a chance to reach your potential.<Consider, for example, the evolving role of support staff in the contemporary office. Today, employees who used to be called "secretaries" assume many duties previously in the domain of management, such as project coordination and public relations. Information technology has enriched their jobs because they can now apply such skills as word processing, desktop publishing, creating spreadsheets, and managing databases. That's why we now hear such a term as *administrative assistant* instead of *secretary* (Kerka, 2011).

Work/Life Quality

Building a career requires a substantial commitment in time and energy, and most people find that they aren't left with much time for nonwork activities. Fortunately, many organizations recognize the need to help employees strike a balance between their work and home lives (Greenhaus, et. al., 2003). By helping employees combine satisfying careers and fulfilling personal lives, companies tend to end up with a happier, less-stressed, and more productive workforce. The financial benefits include lower absenteeism, turnover, and health care costs.

Alternative Work Arrangements

The accounting firm KPMG, which has made the list of the "100 Best Companies for Working Mothers" for twelve years (KPMG firm, 2011), is committed to promoting a balance between its employees' work and personal lives. KPMG offers

a variety of work arrangements designed to accommodate different employee needs and provide scheduling flexibility (KPMG, 2011).

Flextime

Employers who provide for ==flextime== set guidelines that allow employees to designate starting and ending times. Guidelines, for example, might specify that all employees must work eight hours a day (with an hour for lunch) and that four of those hours must be between 10 a.m. and 3 p.m. Thus, you could come in at 7 a.m. and leave at 4 p.m., while coworkers arrive at 10 a.m. and leave at 7 p.m. With permission you could even choose to work from 8 a.m to 2 p.m., take two hours for lunch, and then work from 4 p.m. to 6 p.m.

Compressed Workweeks

==Compressed Work Week==– Rather than work eight hours a day for five days a week, you might elect to earn a three-day weekend by working ten hours a day for four days a week.

Part-Time Work

If you're willing to have your pay and benefits adjusted accordingly you can work fewer than forty hours a week.

Job Sharing

Under ==job sharing==, two people share one full-time position, splitting the salary and benefits of the position as each handles half the job. Often they arrange their schedules to include at least an hour of shared time during which they can communicate about the job.

Telecommuting

==Telecommuting== means that you regularly work from home (or from some other nonwork location). You're connected to the office by computer, email, and phone. You save on commuting time, enjoy more flexible work hours, and have more opportunity to spend time with your family. A study of 5,500 IBM employees (one-fifth of whom telecommute) found that those who worked at home not only had a better balance between work and home life but also were more highly motivated and less likely to leave the organization (Reported in Work-Life, 2011) (The Business Case for Telecommuting, 2011).

Though it's hard to count telecommuters accurately, some estimates put the number of people who work at home at least one day a week at 20 percent. This estimate includes 2 percent of workers who run home-based businesses and 2 percent who work exclusively at home for other companies (Telework Research Network, 2011). Telecommuting isn't for

everyone. Working at home means that you have to discipline yourself to avoid distractions, such as TV, personal phone calls, home chores, or pets, and some people feel isolated from social interaction in the workplace.

Family-Friendly Programs

In addition to <mark>alternative work arrangements</mark>, many employers, including KPMG, offer programs and benefits designed to help employees meet family and home obligations while maintaining busy careers. KPMG offers each of the following benefits (KPMG, 2011).

Dependent Care

Caring for dependents—young children and elderly parents—is of utmost importance to some employees, but combining dependent-care responsibilities with a busy job can be particularly difficult. KPMG provides on-site child care during tax season (when employees are especially busy) and offers emergency backup dependent care all year round, either at a provider's facility or in the employee's home. To get referrals or information, employees can call KPMG's LifeWorks Resource and Referral Service. KPMG is by no means unique in this respect: more than eight thousand companies maintain on-site day care (Harris, 2000) and 18 percent of all U.S. companies offer child-care resources or referral services (CNNMoney, 2003).

Paid Parental Leave

Any employee (whether male or female) who becomes a parent can take two weeks of paid leave. New mothers also get time off through short-term disability benefits.

Caring for Yourself

Like many companies, KPMG allows employees to aggregate all paid days off and use them in any way they want. In other words, instead of getting, say, ten sick days, five personal days, and fifteen vacation days, you get a total of thirty days to use for anything. If you're having personal problems, you can contact the Employee Assistance Program. If staying fit makes you happier and more productive, you can take out a discount membership at one of more than nine thousand health clubs.

Unmarried without Children

You've undoubtedly noticed by now that many programs for balancing work and personal lives target married people, particularly those with children. Single individuals also have trouble striking a satisfactory balance between work and nonwork activities, but many single workers feel that they aren't getting equal consideration from employers (Collins

& Hoover, 1995). They report that they're often expected to work longer hours, travel more, and take on difficult assignments to compensate for married employees with family commitments.

Needless to say, requiring singles to take on additional responsibilities can make it harder for them to balance their work and personal lives. It's harder to plan and keep personal commitments while meeting heavy work responsibilities, and establishing and maintaining social relations is difficult if work schedules are unpredictable or too demanding. Frustration can lead to increased stress and job dissatisfaction. In several studies of stress in the accounting profession, unmarried workers reported higher levels of stress than any other group, including married people with children[1].

With singles, as with married people, companies can reap substantial benefits from programs that help employees balance their work and nonwork lives: they can increase job satisfaction and employee productivity and reduce turnover. PepsiCo, for example, offers a "concierge service," which maintains a dry cleaner, travel agency, convenience store, and fitness center on the premises of its national office in Somers, New York (Lifestyle Concierge Services, 2011). Single employees seem to find these services helpful, but what they value most of all is control over their time. In particular, they want predictable schedules that allow them to plan social and personal activities. They don't want employers assuming that being single means that they can change plans at the last minute. It's often more difficult for singles to deal with last-minute changes because, unlike married coworkers, they don't have the at-home support structure to handle such tasks as tending to elderly parents or caring for pets.

Compensation and Benefits

Though paychecks and benefits packages aren't the only reasons why people work, they do matter. Competitive pay and benefits also help organizations attract and retain qualified employees. Companies that pay their employees more than their competitors generally have lower turnover. Consider, for example, The Container Store, which regularly appears on *Fortune* magazine's list of "The 100 Best Companies to Work For" (Fortune, 2011). The retail chain staffs its stores with fewer employees than its competitors but pays them more—in some cases, three times the industry average for retail workers. This strategy allows the company to attract extremely talented workers who, moreover, aren't likely to leave the company. Low turnover is particularly valuable in the retail industry because it depends on service-oriented personnel to generate repeat business.

In addition to salary and wages, compensation packages often include other financial incentives, such as bonuses and profit-sharing plans, as well as benefits, such as medical insurance, vacation time, sick leave, and retirement accounts.

Wages and Salaries

The largest, and most important, component of a compensation package is the payment of wages or salary. If you're paid according to the number of hours you work, you're earning **wages**. Counter personnel at McDonald's, for instance, get wages, which are determined by multiplying an employee's hourly wage rate by the number of hours worked during the pay period. On the other hand, if you're paid for fulfilling the responsibilities of a position—regardless of the number of hours required to do it—you're earning a **salary.** The McDonald's manager gets a salary for overseeing the operations of the restaurant. He or she is expected to work as long as it takes to get the job done, without any adjustment in compensation.

Piecework and Commissions

Sometimes it makes more sense to pay workers according to the quantity of product that they produce or sell. Byrd's Seafood, a crab-processing plant in Crisfield, Maryland, pays workers on **piecework**: Workers' pay is based on the amount of crabmeat that's picked from recently cooked crabs. (A good picker can produce fifteen pounds of crabmeat an hour and earn about $100 a day.) (Crisfield Off the Beaten Path, 2006; Learner, 2000). If you're working on **commission**, you're probably getting paid for quantity of sales. If you were a sales representative for an insurance company, like The Hartford, you'd get a certain amount of money for each automobile or homeowner policy that you sell (The Hartford, 2011).

Incentive Programs

In addition to regular paychecks, many people receive financial rewards based on performance, whether their own, their employer's, or both. At computer-chip maker Texas Instruments (TI), for example, employees may be eligible for bonuses, profit sharing, and stock options. All three plans are **incentive programs**: programs designed to reward employees for good performance (Texas Instruments, 2011).

Bonus Plans

TI's year-end **bonuses**—annual income given in addition to salary—are based on company-wide performance. If the company has a profitable year, and if you contributed to that success, you'll get a bonus. If the company doesn't do well, you're out of luck, regardless of what you contributed.

Bonus plans have become quite common, and the range of employees eligible for bonuses has widened in recent years. In the past, bonus plans were usually reserved for managers above a certain level. Today, however, companies have realized the value of extending plans to include employees at virtually every level. The magnitude of bonuses still favors those at the top. High-ranking officers (such as CEOs and CFOs) often get bonuses ranging from 30 percent to 50 percent of their salaries. Upper-level managers may get from 15 percent to 25 percent and middle managers from 10 percent to 15 percent. At lower levels, employees may expect bonuses from 3 percent to 5 percent of their annual compensation (Opdyke, 2004).

Profit-Sharing Plans

TI also maintains a **profit-sharing plan**, which relies on a predetermined formula to distribute a share of the company's profits to eligible employees. Today, about 40 percent of all U.S. companies offer some type of profit-sharing program (Obringer, 2011). TI's plan, however, is a little unusual: while most plans don't allow employees to access profit-sharing funds until retirement or termination, TI employees get their shares immediately—in cash.

TI's plan is also pretty generous—as long as the company has a good year. Here's how it works. An employee's profit share depends on the company's operating profit for the year. If profits from operations reach 10 percent of sales, the employee gets a bonus worth 4 percent of his or her salary. If operating profit soars to 20 percent, the employee bonuses go up to 26 percent of salary. But if operating profits fall short of a certain threshold, nobody gets anything (Texas Instruments, 2011).

Stock-Option Plans

Like most <mark>stock-option plans</mark>, the TI plan gives employees the right to buy a specific number of shares of company stock at a set price on a specified date. At TI, an employee may buy stock at its selling price at the time when he or she was given the option. So, if the price of the stock goes up, the employee benefits. Say, for example, that the stock was selling for $30 a share when the option was granted in 2007. In 2011, it was selling for $40 a share. Exercising his or her option, the employee could buy TI stock at the 2007 price of $30 a share—a bargain price (Texas Instruments, 2011).

At TI, stock options are used as an incentive to attract and retain top people. Starbucks, by contrast, isn't nearly as selective in awarding stock options. At Starbucks, all employees can earn "Bean Stock"—the Starbucks employee stock-option plan. Both full- and part-time employees get options to buy Starbucks shares at a set price. If the company does well and its stock goes up, employees make a profit. CEO Howard Schultz believes that Bean Stock pays off: because employees are rewarded when the company does well, they have a stronger incentive to add value to the company (and so drive up its stock price). Shortly after the program was begun, the phrase "bean-stocking" became workplace lingo for figuring out how to save the company money.

Benefits

Another major component of an employee's compensation package is <mark>benefits</mark>—compensation other than salaries, hourly wages, or financial incentives. Types of benefits include the following:

- Legally required benefits (Social Security and Medicare, unemployment insurance, workers' compensation)
- Paid time off (vacations, holidays, sick leave)
- Insurance (health benefits, life insurance, disability insurance)
- Retirement benefits

Unfortunately, the cost of providing benefits is staggering. According to the Employee Benefit Research Institute, it costs an employer 30 percent of a worker's salary to provide the same worker with benefits. If you include pay for time not worked (while on vacation or sick and so on), the percentage increases to 41 percent. So if you're a manager making $100,000 a year, your employer is also paying out another $41,000 for your benefits. The most money goes for health care (8 percent of salary costs), paid time off (11 percent), and retirement benefits (5 percent) (Employee Benefit Reasearch Institute, 2011).

Some workers receive only benefits required by law, including Social Security, unemployment, and workers' compensation. Low-wage workers generally get only limited benefits and part-timers often nothing at all (National Compensation Survey, 2003). Again, Starbucks is generous in offering benefits. The company provides benefits even to the part-timers who make up two-thirds of the company's workforce; anyone working at least twenty hours a week gets medical coverage.

Key Takeaways

- Employees report that they're motivated to perform well when they're challenged, respected, treated fairly, and appreciated.

- Other factors may contribute to employee satisfaction. Some companies use **job redesign** to make jobs more interesting and challenging.

  - **Job rotation** allows employees to rotate from one job to another on a systematic basis.
  - **Job enlargement** enhances a job by adding tasks at similar skill levels.
  - **Job enrichment** adds tasks that increase both responsibility and opportunity for growth.

- Many organizations recognize the need to help employees strike a balance between their work and home lives and offer a variety of work arrangements to accommodate different employee needs.
- **Flextime** allows employees to designate starting and quitting times, compress workweeks, or perform part-time work.
- With **job sharing**, two people share one full-time position.
- **Telecommuting** means working from home. Many employers also offer dependent care, paid leave for new parents, employee-assistance programs, and on-site fitness centers.
- Competitive compensation also helps.
- Workers who are paid by the hour earn **wages**, while those who are paid to fulfill the responsibilities of the job earn **salaries**.
- Some people receive **commissions** based on sales or are paid for output, based on a **piecework** approach.
- In addition to pay, many employees can earn financial rewards based on their own and/or their employer's performance.
- They may receive year-end **bonuses**, participate in **profit-sharing plans** (which use predetermined formulas to distribute a share of company profits among employees), or receive **stock options** (which let them buy shares of company stock at set prices).
- Another component of many compensation packages is **benefits**—compensation other than salaries, wages, or financial incentives. Benefits may include paid time off, insurance, and retirement benefits.

Exercise

1. Describe the ideal job that you'd like to have once you've finished college. Be sure to explain the type of work schedule that you'd find most satisfactory, and why. Identify family-friendly programs that you'd find desirable and explain why these appeal to you.
2. Describe a typical compensation package for a sales manager in a large organization. If you could design your own compensation package, what would it include?

[1]Data was obtained from 1988 and 1991 studies of stress in public accounting by Karen Collins and from a 1995 study on quality of life in the accounting profession by Collins and Jeffrey Greenhaus. Analysis of the data on single individuals was not separately published.

7.6 Performance Appraisal

Employees generally want their managers to tell them three things: what they should be doing, how well they're doing it, and how they can improve their performance. Good managers address these issues on an ongoing basis. On a semiannual or annual basis, they also conduct formal **performance appraisals** to discuss and evaluate employees' work performance.

The Basic Three-Step Process

Appraisal systems vary both by organization and by the level of the employee being evaluated, but as you can see in Figure 7.9: How to Do a Performance Appraisal, it's generally a three-step process:

1. Before managers can measure performance, they must set goals and performance expectations and specify the criteria (such as quality of work, quantity of work, dependability, initiative) that they'll use to measure performance.
2. At the end of a specified time period, managers complete written **evaluations** that rate employee performance according to the predetermined criteria.
3. Managers then meet with each employee to discuss the evaluation. Jointly, they suggest ways in which the employee can improve performance, which might include further training and development.

Figure 7.9: How to Do a Performance Appraisal

It sounds fairly simple, but why do so many managers report that, except for firing people, giving performance appraisals is their least favorite task? (Heathfield, 2011) To get some perspective on this question, we'll look at performance

appraisals from both sides, explaining the benefits and identifying potential problems with some of the most common practices.

Among other benefits, formal **appraisals** provide the following:

- An opportunity for managers and employees to discuss an employee's performance and to set future goals and performance expectations
- A chance to identify and discuss appropriate training and career-development opportunities for an employee
- Formal documentation of the evaluation that can be used for salary, promotion, demotion, or dismissal purposes (Nelson & Economy, 2003)

As for disadvantages, most stem from the fact that appraisals are often used to determine salaries for the upcoming year. Consequently, meetings to discuss performance tend to take on an entirely different dimension: the manager appears judgmental (rather than supportive), and the employee gets defensive. It's the adversarial atmosphere that makes many managers not only uncomfortable with the task but also unlikely to give honest feedback. (They tend to give higher marks in order to avoid delving into critical evaluations.) HR professionals disagree about whether performance appraisals should be linked to pay increases. Some experts argue that the connection eliminates the manager's opportunity to use the appraisal to improve an employee's performance. Others maintain that it increases employee satisfaction with the process and distributes raises on the basis of effort and results (Archer North & Associates, 2011).

360-Degree and Upward Feedback

Instead of being evaluated by one person, how would you like to be evaluated by several people—not only those above you in the organization but those below and beside you? The approach is called **360-*degree feedback***, and the purpose is to ensure that employees (mostly managers) get feedback from all directions—from supervisors, reporting subordinates, coworkers, and even customers. If it's conducted correctly, this technique furnishes managers with a range of insights into their performance in a number of roles.

Some experts, however, regard the 360-degree approach as too cumbersome. An alternative technique, called ***upward feedback,*** requires only the manager's subordinates to provide feedback. Computer maker Dell uses this approach as part of its manager-development plan. Every six months, forty thousand Dell employees complete a survey in which they rate their supervisors on a number of dimensions, such as practicing ethical business principles and providing support in balancing work and personal life. Like most companies using this technique, Dell uses survey results for development purposes only, not as direct input into decisions on pay increases or promotions (Dell, Inc., 2011).

Retaining Valuable Employees

When a valued employee quits, the loss to the employer can be serious. Not only will the firm incur substantial costs to recruit and train a replacement, but it also may suffer temporary declines in productivity and lower morale among remaining employees who have to take on heavier workloads. Given the negative impact of **turnover**—the permanent separation of an employee from a company—most organizations do whatever they can to retain qualified employees. Compensation plays a key role in this effort: companies that don't offer competitive compensation packages (including benefits) tend to lose employees. But other factors come into play, some of which we discussed earlier, such as training

and development, as well as helping employees achieve a satisfying work/nonwork balance. In the following sections, we'll look at a few other strategies for reducing turnover and increasing productivity (Smith, 2011).

Creating a Positive Work Environment

Employees who are happy at work are more productive, provide better customer service, and are more likely to stay with the company. A study conducted by Sears, for instance, found a positive relationship between customer satisfaction and employee attitudes on ten different issues: a 5 percent improvement in employee attitudes results in a 1.3 percent increase in customer satisfaction and a 0.5 percent increase in revenue (Wall Street Journal, 1998).

The Employee-Friendly Workplace

What sort of things improve employee attitudes? The twelve thousand employees of software maker SAS Institute fall into the category of "happy workers." They choose the furniture and equipment in their own (private) offices; eat subsidized meals at one of three on-site restaurants; enjoy free soft drinks, fresh fruit on Mondays, M&M's on Wednesdays, and a healthy breakfast snack on Fridays in convenient break rooms; and swim and work out at a seventy-seven-thousand-square-foot fitness center. They set their own work hours, and they're encouraged to stay home with sick children. They also have job security: no one's ever been laid off because of an economic downturn. The employee-friendly work environment helps SAS employees focus on their jobs and contribute to the attainment of company goals (Safer, 2003; Fortune, 2011). Not surprisingly, it also results in very low 3 percent turnover.

Recognizing Employee Contributions

Thanking people for work done well is a powerful motivator. People who feel appreciated are more likely to stay with a company than those who don't (McGarvey, 2004). While personal thank-yous are always helpful, many companies also have formal programs for identifying and rewarding good performers. The Container Store, a national storage and container retailer, rewards employee accomplishments in a variety of ways. Recently, for example, twelve employees chosen by coworkers were rewarded with a Colorado vacation with the company's owners, and the seven winners of a sales contest got a trip to visit an important supplier—in Sweden (The Container Store, 2011). The company is known for its supportive environment and has frequently been selected as one of the top U.S. companies to work for.

Involving Employees in Decision Making

Companies have found that involving employees in decisions saves money, makes workers feel better about their jobs, and reduces turnover. Some have found that it pays to take their advice. When General Motors asked workers for ideas on improving manufacturing operations, management was deluged with more than forty-four thousand suggestions during one quarter. Implementing a few of them cut production time on certain vehicles by 15 percent and resulted in sizable savings (Turner, 2003).

Similarly, in 2001, Edward Jones, a personal investment company, faced a difficult situation during the stock-market downturn. Costs had to be cut, and laying off employees was one option. Instead, however, the company turned to its

workforce for solutions. As a group, employees identified cost savings of more than $38 million. At the same time, the company convinced experienced employees to stay with it by assuring them that they'd have a role in managing it (Daft & Marcic, 2006).

Why People Quit

As important as such initiatives can be, one bad boss can spoil everything. The way a person is treated by his or her boss may be the primary factor in determining whether an employee stays or goes. People who have quit their jobs cite the following behavior by superiors:

- Making unreasonable work demands
- Refusing to value their opinions
- Failing to be clear about what's expected of subordinates
- Rejecting work unnecessarily
- Showing favoritism in compensation, rewards, or promotions (Smith, 2011)

Figure 7.10. Trying to meet unreasonable work demands can be extremely stressful and is a major reason people quit their jobs.

Holding managers accountable for excessive turnover can help alleviate the "bad-boss" problem, at least in the long run. In any case, whenever an employee quits, it's a good idea for someone—someone other than the individual's immediate

supervisor—to conduct an exit interview to find out why. Knowing why people are quitting gives an organization the opportunity to correct problems that are causing high turnover rates.

Involuntary Termination

Before we leave this section, we should say a word or two about ==**termination**==—getting fired. Though turnover—voluntary separations—can create problems for employers, they're not nearly as devastating as the effects of involuntary termination on employees. Losing your job is what psychologists call a "significant life change," and it's high on the list of "stressful life events" regardless of the circumstances. Sometimes, employers lay off workers because revenues are down and they must resort to ==**downsizing**==—to cutting costs by eliminating jobs. Sometimes a particular job is being phased out, and sometimes an employee has simply failed to meet performance requirements.

Employment at Will

Is it possible for you to get fired even if you're doing a good job and there's no economic justification for your being laid off? In some cases, yes—especially if you're not working under a contract. Without a formal contract, you're considered to be ==*employed at will,*== which means that both you and your employer have the right to terminate the employment relationship at any time. *You* can quit whenever you want (which is good for you), but your *employer* can fire you whenever it wants (which is obviously bad for you).

Fortunately for you, over the past several decades, the courts have undercut employers' rights under the employment-at-will doctrine (Muhl, 2001). By and large, management can no longer fire employees at will: usually, employers must show just cause for termination, and in some cases, they must furnish written documentation to substantiate the reasons for terminating an employee. If it's a case of poor performance, the employee is generally warned in advance that his or her current level of performance could result in termination. As a rule, managers give employees who have been warned a reasonable opportunity to improve performance. When termination is unavoidable, it should be handled in a private conversation, with the manager explaining precisely why the action is being taken.

Key Takeaways

- Managers conduct **performance appraisals** to evaluate work performance, usually following a three-step process:

  1. Setting goals and performance expectations and specifying the criteria for measuring performance
  2. Completing written evaluations to rate performance according to predetermined criteria
  3. Meeting with employees to discuss evaluations and ways to improve performance

- **Turnover**—the permanent separation of an employee from a company—has a negative effect on an organization.

- In addition to offering competitive compensation, companies may take a variety of steps to retain qualified employees:

  1. Providing appropriate training and development
  2. Helping employees achieve a satisfying work/nonwork balance in their lives
  3. Creating a positive work environment
  4. Recognizing employee efforts
  5. Involving employees in decision making

- On the other hand, employers may have to terminate the employment of (that is, fire) some workers.

  1. They may lay off workers because revenues are down and they have to **downsize**—to cut costs by eliminating jobs.
  2. Sometimes a job is phased out, and sometimes an employee simply fails to meet performance requirements.

- If there's no written employment contract, the employment relationship falls under the principle of **employment-at-will**, by which an employer can end it at any time. Usually, however, the employer must show just cause.

Exercises

1. What steps does a manager take in evaluating an employee's performance? Explain the benefits of performance appraisals, and identify some of the potential problems entailed by the performance-evaluation process.
2. As an HR manager, what steps would you take to retain valuable employees? Under what circumstances would you fire an employee? Can you fire someone without giving that person a warning?

7.7 Labor Unions

As we saw earlier, Maslow believed that individuals are motivated to satisfy five levels of unmet needs (physiological, safety, social, esteem, and self-actualization). From this perspective, employees should expect that full-time work will satisfy at least the two lowest-level needs: they should be paid wages that are sufficient for them to feed, house, and clothe themselves and their families, and they should have safe working conditions and some degree of job security. Organizations also have needs: they need to earn profits that will satisfy their owners. Sometimes, the needs of employees and employers are consistent: the organization can pay decent wages and provide workers with safe working conditions and job security while still making a satisfactory profit. At other times, there is a conflict—real, perceived, or a little bit of both—between the needs of employees and those of employers. In such cases, workers may be motivated to join a **labor union**—an organized group of workers that bargains with employers to improve its members' pay, job security, and working conditions.

Figure 7.11: Labor Union Density, 1930–2010 charts *labor-union density*—union membership as a percentage of payrolls—in the United States from 1930 to 2010. As you can see, there's been a steady decline since the mid-1950s, and, today, only about 12 percent of U.S. workers belong to unions (U.S. Department of Labor, 2011). Only membership among public workers (those employed by federal, state, and local governments, such as teachers, police, and firefighters) has grown. In the 1940s, 10 percent of public workers and 34 percent of those in the private sector belonged to unions. Today, this has reversed: 36 percent of public workers and 7 percent of those in the private sector are union members (Wikipedia, 2011).
Figure 7.11: Labor Union Density, 1930–2010

Why the decline in private sector unionization? Many factors come into play. The poor economy has reduced the number of workers who can become union members. In addition, we've shifted from a manufacturing-based economy characterized by large, historically unionized companies to a service-based economy made up of many small firms that are hard to unionize. Finally, there are more women in the workforce, and they're more likely to work part-time or intermittently (Maher, 2010; Greenhouse, 2011).

Union Structure

Unions have a pyramidal structure much like that of large corporations. At the bottom are *locals* that serve workers in a particular geographical area. Certain members are designated as ==**shop stewards**== to serve as go-betweens in disputes between workers and supervisors. Locals are usually organized into ==**national unions**== that assist with local contract negotiations, organize new locals, negotiate contracts for entire industries, and lobby government bodies on issues of importance to organized labor. In turn, national unions may be linked by a *labor federation*, such as the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), which provides assistance to member unions and serves as the principal political organ for organized labor.

Collective Bargaining

In a nonunion environment, the employer makes largely unilateral decisions on issues affecting its labor force, such as salary and benefits. Management, for example, may simply set an average salary increase of 3 percent and require employees to pay an additional $50 a month for medical insurance. Typically, employees are in no position to bargain for better deals. (At the same time, however, for reasons that we've discussed earlier in this chapter, employers have a vested interest in treating workers fairly. A reputation for treating employees well, for example, is a key factor in attracting talented people.)

The process is a lot different in a union environment. Basically, union representatives determine with members what they want in terms of salary increases, benefits, working conditions, and job security. Union officials then tell the employer what its workers want and ask what they're willing to offer. When there's a discrepancy between what workers want and what management is willing to give—as there usually is—union officials serve as *negotiators* to bring the two sides together. The process of settling differences and establishing mutually agreeable conditions under which employees will work is called ==**collective bargaining**==.

The Negotiation Process

Negotiations start when each side states its position and presents its demands. As in most negotiations, these opening demands simply stake out starting positions. Both parties expect some give-and-take and realize that the final agreement will fall somewhere between the two positions. If everything goes smoothly, a tentative agreement is reached and then voted on by union members. If they accept the agreement, the process is complete and a contract is put into place to govern labor-management relations for a stated period. If workers reject the agreement, negotiators go back to the bargaining table.

Mediation and Arbitration

If negotiations stall, the sides may call in outsiders. One option is ==**mediation**==, under which an impartial third party assesses the situation and makes recommendations for reaching an agreement. A mediator's advice can be accepted or rejected. If the two sides are willing to accept the decision of a third party, they may opt instead for ==**arbitration**==, under which the third party studies the situation and arrives at a binding agreement.

Grievance Procedures

Another difference between union and nonunion environments is the handling of **grievances**–worker complaints on contract-related matters. When nonunion workers feel that they've been treated unfairly, they can take up the matter with supervisors, who may or may not satisfy their complaints. When unionized workers have complaints (such as being asked to work more hours than stipulated under their contract), they can call on union representatives to resolve the problem, in conjunction with supervisory personnel. If the outcome isn't satisfactory, the union can take the problem to higher-level management. If there's still no resolution, the union may submit the grievance to an arbitrator.

When Negotiations Break Down

At times, labor and management can't resolve their differences through collective bargaining or formal grievance procedures. When this happens, each side may resort to a variety of tactics to win support for its positions and force the opposition to agree to its demands.

Union Tactics

The tactics available to the union include *striking*, *picketing*, and *boycotting*. When they go on strike, workers walk away from their jobs and refuse to return until the issue at hand has been resolved. As undergraduates at Yale discovered when they arrived on campus in fall 2003, the effects of a strike can engulf parties other than employers and strikers: with four thousand dining room workers on strike, students had to scramble to find food at local minimarkets. The strike–the ninth at the school since 1968–lasted twenty-three days, and in the end, the workers got what they wanted: better pension plans.

   Though a strike sends a strong message to management, it also has consequences for workers, who don't get paid when they're on strike. Unions often ease the financial pressure on strikers by providing cash payments. (Some unionized workers, by the way, don't have the right to strike. Strikes by federal employees, such as air-traffic controllers, are illegal because they jeopardize the public interest.)

Figure 7.12. The adverse affects of a strike can impact management and workers alike.

When you see workers parading with signs outside a factory or an office building (or even a school), they're probably **picketing**. The purpose of picketing is informative–to tell people that a workforce is on strike or to publicize some management practice that's unacceptable to the union. In addition, because other union workers typically won't cross picket lines, marchers can interrupt the daily activities of the targeted organization. How would you like to show up for classes to find faculty picketing outside the classroom building? In April 2001, faculty at the University of Hawaii, unhappy about salaries, went on strike for thirteen days. Initially, many students cheerfully headed for the beach to work on their tans, but before long, many more–particularly graduating seniors–began to worry about finishing the semester with the credits they needed to keep their lives on schedule (USA Today, 2001).

The final tactic available to unions is **boycotting**, in which union workers refuse to buy a company's products and try to get other people to follow suit. The tactic is often used by the AFL-CIO, which maintains a national "Don't Buy or Patronize" boycott list. In 2003, for example, at the request of two affiliates, the Actor's Equity Association and the American Federation of Musicians, the AFL-CIO added the road show of the Broadway musical *Miss Saigon* to the list. Why? The unions objected to the use of nonunion performers who worked for particularly low wages and to the use of a "virtual orchestra," an electronic apparatus that can replace a live orchestra with software-generated orchestral accompaniment (AFL-CIO, 2004).

Management Tactics

Management doesn't sit by passively, especially if the company has a position to defend or a message to get out. One available tactic is the **lockout**–closing the workplace to workers–though it's rarely used because it's legal only when unionized workers pose a credible threat to the employer's financial viability. Another tactic is replacing striking workers with **strikebreakers**–nonunion workers who are willing to cross picket lines to replace strikers. Though the

law prohibits companies from permanently replacing striking workers, it's often possible for a company to get a court injunction that allows it to bring in replacement workers.

Lockout tactics were used in the 2011 labor dispute between the National Football League (NFL) and the National Football League Players Association when club owners and players failed to reach an agreement on a new contract. Prior to the 2011 season, the owners imposed a lockout, which prevented the players from practicing in team training facilities. Both sides had their demands: The players wanted a greater percentage of the revenues, which the owners were against. The owners wanted the players to play two additional season games, which the players were against. With the season drawing closer, an agreement was finally reached in July 2011 bringing the 130-day lockout to an end and ensuring that the 2011 football season would begin on time (Iyer & Brown, 2011).

The Future of Unions

As we noted earlier, union membership in the United States is declining. So, what's the future of organized labor? Will membership continue to decline and unions lose even more power? The AFL-CIO is optimistic about union membership, pointing out recent gains in membership among women and immigrants, as well as health care workers, graduate students, and professionals (Bureau of Labor Statistics, 2012; Unions 101, 2012).

But convincing workers to unionize is still more difficult than it used to be and could become even harder in the future. For one thing, employers have developed strategies for dissuading workers from unionizing—in particular, tactics for withholding job security. If unionization threatens higher costs for wages and benefits, they can resort to part-time or contract workers. They can also outsource work, eliminating jobs entirely, and more employers are now investing in technology designed to reduce the amount of human labor needed to produce goods or offer services.

Key Takeaways

- Some workers belong to **labor unions**—organized groups of workers that bargain with employers to improve members' pay, job security, and working conditions.

- Unions have a pyramidal structure. At the bottom are *locals*, who serve workers in a particular geographical area.

  1. Locals are usually organized into *national unions* that assist with local contract negotiations and negotiate industry-wide contracts.
  2. Nationals may be linked by a *labor federation*, such as the AFL-CIO, which provides assistance to member unions and serves as the principal political organ for organized labor.

- When there's a discrepancy between what workers want in terms of salary increases, benefits, working conditions, and job security and what management is willing to give, the two sides engage in a process called **collective bargaining**.

  1. If everything goes smoothly, a contract is soon put into place.
  2. If negotiations break down, the sides may resort to **mediation** (in which an impartial third party makes recommendations for reaching an agreement) or **arbitration** (in which the third party imposes a binding agreement).

- When unionized workers feel that they've been treated unfairly, they can file **grievances**–complaints over contract-related matters that are resolved by union representatives and employee supervisors.

- If labor differences can't be resolved through collective bargaining or formal grievance procedures, each side may resort to a variety of tactics. The union can do the following:

  1. Call a **strike** (in which workers leave their jobs until the issue is settled)
  2. Organize **picketing** (in which workers congregate outside the workplace to publicize their position)
  3. Arrange for **boycotting** (in which workers and other consumers are urged to refrain from buying an employer's products)

- Management may resort to a **lockout**–closing the workplace to workers–or call in **strikebreakers** (nonunion workers who are willing to cross picket lines to replace strikers).

Exercises

1. You've just gotten a job as an autoworker. Would you prefer to work in a unionized or nonunionized plant? Why? If you were hired as a high-level manager in the company, would you want your workers to be unionized? Why, or why not? What's your opinion on the future of organized labor? Will union membership grow or decline in the next decade? Why, or why not?
2. What happens in a unionized company when negotiations between labor and management break down? Identify and describe the tactics that unions can use against management and those that management can use against unions.

7.8 Cases and Problems

Alternatively, go to the DOL Bureau of Labor Statistics website at http://stats.bls.gov. Access the most recent DOL publications and locate the following information. (Information)\

- ◦ Number of persons in the American workforce
- ◦ Unemployment rate for last year
- ◦ Demographic characteristics of the American workforce: race, ethnic status, age, marital status, and gender
- ◦ Occupations where there are projected shortages for the next five or 10 years
- ◦ Union membership by major industry category: manufacturing, banking and finance, health care, business and personal services, sports and entertainment, and any other area of interest to you

4. Assume you are a director of labor relations for a firm faced with a union certification election in 30 days. Draft a letter to be sent to your employees in which you urge them to vote "no union"; be persuasive in presenting your arguments against the union. (Information)

5. Using the internet, research articles featuring a recent strike or a labor contract settlement. Report to your class the specifics of the strike or settlement. (Technology, Resources)

6. **Team Activity** Select two teams of five. One team will take the position that employees are simply a business expense to be managed. The second team will argue that employees are an asset to be developed to enable the firm to gain a competitive advantage. The remainder of the class will judge which team provided the stronger argument. (Interpersonal)

7. Have you or a family member ever been a union member? If so, name the union and describe it in terms of membership size, membership characteristics, strike history, recent bargaining issues, and employers under union contracts. (Information)

8. **Team Activity** Divide the class into two groups. One group will take the position that workers should be required to join unions and pay dues. The other group will take the position that workers should not be required to join unions. Hold a debate in which a spokesperson from each group is given 10 minutes to present the group's arguments. (Interpersonal)

Ethics Angle (AACSB)

Misstating the Facts

Life couldn't get much better for George O'Leary when he was named the head football coach at Notre Dame. Unfortunately, he barely had time to celebrate his new job before he was ruled ineligible: after just a week on the job, he was forced to resign, embarrassing himself, his family, his friends, and Notre Dame itself. Why? Because of a few lies that he'd put on his résumé twenty years earlier. To get the facts behind this story, go to the Chicago Tribune site https://www.chicagotribune.com/news/ct-xpm-2001-12-15-0112150269-story.html and read the article "Short Tenure: O'Leary Out at Notre Dame After One Week." Then, answer the following questions:

1. Was O'Leary's punishment appropriate? If you were the athletic director at Notre Dame, would you have meted out the same punishment? Why, or why not?
2. False information on his résumé came back to haunt O'Leary after twenty years. Once he'd falsified his résumé, was there any corrective action that he could have taken? If so, what?
3. If O'Leary had told Notre Dame about the falsifications before they came to light, would they have hired him?
4. Would his previous employer take him back?
5. O'Leary was later hired as a head coach by the University of Central Florida. Will the episode involving his résumé undermine his ability to encourage players to act with integrity? Will it affect his ability to recruit players?
6. What's the lesson to be learned from O'Leary's experience? In what ways might a few (theoretical) misstatements on your résumé come back to haunt you?

Team-Building Skills (AACSB)

Dorm Room Rescue

Any night of the week (at least as of this writing), you can relax in front of the TV and watch a steady stream of shows about how to improve your living space—such as *New Spaces*. You like the concept of these programs well enough, but you're tired of watching them in a tiny, cluttered dorm room that's decorated in early barracks style. Out of these cramped conditions, however, you and a team of friends come up with an idea. On graduation, you'll start a business called Dorm Room Rescue to provide decorating services to the dorm dwellers who come after you. You'll help college students pick colors and themes for their rooms and select space-saving furniture, storage materials, area rugs, and wall decorations. Your goal will be to create attractive dorm rooms that provide comfort, functionality, and privacy, as well as pleasant spaces in which students can relax and even entertain.

The team decides to develop a plan for the HR needs of your future company. You'll need to address the following issues:

1. HR plan

   ◦ Number of employees
   ◦ Job descriptions: duties and responsibilities for each type of employee
   ◦ Job specifications: needed skills, knowledge, and abilities

2. Recruitment of qualified employees

   ◦ Recruitment plan: how and where to find candidates
   ◦ Selection process: steps taken to select employees

3. Developing employees

- New-employee orientation
- Training and development

4. Compensation and benefits

   - Wages, salaries, and incentive programs
   - Benefits

5. Work/Life quality

   - Work schedules and alternative work arrangements
   - Family-friendly programs

6. Performance appraisal

   - Appraisal process
   - Retaining valuable employees

You might want to divide up the initial work, but you'll need to regroup as a team to make your final decisions on these issues and to create a team-prepared report.

The Global View (AACSB)

Sending Ed to China

You're the HR manager for a large environmental consulting firm that just started doing business in China. You've asked your top engineer, Ed Deardon, to relocate to Shanghai for a year. Though China will be new to Deardon, working overseas won't be; he's already completed assignments in the Philippines and Thailand; as before, his wife and three children will be going with him.

You've promised Deardon some advice on adapting to living and working conditions in Shanghai, and you intend to focus on the kinds of cultural differences that tend to create problems in international business dealings. Unfortunately, you personally know absolutely nothing about living in China and so must do some online research. Here are some promising sites:

- China Window (http://china-window.com)
- Los Angeles Chinese Learning Center (http://chinese-school.netfirms.com)

Instructions

Prepare a written report to Deardon in which you identify and explain five or six cultural differences between business behavior in the United States and China, and offer some advice on how to deal with them.

TEAMWORK AND COMMUNICATIONS

8.1 The Team and the Organization

What Is a Team? How Does Teamwork Work?

A **team** (or a ***work team***) is a group of people with complementary skills who work together to achieve a specific goal (Thompson, 2008). In the case of Motorola's RAZR team, the specific goal was to develop (and ultimately bring to market) an ultrathin cell phone that would help restore the company's reputation as a designer of stylistically appealing, high-function phones. The team achieved its goal by integrating specialized but complementary skills in engineering and design and by making the most of its authority to make its own decisions and manage its own operations.

Teams versus Groups

"A **group**," suggests Bonnie Edelstein, a consultant in organizational development, "is a bunch of people in an elevator. A team is also a bunch of people in an elevator, but the elevator is broken." This distinction may be a little oversimplified, but as our tale of teamwork at Motorola reminds us, a *team* is clearly something more than a mere *group* of individuals. In particular, members of a group—or, more accurately, a *working group*—go about their jobs independently and meet primarily to share information. A group of department-store managers, for example, might meet monthly to discuss their progress in cutting plant costs, but each manager is focused on the goals of his or her department because each is held accountable for meeting only those goals. Teams, by contrast, are responsible for achieving specific common goals, and they're generally empowered to make the decisions needed to complete their authorized tasks.

Some Key Characteristics of Teams

To keep matters in perspective, let's identify five key characteristics of work teams (Thompson, 2008; Alderfer, et. al., 1977):

1. *Teams are accountable for achieving specific **common goals***. Members are collectively responsible for achieving team goals, and if they succeed, they're rewarded collectively.
2. *Teams function **interdependently***. Members cannot achieve goals independently and must rely on each other for information, input, and expertise.
3. *Teams are **stable***. Teams remain intact long enough to finish their assigned tasks, and each member remains on board long enough to get to know every other member.
4. *Teams have **authority***. Teams possess the decision-making power to pursue their goals and to manage the activities through which they complete their assignments.
5. *Teams operate in a **social context***. Teams are assembled to do specific work for larger organizations and have the advantage of access to resources available from other areas of their organizations.

Why Organizations Build Teams

Why do major organizations now rely more and more on teams to improve operations? Executives at Xerox have reported that team-based operations are 30 percent more productive than conventional operations. General Mills says that factories organized around team activities are 40 percent more productive than traditionally organized factories. According to in-house studies at Shenandoah Life Insurance, teams have cut case-handling time from twenty-seven to two days and virtually eliminated service complaints. FedEx says that teams reduced service errors (lost packages, incorrect bills) by 13 percent in the first year (Fisher, 1999; Greenberg & Baron, 2008).

Today it seems obvious that teams can address a variety of challenges in the world of corporate activity. Before we go any further, however, we should remind ourselves that data like those we've just cited aren't necessarily definitive. For one thing, they may not be objective–companies are more likely to report successes than failures. As a matter of fact, teams *don't* always work. Indeed, according to one study, team-based projects fail 50 to 70 percent of the time (Greenberg & Baron, 2008; Thompson, 2008).

The Effect of Teams on Performance

Research shows that companies build and support teams because of their effect on overall workplace performance, both organizational and individual. If we examine the impact of team-based operations according to a wide range of relevant criteria–including product quality, worker satisfaction, and quality of work life, among others–we find that overall organizational performance improves. Table 8.1: Effect of Teams on Workplace Performance lists several areas in which we can analyze workplace performance and indicates the percentage of companies that have reported improvements in each area.

Table 8.1: Effect of Teams on Workplace Performance

Area of Performance	Percent of Firms Reporting Improvement
Product and service quality	70
Customer service	67
Worker satisfaction	66
Quality of work life	63
Productivity	61
Competitiveness	50
Profitability	45
Absenteeism/turnover	23

Types of Teams

Teams, then, can improve company and individual performance in a number of areas. Not all teams, however, are formed to achieve the same goals or charged with the same responsibilities. Nor are they organized in the same way. Some, for instance, are more ==autonomous== than others—less accountable to those higher up in the organization. Some depend on a team leader who's responsible for defining the team's goals and making sure that its activities are performed effectively. Others are more or less self-governing: though a leader lays out overall goals and strategies, the team itself chooses and manages the methods by which it pursues its goals and implements its strategies (Thompson, 2008). Teams also vary according to their membership. Let's look at several categories of teams.

Manager-Led Teams

As its name implies, in the ==manager-led team== the manager is the team leader and is in charge of setting team goals, assigning tasks, and monitoring the team's performance. The individual team members have relatively little autonomy. For example, the key employees of a professional football team (a manager-led team) are highly trained (and highly paid) athletes, but their activities on the field are tightly controlled by a head coach. As team manager, the coach is responsible both for developing the strategies by which the team pursues its goal of winning games and for the final outcome of each game (not to mention the season). He's also solely responsible for interacting with managers above him in the organization. The players are responsible only for executing plays (Thompson, 2008).

Self-Managing Teams

==Self-managing teams== (also known as ==*self-directed*== or ==*self-regulating teams*==) have considerable autonomy. They are usually small and often absorb activities that were once performed by traditional supervisors. A manager or team leader may determine overall goals, but the members of the self-managing team control the activities needed to achieve the goals, such as planning and scheduling work, sharing tasks, meeting quality standards, and handling day-to-day operations.

Self-managing teams are the organizational hallmark of Whole Foods Market, the largest natural-foods grocer in the United States. Each store is run by ten teams (produce, prepared foods, and so forth), and virtually every store employee is a member of a team. Each team has a designated leader and its own performance targets. (Team leaders also belong to a store team, and store-team leaders belong to a regional team.) To do its job, every team has access to the kind of information—including sales and even salary figures—that most companies reserve for the eyes of traditional managers (Fishman, 2007).

Needless to say, not every self-managed team enjoys the same degree of autonomy. Companies vary widely in choosing which tasks teams are allowed to manage and which ones are best left to upper-level management only. As you can see in Figure 8.1: What Teams Do (and Don't) Manage, for example, self-managing teams are often allowed to schedule assignments, but they are rarely allowed to fire coworkers.
Figure 8.1: What Teams Do (and Don't) Manage

Cross-Functional Teams

Many companies use **cross-functional teams**—teams that, as the name suggests, cut across an organization's ***functional areas*** (operations, marketing, finance, and so on). A cross-functional team is designed to take advantage of the special expertise of members drawn from different functional areas of the company. When the Internal Revenue Service, for example, wanted to study the effects on employees of a major change in information systems, it created a cross-functional team composed of people from a wide range of departments. The final study reflected expertise in such areas as job analysis, training, change management, industrial psychology, and even ergonomics (Human Technology Inc., 2011).

Cross-functional teams figure prominently in the product-development process at Nike, where they take advantage of expertise from both inside and outside the company. Typically, team members include not only product designers, marketing specialists, and accountants but also sports-research experts, coaches, athletes, and even consumers. Likewise, Motorola's RAZR team was a cross-functional team: Responsibility for developing the new product wasn't passed along from the design team to the engineering team but rather was entrusted to a special team composed of both designers and engineers.

We can also classify the RAZR team as a *product-development* or *project team* (a topic we'll discuss in more detail in [Chapter 10: Product Design and Development](#)). **Committees** and **task forces**, both of which are dedicated to specific issues or tasks, are often cross-functional teams. **Problem-solving teams,** which are created to study such issues as improving quality or reducing waste, may be either intradepartmental or cross-functional (Robbins & Judge, 2009).

Virtual Teams

"Teamwork," said someone (we're not sure who), "doesn't tolerate the inconvenience of distance." Indeed, technology now makes it possible for teams to function not only across such organizational boundaries as functional areas, departments, and divisions but also across time and space, as well. Working in <mark>virtual teams</mark>, geographically dispersed members interact electronically in the process of pursuing a common goal. Such technologies as videoconferencing, instant messaging, and electronic meetings, which allow people to interact simultaneously and in real time, offer a number of advantages in conducting the business of a virtual team (George & Jones, 2008). Among other things, members can participate from any location or at any time of day, and teams can "meet" for as long as it takes to achieve a goal or solve a problem—a few days, a few weeks, or a few months.

Nor does team size seem to be an obstacle when it comes to calling virtual-team meetings: In building the F-35 Strike Fighter, U.S. defense contractor Lockheed Martin staked the $225 billion project on a virtual product-team of unprecedented global dimension, drawing on designers and engineers from the ranks of eight international partners ranging from Canada and the United Kingdom to Norway and Turkey (Adept Science, 2003).

Key Takeaways

- Teamwork brings diverse areas of expertise to bear on organizational problems and projects.
- Reaching teamwork goals requires skills in negotiating trade-offs, and teamwork brings these skills into play at almost every step in the process.
- To be successful, teams need a certain amount of autonomy and authority in making and implementing their decisions.
- A **team** (or a *work team*) is a group of people with complementary skills who work together to achieve a specific goal. Members of a *working group* work independently and meet primarily to share information.

- Work teams have five key characteristics:

    1. They are accountable for achieving specific common goals.
    2. They function interdependently.
    3. They are stable.
    4. They have authority.
    5. They operate in a social context.

- Companies build and support teams because of their effect on overall workplace performance, both organizational and individual.

- Work teams may be of several types:

    1. In the traditional **manager-led team**, the leader defines the team's goals and activities and is responsible for its achieving its assigned goals.
    2. The leader of a **self-managing team** may determine overall goals, but employees control the activities needed to meet them.
    3. A **cross-functional team** is designed to take advantage of the special expertise of members drawn from different functional areas of the company.
    4. On **virtual teams**, geographically dispersed members interact electronically in the process of

pursuing a common goal.

Exercise

You're a marketing researcher for a multinational food-products corporation, and for the past two years, you've been able to work at home. The international division of the company has asked you to join a virtual team assigned to assess the prospects for a new sandwich planned for the Indian market.

List a few of the challenges that you're likely to encounter as a member of the virtual team. Explain the steps you'd take to deal with each of the challenges that you've listed.

8.2 Why Teamwork Works

Now that we know a little bit about *how* teams work, we need to ask ourselves *why* they work. Not surprisingly, this is a fairly complex issue. In this section, we'll answer these closely related questions: Why are teams often effective? Why are they sometimes *in*effective?

Factors in Effective Teamwork

First, let's begin by identifying several factors that, in practice, tend to contribute to effective teamwork. Generally speaking, teams are effective when the following factors are met (Whetten & Cameron, 2007):

- *Members depend on each other*. When team members rely on each other to get the job done, team productivity and efficiency are high.
- *Members trust one another*. Teamwork is more effective when members trust each other.
- *Members work better together than individually*. When team members perform better as a group than alone, collective performance exceeds individual performance.
- *Members become ==boosters==*. When each member is encouraged by other team members to do his or her best, collective results improve.
- *Team members enjoy being on the team*. The more that team members derive satisfaction from being on the team, the more committed they become.
- ==*Leadership rotates*==. Teams function effectively when leadership responsibility is shared over time.

Most of these explanations probably make pretty clear intuitive sense. Unfortunately, because such issues are rarely as clear-cut as they may seem at first glance, we need to examine the issue of group effectiveness from another perspective—one that considers the effects of factors that aren't quite so straightforward.

Group Cohesiveness

The idea of ==group cohesiveness== refers to the *attractiveness* of a team to its members. If a group is high in cohesiveness, membership is quite satisfying to its members; if it's low in cohesiveness, members are unhappy with it and may even try to leave it. The principle of group cohesiveness, in other words, is based on the simple idea that groups are most effective when their members like being members of the group (George & Jones, 2008; Festinger, 1950).

What Makes a Team Cohesive?

Numerous factors may contribute to team cohesiveness, but in this section, we'll focus on five of the most important:

1. *Size*. The bigger the team, the less satisfied members tend to be. When teams get too large, members find it harder to interact closely with other members; a few members tend to dominate team activities, and conflict becomes more likely.

2. **<mark>Similarity</mark>**. People usually get along better with people like themselves, and teams are generally more cohesive when members perceive fellow members as people who share their own attitudes and experience.
3. **<mark>Success</mark>**. When teams are successful, members are satisfied, and other people are more likely to be attracted to their teams.
4. **<mark>Exclusiveness</mark>**. The harder it is to get into a group, the happier the people who are already in it. Status (the extent to which outsiders look up to a team, as well as the perks that come with membership) also increases members' satisfaction.
5. **<mark>Competition</mark>**. Members value membership more highly when they're motivated to achieve common goals–especially when those goals mean outperforming other teams.

Figure 8.2. A cohesive team with goals that are aligned with the goals of the organization is most likely to succeed.

There's such a thing as too much cohesiveness. When, for instance, members are highly motivated to collaborate in performing the team's activities, the team is more likely to be effective in achieving its goals. Clearly, when those goals are aligned with the goals of the larger organization, the organization, too, will be happy. If, however, its members get too wrapped up in more immediate team goals, the whole team may lose sight of the larger organizational goals toward which it's supposed to be working.

Groupthink

Likewise, it's easier for leaders to direct members toward team goals when members are all on the same page–when there's a basic willingness to conform to the team's rules and guidelines. When there's too much conformity, however, the group can become ineffective: It may resist change and fresh ideas and, what's worse, may end up adopting its

own dysfunctional tendencies as its way of doing things. Such tendencies may also encourage a phenomenon known as ==**groupthink**==—the tendency to conform to group pressure in making decisions, while failing to think critically or to consider outside influences.

Groupthink is often cited as a factor in the explosion of the space shuttle *Challenger* in January 1986: Engineers from a supplier of components for the rocket booster warned that the launch might be risky because of the weather but were persuaded to reverse their recommendation by NASA officials who wanted the launch to proceed as scheduled (Griffin, 2011).

Why Teams Fail

Teams don't always work. To learn why, let's take a quick look at four common obstacles to success in introducing teams into an organization (Greenberg & Baron, 2008):

- *Unwillingness to cooperate.* Failure to cooperate can occur when members don't or won't commit to a common goal or set of activities. What if, for example, half the members of a product-development team want to create a brand-new product and half want to improve an existing product? The entire team may get stuck on this point of contention for weeks or even months.
- *Lack of ==**managerial support**==.* Every team requires organizational resources to achieve its goals, and if management isn't willing to commit the needed resources—say, funding or key personnel—a team will probably fall short of those goals.
- *Failure of managers to ==**delegate authority**==.* Team leaders are often chosen from the ranks of successful supervisors—first-line managers who, as we saw in [Chapter 6: Managing for Business Success](#), give instructions on a day-to-day basis and expect to have them carried out. This approach to workplace activities may not work very well in leading a team—a position in which success depends on building a consensus and letting people make their own decisions.
- *Failure of teams to cooperate.* If you're on a workplace team, your employer probably depends on teams to perform much of the organization's work and meet many of its goals. In other words, it is, to some extent, a team-based organization, and as such, reaching its overall goals requires a high level of cooperation *among teams* (Thompson, 2008). When teams can't agree on mutual goals (or when they duplicate efforts), neither the teams nor the organization is likely to meet with much success.

Motivation and Frustration

Finally, remember that teams are composed of people, and whatever the roles they happen to be playing at a given time, people are subject to psychological ups and downs. As members of workplace teams, they need motivation, and as we observed in [Chapter 7: Recruiting, Motivating, and Keeping Quality Employees](#), when motivation is down, so are ==effectiveness== and ==productivity==. As you can see in Figure 8.3: Sources of Frustration, the difficulty of maintaining a high level of motivation is the chief cause of frustration among members of teams. As such, it's also a chief cause of ineffective teamwork, and that's one reason why more employers now look for the ability to develop and sustain motivation when they're hiring new managers (Thompson, 2008).
Figure 8.3: Sources of Frustration

Key Takeaways

- Generally speaking, teams are effective when the following are true:

    1. Members are interdependent.
    2. Members work better together than individually.
    3. Teams work well enough to satisfy members.
    4. Leadership rotates.
    5. Members help one another.
    6. Members become boosters.
    7. Members trust one another.

- **Group cohesiveness** refers to the *attractiveness* of a team to its members. If a group is high in cohesiveness, membership is quite satisfying to its members; if it's low in cohesiveness, members are unhappy with it and may even try to leave it.

- Common obstacles to team success include the following:

    1. Unwillingness to cooperate
    2. Lack of managerial support

3. Failure of managers to delegate authority
4. Failure of teams to cooperate

Exercise

At some point in the coming week, while you're working on an assignment for any one of your classes, ask at least one other member of the class to help you with it or to collaborate with you in studying for it. After you've completed your assignment, make a list of the advantages and disadvantages of working on the assignment with another person.

8.3 The Team and Its Members

"Life Is All about Group Work"

"I'll work extra hard and do it myself, but please don't make me have to work in a group."

Like it or not, you'll probably be given some teamwork assignments while you're in college. More than two-thirds of all students report having participated in the work of an organized team, and if you're in business school, you will almost certainly find yourself engaged in team-based activities (Whetten & Cameron, 2007; Wellins et. al., 1991).

Why do we put so much emphasis on something that, reportedly, makes many students feel anxious and academically drained? Here's one college student's practical-minded answer to this question:

> In the real world, you have to work with people. You don't always know the people you work with, and you don't always get along with them. Your boss won't particularly care, and if you can't get the job done, your job may end up on the line. Life is all about group work, whether we like it or not. And school, in many ways, prepares us for life, including working with others" (Nichols, 2003).

She's right. In placing so much emphasis on teamwork skills and experience, college business departments are doing the responsible thing—preparing students for the business world that awaits them. A survey of *Fortune* 1000 companies reveals that 79 percent already rely on self-managing teams and 91 percent on various forms of employee work groups. Another survey found that the skill that most employers value in new employees is the ability to work in teams (Whetten & Cameron, 2007; Lawler, 2003). If you're already trying to work your way up an organizational ladder, consider the advice of former Chrysler Chairman Lee Iacocca: "A major reason that capable people fail to advance is that they don't work well with their colleagues" (Paulson, 1990). The importance of the ability to work in teams was confirmed in a survey of leadership practices of more than sixty of the world's top organizations (Fortune Magazine, 1999). When top executives in these organizations were asked, "What causes high-potential leadership candidates to derail? (stop moving up in the organization)," 60 percent of the organizations cited "inability to work in teams." Interestingly, only 9 percent attributed the failure of these executives to advance to "lack of technical ability." While technical skills will be essential in your getting hired into an organization, your team skills will play a significant role in your ability to advance.

To be **<mark>team-ready</mark>** or not to be team-ready—that is the question. Or, to put it in plainer terms, the question is not whether you'll find yourself working as part of a team. You will. The question is whether you'll know how to participate successfully in team-based activities.

What Skills Does the Team Need?

Sometimes we hear about a sports team made up of mostly average players who win a championship because of coaching genius, flawless teamwork, and superhuman determination (Robbins & Judge, 2009). But not terribly often. In fact, we usually hear about such teams simply because they're newsworthy—exceptions to the rule. Typically a team

performs well because its members possess some level of talent. This doesn't mean, however, that we should reduce team performance to the mere sum of its individual contributions: Members' talents aren't very useful if they're not managed in a collective effort to achieve a common goal.

In the final analysis, of course, a team can succeed only if its members provide the skills that need managing. In particular, every team requires some mixture of three sets of skills:

- ==*Technical skills*==. Because teams must perform certain tasks, they need people with the skills to perform them. For example, if your project calls for a lot of math work, it's good to have someone with the necessary quantitative skills.
- ==*Decision-making and problem-solving skills*==. Because every task is subject to problems, and because handling every problem means deciding on the best solution, it's good to have members who are skilled in identifying problems, evaluating alternative solutions, and deciding on the best options.
- ==*Interpersonal skills*==. Because teams are composed of people, and because people need direction and motivation and depend on communication, every group benefits from members who know how to listen, provide feedback, and smooth ruffled feathers. The same people are usually good at communicating the team's goals and needs to outsiders.

The key to success is ultimately the right mix of these skills. Remember, too, that no team needs to possess all these skills—never mind the right balance of them—from day one. In many cases, a team gains certain skills only when members volunteer for certain tasks and perfect their skills in the process of performing them. For the same reason, effective teamwork develops over time as team members learn how to handle various team-based tasks. In a sense, teamwork is always work in progress.

What Roles Do Team Members Play?

Like your teamwork skills, expect your role on a team to develop over time. Also remember that, both as a student and as a member of the workforce, you'll be a *member* of a team more often than a *leader* (a subject that we'll take up in the next section). Team members, however, can have as much impact on a team's success as its leaders. The key is the quality of the contributions they make in performing nonleadership roles (Whetten & Cameron, 2007).

What, exactly, are those roles? At this point, you've probably concluded that every team faces two basic challenges:

1. Accomplishing its assigned task
2. Maintaining or improving group cohesiveness

Whether you affect the team's work positively or negatively depends on the extent to which you help it or hinder it in meeting these two challenges (Whetten & Cameron, 2007). We can thus divide teamwork roles into two categories, depending on which of these two challenges each role addresses. These two categories (task-facilitating roles and relationship-building roles) are summarized in Table 8.2: Roles that Team Members Play.

Table 8.2: Roles that Team Members Play

Task-facilitating Roles	Example	Relationship-building Roles	Example
Direction giving	"Jot down a few ideas and we'll see what everyone has come up with."	Supporting	"Now, that's what I mean by a practical application."
Information seeking	"Does anyone know if this is the latest data we have?"	Harmonizing	"Actually, I think you're both saying pretty much the same thing."
Information giving	"Here are latest numbers from…."	Tension relieving	"Before we go on to the next section, how many people would like a pillow?"
Elaborating	"I think a good example of what you're talking about is…."	Confronting	"How does that suggestion relate to the topic that we're discussing?"
Urging	"Let's try to finish this proposal before we adjourn."	Energizing	"It's been a long time since I've had this many laughs at a meeting in *this* department."
Monitoring	"If you'll take care of the first section, I'll make sure that we have the second by next week."	Developing	"If you need some help pulling the data together, let me know."
Process analyzing	"What happened to the energy level in this room?"	Consensus building	"Do we agree on the first four points even if number five needs a little more work?"
Reality testing	"Can we make this work and stay within budget?"	Empathizing	"It's not you. The numbers *are* confusing."
Enforcing	"We're getting off track. Let's try to stay on topic."		
Summarizing	"Before we jump ahead, here's what we've decided so far."		

Source: Adapted from David A. Whetten and Kim S. Cameron, *Developing Management Skills*, 7th ed. (Upper Saddle River, NJ: Pearson Education, 2007), 517, 519.

Task-Facilitating Roles

Task-facilitating roles address challenge number one—accomplishing the team goals. As you can see from <u>Table 8.2 "Roles that Team Members Play"</u>, such roles include not only providing information when someone else needs it but also asking for it when you need it. In addition, it includes **monitoring** (checking on progress) and **enforcing** (making sure that team decisions are carried out). Task facilitators are especially valuable when assignments aren't clear or when progress is too slow. Moreover, every team needs people who recognize when a little task facilitation is called for.

Relationship-Building Roles

When you challenge unmotivated behavior or help other team members understand their roles, you're performing a **relationship-building role** and addressing challenge number two—maintaining or improving group cohesiveness. This type of role includes just about every activity that improves team "chemistry," from *confronting* to *empathizing*.

Bear in mind three points about this model of team-membership roles: (1) Teams are most effective when there's a good balance between task facilitation and relationship building; (2) it's hard for any given member to perform both types of roles, as some people are better at focusing on tasks and others on relationships; and (3) overplaying any facet of any role can easily become counterproductive. For example, **elaborating** on something may not be the best strategy

when the team needs to make a quick decision; and **consensus building** may cause the team to overlook an important difference of opinion.

Blocking Roles

Finally, review Table 8.3: How to Block Teamwork, which summarizes a few characteristics of another kind of team-membership role. So-called **blocking roles** consist of behavior that inhibits either team performance or that of individual members. Every member of the team should know how to recognize blocking behavior. If teams don't confront dysfunctional members, they can destroy morale, hamper consensus building, create conflict, and hinder progress.

Table 8.3: How to Block Teamwork

Blocking Strategy	Tactics
Dominate	Talk as much as possible; interrupt and interject
Overanalyze	Split hairs and belabor every detail
Stall	Frustrate efforts to come to conclusions: decline to agree, sidetrack the discussion, rehash old ideas
Remain passive	Stay on the fringe; keep interaction to a minimum; wait for others to take on work
Overgeneralize	Blow things out of proportion; float unfounded conclusions
Find fault	Criticize and withhold credit whenever possible
Make premature decisions	Rush to conclusions before goals are set, information is shared, or problems are clarified
Present opinions as facts	Refuse to seek factual support for ideas that you personally favor
Reject	Object to ideas offered by people who tend to disagree with you
Pull rank	Use status or title to push through ideas, rather than seek consensus on their value
Resist	Throw up roadblocks to progress; look on the negative side
Deflect	Refuse to stay on topic; focus on minor points rather than main points

Class Team Projects

As we highlighted earlier, throughout your academic career you'll likely participate in a number of team projects. Not only will you make lasting friends by being a member of a team, but in addition you'll produce a better product. To get insider advice on how to survive team projects in college (and perhaps really enjoy yourself in the process), let's look at some suggestions offered by two students who have gone through this experience (Nichols, 2003; Feenstra, 2002).

- *Draw up a team charter*. At the beginning of the project, draw up a **team charter** (or contract) that includes the goals of the group; ways to ensure that each team member's ideas are considered and respected; when and where your group will meet; what happens if a team member skips meetings or doesn't do his or her share of the work; how conflicts will be resolved.
- *Contribute your ideas*. Share your ideas with your group; they might be valuable to the group. The worst that could happen is that they won't be used (which is what would happen if you kept quiet).

- *Never miss a meeting*. Pick a weekly meeting time and write it into your schedule as if it were a class. Never skip it. And make your meetings productive.
- *Be ==considerate== of each other*. Be patient, listen to everyone, communicate frequently, involve everyone in decision making, don't think you're always right, be positive, avoid infighting, build trust.
- *Create a process for ==resolving conflict==*. Do this before conflict arises. Set up rules to help the group decide whether the conflict is constructive, whether it's personal, or whether it arises because someone won't pull his or her weight. Decide, as a group, how conflict will be handled.
- *Use the strengths of each team member*. Some students are good researchers, others are good writers, others have strong problem-solving or computer skills, while others are good at generating ideas. Don't have your writer do the research and your researcher do the writing. Not only would the team not be using its resources wisely, but two team members will be frustrated because they're not using their strengths.
- *Don't do all the work yourself*. Work with your team to get the work done. The project output is not as important as the experience of working in a team.
- *Set ==deadlines==*. Don't leave everything to the end; divide up tasks, hold team members accountable, and set intermediary deadlines for each team member to get his or her work done. Work together to be sure the project is in on time and in good shape.

What Does It Take to Lead a Team?

"Some people are born leaders, some achieve leadership, and some have leadership thrust upon them." Or so Shakespeare might have said if he were managing a twenty-first-century work team instead of a sixteenth-century theater troupe. At some point in a successful career, whether in business, school, or any other form of organizational work, you may be asked (or assigned) to lead a team. The more successful you are, the more likely you are to receive such an invitation. So, what will you have to do as a leader? What skills will you need?

Like so many of the questions that we ask in this book, these questions don't have any simple answers. As for the first question—what does a leader have to do?—we can provide one broad answer: A leader must help members develop the attitudes and behavior that contribute to team success: interdependence, collective responsibility, shared commitment, and so forth.

Influence Team Members and Gain their Trust

Team leaders must be able to influence their team members. And notice that we say *influence*: except in unusual circumstances, giving commands and controlling everything directly doesn't work very well (Whetten & Cameron, 2007). As one team of researchers puts it, team leaders are more effective when they work *with* members rather than *on* them (Whetten & Cameron, 2007). Hand in hand with the ability to influence is the ability to gain and keep the *trust* of team members. People aren't likely to be influenced by a leader whom they perceive as dishonest or selfishly motivated.

Figure 8.4: Team leaders are most effective when they can not only influence members but also gain their trust.

Assuming you were asked to lead a team, there are certain leadership skills and behaviors that would help you influence your team members and build trust. Let's look at seven of these:

- *Demonstrate* ==**integrity**==. Do what you say you'll do, and act in accordance with your stated values. Be honest in communicating with members, and follow through on promises.
- *Be clear and consistent.* Let members know that you're certain about what you want, and remember that being clear and consistent reinforces your credibility.
- *Generate* ==**positive energy**==. Be optimistic and compliment team members. Recognize their progress and success.
- *Acknowledge common points of view.* Even if you're about to propose some kind of change, before embarking on a new stage of a project recognize the value of the views that members already hold in common.
- *Manage* ==**agreement and disagreement**==. When members agree with you, focus on your point of view and present it reasonably. When they disagree with you, acknowledge both sides of the issue and support your own with strong, clearly presented evidence.
- ==**Encourage**== *and* ==**coach**==. Buoy up members when they run into new and uncertain situations and when success depends on their performing at a high level. Give them the information they need and otherwise help them to perform tasks.
- *Share information.* Let members know that you're knowledgeable about team tasks and individual talents. Check with team members regularly to find out what they're doing and how the job is progressing. Collect information from outside sources, and make sure that it gets to the team members who need it.

- As the business world depends more and more on teamwork, it's increasingly important for incoming members of the workforce to develop skills and experience in team-based activities.

- Every team requires some mixture of three skill sets:

  1. *Technical skills*: skills needed to perform specific tasks
  2. *Decision-making and problem-solving skills*: skills needed to identify problems, evaluate alternative solutions, and decide on the best options
  3. *Interpersonal skills*: skills in listening, providing feedback, and resolving conflict

- Team members deal with two basic challenges: (1) accomplishing the team's assigned task and (2) maintaining or improving group cohesiveness.
- **Task-facilitating roles** address challenge number one—accomplishing team tasks. **Relationship-building roles** address challenge number two—maintaining or improving group cohesiveness. **Blocking roles** consist of behavior that inhibits either team performance or that of individual members.

- The following are eight ways to add value to and survive team projects in college:

  1. Draw up a team charter.
  2. Contribute your ideas.
  3. Never miss a meeting.
  4. Be considerate of each other.
  5. Create a process for resolving conflict.
  6. Use the strengths of each team member.
  7. Don't do all the work yourself.
  8. Set deadlines.

- The following are seven types of skills and behaviors that help team leaders influence their members and gain their trust:

  1. Demonstrating integrity
  2. Being clear and consistent
  3. Generating positive energy
  4. Acknowledging common points of view
  5. Managing agreement and disagreement
  6. Encouraging and coaching
  7. Sharing information

8.4 The Business of Communication

Communication by Design

As the chief designer assigned to the "**thin-clam**" team at Motorola, Chris Arnholt was responsible for some of the phone's distinctive physical features, including its sleek aluminum finish and backlit keyboard. In fact, it was he who pushed the company's engineers and marketers to buck an industry trend toward phones that were getting fatter because of many add-ons such as cameras and stereo speakers. For Arnholt had a vision. He called it "rich minimalism," and his goal was to help the Motorola cell phone team realize a product that embodied that profile.

But what exactly did Arnholt mean by rich minimalism? "Sometimes," he admits, "my ideas are tough to communicate," but as a veteran in his field, he also understands that "design is really about communication" (Lashinsky, 2006; Anthony, 2011). His chief (and ongoing) task, then, was communicating to the cell phone team what he meant by rich minimalism. Ultimately, of course, he had to show them what rich minimalism looked like when it appeared in tangible form in a fashionable new cell phone. In the process, he also had to be sure that the cell phone included certain key benefits that prospective consumers would want. As always, the physical design of the finished product had to be right for its intended market.

We'll have much more to say about the process of developing new products in [Chapter 10: Product Design and Development](#). Here, however, let's simply highlight two points about the way successful companies approach the challenges of new-product design and development (which you will likely recognize from reading the first part of this chapter):

1. In contributing to the new-product design and development process, industrial designers like Chris Arnholt must effectively communicate both ideas and practical specifications.
2. The design and development process usually succeeds only when the assigned team integrates input from every relevant area of the organization (Urban & Hauser, 1993).

The common denominator in both facets of the process is effective communication. The designer, for example, must communicate not only his vision of the product but also certain specifications for turning it into something concrete. Chris Arnholt sculpted models out of cornstarch and then took them home at night to refashion them according to suggestions made by the product team. Then he'd put his newest ideas on paper and hand the drawings over to another member of his design team, who'd turn them into 3D computer graphics from which other specialists would build plastic models. Without effective communication at every step in this process, it isn't likely that a group of people with different skills would produce plastic models bearing a practical resemblance to Arnholt's original drawings. On top of everything else, Arnholt's responsibility as chief designer required him to communicate his ideas not only about the product's visual and physical features but also about the production processes and manufacturing requirements for building it (ISDA, 2008).

Thus Arnholt's job—which is to say, his responsibility on the cell phone team—meant that he had to do a lot more than merely design the product. Strictly speaking, the designer's function is to understand a product from the consumer's point of view; develop this understanding into a set of ideas and specifications that will satisfy not only consumer needs but producer requirements; and make recommendations through drawings, models, and verbal communications (IDSA, 2008). Even our condensed version of the RAZR story, however, indicates that Arnholt's job was far broader. Why? Because new-product design is an integrative process: contributions must come from all functions within an organization, including *operations* (which includes research and development, engineering and manufacturing), *marketing*, *management*, *finance*, and *accounting* (Urban & Hauser, 1993).

Our version of the RAZR story has emphasized **operations** (which includes research and development, engineering,

and manufacturing) and touched on the role of <mark>marketing</mark> (which collects data about consumer needs). Remember, though, that members from several areas of management were recruited for the team. Because the project required considerable investment of Motorola's capital, finance was certainly involved, and the decision to increase production in late 2004 was based on numbers crunched by the accounting department. At every step, Arnholt's drawings, specs, and recommendations reflected his collaboration with people from all these functional areas.

Figure 8.5. The explosion of text messaging has changed the way people use their cell phones and created new design needs for manufacturers like Motorola.

As we'll see next, what all this interactivity amounts to is *communication* (Urban & Hauser, 1993). As for what Arnholt meant by rich minimalism, you'll need to take a look at the picture of the RAZR at the beginning of the chapter. Among other things, it means a blue electroluminescent panel and a 22 kHz polyphonic speaker.

What Is Communication?

Let's start with a basic (and quite practical) definition of <mark>communication</mark> as the process of transferring information from a sender to a receiver. When you call up a classmate to inform him that your Introduction to Financial Accounting class has been canceled, you're sending information and your classmate is receiving it. When you go to your professor's website to find out the assignment for the next class, your professor is sending information and you're receiving it. When your boss e-mails you the data you need to complete a sales report and tells you to e-mail the report back to her

by 4 o'clock, your boss is sending information and, once again, you're receiving it; later in the day, the situation will be reversed.

Your Ticket In (or Out)

Obviously, you participate in dozens of "**informational transfers**" every day. In fact, they take up about 70 percent of your waking hours–80 percent if you have some sort of managerial position (Robbins & Judge, 2009; Whetten & Cameron, 2007). In any case, it wouldn't make much sense for us to pursue the topic much further without assuming that you've gained *some* experience and mastered *some* skills in the task of communicating. At the same time, though, we'll also venture to guess that you're much more comfortable having casual conversations with friends than writing class assignments or giving speeches in front of classmates. That's why we're going to resort to the same plain terms that we used when we discussed the likelihood of your needing teamwork skills in an organizational setting: The question is not whether you'll need communication skills (both written and verbal). You will. The question is whether you'll develop the skills to communicate effectively in a variety of organizational situations.

   Once again, the numbers back us up. In a recent survey by the Association of Colleges and Employers, the ability to communicate well topped the list of skills that business recruiters want in potential hires (National Association of Colleges and Employers, 2007). A College Board survey of 120 major U.S. companies concludes that writing is a "threshold skill" for both employment and promotion. "In most cases," volunteered one human resources director, "writing ability could be your ticket in–or your ticket out." Applicants and employees who can't write and communicate clearly, says the final report, "will not be hired and are unlikely to last long enough to be considered for promotion" (College Board, 2004).

Why Are Communication Skills Important?

They're important to you because they're important to prospective employers. And why do employers consider communication skills so important? Because they're good for business. Research shows that businesses benefit in several ways when they're able to foster effective communication among employees (Thill & Bovée, 2008; Carr, 2006):

- Decisions are more convincing and certain, and problem solving is faster.
- Warning signs of potential problems appear earlier.
- Workflow moves more smoothly and productivity increases.
- Business relationships are stronger.
- Marketing messages are more persuasive.
- The company's professional image is enhanced.
- Employee satisfaction goes up and turnover goes down.
- The firm and its investors enjoy better financial results.

What Skills Are Important?

Figure 8.6: Required Skills reveals some further findings of the College Board survey that we mentioned previously–namely, the percentage of companies that identified certain communication skills as being "frequently" or

"almost always" necessary in their workplaces. As you can see, ability in using e-mail is a nearly universal requirement (and in many cases this includes the ability to adapt messages to different receivers or compose persuasive messages when necessary). The ability to make presentations (with visuals) also ranks highly.
Figure 8.6: Required Skills

Key Takeaways

- Effective communication is needed in several facets of the new-product design and development process:

    1. Designers must effectively communicate both ideas and practical specifications.
    2. The process usually succeeds only when the assigned team integrates input from every relevant area of the organization.

- **Communication** is the process of transferring information from a sender to a receiver.

- Businesses benefit in several ways when they're able to foster effective communication among employees:

  1. Decisions are more assured and cogent, and problem solving is faster.
  2. Warning signs of potential problems appear earlier.
  3. Workflow moves more smoothly and productivity increases.
  4. Business relationships are stronger.
  5. Marketing messages are more persuasive.
  6. The company's professional image is enhanced.
  7. Employee satisfaction goes up and turnover goes down.
  8. The firm and its investors enjoy better financial results.

Exercise

Pick a company you're interested in working for when you graduate from college. For this company, identify the following:

1. A starting position you'd like to obtain on graduation
2. A higher-level position you'd like to be promoted to in five years.

For each of these positions, describe the skills needed to get the job and those needed to be successful in the position.

8.5 Communication Channels

What Is *Organizational* Communication?

Clearly, the task of preparing and submitting a finished sales report doesn't require the same kinds of communication skills as talking on the phone with a classmate. No matter what your "workstation" happens to be—whether your workplace office or your kitchen table—you're performing the task of preparing that sales report in an **organizational setting**. You're still a sender transferring information to a receiver, but the organizational context of the task requires you to consider different factors for success in communicating effectively (including barriers to success). A report, for example, must be targeted for someone in a specific position and must contain the information necessary to make a specific set of decisions (Netzley & Snow, 2002).

Communication Flows

Here's another way of thinking about communication in an organizational setting. Let's assume that you and the classmate you called on the phone are on roughly equal footing—you're both juniors, your grades in the class are about the same, and so forth. Your phone conversation, therefore, is "**lateral**": You belong to the same group (your accounting class), and your group activities take place on the same level.

Communication may also flow laterally in organizational settings (as it does between you and your classmate), but more often it flows up or down. Take a look at Figure 8.7: Formal Communication Flows. If it looks familiar, that's because we've borrowed it from [Chapter 6: Managing for Business Success](#), where it appeared as the *organization chart* for the fictional company Notes-4-You. As you can see, we've added a few lines to show the three directions in which communications can flow in a typical organization (Greenberg & Baron, 2008):

- As the term suggests, **downward communication** flows from higher organizational levels (supervisors) to lower organizational levels (subordinates).
- **Upward communication** flows from lower to higher organizational levels.
- **Lateral (or horizontal) communication** flows across the organization, among personnel on the same level.

Your boss's request for a sales report is an instance of downward communication, and when you've finished and submitted it, you will have completed a task of upward communication.
Figure 8.7: Formal Communication Flows

Advantages of Communication Flows

Naturally, each of these different directional flows has its functions and advantages. Downward communication, for example, is appropriate for giving instructions or directions–telling people what to do. (As a goal of communication, by the way, giving orders isn't as one-sided as it may seem. One of the things that employees–the receivers–most want to know is: What, exactly, does my job entail?) (Greenberg & Baron, 2002) Like a sales report, upward communication usually provides managers with information that they need for making decisions, but it's also the vehicle for new ideas, suggestions, and complaints. Horizontal communication supports efforts to coordinate tasks and otherwise help people work together.

Disadvantages of Communication Flows

And, of course, each type of flow has its disadvantages. As information seeps downward, for instance, it tends to lose some of its original clarity and often becomes distorted or downright wrong. (This is especially true when it's delivered orally.) In addition, unlike Donald Trump, most people who are responsible for using downward communication don't like delivering bad news (such as "You're fired" or, more commonly, "Your job is being phased out"); as a result, bad

news—including bad news that happens to be important news—is often ignored or disguised. The same thing may happen when bad news—say, a negative status report—must be sent upward.

Finally, while horizontal flows are valuable for promoting cooperation, they can also be used to engage in conflict—for instance, between two departments competing for the same organizational resources. The problem is especially bad when such horizontal communications breach official upward or downward lines of communication, thus bypassing managers who might be able to resolve the conflict.

Channels of Communication

Figure 8.8: Channels of Communication summarizes two additional sets of characteristics of organizational communication—*internal and external channels* and *formal and informal channels* (Thill & Bovée, 2008). **==Internal communication==** is shared by people at all levels within a company. **==External communication==** occurs between parties inside a company and parties outside the company, such as suppliers, customers, and investors. Both internal and external forms of communication include everything from formal e-mail and official reports to face-to-face conversations and casual phone calls. External communication also takes such forms as customer and supplier Web sites, news releases, and advertising.

Figure 8.8: Channels of Communication

	INTERNAL	EXTERNAL
FORMAL	**Planned communications following the company's chain of command among people inside the organization** – *e-mail, memos, conference calls, reports, presentations, executive blogs*	**Planned communications with people outside the organization** – *letters, instant messages, reports, speeches, news releases, advertising, Web sites executive blogs*
INFORMAL	**Casual communications among employees that do not follow the company's chain of command** – *e-mail, instant messages, phone calls, face-to-face conversations, team blogs*	**Casual communications with outsiders (e.g., suppliers, customers, investors)** – *e-mail, instant messages, phone calls, face-to-face conversations, customer-support blogs*

Note that Figure 8.8: Channels of Communication takes the form of a grid, thus creating four dimensions in which communication can take place. Informal communication, for example, can take place either among people within the company (internally) or between insiders and outsiders (externally). By and large, though you can use the same set of tools (memos, reports, phone calls) to communicate in any of these four situations, some tools (team blogs, news releases, supplier Web sites) are useful only in one or two.

The Formal Communication Network

An organization's **==formal communication network==** consists of all communications that flow along its official lines of authority. Look again at Figure 8.7. Because it incorporates the *organization chart* for Notes-4-You, it shows the company's lines of authority—what, in [Chapter 6: Managing for Business Success](#), we called its **==*reporting relationships*==**. Here we can see that the reporting relationships in question consist of *upward communication* from subordinates to superiors. In reporting to the operations manager, for example, the notetakers' supervisor communicates upward. Conversely, when the notetakers' manager needs to give direction to notetakers, she will use *downward communication.* If the notetakers' manager and the copiers' manager must get together to prepare a joint report for the operations manager, they'll engage in *lateral communication.* In short, an organization's formal communication network is basically the same thing as its network of reporting relationships and lines of authority (Greenberg & Baron, 2008).

The Informal Communication Network

Every company also has an **informal communication network (or grapevine)**, which goes to work whenever two or more employees get together and start talking about the company and their jobs. Informal communication can take place just about anywhere (in one person's cubicle, in the cafeteria, on the golf course) and by just about any means (phone, e-mail, instant messaging, face-to-face conversation).

Though it's sometimes called the *grapevine*, an informal network is an extremely important communication channel. Why? For the simple reason that it's typically widespread and can rarely be prevented, even if it's not officially sanctioned by the company—indeed, even when the company tries to discourage or bypass it. Unofficial information crosses virtually every boundary drawn by a firm's organization chart, reaching out and touching everyone in the organization, and what's more, it travels a lot faster than official information.

Problems with the Flow of Information through Informal Channels

The downside of "**unofficial**" information should be obvious. Because much of it is communicated orally, it's likely to get distorted and often degenerates into outright misinformation. Say, for example, that a rumor about layoffs gets started in your workplace. As more than one manager will verify, such rumors can do more damage than the reality. Morale may plummet and productivity won't be far behind. Valuable employees may abandon ship (needlessly, if the rumors are false) (Watson, 2003).

And imagine what can happen if informal information gets outside the organization. In the 1970s, Chicago-area McDonald's outlets found themselves fighting rumors about worms in their hamburgers. Over the years, Coca-Cola has had to fight rumors about terrorists joining its organization, subversive messages concealed in its label, and hyperacidity (false rumors that Coke causes osteoporosis and makes a good pesticide and an equally good spermicide) (Kimmel, 2004; Greenberg & Baron, 2008).

What to Do about Informal Information Flows

On the upside, savvy managers can tap into the informal network, either to find out what sort of information is influencing employee activities or to circulate more meaningful information, including new ideas as well as corrective information. In any case, managers have to deal with the grapevine, and one manager has compiled a list of suggestions for doing so effectively (McConnell, 2008):

- *Learn to live with it*. It's here to stay.
- *Tune into it*. Pay attention to the information that's circulating and try to learn something from it. Remember: The more you know about grapevine information, the better you can interact with employees (who, in turn, will probably come to regard you as someone who keeps in touch with the things that concern them).
- *Don't participate in rumors*. Resist the temptation to add your two cents' worth, and don't make matters worse.
- *Check out what you hear*. Because it's your job to replace bad information with good information, you need to find out what's really going on.
- *Take advantage of the grapevine*. Its only function is to carry information, so there's no reason why you can't pump some useful information through it.

Perhaps most importantly, when alert managers notice that the grapevine is particularly active, they tend to reach a sensible twofold conclusion:

1. The organization's formal lines of communication aren't working as well as they should be.
2. The best way to minimize informal communication and its potential damage is to provide better formal communication from the outset—or, failing that, to provide whatever formal communication will counteract misinformation as thoroughly as possible.

Let's go back to our example of a workplace overwhelmed by layoff rumors. In a practical sense, what can a manager—say, the leader of a long-term product-development team—do to provide better communication? One manager suggests at least three specific responses (Watson, 2003):

1. Go to your supervisor or another senior manager and try to find out as much as you can about the organization's real plans.
2. Ask a senior manager or a human resources representative to meet with your team and address members' concerns with accurate feedback.
3. Make it a priority to keep channels open—both between yourself and your team members and between team members and the human resources department.

Because actions of this sort send a message, they can legitimately be characterized as a form of formal communication. They also reflect good leadership: Even though the information in this case relates only indirectly to immediate team tasks, you're sharing information with people who need it, and you're demonstrating integrity (you're being honest, and you're following through on a commitment to the team).

Overcoming Barriers to Communication

What Are Barriers to Communication?

By **barriers** we mean anything that prevents people from communicating as effectively as possible. Noise, for example, can be a barrier to communication; if you and other team members are mumbling among yourselves while your team leader is trying to explain task assignments, you're putting up a barrier to group communication. As a matter of fact, you're putting up two barriers: In addition to **creating noise**, you're **failing to listen**. About 80 percent of top executives say that learning to listen is the most important skill in getting things done in the workplace (Thill & Bovée, 2008; Brownell, 2002), and as President Calvin Coolidge once remarked, "No man ever listened himself out of a job." Business people who don't listen risk offending others or misinterpreting what they're saying.

Two Types of Barriers

Figure 8.9. Though developed to improve communication, in some cases cell phones can create a barrier.

As for creating unnecessary verbal noise and failing to listen, we can probably chalk them up to poor communication habits (or maybe the *same* habit, for as legendary management expert Peter Drucker argues, "Listening is not a skill; it is a discipline. All you have to do is keep your mouth shut"). In the rest of this section, we'll overlook personal barriers to communication and concentrate instead on two types of barriers that are encountered by groups of people, sometimes large and sometimes small, working toward organizational goals.

Cultural Barriers

==Cultural barriers==, which are sometimes called cultural filters, are the barriers that result from differences among people of different cultures (Kramer, 2001). As we point out in [Chapter 7: Recruiting, Motivating, and Keeping Quality Employees](), experts and managers agree that cultural diversity in the workplace can and should be a significant asset: It broadens the perspectives from which groups approach problems, gives them fresh ideas, and sparks their creativity; it also gives organizations an advantage in connecting with diverse customer bases. None of these advantages, though, magically appears simply because workplace diversity increases. To the contrary: As diversity increases, so does the possibility that a group will be composed of people who have different attitudes and different ways of expressing them.

If it hasn't happened already, for example, one of these days you'll find yourself having a work-related conversation with a member of the opposite sex. If the conversation doesn't go as smoothly as you'd expected, there's a good reason: Men and women in the workplace don't communicate the same way. According to American linguist Deborah Tannen, men tend to assert their status, to exert confidence, and to regard asking questions as a sign of weakness. Women, in contrast, tend to foster positive interrelationships, to restrain expressions of confidence, and to ask questions with no trouble (Greenberg & Baron, 2008; Tannen, 1995).

It really doesn't matter which "style" (if either) is better suited to making a conversation more productive. Two points, however, are clear:

1. Even if two people of the opposite sex enter a conversation with virtually identical viewpoints, their different styles of expressing themselves might very well present a barrier to their reaching an agreement. Much the same can be said of differences in style arising from other cultural filters, such as ethnicity, education, age, and experience.
2. Workplace conversations can be tricky to negotiate, yet there's no escaping them. Like life in the outside world, observes Tannen, life in the workplace "is a matter of dealing with people…and that means a series of conversations." That's also why surveys continue to show that managers regard the ability to communicate face to face as a key factor in an employee's promotability (Whetten & Cameron, 2007).

Functional Barriers

Let's return for a moment to Figure 8.7: Formal Communication Flows. Recall that when we introduced the organizational structure of Notes-4-You in <mark>Chapter 6: Managing for Business Success</mark>, we characterized it as a ***functional organization***—one that groups together people who have comparable skills and perform similar tasks. Note, however, that in setting up this form of organization for our hypothetical company, we found it necessary to insert two layers of management (four functional managers and two job supervisors) between our owner/president and our lowest-level employees. In this respect, our structure shares certain characteristics with another form of organization—*divisional*, which groups people into units that are more or less self-contained and that are largely accountable for their own performance.

What does all this have to do with barriers to communication? Simply this: The more "divisionalized" an organization becomes, the more likely it will be to encounter communication barriers. Not surprisingly, communication gets more complicated, for the same reason that an organization comes to rely on more levels of management (George & Jones, 2008). Notes-4-You, for instance, needs two supervisors because its notetakers don't do the same work as its copiers. In addition, because their groups don't perform the same work, the two supervisors don't call on the same resources from the company's four functional managers. (Likewise, Notes-4-You also has four functional-area managers because none of them does the same work as any of the others.)

Officially, then, the operations of the two work groups remain distinct or specialized. At the same time, each group must contribute to the company-wide effort to achieve common goals. Moreover, certain organizational projects, like Motorola's cell phone project, may require the two groups to work together more closely than usual. When that happens, employees from each of the two groups may find themselves working together on the same team, but even so, one crucial fact remains: Information that one group possesses and the other doesn't must still be exchanged among team members. It may not be quite as apparent as the *cultural diversity* among men and women in many workplace situations, but there is in fact a *functional diversity* at Notes-4-You among notetakers and copiers (Tsui & Gutek, 1999).

Figure 8.10: Functional Barriers to Communication illustrates the location of barriers that may be present when a team-based project must deal with a certain degree of functional diversity. As you can see, we've modeled our process on the process of the Motorola ultratrim phone project (Russell & Taylor, 2005). We don't need to describe the entire process in detail, but we will focus on two aspects of it that we've highlighted in the drawing:

1. The company has assigned team members from different functional areas, notably marketing and operations (which, as at Motorola, includes design, engineering, and production).
2. Information (which we've characterized as different types of "specs") must be transferred from function to function, and at the key points where this occurs, we've built in communication barriers (symbolized by brick walls).

If, for example, marketing specs called for the new Motorola phone to change colors with the user's mood, someone

in engineering might have to explain the difficulties in designing the software. If design specs called for quadraphonic sound, production might have to explain the difficulties in procuring sufficiently lightweight speaker components.
Figure 8.10: Functional Barriers to Communication

Each technical problem—each problem that arises because of differences in team members' knowledge and expertise—becomes a problem in communication. In addition, communicating as a member of a team obviously requires much more than explaining the limitations of someone else's professional expertise. Once they've surfaced, technical and other problems have to be resolved—a process that will inevitably require even more communication. As we've seen in this part of the chapter, improving communication is a top priority for most organizations (for one thing, developing a team-based environment is otherwise impossible), and the ongoing task of improving communication is pretty much the same thing as the ongoing task of overcoming barriers to it.

Key Takeaways

- In a typical organizational setting, *communication flows* may take three directions:

    1. **Downward communication** flows from higher organizational levels (supervisors) to lower organizational levels (subordinates).
    2. **Upward communication** flows from lower to higher organizational levels.
    3. **Lateral** (or **horizontal**) **communication** flows across the organization, among personnel on the same level.

- Organizational communication flows through two different *channels*. **Internal communication** is shared by people at all levels within a company. **External communication** occurs between parties inside a company and parties outside the company, such as suppliers, customers, and investors.
- Organizational communication also flows through two different *networks*. Its **formal communication network** consists of all communications that flow along an organization's official lines of authority. The **informal communication network**, sometimes called the *grapevine*, goes to work whenever two or more employees get together and start talking about the company and their jobs.
- *Barriers to communication* include anything that prevents people from communicating as effectively as possible. Among groups, two types of barriers are common. *Cultural barriers*, sometimes called *cultural filters*, are the barriers that result from differences among people of different cultures. *Functional barriers* arise when communication must flow among individuals or groups who work in different functional areas of an organization.

Exercise

Write three messages (you decide which communication channel to use):

1. To a coworker asking her for a report on this quarter's sales for your division
2. To your manager telling him what the sales were for the quarter and whether sales improved (or got worse), and why
3. To the vice president of the company recommending a new system for tracking sales in your division

8.6 Forms of Communication

As mentioned previously, the College Board identified these communication skills as "frequently" or "almost always" necessary in the workplace (College Board, 2004): e-mail, presentation with visuals, technical reports, formal reports, memos, and presentations without visuals. The skill ranked highest in importance was the use of e-mails, including the ability to adapt messages to different receivers or compose persuasive messages when necessary. The ability to make presentations (with visuals) ranked second in importance. Report writing came next. Given the complexity of report writing, we will not cover this topic here. Instead, we will look at the remaining three forms of communication: e-mail, presentations with visuals, and memos.

Tips for Writing Business E-Mails

Dennis Jerz and Jessica Bauer created the following list of the top 10 tips for writing effective e-mail messages (Jerz & Bauer, 2011):

1. *Write a **meaningful** subject line.* Recipients use the subject line to decide whether to open or delete a message and sometimes where to store it. Write a subject line that describes the content.
2. *Keep the message **focused**.* Avoid including multiple messages or requests in one e-mail. Try to focus on only one topic. Use standard capitalization and spelling; none of this "thx 4 ur help 2day ur gr8."
3. *Avoid attachments.* Extract the relevant text from a large file and ask the recipient if he or she wants to see the full document.
4. *Identify yourself clearly. Identify yourself in the first few lines*—otherwise your message might be deleted quickly.
5. *Be kind. Don't flame.* Avoid writing e-mails when you are upset. Always think before you hit the "send" button. Once it's gone, you can't get it back. If you're mad, write the e-mail, but don't send it. Keep it in your "save" or "draft" folder and reread it the next day.
6. ***Proofread.*** Use spell check and read the memo carefully before sending it.
7. *Don't assume **privacy.*** Don't send anything you wouldn't want posted on the office bulletin board (with your name on it). Remember, employers can read your e-mails!
8. *Distinguish between **formal and informal situations**.* When writing to a coworker with whom you are friends, you can be less formal than when you are writing to your manager or a client.
9. ***Respond promptly***. Get back quickly to the person who sent you the e-mail. If you're too busy to answer, let the person know you got the message and will respond as soon as you can.
10. *Show respect and restraint.* Watch out: Don't use the "reply to all" button in error. Don't forward an e-mail before getting permission from the sender.

Planning, Preparing, Practicing, and Presenting

For some, the thought of making a presentation is traumatic. If you're one of those people, the best way to get over your fear is to get up and make a presentation. With time, it will get easier, and you might even start enjoying it. As you progress through college, you will have a number of opportunities to make presentations. This is good news—it gives you practice, lets you make your mistakes in a protected environment (before you hit the business world), and

allows you to get fairly good at it. Your opportunities to talk in front of a group will multiply once you enter the business world. Throughout your business career, you'll likely be called on to present reports, address groups at all levels in the organization, represent your company at various events, run committee meetings, lead teams, or make a sales pitch (Barada, 2011). In preparing and delivering your presentation, you can follow a four-step process (plan, prepare, practice, and present) designed by Dale Carnegie, a global training company named after its famed founder (Carnegie, 2011).

Plan

Plan your presentation based on your purpose and the knowledge level and interest of your audience. Use words and concepts your audience can understand, and stay focused. If your audience is knowledgeable about your topic, you can skim over the generalities and delve into the details. On the other hand, if the topic is new to them, you need to move through it slowly. As you plan your presentation, ask yourself these questions: What am I trying to accomplish? Am I trying to educate, inform, motivate, or persuade my audience? What does my audience know about the topic? What do I want them to know? How can I best convey this information to them?

Prepare

Once you have planned your presentation, you're ready to prepare. It might be easier to write your presentation if you divide it into three sections: opening, body, close. Your opening should grab your audience's attention. You can do this by asking a question, telling a relevant story, or even announcing a surprising piece of information. About 5 to 10 percent of your time can be spent on the opening. The body covers the bulk of the material and consumes about 80 to 85 percent of your time. Cover your key points, stay focused, but do not overload your audience. It has been found that an audience can absorb only about four to six points. Your close, which uses about 5 to 10 percent of your time, should leave the audience with a positive impression of you and your presentation. You have lots of choices for your close: You can either summarize your message or relate your closing remarks to your opening remarks or do both.

Practice

This section should really be called "Practice, Practice, Practice" (and maybe another Practice for emphasis). The saying "practice makes perfect" is definitely true with presentations, especially for beginners. You might want to start off practicing your presentation by yourself, perhaps in front of a mirror. You could even videotape yourself and play it back (that should be fun). As you get the hang of it, ask a friend or a group of friends to listen to and critique your talk. When you rehearse, check your time to see whether it's what you want. Avoid memorizing your talk, but know it well.

Present

Figure 8.11. Preparation is key to a successful presentation.

Now you're ready for the big day—it's time to present. Dress for the part—if it's a professional talk, dress like a professional. Go early to the location where you'll present, check out the room, and be sure any equipment you'll need is there and works. Try to connect with your audience as soon as you start your presentation. Take your time delivering your opening. Act as natural as you can, and try to relax. Slow your speech down, as you'll likely have a tendency to speed up if you get nervous. Pause before and after your main point for emphasis. If you put brief notes on index cards, avoid reading from the cards. Glance down at them when needed, but then look up at your audience as you speak. Involve your audience in your presentation by asking them questions. Not only will they feel included, but it will help you relax. When you're close to finishing, let your audience know this (but don't announce it too early in the talk or your audience might start packing up prematurely). Remember to leave some time for questions and answers.

Visual Aids

It's very common to use **visual aids** (generally PowerPoint slides) in business presentations. The use of visual aids helps your audience remember your main points and keeps you focused. If you do use PowerPoint slides, follow some simple (but important) rules (Iasted, 2011):

- Avoid **wordiness**: use key words and phrases only.
- Don't crowd your slide: include at most four to five points per slide.
- Use at least an eighteen-point font (so that it can be seen from the back of the room).
- Use a color font that contrasts with the background (for example, blue font on white background).
- Use graphs rather than just words.
- Proof your slides and use spell check.

And most important: The PowerPoint slides are background, but you are the show. Avoid turning around and reading the slides. The audience wants to see *you* talk; they are not interested in seeing the back of your head.

How to Write an Effective Memo

Memos are effective at conveying fairly detailed information. To help you understand how to write a memo, read the following sample memorandum.

Memorandum

TO

FROM

DATE

RE

_____

    As college students, you'll be expected to analyze real-world situations, research issues, form opinions, and provide support for the conclusions that you reach. In addition to engaging in classroom discussions of business issues, you'll be asked to complete a number of written assignments. For these assignments, we'll give you a business situation and ask you to analyze the issues, form conclusions, and provide support for your opinions.

    In each assignment, you'll use the *memo format*, which is the typical form of written communication used in business. Writing in memo format means providing a *complete but concise response* to the issues at hand. Good memo writing demands time and effort. Because the business world expects you to possess this skill, we want to give you an opportunity to learn it now.

Guidelines

Here are a few helpful hints to get you started on the right track:

- **The format should follow the format of this memo**. Note the **guide headings**—"TO," "FROM," "DATE," and "RE" (which, by the way, stands for "regarding" or "reference"). We also include a line across the page to signal the beginning of the body of the memo.
- Keep **paragraphs** short and to the point. The trick is being concise yet complete—summarizing effectively. Paragraphs should be single-spaced, flush against the left margin, and separated by a single blank line.
- Accent or highlight **major points**. Use underlining, bullets, or bold type for desired effect (taking care not to overdo it).
- Use *short* **headings** to distinguish and highlight vital information. Headings keep things organized, provide structure, and make for smooth reading. Headings (and, as appropriate, subheadings) are an absolute *must*.
- Your **title** (the "Re" line) should reflect the contents of your memo: It should let the reader know why he or she should read it. Keep the title short—a phrase of a few words, not a sentence.
- Be persuasive and convincing in your narrative. You have limited space in which to get your **key points** across. State your positions clearly. And again, be concise (a memo is not a term paper).

- If you have any additional information in the form of **exhibits**–charts, tables, illustrations, and so forth–put them in an **attachment**. Label each item "Exhibit 1," "Exhibit 2," and the like. Give each one a title, and be sure to reference them in your narrative ("As shown in Exhibit 1, the annual growth rate in sales has dropped from double-digit to single-digit levels").
- Finally, *staple* multiple pages for submission. Needless to say, be sure to proofread for correct spelling and punctuation. Don't scribble in changes by hand: They're sloppy and leave a bad impression.

Final Comment

Now that you've read our memo, we expect you to follow the simple guidelines presented in it. This form of communication is widely practiced in business, so take advantage of this opportunity to practice your memo-writing skills.

Nonverbal Communication

Sometimes it's not what you say or how you say it that matters, but what your body language communicates about you and how you feel. When a good friend who's in a bad mood walks into a room, you don't need to hear a word from her to know she's having an awful day. You can read her expression. In doing this, you're picking up on her <mark>nonverbal communication</mark>–"nonword" messages communicated through facial expressions, posture, gestures, and tone of voice. People give off nonverbal cues all the time. So what effect do these cues have in the business setting? Quite a bit–these cues are often better at telling you what's on a person's mind than what the person actually says. If an employee is meeting with his supervisor and frowns when she makes a statement, the supervisor will conclude that he disapproved of the statement (regardless of what he claims). If two employees are discussing a work-related problem and one starts to fidget, the other will pick this up as disinterest.

Given the possible negative effect that nonverbal cues can have in business situations, how can you improve your body language? The best approach is to become aware of any <mark>nonverbal cues</mark> you give out, and then work to eliminate them. For example, if you have a habit of frowning when you disapprove of something, recognize this and stop doing it. If the tone of your voice changes when you are angry, try to maintain your voice at a lower pitch.

Key Takeaways

- Here are ten tips for writing an e-mail:

    1. Write a meaningful subject line.
    2. Keep the message focused and readable.
    3. Avoid attachments.
    4. Identify yourself clearly in the first few lines.
    5. Be kind. Don't flame. Always think before hitting the "send" button.
    6. Proofread.
    7. Don't assume privacy.

8. Distinguish between formal and informal situations.
9. Respond promptly.
10. Show respect and restraint.

- In preparing and delivering your presentation, you can follow a four-step process: plan, prepare, practice and present.
- You should **plan** your presentation based on your purpose and the knowledge level and interest of your audience.

- In **preparing** your presentation, it helps to divide it into three sections: opening, body and close.

  1. Your **opening**, which uses about 5–10 percent of your time, should grab your audience's attention.
  2. The **body** covers your main points and uses about 80 to 85 percent of your time.
  3. Your **close**, which uses about 5 to 10 percent of your time, should leave the audience with a positive impression of you and your presentation.

- The saying "**practice** makes perfect" is definitely true when giving presentations (especially for beginners).

- When you **present**, dress professionally, connect with your audience, try to relax and pause before and after your main points for emphasis.

  ◦ Visual aids, such as PowerPoint slides, can aid your presentation if they are used properly.

- Memos are effective at conveying fairly detailed information. Here are some tips:

  1. Keep paragraphs short and to the point.
  2. Accent or highlight **major points**.
  3. Use **short** headings.
  4. Your **title** should reflect the contents of your memo.
  5. Be persuasive and convincing in your narrative.

Exercise

1. Ask a friend or a family member to tell you which nonverbal cues you frequently transmit. Identify those that would be detrimental to you in a business situation. Indicate how you could eliminate or reduce the impact of these cues. Ask the same person (or someone else) whether you are a good listener. If the answer is no, indicate how you could improve your listening skills.
2. Prepare a presentation on "planning, preparing, practicing, and presenting." Divide your presentation into three parts: opening, body, and closing. Prepare visual aids. Pretend that your audience is made up of recent college graduates hired by Nike.

8.7 Cases and Problems

Factors Contributing to Nike's Success

This writing assignment solicits your opinion on factors contributing to Nike's success. To complete it, you can go to Nike's About page (https://about.nike.com/) or review other resources online.

Memo Format

Use the memo format described in the chapter for this assignment. Your memo should not exceed two pages. It should be single spaced (with an extra space between paragraphs and bulleted items).

Scenario

You're one of the fortunate college students selected to participate in Nike's summer internship program. The program is quite competitive, and you still can't believe that you were chosen. You arrived in Beaverton, Oregon, yesterday morning and have been busy ever since. Last night, you attended a dinner for new interns where you were welcomed to Nike by CEO Mark Parker.

You were lucky to be sitting next to a personable, well-informed Nike veteran named Simon Pestridge. Pestridge joined Nike about twelve years ago. He was telling you about a past assignment he had as director of marketing for Australia. (You were impressed with his status at Nike, not just because he doesn't look much older than you, but also because you've always wanted to travel to Australia.) The dinner conversation turned to a discussion of the reasons for Nike's success. Others at the table were giving their opinions on the subject when Pestridge turned to you and said, "As a new intern, give us an outsider's point of view. Why do you think Nike's been so successful?" You were about to venture an opinion when Pestridge was called away for a phone call. As he got up, however, he quickly said, "Send me a memo telling me what factors you think have contributed to Nike's success. Keep it simple. Three factors are plenty." Though you were relieved to have a little time to think about your answer, you were also a bit nervous about the prospect of writing your first official memo.

As everyone else headed for the Bo Jackson gym, you went back to your room to think about Pestridge's question and to figure out how to go about writing your memo. You want to be sure to start by telling him that you enjoyed talking with him. You also need to remind him that you're responding to his question about three factors in Nike's success, and must be sure to explain why you believe they're important. You'll end by saying that you hope the information is helpful and that he can contact you if he has any further questions.

So far, so good, but you're still faced with the toughest part of your task—identifying the three factors that

you deem important to Nike's success. Fortunately, even at Nike there's always tomorrow to get something done, so you decide to sleep on it and write your memo in the morning.

Ethics Angle (AACSB)

The Goof-Off

You and three other students have been working on a group project all semester in your Introduction to Business class. One of the members of the team did very little work; he failed to attend almost all the meetings, took no responsibility for any of the tasks, didn't attend the practice session before your presentation, and in general was a real goof-off. But he happens to be friends with two of the team members. You and your other team members have been asked to complete the attached team member evaluation. You want to give the student what he deserves—almost no credit. But your other two team members don't agree. They argue that it is "unsocial and mean" to tell the truth about this student's lack of contribution. Instead, they want to report that everyone shared the work equally. The evaluation will be used in determining grades for each team member. Those who contributed more will get a higher grade than those who did not. Prepare an argument that you can advance to the other team members on the ethics of covering for this student. Assuming that your two teammates won't change their minds, what would you do?

Team Member Evaluation

(To be given to your faculty member during the last week of class)

TEAM _____

You have a total of $100,000. You can use this to reward your team members (including yourself) for their contributions to the team project.

Fill in each team member's name below (including your own), and show beside each name how much of the $100,000 you would give that member for his or her contributions to the preparation and presentation of the team project. Do not share your recommendations with your team members.

Your recommendations will be confidential.

Team Members (including yourself)	Amount to be given for efforts on team project
_____	$_____
_____	$_____
_____	$_____
_____	$_____
_____	$_____
_____	$_____
TOTAL (MUST EQUAL $100,000)	$_____

YOUR NAME _____

Team-Building Skills (AACSB)

Team Skills and Talents

Team projects involve a number of tasks that are handled by individual team members. These tasks should be assigned to team members based on their particular skills and talents. The next time you work on a team project, you should use the following table to help your team organize its tasks and hold its members responsible for their completion.

Here is how you should use this document:

1. Identify all tasks to be completed.
2. Assign each task to a member (or members) of your team based on their skills, talents, and time available.
3. Determine a due date for each task.
4. As a task is completed, indicate its completion date and the team member (or members) who completed the task. If more than one team member works on the assignment, indicate the percentage of time each devoted to the task. You can add tasks that surface as your team works its way through the project.
5. If the assigned person fails to complete the task, or submits poor quality work, add a note to the report explaining what happened and how the situation was corrected (for example, another team member had to redo the task).
6. Submit the completed form (with all columns completed) to your faculty member at the class after your team project is due. Include a cover sheet with your team's name (or number) and the name of each team member.

Tasks to Be Completed	Initials of Team Member(s) Who Will Complete Task	Date to Be Completed	Date Completed	Initials of Team Member(s) Who Completed Task (Add a Note Below the Table Explaining Any Problems with Completion or Quality of Work)
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____

The Global View (AACSB)

A Multicultural Virtual Team

You work for Nike, a global company. You just learned that you were assigned to a virtual team whose mission is to assess the feasibility of Nike's making an inexpensive shoe that can be sold in Brazil. The team consists of twelve members. Three of the members work in the United States (two in Beaverton, Oregon, and one in New York City). Two work in England, two in China, two in India, and three in Brazil. All are Nike employees and all were born in the country in which they work. All speak English, though some speak it better than others. What challenges do you anticipate the team will face because of its multicultural makeup?. How could these challenges be overcome?

MARKETING: PROVIDING VALUE TO CUSTOMERS

Learning Objectives

1. Define the terms marketing, marketing concept, and marketing strategy.
2. Outline the tasks involved in selecting a target market.
3. Identify the four Ps of the marketing mix.
4. Explain how to conduct marketing research.
5. Discuss various branding strategies and explain the benefits of packaging and labeling.
6. Identify pricing strategies that are appropriate for new and existing products.
7. Explore various product-distribution strategies.
8. Explain how companies create value through effective supply chain management.
9. Describe the elements of the promotion mix.
10. Explain how companies manage customer relationships.
11. Describe social media marketing and identify its advantages and disadvantages.
12. Explain how a product moves through its life cycle and how this brings about shifts in marketing-mix strategies.
13. Describe the external marketing environment in which businesses operate.
14. Discuss the factors that influence consumer behavior.
15. Describe opportunities in the field of marketing.

9.1 A Robot with Attitude

Mark Tilden used to build robots for NASA that were trashed on Mars, but after seven years of watching the results of his work meet violent ends thirty-six million miles from home, he decided to specialize in robots for earthlings. He left the space world for the toy world and teamed up with Wow Wee Toys Ltd. to create "Robosapien," an intelligent robot with an attitude (Wow Wee Toys, 2006). The fourteen-inch-tall robot, which is operated by remote control, has great moves: In addition to the required maneuvers (walking forward and backward and turning), he dances, raps, and gives karate chops. He can pick up (fairly small) stuff and even fling it across the room, and he does everything while grunting, belching, and emitting other bodily sounds.

Robosapien gave Wow Wee Toys a good headstart in the toy robot market: in the first five months, more than 1.5 million Robosapiens were sold (Taylor, 2011). The company expanded the line to more than a dozen robotics and other interactive toys, including Roborover (an adventurous robot explorer), FlyTech Dragon Fly (a futuristic bug named as one of the inventions of the year by *Time* Magazine in 2007), FlyTech Bladestor (a revolutionary indoor flying machine that won an Editor's Choice Award in 2008 by *Popular Mechanics* magazine) (Wow Wee, 2011).

What does Robosapien have to do with marketing? The answer is fairly simple: Though Mark Tilden is an accomplished inventor who has created a clever product, Robosapien wouldn't be going anywhere without the marketing expertise of Wow Wee (certainly not forward). In this chapter, we'll look at the ways in which marketing converts product ideas like Robosapien into commercial successes.

Figure 9.1. Robosapien is a robot with attitude.

9.2 What Is Marketing?

When you consider the functional areas of business—accounting, finance, management, marketing, and operations—marketing is the one you probably know the most about. After all, as a consumer and target of all sorts of advertising messages, you've been on the receiving end of marketing initiatives for most of your life. What you probably don't appreciate, however, is the extent to which marketing focuses on providing value to the customer. According to the American Marketing Association, "**Marketing** is the activity, set of institutions, and processes for creating, communicating, delivering, and exchanging offerings that have value for customers, clients, partners, and society at large" (American Marketing Association, 2011).

In other words, marketing isn't just advertising and selling. It includes everything that organizations do to satisfy customer needs:

- Coming up with a product and defining its features and benefits
- Setting its price
- Identifying its target market
- Making potential customers aware of it
- Getting people to buy it
- Delivering it to people who buy it
- Managing relationships with customers after it has been delivered

Not surprisingly, marketing is a team effort involving everyone in the organization. Think about a typical business—a local movie theater, for example. It's easy to see how the person who decides what movies to show is involved in marketing: he or she selects the product to be sold. It's even easier to see how the person who puts ads in the newspaper works in marketing: he or she is in charge of advertising—making people aware of the product and getting them to buy it. But what about the ticket seller and the person behind the counter who gets the popcorn and soda? What about the projectionist? Are they marketing the business? Absolutely: the purpose of every job in the theater is satisfying customer needs, and as we've seen, identifying and satisfying customer needs is what marketing is all about.

If everyone is responsible for marketing, can the average organization do without an official marketing department? Not necessarily: most organizations have marketing departments in which individuals are actively involved in some marketing-related activity—product design and development, pricing, promotion, sales, and distribution. As specialists in identifying and satisfying customer needs, members of the marketing department manage—plan, organize, direct, and control—the organization's overall marketing efforts.

The Marketing Concept

Figure 9.2: The Marketing Concept is designed to remind you that to achieve business success you need to do three things:

1. Find out what customers or potential customers need.
2. Develop products to meet those needs.
3. Engage the entire organization in efforts to satisfy customers.

Figure 9.2: The Marketing Concept

At the same time, you need to achieve organizational goals, such as profitability and growth. This basic philosophy—satisfying customer needs while meeting organizational goals—is called the <mark>marketing concept</mark>, and when it's effectively applied, it guides all of an organization's marketing activities.

The marketing concept puts the customer first: as your most important goal, satisfying the customer must be the goal of everyone in the organization. But this doesn't mean that you ignore the bottom line; if you want to survive and grow, you need to make some profit. What you're looking for is the proper balance between the commitments to customer satisfaction and company survival. Consider the case of Medtronic, a manufacturer of medical devices, such as pacemakers and defibrillators. The company boasts more than 50 percent of the market in cardiac devices and is considered the industry standard setter (Medtronics, 2011). Everyone in the organization understands that defects are intolerable in products that are designed to keep people alive. Thus, committing employees to the goal of zero defects is vital to both Medtronic's customer base and its bottom line. "A single quality issue," explains CEO Arthur D. Collins Jr., "can deep-six a business" (Arndt, 2004).

Marketing Strategy

Declaring that you intend to develop products that satisfy customers and that everyone in your organization will focus on customers is easy. The challenge is doing it. As you can see in Figure 9.3: Marketing Strategy, to put the marketing concept into practice, you need a <mark>marketing strategy</mark>—a plan for performing two tasks:

1. Selecting a target market
2. Developing your <mark>*marketing mix*</mark>—implementing strategies for creating, pricing, promoting, and distributing products that satisfy customers

We'll use Figure 9.3: Marketing Strategy as a blueprint for our discussion of target-market selection, and we'll analyze the concept of the marketing mix in more detail in the next section.

Figure 9.3: Marketing Strategy

Selecting a Target Market

As we saw earlier, businesses earn profits by selling goods or providing services. It would be nice if everybody in the marketplace was interested in your product, but if you tried to sell it to everybody, you'd spread your resources too thin. You need to identify a specific group of consumers who should be particularly interested in your product, who would have access to it, and who have the means to buy it. This group is your **target market**, and you'll aim your marketing efforts at its members.

Identifying Your Market

How do marketers identify target markets? First, they usually identify the overall market for their product—the individuals or organizations that need a product and are able to buy it. As Figure 9.3 shows, this market can include either or both of two groups:

1. A ==consumer market==—buyers who want the product for personal use
2. An ==industrial market==—buyers who want the product for use in making other products

You might focus on only one market or both. A farmer, for example, might sell blueberries to individuals on the consumer market and, on the industrial market, to bakeries that will use them to make muffins and pies.

Segmenting the Market

The next step in identifying a target market is to divide the entire market into smaller portions, or ==market segments==—groups of potential customers with common characteristics that influence their buying decisions. You can use a number of characteristics to narrow a market. Let's look at some of the most useful categories in detail.

Demographic Segmentation

Figure 9.4. Maybelline and Cover Girl use segmentation strategies to target their predominant consumers: women.

==Demographic segmentation== divides the market into groups based on such variables as age, marital status, gender, ethnic background, income, occupation, and education. Age, for example, will be of interest to marketers who develop

products for children, retailers who cater to teenagers, colleges that recruit students, and assisted-living facilities that promote services among the elderly. The wedding industry, which markets goods and services to singles who will probably get married in the near future, is interested in trends in marital status. Gender and ethnic background are important to TV networks in targeting different audiences. Lifetime Television for Women targets female viewers; Spike TV targets men; Telemundo networks target Hispanic viewers. If you're selling yachts, you'll want to find people with lots of money; so income is an important variable. If you're the publisher of *Nurses* magazine, you want to reach people in the nursing profession. When Hyundai offers recent (and upcoming) college graduates the opportunity to buy a new car with no money down, the company's marketers have segmented the market according to education level (Hyundai Motor America, 2011).

Geographic Segmentation

Geographic segmentation—dividing a market according to such variables as climate, region, and population density (urban, suburban, small-town, or rural)—is also quite common. Climate is crucial for many products: try selling snow shovels in Hawaii or above-ground pools in Alaska. Consumer tastes also vary by region. That's why McDonald's caters to regional preferences, offering a breakfast of Spam and rice in Hawaii, tacos in Arizona, and lobster rolls in Massachusetts (Pacific Business News, 2002). Outside the United States, menus diverge even more widely (you can get seaweed burgers or, if you prefer, seasoned seaweed fries in Japan) (Halfbakery, 2011; Weird Asia News, 2011).

Likewise, differences between urban and suburban life can influence product selection. As exhilarating as urban life can be, for example, it's a hassle to parallel park on crowded city streets. Thus, Toyota engineers have developed a product especially for city dwellers (at least in Japan). The Japanese version of the Prius, Toyota's hybrid gas-electric car, can automatically parallel park itself. Using computer software and a rear-mounted camera, the parking system measures the spot, turns the steering wheel, and swings the car into the space (making the driver—who just sits there—look like a master of urban survival skills) (Time, 2003). After its success in the Japanese market, the self-parking feature was brought to the United States. So if you ever see a car doing a great job parallel parking without the driver touching the wheel, it is likely a self-parking Prius (Youtube, 2009) (I wonder if you could use one of these cars in a driving test).

Behavioral Segmentation

Dividing consumers by such variables as attitude toward the product, user status, or usage rate is called **behavioral segmentation**. Companies selling technology-based products might segment the market according to different levels of receptiveness to technology. They could rely on a segmentation scale developed by Forrester Research that divides consumers into two camps: *technology optimists*, who embrace new technology, and *technology pessimists*, who are indifferent, anxious, or downright hostile when it comes to technology (Rubin & Bluestein, 2011).

Some companies segment consumers according to *user status*, distinguishing among nonusers, potential users, first-time users, and regular users of a product. Depending on the product, they can then target specific groups, such as first-time users. Credit-card companies use this approach when they offer frequent flyer miles to potential customers in order to induce them to get their card. Once they start using it, they'll probably be segmented according to usage. "Heavy users" who pay their bills on time will likely get increased credit lines.

Psychographic Segmentation

Psychographic segmentation classifies consumers on the basis of individual lifestyles as they're reflected in people's interests, activities, attitudes, and values. If a marketer profiled you according to your lifestyle, what would the result be? Do you live an active life and love the outdoors? If so, you may be a potential buyer of athletic equipment and apparel. Maybe you'd be interested in an ecotour offered by a travel agency. If you prefer to sit on your couch and watch TV, you might show up on the radar screen of a TiVo provider. If you're compulsive or a risk taker, you might catch the attention of a gambling casino. If you're thrifty and uncomfortable with debt, Citibank might want to issue you a debit card.

Clustering Segments

Typically, marketers determine target markets by combining, or "clustering," segmenting criteria. What characteristics does Starbucks look for in marketing its products? Three demographic variables come to mind: age, geography, and income. Buyers are likely to be males and females ranging in age from about twenty-five to forty (although college students, aged eighteen to twenty-four, are moving up in importance). Geography is a factor as customers tend to live or work in cities or upscale suburban areas. Those with relatively high incomes are willing to pay a premium for Starbucks specialty coffee and so income—a socioeconomic factor—is also important.

Key Takeaways

- **Marketing** is a set of processes for creating, communicating, and delivering value to customers and for improving customer relationships. It includes everything that organizations do to satisfy customers' needs.
- The philosophy of satisfying customers' needs while meeting organizational profit goals is called the **marketing concept** and guides all of an organization's marketing activities.
- To apply this approach, marketers need a **marketing strategy**—a plan for doing two things: selecting a target market and then implementing strategies for creating, pricing, promoting, and distributing products that satisfy customers' needs.
- A **target market** is a specific group of consumers who are particularly interested in a product, would have access to it, and are able to buy it.
- To identify this group, marketers first identify the overall market for the product (from the **consumer market**, the **industrial market**, or both).
- Then, they divide the market into **market segments**—groups of customers with common characteristics that influence their buying decisions.

- The market can be divided according to any of the following variables:

  1. **Demographics** (age, gender, income, and so on)
  2. **Geographics** (region, climate, population density)
  3. **Behavior** (receptiveness to technology, usage)
  4. **Psychographics** or lifestyle variables (interests, activities, attitudes, and values)

If you were developing a marketing campaign for the Harley-Davidson Motorcycle Company, what group of consumers would you target? What if you were marketing an iPod? What about time-shares (vacation-ownership opportunities) in Vail, Colorado? For each of these products, identify at least five segmentation characteristics that you'd use in developing a profile of your customers. Explain the segmentation category into which each characteristic falls—demographic, geographic, behavioral, or psychographic. Where it's appropriate, be sure to include at least one characteristic from each category.

9.3 The Marketing Mix

After identifying a target market, your next step is developing and implementing a marketing program designed to reach it. As Figure 9.5: The Marketing Mix shows, this program involves a combination of tools called the ==**marketing mix**==, often referred to as the "four Ps" of marketing:

1. Developing a *product* that meets the needs of the target market
2. Setting a *price* for the product
3. Distributing the product–getting it to a *place* where customers can buy it
4. *Promoting* the product–informing potential buyers about it

Figure 9.4: The Marketing Mix

The goal is to develop and implement a marketing strategy that combines these four elements. To see how this process works, let's look at Wow Wee Toys' marketing program for Robosapien (Wow Wee Toys Ltd., 2004).

Developing a Product

The development of Robosapien was a bit unusual for a company that was already active in its market. Generally, product ideas come from people within the company who understand its customers' needs. Internal engineers are then challenged to design the product. In the case of Robosapien, however, the creator, Mark Tilden, had conceived and designed the product before joining Wow Wee Toys. The company gave him the opportunity to develop the product for

commercial purposes, and Tilden was brought on board to oversee the development of Robosapien into a product that satisfied Wow Wee's commercial needs.

Robosapien is not a "kid's toy," though kids certainly love its playful personality. It's a home-entertainment product that appeals to a broad audience—children, young adults, older adults, and even the elderly. It's a big gift item, and it has developed a following of techies and hackers who take it apart, tinker with it, and even retrofit it with such features as cameras and ice skates. In fact, Tilden wanted the robot to be customizable; that's why he insisted that its internal parts be screwed together rather than soldered.

Conducting Marketing Research

Before settling on a strategy for Robosapien, the marketers at Wow Wee did some homework. First, to zero in on their target market, they had to find out what various people thought of the product. More precisely, they needed answers to questions like the following:

- Who are our potential customers? What are they like?
- Do people like Robosapien? What gets them excited about it? What don't they like? What would they change?
- How much are they willing to pay for Robosapien?
- Where will they probably go to buy the product?
- How should it be promoted? How can we distinguish it from competing products?
- Will enough people buy Robosapien to return a reasonable profit?
- Should we go ahead and launch the product?

The last question would be left up to Wow Wee management, but, given the size of the investment needed to bring Robosapien to market, Wow Wee couldn't afford to make the wrong decision. Ultimately, the company was able to make an informed decision because its marketing team provided answers to all the other questions. They got these answers through **marketing research**—the process of collecting and analyzing the data that are relevant to a specific marketing situation.

This data had to be collected in a systematic way. Market research seeks two types of data:

1. Marketers generally begin by looking at **secondary data**—information already collected, whether by the company or by others, that pertains to the target market.
2. Then, with secondary data in hand, they're prepared to collect **primary data**—newly collected information that addresses specific questions.

You can get secondary data from inside or outside the organization. Internally available data includes sales reports and other information on customers. External data can come from a number of sources. The U.S. Census Bureau, for example, posts demographic information on American households (such as age, income, education, and number of members), both for the country as a whole and for specific geographic areas. You can also find out whether an area is growing or declining.

Population data helped Wow Wee estimate the size of its potential U.S. target market. Other secondary data helped the firm assess the size of foreign markets in regions around the world, such as Europe, the Middle East, Latin America, Asia, and the Pacific Rim. This data positioned the company to sell Robosapien in eighty-five countries, including Canada, England, France, Germany, South Africa, Australia, New Zealand, Hong Kong, and Japan.

Using secondary data that are already available (and free) is a lot easier than collecting your own information. Unfortunately, however, secondary data didn't answer all the questions that Wow Wee was asking in this particular situation. To get these answers, the marketing team had to conduct primary research: they had to work directly with

members of their target market. It's a challenging process. First, they had to decide exactly *what* they wanted to know. Then they had to determine *whom* to ask. Finally, they had to pick the best *methods* for gathering information.

We know what they wanted to know—we've already listed the questions they asked themselves. As for whom to talk to, they randomly selected representatives from their target market. Now, they could have used a variety of tools for collecting information from these people, each of which has its advantages and disadvantages. To understand the marketing-research process fully, we need to describe the most common of these tools:

- *Surveys*. Sometimes marketers mail questionnaires to members of the target market. In Wow Wee's case, the questionnaire could have included photos of Robosapien. It's an effective way to reach people, but the process is time consuming and the response rate is generally low. Phoning people also takes a lot of time, but a good percentage of people tend to respond. Unfortunately, you can't show them the product. Online surveys are easier to answer and get better response rates, and the site can link to pictures or even videos of Robosapien.
- *Personal interviews*. Though time consuming, personal interviews not only let you talk with real people but also let you demonstrate Robosapien. You can also clarify answers and ask open-ended questions.
- *Focus groups*. With a **focus group**, you can bring together a group of individuals (perhaps six to ten) and ask them questions. A trained moderator can explain the purpose of the group and lead the discussion. If sessions are run effectively, you can come away with valuable information about customer responses to both your product and your marketing strategy.

Wow Wee used focus groups and personal interviews because both approaches had the advantage of allowing people to interact with Robosapien. In particular, focus-group sessions provided valuable opinions about the product, proposed pricing, distribution methods, and promotion strategies. Management was pleased with the feedback and confident that the product would succeed.

Researching your target market is necessary before you launch a new product. But the benefits of marketing research don't extend merely to brand-new products. Companies also use it when they're deciding whether or not to refine an existing product or develop a new marketing strategy for an existing product. Kellogg's, for example, conducted online surveys to get responses to a variation on its Pop-Tarts brand—namely, Pop-Tarts filled with a mixture of traditional fruit filling and yogurt. Marketers had picked out four possible names for the product and wanted to know which one kids and mothers liked best. They also wanted to know what they thought of the product and its packaging. Both mothers and kids liked the new Pop-Tarts (though for different reasons) and its packaging, and the winning name for the product launched in the spring of 2011 was "Pop-Tarts Yogurt Blasts." The online survey of 175 mothers and their children was conducted in one weekend by an outside marketing research group (Light, 2004).

Branding

Armed with positive feedback from their research efforts, the Wow Wee team was ready for the next step: informing buyers—both consumers and retailers—about their product. They needed a <mark>brand</mark>—some word, letter, sound, or symbol that would differentiate their product from similar products on the market. They chose the brand name *Robosapien*, hoping that people would get the connection between *homo sapiens* (the human species) and *Robosapien* (the company's coinage for its new robot "species"). To prevent other companies from coming out with their own "Robosapiens," they took out a <mark>trademark</mark> by registering the name with the U.S. Patent and Trademark Office.

Though this approach—giving a unique brand name to a particular product—is a bit unusual, it isn't unprecedented. Mattel, for example, established a separate brand for Barbie, and Anheuser-Busch sells beer under the brand name Budweiser. Note, however, that the more common approach, which is taken by such companies as Microsoft, Dell, and Apple, calls for marketing all the products made by a company under the company's brand name.

Branding Strategies

Companies can adopt one of three major strategies for branding a product:

1. With **private branding** (or *private labeling*), a company makes a product and sells it to a retailer who in turn resells it under its own name. A soft-drink maker, for example, might make cola for Wal-Mart to sell as its Sam's Choice Cola house brand.
2. With **generic branding**, the maker attaches no branding information to a product except a description of its contents. Customers are often given a choice between a brand-name prescription drug or a cheaper generic drug with a similar chemical makeup.

Figure 9.6. Though the generic brand Fluoxetine has the same chemical makeup as Prozac, it has a much lower price tag.

3. With **manufacturer branding**, a company sells one or more products under its own brand names. Adopting a *multiproduct-branding* approach, it sells all its products under one brand name (generally the company name). Using a *multibranding* approach, it will assign different brand names to different products. Campbell's Soup, which markets all its soups under the company's name, uses the multiproduct-branding approach. Automakers generally use multibranding. Toyota, for example, markets to a wide range of potential customers by offering cars under various brand names (Toyota, Lexus, and Scion).

Building Brand Equity

Wow Wee went with the multibranding approach, deciding to market Robosapien under the robot's own brand name. Was this a good choice? The answer depends, at least in part, on how the product sells. If customers don't like Robosapien, its failure won't reflect badly on Wow Wee's other products. On the other hand, people might like

Robosapien but have no reason to associate it with other Wow Wee products. In this case, Wow Wee wouldn't gain much from its <mark>brand equity</mark>—any added value generated by favorable consumer experiences with Robosapien. To get a better idea of how valuable brand equity is, think for a moment about the effect of the name *Dell* on a product. When you have a positive experience with a Dell product—say, a laptop or a printer—you come away with a positive opinion of the entire Dell product *line* and will probably buy more Dell products. Over time, you may even develop <mark>brand loyalty</mark>: you may prefer—or even insist on—Dell products. Not surprisingly, brand loyalty can be extremely valuable to a company. Because of customer loyalty, the value of the Coca-Cola brand is estimated at more than $70 billion, followed by IBM at $65 billion, Microsoft at $61 billion, and Google at $43 billion (Interbrand, 2010).

Packaging and Labeling

<mark>Packaging</mark>—the container that holds your product—can influence a consumer's decision to buy a product or pass it up. Packaging gives customers a glimpse of the product, and it should be designed to attract their attention. <mark>Labeling</mark>—what you say about the product on your packaging—not only identifies the product but also provides information on the package contents: who made it and where or what risks are associated with it (such as being unsuitable for small children).

How has Wow Wee handled the packaging and labeling of Robosapien? The robot is fourteen inches tall, and it's almost as wide. It's also fairly heavy (about seven pounds), and because it's made out of plastic and has movable parts, it's breakable. The easiest, and least expensive, way of packaging it would be to put it in a square box of heavy cardboard and pad it with Styrofoam. This arrangement would not only protect the product from damage during shipping but also make the package easy to store. Unfortunately, it would also eliminate any customer contact with the product inside the box (such as seeing what it looks like and what it's made of). Wow Wee, therefore, packages Robosapien in a container that is curved to his shape and has a clear plastic front that allows people to see the whole robot. It's protected during shipping because it is wired to the box. Why did Wow Wee go to this much trouble and expense? Like so many makers of so many products, it has to market the product while it's still in the box. Because he's in a custom-shaped see-through package, you tend to notice Robosapien (who seems to be looking at you) while you are walking down the aisle of the store.

Meanwhile, the labeling on the package details some of the robot's attributes. The name is highlighted in big letters above the descriptive tagline "A fusion of technology and personality." On the sides and back of the package are pictures of the robot in action with such captions as "Dynamic Robotics with Attitude" and "Awesome Sounds, Robo-Speech & Lights." These colorful descriptions are conceived to entice the consumer to make a purchase because its product features will satisfy some need or want.

Packaging can serve many purposes. The purpose of the Robosapien package is to attract your attention to the product's features. For other products, packaging serves a more functional purpose. Nabisco, for example, packages some of its tastiest snacks—Oreos, Chips Ahoy, and Lorna Doone's—in "100 Calorie Packs" that deliver exactly one hundred calories per package (Nabisco, 2011). Thus, the packaging itself makes life simpler for people who are keeping track of calories (and reminds them of how many cookies they can eat without exceeding one hundred calories).

Key Takeaways

- Developing and implementing a marketing program involves a combination of tools called the marketing mix (often referred to as the "four Ps" of marketing): product, price, place, and promotion.

- Before settling on a marketing strategy, marketers often do **marketing research** to collect and analyze relevant data.
- First, they look at **secondary data** that have already been collected, and then they collect new data, called **primary data**.
- Methods for collecting primary data include surveys, personal interviews, and **focus groups**.
- A **brand** is a word, letter, sound, or symbol that differentiates a product from its competitors.
- To protect a brand name, the company takes out a **trademark** by registering it with the U.S. Patent and Trademark Office.

- There are three major branding strategies:

    1. With **private branding**, the maker sells a product to a retailer who resells it under its own name.
    2. Under **generic branding**, a no-brand product contains no identification except for a description of the contents.
    3. Using **manufacture branding**, a company sells products under its own brand names.

- When consumers have a favorable experience with a product, it builds **brand equity**. If consumers are loyal to it over time, it enjoys **brand loyalty**.
- **Packaging**—the container holding the product—can influence consumers' decisions to buy products or not buy them. It offers them a glimpse of the product and should be designed to attract their attention.
- **Labeling**—the information on the packaging—identifies the product. It provides information on the contents, the manufacturer, the place where it was made, and any risks associated with its use.

Exercise

When XM Satellite Radio was launched by American Mobile Radio in 1992, no one completely understood the potential for satellite radio. The company began by offering a multichannel, nationwide audio service. In 1997, it was granted a satellite-radio-service license from the FCC, and in 2001, the company began offering more than 150 digital channels of commercial-free satellite-radio programming for the car and home. Revenues come from monthly user fees. In the decade between 1992 and 2001, the company undertook considerable marketing research to identify its target market and refine its offerings. Answer the following questions as if you were in charge of XM Satellite Radio's marketing research for the period 1992 to 2001:

- To what questions would you seek answers?
- What secondary data would you look at?
- What primary data would you collect and analyze?
- How would you gather these primary data?

(By the way, in 2008 XM Satellite Radio merged with its competitor, Sirius Satellite Radio, and the two became Sirius XM Radio Inc.)

9.4 Pricing a Product

The second of the four Ps in the marketing mix is price. Pricing a product involves a certain amount of trial and error because there are so many factors to consider. If you price too high, a lot of people simply won't buy your product. Or you might find yourself facing competition from some other supplier that thinks it can beat your price. On the other hand, if you price too low, you might not make enough profit to stay in business. So how do you decide on a price? Let's look at several pricing options that were available to those marketers at Wow Wee who were responsible for pricing Robosapien. We'll begin by discussing two strategies that are particularly applicable to products that are being newly introduced.

New Product Pricing Strategies

When Robosapien was introduced into the market, it had little direct competition in its product category. True, there were some "toy" robots available, but they were not nearly as sophisticated. Sony offered a pet dog robot called Aibo, but its price tag of $1,800 was really high. Even higher up the price-point scale was the $3,600 iRobi robot made by the Korean company Yujin Robotics to entertain kids and even teach them foreign languages. Parents could also monitor kids' interactions with the robot through its own video-camera eyes; in fact, they could even use the robot itself to relay video messages telling kids to shut it off and go to sleep (Edwards, 2004).

Skimming and Penetration Pricing

Because Wow Wee was introducing an innovative product in an emerging market with few direct competitors, it considered one of two pricing strategies:

1. With **skimming pricing**, Wow Wee would start off with the highest price that keenly interested customers would pay. This approach would generate early profits, but when competition enters—and it will, because healthy profits can be made in the market—Wow Wee would have to lower its price.
2. Using **penetration pricing**, Wow Wee would initially charge a low price, both to discourage competition and to grab a sizable share of the market. This strategy might give the company some competitive breathing room (potential competitors won't be attracted to low prices and modest profits). Over time, as its growing market discourages competition, Wow Wee could push up its prices.

Other Pricing Strategies

In their search for the best price level, Wow Wee's marketing managers could consider a variety of other approaches, such as *cost-based pricing*, *demand-based pricing*, *target costing*, *odd-even pricing*, and *prestige pricing*. Any of these methods could be used not only to set an initial price but also to establish long-term pricing levels.

Before we examine these strategies, let's pause for a moment to think about the pricing decisions that you have to make if you're selling goods for resale by retailers. Most of us think of price as the amount that we—consumers—pay for

a product. But when a manufacturer (such as Wow Wee) sells goods to retailers, the price it gets is *not* what we the consumers will pay for the product. In fact, it's a lot less.

Here's an example. Say you buy a shirt at a store in the mall for $40. The shirt was probably sold to the retailer by the manufacturer for $20. The retailer then marks up the shirt by 100 percent, or $20, to cover its costs and to make a profit. The $20 paid to the manufacturer plus the $20 markup results in a $40 sales price to the consumer.

Cost-Based Pricing

Using **cost-based pricing**, Wow Wee's accountants would figure out how much it costs to make Robosapien and then set a price by adding a profit to the cost. If, for example, it cost $40 to make the robot, Wow Wee could add on $10 for profit and charge retailers $50.

Demand-Based Pricing

Let's say that Wow Wee learns through market research how much people are willing to pay for Robosapien. Following a **demand-based pricing** approach, it will use this information to set the price that it charges retailers. If consumers are willing to pay $120 retail, Wow Wee will charge retailers a price that will allow retailers to sell the product for $120. What would that price be? Here's how we would arrive at it: $120 consumer selling price minus a $60 markup by retailers means that Wow Wee can charge retailers $60.

Target Costing

With **target costing**, you work backward. You figure out (again using research findings) how much consumers are willing to pay for a product. You then subtract the retailer's profit. From this price—the selling price to the retailer—you subtract an amount to cover your profit. This process should tell you how much you can spend to make the product. For example, Wow Wee determines that it can sell Robosapien to retailers for $70. The company decides that it wants to make $15 profit on each robot. Thus, Wow Wee can spend $55 on the product ($70 selling price to the retailer minus $15 profit means that the company can spend $55 to make each robot).

Prestige Pricing

Figure 9.7. Luxury goods, like jewelry and watches, are priced based on a prestige approach.

Some people associate a high price with high quality—and, in fact, there generally is a correlation. Thus, some companies adopt a ==prestige-pricing== approach—setting prices artificially high to foster the impression that they're offering a high-quality product. Competitors are reluctant to lower their prices because it would suggest that they're lower-quality products. Let's say that Wow Wee finds some amazing production method that allows it to produce Robosapien at a fraction of its current cost. It could pass the savings on by cutting the price, but it might be reluctant to do so: What if consumers equate low cost with poor quality?

Odd-Even Pricing

Do you think $9.99 sounds cheaper than $10? If you do, you're part of the reason that companies sometimes use ==odd-even pricing==—pricing products a few cents (or dollars) under an even number. Retailers, for example, might price Robosapien at $99 (or even $99.99) if they thought consumers would perceive it as less than $100.

Key Takeaways

- With a new product, a company might consider the **skimming approach**—starting off with the highest price that keenly interested customers are willing to pay. This approach yields early profits but invites competition.
- Using a **penetration approach**, marketers begin by charging a low price, both to keep out competition and to grab as much market share as possible.
- Several strategies work for existing as well as new products.
- With **cost-based pricing**, a company determines the cost of making a product and then sets a price by adding a profit to the cost.
- With **demand-based pricing**, marketers set the price that they think consumers will pay. Using **target**

costing, they figure out how much consumers are willing to pay and then subtract a reasonable profit from this price to determine the amount that can be spent to make the product.

- Companies use **prestige pricing** to capitalize on the common association of high price and quality, setting an artificially high price to substantiate the impression of high quality.
- Finally, with **odd-even pricing**, companies set prices at such figures as $9.99 (an odd amount), counting on the common impression that it sounds cheaper than $10 (an even amount).

Exercise

Most calculators come with a book of instructions. Unfortunately, if you misplace the book, you're left to your own devices in figuring out how to use the calculator. Wouldn't it be easier if the calculator had a built-in "help" function similar to the one on your computer? You could just punch the "Help" key on your keypad and call up the relevant instructions on your display screen. You just invented a calculator with this feature, and you're ready to roll it out. First, however, you have to make some pricing decisions:

- When you introduce the product, should you use skimming or penetration pricing?
- Which of the following pricing methods should you use in the long term: cost-based pricing, demand-based pricing, target costing, or prestige pricing?

Prepare a report describing both your introductory and your long-term alternatives. Then explain and justify your choice of the methods that you'll use.

9.5 Placing a Product

The next element in the marketing mix is *place*, which refers to strategies for *distribution*. **Distribution** entails all activities involved in getting the right quantity of your product to your customers at the right time and at a reasonable cost. Thus, distribution involves selecting the most appropriate *distribution channels* and handling the *physical distribution* of products.

Distribution Channels

Companies must decide how they will distribute their products. Will they sell directly to customers (perhaps over the Internet)? Or will they sell through an ==intermediary==—a wholesaler or retailer who helps move products from their original source to the end user? As you can see from Figure 9.8: Distribution Channels, various marketing channels are available to companies.

Selling Directly to Consumers

Producer → Consumer

Selling through Retailers

Producer → Retailer → Consumer

Selling through Wholesalers

Producer → Wholesaler → Retailer → Consumer
Figure 9.8: Distribution Channels

Selling Directly to Customers

Many businesses, especially small ones and those just starting up, sell directly to customers. Michael Dell, for example, started out selling computers from his dorm room. Tom First and Tom Story began operations at Nantucket Nectars by peddling home-brewed fruit drinks to boaters in Nantucket Harbor. Most service companies sell directly to their customers; it's impossible to give a haircut, fit contact lenses, mow a lawn, or repair a car through an intermediary. Many

business-to-business sales take place through direct contact between producer and buyer. Toyota, for instance, buys components directly from suppliers.

The Internet has greatly expanded the number of companies using direct distribution, either as their only distribution channel or as an additional means of selling. Dell sells only online, while Adidas and Apple sell both on Web sites and in stores. The eBay online auction site has become the channel of choice for countless small businesses. Many of the companies selling over the Internet are enjoying tremendous sales growth. The largest of the online retailers—Amazon—was founded by Jeff Bezos in 1995 as an online bookstore. In its fifteen-plus years in business, the company has experienced tremendous success, generating more than $34 billion in revenues during 2010. With sales soaring by 51 percent, the future looks bright for the company (Yahoo!, 2011; Los Angeles Times, 2011).

The advantage of this approach of selling direct to the customer is a certain degree of control over prices and selling activities: you don't have to depend on or pay an intermediary. On the other hand, you must commit your own resources to the selling process, and that strategy isn't appropriate for all businesses. It would hardly be practical for Wow Wee to sell directly to individual consumers scattered around the world.

Selling through Retailers

Retailers buy goods from producers and sell them to consumers, whether in stores, by phone, through direct mailings, or over the Internet. Best Buy, for example, buys Robosapiens from Wow Wee and sells them to customers in its stores. Moreover, it promotes Robosapiens to its customers and furnishes technical information and assistance. Each Best Buy outlet features a special display at which customers can examine Robosapien and even try it out. On the other hand, selling through retailers means giving up some control over pricing and promotion. The wholesale price you get from a retailer, who has to have room to mark up a retail price, is substantially lower than you'd get if you sold directly to consumers.

Selling through Wholesalers

Selling through retailers works fine if you're dealing with only a few stores (or chains). But what if you produce a product—bandages—that you need to sell through thousands of stores, including pharmacies, food stores, and discount stores. You'll also want to sell to hospitals, day-care centers, and even college health centers. In this case, you'd be committing an immense portion of your resources to the selling process. Besides, buyers like the ones you need don't want to deal directly with you. Imagine a chain like CVS Pharmacy negotiating sales transactions with the maker of every single product that it carries in its stores. CVS deals with **wholesalers** (sometimes called *distributors*): intermediaries who buy goods from suppliers and sell them to businesses that will either resell or use them. Likewise, you'd sell your bandages to a wholesaler of health care products, which would, in turn, sell them both to businesses like CVS, Kmart, and Giant Supermarkets and to institutions, such as hospitals and college health care centers.

The wholesaler doesn't provide this service for free. Here's how it works. Let's say that CVS is willing to pay $2 a box for your bandages. If you go through a wholesaler, you'll probably get only $1.50 a box. In other words, you'd make $0.50 less on each box sold. Your **profit margin**—the amount you earn on each box—would therefore be less.

While selling through wholesalers will cut into your profit margins, the practice has several advantages. For one thing, wholesalers make it their business to find the best outlets for the goods in which they specialize. They're often equipped to warehouse goods for suppliers and to transport them from the suppliers' plants to the point of final sale. These advantages would appeal to Wow Wee. If it sold Robosapien's to just a few retailers, it wouldn't need to go through a distributor. However, the company needs wholesalers to supply an expanding base of retailers who want to carry the product.

Finally, intermediaries, such as wholesalers, can make the distribution channel more cost-effective. Look, for example, at Figure 9.9: What an Intermediary Can Do. Because every contact between a producer and a consumer incurs costs, the more contacts in the process (panel *a*), the higher the overall costs to consumers. The presence of an intermediary substantially reduces the total number of contacts (panel *b*).
Figure 9.9: What an Intermediary Can Do

Physical Distribution

Buyers from the stores that sell Robosapiens don't go to the Wow Wee factory (which happens to be in China) to pick up their orders. The responsibility for getting its products to customers, called **physical distribution**, belongs to Wow Wee itself. To keep its customers satisfied, Wow Wee must deliver robots on time, in good shape, and in the quantity ordered. To accomplish this, Wow Wee must manage several interrelated activities: *warehousing, materials handling,* and *transportation.*

Warehousing

After the robots have been packaged, they're ready for sale. It would be convenient if they've already been sold and only needed to be shipped to customers, but business-to-business (B2B) transactions don't always work out this way. More often, there's a time lag between manufacture and delivery. During this period, the robots must be stored somewhere. If Wow Wee has to store a large volume over an extended period (perhaps a month or two right before the holiday season), it will keep unsold robots in a **storage warehouse**. On the other hand, if Wow Wee has to hold them only temporarily while they're en route to their final destinations, they'll be kept in a **distribution center**.

Wal-Mart, for example, maintains forty regional U.S. distribution centers at which it receives goods purchased from suppliers, sorts them, and distributes them to 4,400 stores, superstores, and Sam's Clubs around the country (Wikipedia, 2011). Its efficiency in moving goods to its stores is a major factor in Wal-Mart's ability to satisfy customer needs. How major? "The misconception," says one senior executive "is that we're in the retail business, but in reality, we're in the distribution business" (Lillo, 2003; Walmart, 2011).

Materials Handling

Making, storing, and distributing Robosapien entails a good deal of **materials handling**—the process of physically moving or carrying goods during production, warehousing, and distribution. Someone (or some machine) needs to move both the parts that go into Robosapien and the partially finished robot through the production process. In addition, the finished robot must be moved into storage facilities and, after that, out of storage and onto a truck, plane, train, or ship. At the end of this leg of the trip, it must be moved into the store from which it will be sold.

Automation

All these activities draw on company resources, particularly labor, and there's always the risk of losing money because the robot's been damaged during the process. To sell goods at competitive prices, companies must handle materials as efficiently and inexpensively as possible. One way is by automating the process. For example, parts that go into the production of BMWs are stored and retrieved through automated sequencing centers (Maloney, 2003). Cars are built on moving assembly lines made of "skillets" large enough to hold workers who move along with the car while it's being assembled. Special assistors are used to help workers handle heavy parts. For hard-to-reach areas under the car, equipment rotates the car 90 degrees and sets the undercarriage at waist level. Records on each car's progress are updated by means of a bar code that's scanned at each stage of production (Automotive Intelligence, 2001; BMW, 2011).

Just-in-Time Production

Another means of reducing materials-handling costs is called <mark>just-in-time production</mark>. Typically, companies require suppliers to deliver materials to their facilities *just in time* for them to go into the production process. This practice cuts the time and cost entailed by moving raw materials into and out of storage.

Transportation

There are several ways to transport goods from manufacturing facilities to resellers or customers—trucks, trains, planes, ships, and even pipelines. Companies select the best mode (or combination of modes) by considering several factors, including cost, speed, match of transport mode to type of good, dependability, and accessibility. The choice usually involves trade-offs. Planes, for example, are generally faster but cost more than other modes. Sending goods by cargo ship or barge is inexpensive but very slow (and out of the question if you want to send something from Massachusetts to Chicago). Railroads are moderately priced, generally accessible, and faster than ships but slower than planes. They're particularly appropriate for some types of goods, such as coal, grain, and bulky items (such as heavy equipment and cars). Pipelines are fine if your product happens to be petroleum or natural gas. Trucks, though fairly expensive, work for most goods and can go just about anywhere in a reasonable amount of time.

Figure 9.10. Trucks are the primary source of transportation in the lumber industry.

According to the U.S. Department of Transportation (1993, 1997, 2002), trucks are the transportation of choice for most goods, accounting for 65 percent of U.S. transportation expenditures. Trucks also play an important role in the second highest category—multimodal combinations, which account for 11 percent of expenditures. *Multimodal combinations* include rail and truck and water and truck. New cars, for example, might travel from Michigan to California by rail and then be moved to tractor trailers to complete their journey to dealerships. Water accounts for 9 percent of expenditures,

air for 8 percent. When used alone, rail accounts for only 4 percent but is commonly combined with other modes. Pipelines account for 3 percent of expenditures. Crowded highways notwithstanding, the economy would come to a standstill without the two million workers that make up the U.S. trucking industry (U.S. Department of Labor, 2011).

Creating an Effective Distribution Network: The Supply Chain

Before we go on to the final component in the marketing mix—*promotion*—let's review the elements that we've discussed so far: product, price, and place. As we've seen, to be competitive, companies must produce quality products, sell them at reasonable prices, and make them available to customers at the right place at the right time. To accomplish these three tasks, they must work with a network of other firms, both those that supply them with materials and services and those that deliver and sell their products. To better understand the links that must be forged to create an effective network, let's look at the steps that the candy maker Just Born takes to produce and deliver more than one billion Marshmallow Peeps each year to customers throughout the world. Each day, the company engages in the following process:

- Purchasing managers buy raw materials from suppliers (sugar and other ingredients used to make marshmallow, food coloring, and so forth).
- Other operations managers transform these raw materials, or ingredients, into 4.2 million Marshmallow Peeps every day.
- Operations managers in shipping send completed packages to a warehouse where they're stored for later distribution.
- Operations managers at the warehouse forward packaged Marshmallow Peeps to dealers around the world.
- Retail dealers sell the Marshmallow Peeps to customers.

This process requires considerable cooperation not only among individuals in the organization but also between Just Born and its suppliers and dealers. Raw-materials suppliers, for instance, must work closely with Just Born purchasing managers, who must, in turn, work with operations managers in manufacturing at Just Born itself. People in manufacturing have to work with operations managers in the warehouse, who have to work with retail dealers, who have to work with their customers.

If all the people involved in each of these steps worked independently, the process of turning raw materials into finished Marshmallow Peeps and selling them to customers would be inefficient (to say the least). However, when everyone works in a coordinated manner, all parties benefit. Just Born can make a higher-quality product at a lower cost because it knows that it's going to get cooperation from suppliers whose livelihood, after all, depends on the success of customers like Just Born: suppliers can operate more efficiently because they can predict the demand for their products (such as sugar and food coloring). At the other end of the chain, dealers can operate efficiently because they can depend on Just Born to deliver a quality product on time. The real beneficiary is ultimately the end user, or customer: because the process that delivers the product is efficient, its costs are minimized and its quality is optimized. The customer, in other words, gets a higher-quality product at a lower price.

Supply Chain Management

As you can see in Figure 9.11: A Simplified Supply Chain, the flow that begins with the purchase of raw materials and culminates in the sale of the Marshmallow Peeps to end users is called the <mark>supply chain</mark>. The process of integrating all the activities in the supply chain is called <mark>supply chain management (SCM)</mark>. As you can see from our discussion

so far, SCM requires a high level of cooperation among the members of the chain. All parties must be willing to share information and work together to maximize the final customer's satisfaction (Fredendall, 2001).

Figure 9.11: A Simplified Supply Chain

Managing your supply chain can be difficult, particularly if your company has large seasonal fluctuations (Kaplan, 2011). This is certainly true at Just Born. Even though it has a Marshmallow Peep for every season (heart Peeps for Valentine's Day, spooky Peeps for Halloween, patriotic Peeps for July Fourth, and so on), the biggest problem rests with the standard yellow Marshmallow Peep that provides a major spike in sales each spring. Without careful supply chain management, there would be either too many or two few yellow Marshmallow Peeps—both big problems. To reduce the likelihood of either situation, the manager of the company's supply chain works to ensure that all members of the chain work together throughout the busy production season, which begins each fall. Suppliers promise to deliver large quantities of ingredients, workers recognize that they will be busy through February, and dealers get their orders in early. Each member of the chain depends on the others to meet a mutually shared goal: getting the right quantity of yellow Marshmallow Peeps to customers at the right time.

But what if a company has multiple sales spikes (and lulls)? What effect does this pattern have on its supply chain? Consider Domino's Pizza. Have you ever thought about what it takes to ensure that a piping-hot pizza will arrive at your door on Super Bowl Sunday (Domino's busiest day of the year)? What about on the average weekend? How about when the weather's bad and you just don't want to go out? Clearly, Domino needs a finely tuned supply chain to stay on top of demand. Each year, the company sells about four hundred million pizzas (more than one pizza for every man, woman, and child in the United States). Its suppliers help to make this volume possible by providing the company with about one hundred fifty million pounds of cheese and toppings. Drivers do their part by logging nine million miles a week (the equivalent of 37.5 round trips to the moon every week).

How are these activities managed? Dominos relies on a software system that uses historical data to forecast demand by store; determines, orders, and adjusts supplies; fills staffing needs according to expected sales levels; and facilitates the smooth flow of accurate information among members of the chain. All this coordination is directed at a single goal—satisfying the largest possible number of end users (Retail Solutions Online, 2000).

The Value Chain

Supply chain management helps companies produce better products at lower costs and to distribute them more effectively. Remember, however, that effective supply chain management doesn't necessarily guarantee success. A company must also persuade consumers to buy its products, rather than those of its competitors, and the key to achieving this goal is delivering the most value.

The Customer Value Triad

Today's consumers can choose from a huge array of products offered at a range of prices through a variety of suppliers. So how do they decide which product to buy? Most people buy the product that gives them the highest value, and they usually determine value by considering the three factors that many marketers call the ==customer value triad==: *quality*, *service*, and *price* (Kotler, 2003). In short, consumers tend to select the product that provides the best combination of these factors.

To deliver high customer value, a company must monitor and improve its ==value chain==–the entire range of activities involved in delivering value to customers[1]. Some of these activities arise in the process of supply chain management–obtaining raw materials, manufacturing products, getting finished goods to customers. Others take place outside the supply chain, particularly those associated with marketing and selling products and with providing customer support. In addition, companies need to find ways of creating value by improving the internal operations–procurement, research and development, human resource management, and financial management–that support their primary value-chain activities.

The idea is fairly simple: by focusing on the interrelated links in its value chain, a company can increase product quality, provide better service, and cut prices. In other words, it can improve its quality-service-price mix, thereby making its products more competitive.

Key Takeaways

- **Distribution** entails all activities involved in getting the right quantity of a product to customers at the right time and at a reasonable cost.
- Companies can sell directly (from stores or over the Internet) or indirectly, through **intermediaries**–retailers or wholesalers who help move products from producers to end users.
- **Retailers** buy goods from producers and sell them to consumers, whether in stores, by phone, through direct mailings, or over the Internet.
- **Wholesalers** (or distributors) buy goods from suppliers and sell them to businesses that will resell or use them.
- **Physical distribution**–the process of getting products from producers to customers–entails several interrelated activities: *warehousing* in either a **storage warehouse** or a **distribution center**, **materials handling** (physically moving products or components), and *transportation* (shipping goods from manufacturing facilities to resellers or customers).
- A firm can produce better-quality products at lower cost and distribute them more effectively by successfully managing its **supply chain**–the entire range of activities involved in producing and distributing products, from purchasing raw materials, transforming raw materials into finished goods, storing finished goods, and distributing them to customers.
- Effective **supply chain management (SCM)** requires cooperation, not only among individuals within the organization but also among the company and its suppliers and dealers. In addition, a successful company provides customers with added value by focusing on and improving its **value chain**–the entire range of its value-creating activities.

[1]The concept of the value chain was first analyzed by Michael Porter in *Competitive Advantage: Creating and Sustaining Superior Performance* (New York: The Free Press, 1985).

9.6 Promoting a Product

Your <mark>promotion mix</mark>—the means by which you communicate with customers—may include advertising, personal selling, sales promotion, and publicity. These are all tools for telling people about your product and persuading potential customers, whether consumers or organizational users, to buy it. Before deciding on an appropriate promotional strategy, you should consider a few questions:

- What's the main purpose of the promotion? Am I simply trying to make people aware of my product, or am I trying to get people to buy it right now? Am I trying to develop long-term customers? Am I trying to connect with my current customers? Am I trying to promote my company's image?
- What's my target market? What's the best way to reach it?
- Which product features (quality, price, service, availability, innovativeness) should I emphasize? How does my product differ from those of competitors?
- How much can I afford to invest in a promotion campaign?
- How do my competitors promote their products? Should I take a similar approach?

To promote a product, you need to imprint a clear image of it in the minds of your target audience. What do you think of, for instance, when you hear "Ritz-Carlton"? What about "Motel 6"? They're both hotel chains, but the names certainly conjure up different images. Both have been quite successful in the hospitality industry, but they project very different images to appeal to different clienteles. The differences are evident in their promotions. The Ritz-Carlton Web site describes "luxury hotels" and promises that the chain provides "the finest personal service and facilities throughout the world" (Ritz-Carlton, 2011). Motel 6, by contrast, characterizes its facilities as "discount hotels" and assures you that you'll pay "discount hotel rates" (Motel 6, 2011).

Promotional Tools

We'll now examine each of the elements that can go into the promotion mix—*advertising*, *personal selling*, *sales promotion*, and *publicity*. Then we'll see how Wow Wee incorporated them into a promotion mix to create a demand for Robosapien.

Advertising

<mark>Advertising</mark> is paid, nonpersonal communication designed to create an awareness of a product or company. Ads are everywhere—in print media (such as newspapers, magazines, the *Yellow Pages*), on billboards, in broadcast media (radio and TV), and on the Internet. It's hard to escape the constant barrage of advertising messages; indeed, it's estimated that the average consumer is confronted by about five thousand ad messages each day (compared with about five hundred ads a day in the 1970s) (Johnson, 2011). For this very reason, ironically, ads aren't as effective as they used to be. Because we've learned to tune them out, companies now have to come up with innovative ways to get through to potential customers. A *New York Times* article (Story, 2007) claims that "anywhere the eye can see, it's likely to see an ad." Subway turnstiles are plastered with ads for GEICO auto insurance, Chinese food containers are decorated with ads for Continental Airways, parking meters display ads for Campbell's Soup (Godin, 1999), examining tables in pediatricians' offices are covered with ads for Disney's *Little Einsteins* DVDs, school buses play radio ads for children, "Got Milk"

billboards at San Francisco bus stops give off the smell of chocolate chip cookies, and U.S. Airways is even selling ads on motion sickness bags (yuck!) (Story, 2007). Even so, advertising is still the most prevalent form of promotion.

Your choice of advertising media depends on your product, your target audience, and your budget. A travel agency selling spring-break getaways to college students might post flyers on campus bulletin boards or run ads in campus newspapers. A pharmaceutical company trying to develop a market for a new allergy drug might focus on TV ads that reach a broad audience of allergy sufferers. A fitness center might purchase a Google ad that appears next to the search results when someone puts in a relevant keyword, such as fitness. A small hot dog and hamburger stand will probably spend its limited advertising budget on ads in the *Yellow Pages* and local newspapers (or pay a broke college student to stand by the side of the road dressed in a hot dog costume and hold a sign that entices potential customers to "come on in"). The cofounders of Nantucket Nectars found radio ads particularly effective. Rather than pay professionals, they produced their own ads themselves. (Actually, they just got on the radio and started rambling about their product or their lives or anything else that seemed interesting at the time.) (Nantucket Allserve, Inc., 2011) As unprofessional as they sounded, the ads worked, and the business grew.

Personal Selling

Personal selling refers to one-on-one communication with customers or potential customers. This type of interaction is necessary in selling large-ticket items, such as homes, and it's also effective in situations in which personal attention helps to close a sale, such as sales of cars and insurance policies.

Many retail stores depend on the expertise and enthusiasm of their salespeople to persuade customers to buy. Home Depot has grown into a home-goods giant in large part because it fosters one-on-one interactions between salespeople and customers. The real difference between Home Depot and everyone else, says one of its cofounders, isn't the merchandise; it's the friendly, easy-to-understand advice that salespeople give to novice homeowners. Customers who never thought they could fix anything suddenly feel empowered to install a carpet or hang wallpaper (Clancy, 2001).

"Congratulations! You can spend two free nights at any Hyatt Hotel in the world! All you have to do is sign up for a Hyatt-branded credit card" (Hyatt Hotels and Resorts, 2011). This tactic is a form of **sales promotion** in which a company provides an incentive for a potential customer to buy something. Most sales promotions are more straightforward than our hotel stay/credit-card offer. Promotional giveaways might feature free samples or money-off coupons. Promotions can involve in-store demonstrations or trade-show displays. They can be cheaper than advertising and can encourage customers to buy something quickly.

Apple Inc. and Starbucks partner to promote the iTunes experience by giving away free iTunes products, including a "Pick of the Week" music download, apps, book samples from the iBookstore, TV shows, and games. The current app giveaway is the Shazam Encore App, a music recognition service that allows users to immediately identify any song that's playing, see the lyrics, watch the music videos, purchase concert tickets, and buy the track and share it with friends on Facebook and Twitter. The joint promotion benefits both companies: Apple gets to plug its iTunes download and other products, and Starbucks entices customers to come into its stores, enjoy free Wi-Fi, and buy coffee (Kelly B., 2011).

Publicity and Public Relations

Free **publicity**—say, getting your company or your product mentioned in a newspaper or on TV—can often generate more customer interest than a costly ad. You may remember the holiday season buying frenzy surrounding a fuzzy red doll named "Tickle Me Elmo." The big break for this product came when the marketing team sent a doll to the one-year-old son of talk-show host Rosie O'Donnell. Two months before Christmas, O'Donnell started tossing dolls into the audience

every time a guest said the word *wall*. The product took off, and the campaign didn't cost marketers anything except a few hundred dolls (Media Awareness Network, 2011).

Consumer perception of a company is often important to a company's success. Many companies, therefore, manage their ==**public relations**== in an effort to garner favorable publicity for themselves and their products. When the company does something noteworthy, such as sponsoring a fund-raising event, the public relations department may issue a press release to promote the event. When the company does something negative, such as selling a prescription drug that has unexpected side effects, the public relations department will work to control the damage to the company. Each year, the accounting firm of PricewaterhouseCoopers and the *Financial Times* jointly survey more than a thousand CEOs in twenty countries to identify companies that have exhibited exceptional integrity or commitment to corporate governance and social responsibility. Among the companies circulating positive public relations as a result of a survey were General Electric, Microsoft, Coca-Cola, and IBM (PricewaterhouseCoopers, 2011).

Marketing Robosapien

Now let's look more closely at the strategy that Wow Wee pursued in marketing Robosapien in the United States. The company's goal was ambitious: to promote the robot as a must-have item for kids of all ages. As we know, Wow Wee intended to position Robosapien as a home-entertainment product, not as a toy. The company rolled out the product at Best Buy, which sells consumer electronics, computers, entertainment software, and appliances. As marketers had hoped, the robot caught the attention of consumers shopping for TV sets, DVD players, home and car audio equipment, music, movies, and games. Its $99 price tag was also consistent with Best Buy's storewide pricing. Indeed, the retail price was a little lower than the prices of other merchandise, and that fact was an important asset: shoppers were willing to treat Robosapien as an *impulse item*—something extra to pick up as a gift or as a special present for children, as long as the price wasn't too high.

Meanwhile, Robosapien was also getting lots of free publicity. Stories appeared in newspapers and magazines around the world, including the *New York Times*, the *Times of London*, *Time* magazine, and *National Parenting* magazine. Commentators on *The Today Show*, *The Early Show*, CNN, ABC News, and FOX News remarked on it; it was even the talk of the prestigious New York Toys Fair. It garnered numerous awards, and experts predicted that it would be a hot item for the holidays.

At Wow Wee, Marketing Director Amy Weltman (who had already had a big hit with the Rubik's Cube) developed a gala New York event to showcase the product. From mid- to late August, actors dressed in six-foot robot costumes roamed the streets of Manhattan, while the fourteen-inch version of Robosapien performed in venues ranging from Grand Central Station to city bars. Everything was recorded, and film clips were sent to TV stations.

Then the stage was set for expansion into other stores. Macy's ran special promotions, floating a twenty-four-foot cold-air robot balloon from its rooftop and lining its windows with armies of Robosapien's. Wow Wee trained salespeople to operate the product so that they could help customers during in-store demonstrations. Other retailers, including The Sharper Image, Spencer's, and Toys "R" Us, carried Robosapien, as did e-retailers such as Amazon.com. The product was also rolled out (with the same marketing flair) in Europe and Asia.

When national advertising hit in September, all the pieces of the marketing campaign came together—publicity, sales promotion, personal selling, and advertising. Wow Wee ramped up production to meet anticipated fourth-quarter demand and waited to see whether Robosapien would live up to commercial expectations.

> **Exercises**
>
> Companies encourage customers to buy their products by using a variety of promotion tools, including advertising, personal selling, sales promotion, and publicity. Your task is to develop a promotion strategy for two products—the Volkswagen Jetta and Red Bolt soda. For each product, answer the following questions:
>
> - What's the purpose of the promotion?
> - What's your target market?
> - What's the best way to reach that target market?
> - What product features should you emphasize?
> - How does your product differ from competitors'?
>
> Then describe the elements that go into your promotion mix, and explain why you chose the promotional tools that you did.

9.7 Interacting with Your Customers

Customer-Relationship Management

Customers are the most important asset that any business has. Without enough good customers, no company can survive, and to survive, a firm must not only attract new customers but, perhaps more importantly, also hold on to its current customers. Why? Because repeat customers are more profitable. It's estimated that it costs as much as six times more to attract and sell to a new customer than to an existing one (Bean, 1999). Repeat customers also tend to spend more, and they're much more likely to recommend you to other people.

Retaining customers is the purpose of ==customer-relationship management==—a marketing strategy that focuses on using information about current customers to nurture and maintain strong relationships with them. The underlying theory is fairly basic: to keep customers happy, you treat them well, give them what they want, listen to them, reward them with discounts and other loyalty incentives, and deal effectively with their complaints.

Take Caesars Entertainment Corporation (formerly Harrah's Entertainment), which operates more than fifty casinos under several brands, including Caesars, Harrah's, Bally's, and Horseshoe. Each year, it sponsors the World Series of Poker with a top prize of $9 million. Caesars gains some brand recognition when the twenty-two-hour event is televised on ESPN, but the real benefit derives from the information cards filled out by the seven thousand entrants who put up $10,000 for a chance to walk away with $9 million. Data from these cards is fed into Caesars database, and almost immediately every entrant starts getting special attention, including party invitations, free entertainment tickets, and room discounts. The program is all part of Harrah's strategy for targeting serious gamers and recognizing them as its best customers (ESPN Poker, 2010; Fitch, 2004).

Figure 9.11. Customer-relationship management is especially important to businesses that provide services. A concierge ensures that hotel guests are treated well during their stay.

Sheraton Hotels uses a softer approach to entice return customers. Sensing that its resorts needed both a new look and a new strategy for attracting repeat customers, Sheraton launched its "Year of the Bed" campaign: in addition to replacing all its old beds with luxurious new mattresses and coverings, it issued a "service promise guarantee"—a policy that any guest who's dissatisfied with his or her Sheraton stay will be compensated. The program also calls for

a customer-satisfaction survey and discount offers, both designed to keep the hotel chain in touch with its customers (Hotel News Resource, 2011).

Another advantage of keeping in touch with customers is the opportunity to offer them additional products. Amazon.com is a master at this strategy. When you make your first purchase at Amazon.com, you're also making a lifelong "friend"—one who will suggest (based on what you've bought before) other things that you might like to buy. Because Amazon.com continually updates its data on your preferences, the company gets better at making suggestions. Now that the Internet firm has expanded past books, Amazon.com can draw on its huge database to promote a vast range of products, and shopping for a variety of products at Amazon.com appeals to people who value time above all else.

Permission versus Interruption Marketing

Underlying Amazon.com's success in communicating with customers is the fact that customers have given the company permission to contact them. Companies that ask for customers' cooperation engage in ==permission marketing== (Godin, 1999). The big advantage is focusing on an audience of people who have already shown an interest in what they have to offer. Compare this approach with ==mass marketing==—the practice of sending out messages to a vast audience of anonymous people. If you advertise on TV, you're hoping that people will listen, even though you're interrupting them; that's why some marketers call such standard approaches ==interruption marketing== (Bianco, 2004). Remember, however, that permission marketing isn't free. Because winning and keeping customers means giving them incentives, Caesars lets high rollers sleep and eat free (or at a deep discount), Norwegian Cruise Line gives members of its past guest program, Latitudes, discounts on sailings, priority check-in, and members-only cocktail parties. Customer-relations management and permission marketing have actually been around for a long time. But recent advances in technology, especially the Internet, now allow companies to practice these approaches in more cost-effective ways.

Social Media Marketing

In the last five years, the popularity of ==social media marketing== has exploded. Most likely you already know what social media is—you use it every day when you connect to Facebook, Twitter, LinkedIn, YouTube, or any number of other online sites that allow you to communicate with others, network, and bookmark and share your opinions, ideas, photos, and videos. So what is social media marketing? Quite simply social media marketing is the practice of including social media as part of a company's marketing program.

Why do businesses use social media marketing? Before responding, ask yourself these questions: How much time do I spend watching TV? When I watch TV, do I sit through the ads? Do I read the newspaper? What about magazines—when was the last time I sat for hours reading a magazine, including the ads? How do I spend my spare time? Now, put yourself in the place of Annie Young-Scrivner, global chief marketing officer of Starbucks. Does it make sense for her to spend millions of dollars to place an ad for Starbucks on TV or in a newspaper or magazine? Or should she instead spend the money on social media marketing initiatives that have a high probability of connecting to Starbucks's market?

For companies like Starbucks, the answer is clear. The days of trying to reach customers through ads on TV, in newspapers, or in magazines are over. Most television watchers skip over commercials (or avoid the ads by using TiVo), and few Starbucks's customers read newspapers or magazines, and even if they do, they don't focus on the ads. Social media marketing provides a number of advantages to companies, including enabling them to (Artis, 2011; Ward, 2011; Lake, 2011):

- create brand awareness;
- connect with customers and potential customers by engaging them in two-way communication;
- build brand loyalty by providing opportunities for a targeted audience to participate in company-sponsored activities, such as a contest;
- offer and publicize incentives, such as special discounts or coupons, which increase sales;
- gather feedback and ideas on how to improve products and marketing initiatives;
- allow customers to interact with each other and spread the word about a company's products or marketing initiatives; and
- take advantage of low-cost marketing opportunities by being active on free social sites, such as Facebook.

To get a flavor of the power of social media marketing, let's look at social media campaigns of two leaders in this field: PepsiCo (Mountain Dew) and Starbucks (Sniderman, 2010).

Mountain Dew (PepsiCo)

When PepsiCo announced it wouldn't show a television commercial during the 2010 Super Bowl game, it came as a surprise (probably a pleasant one to its competitor, Coca-Cola, who had already signed on to show several Super Bowl commercials). What PepsiCo planned to do instead was invest $20 million into social media marketing campaigns. One of PepsiCo's most successful social media initiatives was to extend the DEWmocracy campaign, which two years earlier, resulted in the launch of product—Voltage—created by Mountain Dew fans. DEWmocracy 2 was a yearlong marketing campaign designed to create another Mountain Dew drink. The campaign was rolled out nationally in seven stages and engaged a number of social media outlets, including an online community of enthusiastic fans of Mountain Dew, Twitter, USTREAM (a live video streaming website), a 12secondTV.com video contest, and a dedicated YouTube channel (Yeomans, 2010; Cirillo, 2011). According to Mountain Dew's director of marketing, the goal of the campaign was "to engage in a direct dialogue with our consumers. And through this dialogue really start what we like to call a social movement in order to create this innovation" (Cirillo, 2011). The flavors created through fan input are Whiteout (a citrus flavor that is white), Typhoon (a punch flavor), and Distortion (a hint of lime). All three flavors were launched in the spring of 2010, and it was up to the fans to select the best flavor, which would become a permanent member of Mountain Dew's offerings. And the winner was Whiteout (DEWmocracy, 2011). In addition to using fans to select the best flavors, the campaign used forums and live chats to allow fans to create the packaging, graphics, and social marketing for the products using viral videos, Twitter, and professional commercials (Cirillo, 2011).

Speaking of professional commercials, all you Super Bowl fans and followers of Super Bowl ads will be glad to hear that PepsiCo reversed its position, and its ads were showcased in the 2011 Super Bowl. It was likely a little jealous of its competitor, Coca-Cola, who was very effective at combining its Super Bowl ads with a social media campaign. Facebook fans who went online and donated $1 to the Boys & Girls Club of America received an image of a Coca-Cola bottle to post on their Facebook page and a twenty-second sneak preview of one of Coca-Cola's Super Bowl ads (Promo, 2011).

Starbucks

One of most enthusiastic users of social media marketing is Starbucks. Let's looks at a few of their recent promotions: discount for "Foursquare" mayors, free coffee on Tax Day via Twitter's promoted tweets, and a free pastry day promoted through Twitter and Facebook (Sniderman, 2010).

Discount for "Foursquare" Mayors of Starbucks

This promotion was a joint effort of Foursquare and Starbucks. Foursquare is a mobile social network, and in addition to the handy "friend finder" feature, you can use it to find new and interesting places around your neighborhood to do whatever you and your friends like to do. It even rewards you for doing business with sponsor companies, such as Starbucks. The individual with the most "check in's" at a particular Starbucks holds the title of mayor. For a period of time, the mayor of each store got $1 off a Frappuccino. Those who used Foursquare were particularly excited about Starbucks's nationwide mayor rewards program because it brought attention to the marketing possibilities of the location-sharing app (Grove, 2010).

Free Coffee on Tax Day (via Twitter's Promoted Tweets)

Starbucks was not the only company to give away freebies on Tax Day, April 15, 2010. Lots of others did (Grove, 2010). For example, Cinnabon gave away free cupcake bites, Dairy Queen gave free mini blizzards, and Maggie Moo's offered a free slice of their new Maggie Moo ice cream pizza. But it was the only company to spread the message of their giveaway on the then-new Twitter's Promoted Tweets platform (which went into operation on April 13, 2010). Promoted Tweets are Twitter's means of making money by selling sponsored links to companies (Efrati, 2011). Keeping with Twitter's 140 characters per tweet rule, Starbucks's Promoted Tweet read, "On 4/15 bring a reusable tumbler and we'll fill it with brewed coffee for free. Let's all switch from paper cups." The tweet also linked to a page that detailed Starbucks's environmental initiatives (Dilworth, 2010).

Free Pastry Day (Promoted through Twitter and Facebook)

Starbucks's "free pastry day" was promoted on Facebook and Twitter (Starbucks's Facebook Event Page, 2009). As the word spread from person to person in digital form, the wave of social media activity drove more than a million people to Starbucks's stores around the country in search of free food (Grove, 2010).

As word of the freebie offering spread, Starbucks became the star of Twitter, with about 1 percent of total tweets commenting on the brand. That's almost ten times the number of mentions on an average day. It performed equally well on Facebook's event page where almost 600,000 people joined their friends and signed up as "attendees." This is not surprising given that Starbucks is the most popular brand on Facebook and the first to reach the 10-million fan mark (Walsh, 2010).

How did Starbucks achieve this notoriety on Facebook? According to social media marketing experts, Starbucks earned this notoriety by making social media a central part of its marketing mix, distributing special offers, discounts, and coupons to Facebook users and placing ads on Facebook to drive traffic to its page. As explained by the CEO of Buddy Media, which oversees the brand's social media efforts, "Starbucks has provided Facebook users a reason to become a fan" (Ostrow, 2009).

Social Media Marketing Challenges

The main challenge of social media marketing is that it can be very time consuming. It takes determination and resources to succeed. Small companies often lack the staff to initiate and manage social media marketing campaigns (Ward, 2011). Even large companies can find the management of media marketing initiates overwhelming. A recent study

of 1,700 chief marketing officers indicates that many are overwhelmed by the sheer volume of customer data available on social sites, such as Facebook and Twitter (Prodhan, 2011). This is not surprising given that Facebook has more than eight hundred million active users, and two hundred million tweets are sent each day. The marketing officers recognize the potential value of this data but are not capable of using it. A chief marketing officer in the survey described the situation as follows: "The perfect solution is to serve each consumer individually. The problem? There are 7 billion of them" (Prodhan, 2011). In spite of these limitations, 82 percent of those surveyed plan to increase their use of social media marketing over the next 3 to 5 years. To understand what real-time information is telling them, companies will use analytics software, which is capable of analyzing unstructured data. This software is being developed by technology companies, such as IBM, and advertising agencies.

The bottom line: what is clear is that marketing, and particularly advertising, has changed forever. As Simon Pestridge, Nike's global director of marketing for Greater China, said about Nike's marketing strategy (Ronnestam.com, 2010), "We don't do advertising any more. We just do cool stuff...but that's just the way it is. Advertising is all about achieving awareness, and we no longer need awareness. We need to become part of people's lives and digital allows us to do that."

Key Takeaways

- Because customers are vital to a business, successful companies practice **customer-relationship management**—retaining good customers by keeping information on current customers, to foster and maintain strong ongoing relationships.
- Companies that ask customers if they can contact them are engaged in **permission marketing**.
- **Mass marketing** is the practice of sending out messages to a vast audience of anonymous people.
- TV advertising is a form of **interruption marketing** that interrupts people to get their attention (with the hope they will listen to the ad).
- **Social media marketing** is the practice of including social media as part of a company's marketing program.

- Advantages of social media marketing include the following:

  ◦ Create brand awareness
  ◦ Engage customers and potential customers in two-way conversations
  ◦ Build brand loyalty
  ◦ Offer and publicize incentives
  ◦ Gather feedback on products and marketing initiatives
  ◦ Have customers spread the word about products and marketing initiatives
  ◦ Use low-cost marketing opportunities

- A challenge of social media marketing is that it can be very time consuming to stay in touch with your customers and potential customers.

1. If you ran an airline, how would you practice CRM? How would you get permission to market your product to customers? What information would you collect on them? What incentives would you offer them to continue flying with you? What advantages can you gain through effective CRM?

2. One of the most successful social media marketing campaigns was for Old Spice. Procter & Gamble enlisted former NFL wide receiver Isaiah Mustafa to star in a number of videos pointing out to women that their men could be as fantastic as he is if only they wore Old Spice aftershave. Review the following articles, watch the videos embedded in the articles, and answer the listed questions

   ◦ Brenna Ehrlich, "The Old Spice Social Media Campaign by the Numbers, Mashable Business," *Mashable*, July 15, 2010, http://mashable.com/2010/07/15/old-spice-stats/
   ◦ Samuel Axon, "Top 10 Funniest Old Spice Guy Videos," *Mashable Business*, http://mashable.com/2010/07/18/old-spice-guy-videos/ (accessed October 27, 2011).]
   ◦
   ◦ Describe the campaign and identify the goal of the campaign.
   ◦ How was this campaign different from anything done in the past?
   ◦ Did you like the videos? Why or why not?
   ◦ Would you buy Old Spice products? Why or why not?

9.8 The Product Life Cycle

Figure 9.13. LEGO has decided to go back to basics and focus on the classic bricks rather than complicated kits.

Did you play with LEGO blocks when you were a kid? Almost everyone did. They were a big deal. Store shelves were stacked with boxes of plastic bricks, wheels, and windows, plus packages containing just the pieces you needed to make something special, like a LEGO helicopter. McDonald's put LEGO sets in Happy Meals. If you walk down a toy-store aisle today, you'll still find LEGOS. They're shelved alongside the XBOX Kinect, Buzz Lightyear, and other playthings that appeal to contemporary kids. Like these products, they're more sophisticated. They're often tied in with movies, such as *Toy Story*, *Cars*, *Star Wars*, and *Harry Potter*.

Nowadays, the seventy-nine-year old Denmark company is doing very well: in 2010, its sales rose 37 percent and profits were up 70 percent (Reuters, 2011). The LEGO Group has moved its way up to the fifth largest toy company in the world based on sales (Brown, 2011). Things were very different seven years earlier—LEGO sales had declined drastically in the early 2000s. In its 2003 annual report, its CEO admitted that "2003 was a very disappointing year for LEGO Company." Net sales fell by 26 percent, resulting in a loss in earnings for the year and significant decline in market share. LEGO planned to drop many of its recent initiatives and focus on its classic LEGO brick products (LEGO Group, 2003).

Let's look closer and find out what happened to the LEGO brand prior to its turnaround seven years ago. It was moving through stages of development and decline (KeepMedia, 2004; KeepMedia, 2004; Fishman, 2001). Marketers call this process the **product life cycle**, which is illustrated in Figure 9.14: The Product Life Cycle". In theory, it's a lot like the life cycle that people go through. Once it's developed, a new product is *introduced* to the market. With any success at all, it begins to *grow*, attracting more buyers. At some point, the market stabilizes, and the product becomes *mature*. Eventually, however, its appeal diminishes, and it's overtaken by competing brands or substitute products. Sales *decline*, and it's ultimately taken off the market.
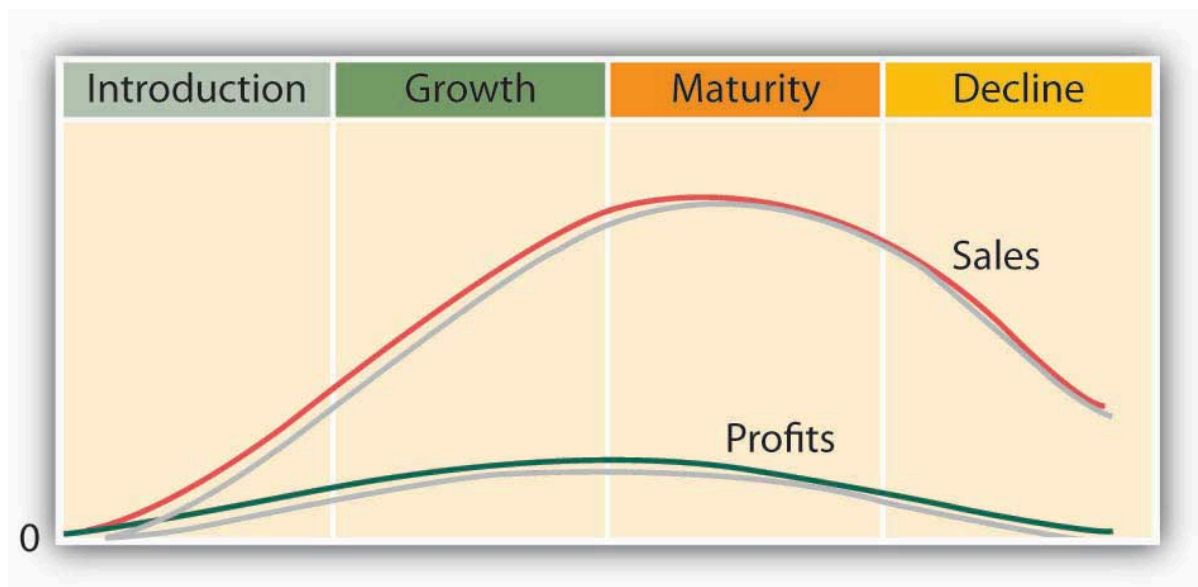

Figure 9.14: The Product Life Cycle

This is a simplified version of the cycle. There are lots of exceptions to the product life-cycle rules. For one thing, most products never make it past the introduction stage; they die an early death. Second, some products (like some people) avoid premature demise by reinventing themselves. This is what the LEGO Group did. The company had been reinventing itself during the fifteen-year period of 1990 to 2005, launching new products in an effort to recover its customer base and overcome a series of financial crises. Unfortunately, this strategy was unsuccessful. As pointed out by its CEO, the introduction of new products and the resulting costs "have not produced the desired results. In some cases," admits the company, "new products have even cannibalized on the sales of LEGO Company's core products and thus eroded earnings" (LEGO Group, 2003).

A take-over threat by Mattel Toy Company forced its CEO into action (Batra, 2010). His first stop in formulating a resurrection plan was to fly to Virginia and attend a convention for adult fans of LEGO's. The attendees' stories of how LEGOs helped shape their minds gave him hope that the family-owned company could be saved. He returned to Denmark and put into place a plan that included downsizing the number of employees, selling its LEGOLAND theme parks, simplifying product designs, cutting unprofitable product lines, and focusing on what made the company great: LEGO building blocks.

Life Cycle and the Changing Marketing Mix

As a product or brand moves through its life cycle, the company that markets it will shift its marketing-mix strategies. Let's see how the mix might be changed at each stage.

Introduction

At this stage, most companies invest in advertising to make consumers aware of a product. If it faces only limited competition, it might use a skimming-pricing approach. Typically, because it will sell only a relatively small quantity of

the product, it will distribute through just a few channels. Because sales are low while advertising and other costs are high, the company tends to lose money during this stage.

Growth

As the company focuses on building sales, which are increasing rapidly at this stage, its advertising costs will go up. If competition appears, it may respond by lowering prices and distributing through multiple distribution channels. With sales going up and costs going down, the product becomes more profitable.

Maturity

If a product survives the growth stage, it will probably remain in the maturity stage for a long time. Sales still grow, though at a decreasing rate, and will eventually stabilize. Advertising will be used to differentiate the product from competition. Price wars may occur, but profits will be good because sales volume will remain high. As the product becomes outdated, the company may make changes in keeping with changing consumer preferences.

Decline

In 2004, LEGO was in this stage: demand had declined as more innovative products absorbed the attention of kids. Price competition had become more intense, and profits were harder to come by; in fact, in some years, they had turned into losses. But, unlike most products that enter the decline stage, LEGO avoided its likely demise by reinventing itself. Now, as the Danish phrase *leg godt*, from which the name LEGO was coined, suggests, children all over the world can take out their LEGOs and "play-well."

Key Takeaways

- The stages of development and decline that products go through over their lives is called the **product life cycle**.

- The stages a product goes through are introduction, growth, maturity, and decline.

  1. Once it's developed, a new product is *introduced* to the market.
  2. With any success at all, it begins to *grow*, attracting more buyers.
  3. At some point the market stabilizes, and the product becomes *mature*.
  4. Eventually, its appeal diminishes, and it's overtaken by competing brands or substitute products. Sales *decline* and it's ultimately taken off the market.

- As a product moves through its life cycle, the company that markets it will shift its marketing-mix strategies.

Exercise

   Did you ever have a Nintendo Game Boy? Is the product still popular? Like all products, Game Boy has a product life cycle. Your job is to describe that product life cycle. To learn something about the product, go to the Web, log on to your favorite search engine (Google, Yahoo!), and enter the phrase "Game Boy history." Identify each of the product life stages that Game Boy has gone through, and speculate on the marketing actions that Nintendo would have taken during each stage. Where do you think Game Boy is now in its product life cycle? Where do you think it will be in five years? Justify your answers.

9.9 The Marketing Environment

By and large, managers can control the four Ps of the marketing mix: they can decide which products to offer, what prices to charge for them, how to distribute them, and how to reach target audiences. Unfortunately, there are other forces at work in the marketing world—forces over which marketers have much less control. These forces make up a company's ==external marketing environment==, which, as you can see in Figure 9.14: The Marketing Environment, we can divide into five sets of factors:

1. Political and regulatory
2. Economic
3. Competitive
4. Technological
5. Social and cultural
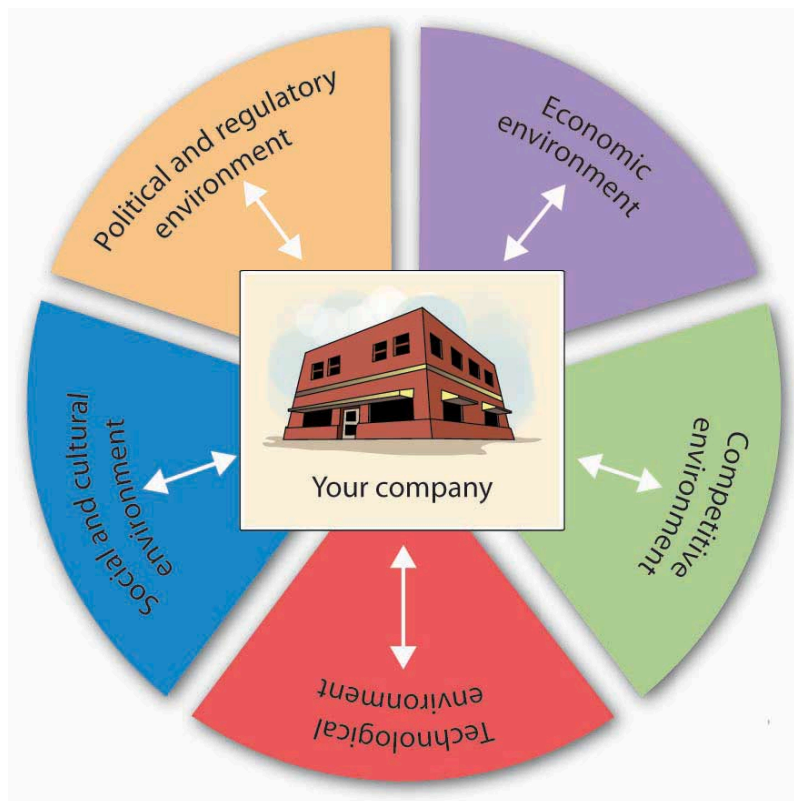

Figure 9.15: The Marketing Environment

These factors—and changes in them—present both threats and opportunities that require shifts in marketing plans. To spot trends and other signals that conditions may be in flux, marketers must continually monitor the environment in which their companies operate. To get a better idea of how they affect a firm's marketing activities, let's look at each of the five areas of the external environment.

The Political and Regulatory Environment

Federal, state, and local bodies can set rules or restrictions on the conduct of businesses. The purpose of regulation is to protect both consumers and businesses. Businesses favor some regulations (such as patent laws) while chafing under others (such as restrictions on advertising). The tobacco industry, for example, has had to learn to live with a federal ban on TV and radio advertising. More recently, many companies in the food industry have expressed unhappiness over regulations requiring the labeling of trans-fat content. The broadcasting industry is increasingly concerned about fines being imposed by the Federal Communications Commission for offenses against "standards of decency." The loudest outcry probably came from telemarketers in response to the establishment of "do-not-call" registries.

All these actions occasioned changes in the marketing strategies of affected companies. Tobacco companies rerouted advertising dollars from TV to print media. Food companies reduced trans-fat levels and began targeting health-conscious consumers. Talent coordinators posted red flags next to the names of Janet Jackson (of the now-famous malfunctioning costume) and other performers. The telemarketing industry fired workers and scrambled to reinvent its entire business model.

The Economic Environment

Every day, marketing managers face a barrage of economic news. They must digest it, assess its impact, and alter marketing plans accordingly. Sometimes (but not recently), the news is cause for optimism—the economy's improving, unemployment's declining, consumer confidence is up. At other times (like today), the news makes them nervous—our economy is weak, industrial production is down, jobless claims are rising, consumer confidence has plummeted, credit is hard to get. Naturally, business thrives when the economy is growing, employment is full, and prices are stable. Marketing products is easier because consumers are willing to buy. On the other hand, when the economy is slowing (or stalled) and unemployment is rising, people have less money to spend, and the marketer's job is harder.

Then there's inflation, which pushes interest rates upward. If you're trying to sell cars, you know that people facing higher interest rates aren't so anxious to take out car loans. Sales will slip, and to counteract the anticipated slowdown, you might have to add generous rebates to your promotional plans.

Moreover, if you operate in foreign markets, you can't focus on solely domestic economic conditions: you have to monitor the economy in every region where you do business. For example, if you're the marketing director for a U.S. company whose goods are manufactured in China and sold in Brazil, you'll need to know as much as you can about the economies in three countries: the United States, China, and Brazil. For one thing, you'll have to pay particular attention to fluctuations in exchange rates, because changes will affect both your sales and your profits.

The Competitive Environment

Imagine playing tennis without watching what your opponent was doing. Marketers who don't pay attention to their competitors are playing a losing game. In particular, they need to monitor the activities of two groups of competitors: the makers of competing brands and the makers of substitute products. Coke and Pepsi, for instance, are brand competitors who have engaged in the so-called cola wars for decades. Each tries to capture market share by convincing people that its soft drinks are better. Because neither wants to lose share to the other, they tend to resort to similar tactics. In summer 2004, both companies came out with nearly identical new colas boasting half the sugar, half the calories, and half the carbohydrates of regular colas. Coke called its product Coke C2, while Pepsi named its competing

brand PepsiEdge. Both companies targeted cola drinkers who want the flavor of a regular soda but fewer calories. (By the way, both products failed and were taken off the market.)

Meanwhile, Coke and Pepsi have to watch Nantucket Nectars, whose fruit drinks are substitute products. What if Nantucket Nectars managed to get its drinks into the soda machines at more fast-food restaurants? How would Coke and Pepsi respond? What if Nantucket Nectars, which markets an ice tea with caffeine, introduced an ice tea drink with mega amounts of caffeine? Would marketers at Coke and Pepsi take action? What if Nantucket Nectars launched a marketing campaign promoting the health benefits of fruit drinks over soda? Would Coke and Pepsi reply with campaigns of their own? Would they respond by introducing new non-cola products?

The Technological Environment

When's the last time you rented a VHS tape of a new movie? If you had trouble finding it, that's because DVDs are in and videotapes are out. Videotape makers who were monitoring technological trends in the industry would probably have taken steps to keep up (go into DVDs) or otherwise protect themselves from losses (maybe even getting out of the market). In addition to making old products obsolete, technological advances create new products. Where would we be without the cell phone, digital cameras, text messaging, LASIK surgery, and global positioning systems?

Figure 9.16. Web sites like iTunes and Amazon.com are now offering customers the option of downloading movies. Do you think DVDs will suffer the same fate as videocassettes?

New technologies also transform the marketing mix in another important way: they alter the way companies market their products. Consider the revolutionary changes brought about by the Internet, which offers marketers a new medium for promoting and selling a vast range of goods and services. Marketers must keep abreast of technological advances and adapt their strategies, both to take advantage of the opportunities and to ward off threats.

The Social and Cultural Environment

Marketers also have to stay tuned to social and cultural factors that can affect sales. The values and attitudes of American consumers are in a state of almost constant flux; what's cool one year is out of style the next. Think about the clothes you wore five years ago: would you wear them today? A lot of people wouldn't—they're the wrong style, the wrong fit, the wrong material, the wrong color, or just plain wrong. Now put yourself in the place of a marketer for a clothing company that targets teenagers and young adults. You wouldn't survive if you tried to sell the same styles every year. As we said at the outset of this chapter, the key to successful marketing is meeting the needs of customers. This means knowing what they want right now, not last year.

Here's another illustration. The last few decades have witnessed monumental shifts in the makeup of the American workforce. The number of women at all levels has increased significantly, the workforce has become more diverse, and telecommuting is more common. More people place more importance on balancing their work lives with the rest of their lives, and fewer people are willing to sacrifice their health to the demands of hectic work schedules. With these changes have come new marketing opportunities. As women spend more time at work, the traditional duties of the "homemaker" have shifted to day-care centers, nannies, house-cleaning services, and (for those who can afford them) child chauffeurs, birthday-party coordinators, and even family-photo assemblers (Loh, 2003). The number of gyms has mushroomed, the selection of home office furniture has expanded, and McDonald's has bowed to the wishes of the health-conscious by eliminating its "super-size" option.

Generation Gaps

Clothiers who target teens and young adults (such as Gap and Abercrombie & Fitch) must estimate the size of both current and future audiences. So must companies that specialize in products aimed at customers in other age brackets—say, young children or retirees. Marketers pay particular attention to population shifts because they can have dramatic effects on a consumer base, either increasing or decreasing the number of potential customers.

Marketers tend to assign most Americans born in the last sixty years to one of three groups: the *baby-boom generation* (those born between 1946 and 1964), *Generation* X (1965 to 1975), and *Generation* Y—also known as "echo baby boomers" or "millenniums" (1976 to 2001) (Sincavage, 2004). In addition to age, members of each group tend to share common experiences, values, and attitudes that stay with them as they mature. These values and attitudes have a profound effect on both the products they want and the marketing efforts designed to sell products to them. Let's look a little more closely at some of the defining characteristics of each group.

Baby Boomers

The huge wave of baby boomers began arriving in 1946, following World War II, and marketers have been catering to them ever since. What are they like? Sociologists have attributed to them such characteristics as "individuality, tolerance, and self-absorption" (Leo, 2003). There are seventy million of them (Neuborne & Kerwin, 2006), and as they marched through life over the course of five decades, marketers crowded the roadside to supply them with toys, clothes, cars, homes, and appliances—whatever they needed at the time. They're still a major marketing force, but their needs have changed: they're now the target market for Botox, pharmaceutical products, knee surgery, financial investments, cruises, vacation homes, and retirement communities.

Generation X

Because birth rates had declined by the time the "Gen X" babies first arrived in 1965, this group had just one decade to grow its numbers. Thus, it's considerably smaller (seventeen million (Neuborne & Kerwin, 1999)) than the baby-boomer group, and it has also borne the brunt of rising divorce rates and the arrival of AIDS. Experts say, however, that they're diverse, savvy, and pragmatic (Neuborne & Kerwin, 1999) and point out that even though they were once thought of as "slackers," they actually tend to be self-reliant and successful. At this point in their lives, most are at their peak earning power and affluent enough to make marketers stand up and take notice.

Generation Y

When they became parents, baby boomers delivered a group to rival their own. Born between 1976 and 2001, their sixty million (Neuborn & Kerwin, 1999) children are sometimes called "echo boomers" (because their population boom is a reverberation of the baby boom). They're still evolving, but they've already been assigned some attributes: they're committed to integrity and honesty, family oriented and close to parents, ethnically diverse and accepting of differences, upbeat and optimistic about the future (although the troubled economy is lessening their optimism), education focused, independent, and goal oriented (Neuborne & Kerwin, 1999; Richardson, 2002; Fernandez-Cruz, 2006). They also seem to be coping fairly well: among today's teens, arrests, drug use, drunk driving, and school dropout rates are all down (Tulgan & Martin, 2001).

Generation Ys are being courted by carmakers. Global car manufacturers have launched a number of 2012 cars designed to cater to the members of Generation Y (Brauer, 2011). Advertisers are also busy trying to find innovative ways to reach this group, but they're finding that it's not easy. Generation Ys grew up with computers and other modes of high technology, and they're used to doing several things at once—simultaneously watching TV, texting, and playing games on the computer. As a result, they're quite adept at tuning out ads. Try to reach them through TV ads and they'll channel-surf right past them or hit their TiVo remotes (Bianco, 2004). You can't get to them over the Internet because they know all about pop-up blockers. In one desperate attempt to get their attention, an advertiser paid college students fifty cents to view thirty-second ads on their computers (Baker, 2004). Advertisers keep trying, because Generation Y is big enough to wreck a brand by giving it a cold shoulder.

Consumer Behavior

Why did you buy an Apple computer when your friend bought a Dell PC? What information did you collect before making the decision? What factors did you consider when evaluating alternatives? How did you make your final choice? Were you happy with your decision? To design effective strategies, marketers need to find the answers that consumers give to questions such as these. In other words, they try to improve their understanding of consumer behavior—the decision process that individuals go through when purchasing or using products. Next, we'll look at the process that buyers go through in choosing one product over another. Then, we'll explore some factors that influence consumers' behavior.

The Buying Process

Generally speaking, buyers run through a series of steps in deciding whether to purchase a particular product. Some purchases are made without much thought. You probably don't think much, for example, about the brand of gasoline you put in your car; you just stop at the most convenient place. Other purchases, however, require considerable thought. For example, you probably spent a lot of time deciding which college to attend. Let's revisit that decision as a means of examining the five steps that are involved in the consumer buying process and that are summarized in Figure 9.17: **The Buying Process"**: *need recognition, information search, evaluation, purchase,* and *postpurchase evaluation.*
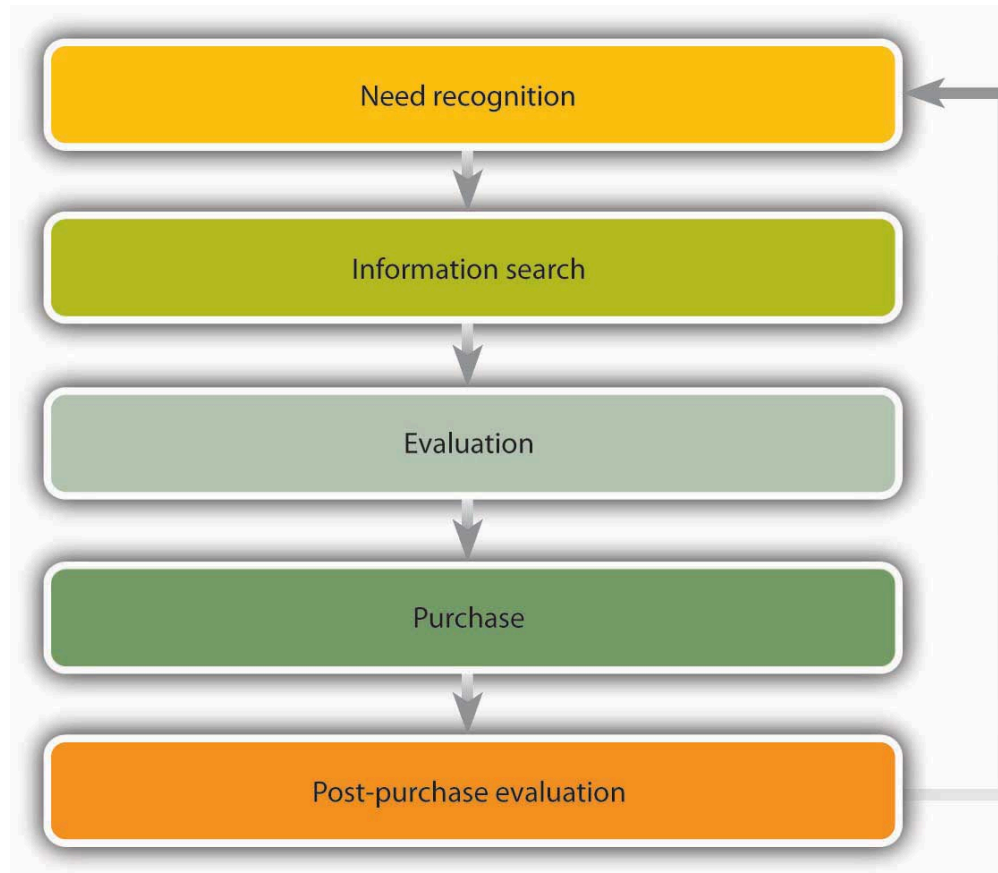

Figure 9.17: The Buying Process

1. *Need recognition.* The process began when you recognized a need to go to college. Perhaps you wanted to prepare for a particular career, to become better educated, or to postpone going to work full time. Maybe your parents insisted.
2. *Information search.* Once you recognized the need to go to college, you probably started gathering information about colleges. You may have gone online and studied the Web sites posted by a few schools. Perhaps you attended college fairs or spoke with your high school guidance counselor. You probably talked with friends about your options. Once you let colleges know that you were interested, admissions departments likely sent you tons of information.
3. *Evaluation.* At this point, you studied the information you'd gathered. First, you probably decided what you wanted from a college. Perhaps price was your number-one criterion, or maybe distance from home. Maybe size was important, or reputation or available majors. Maybe it was the quality of the football team or the male-to-female

ratio.

4. *Purchase*. Ultimately you made a "purchase" decision. In so doing, you focused on what was most important to you. Naturally, you could choose only among schools that had accepted you.
5. *Postpurchase evaluation*. The buying process didn't end when you selected a school. It continues today, while you're using the "product" you purchased. How many times have you rethought your decision? Are you happy with it? Would you make the same choice again?

Understanding the buying process of potential students is crucial to college administrators in developing marketing strategies to attract qualified "buyers." They'd certainly like to know what information you found useful, which factors most influenced your decision, and how you made your final choice. They'll also want to know whether you're happy with your choice. This is the kind of information that colleges are seeking when they solicit feedback, both from students who chose their schools and from those who didn't.

Influences on Buying Behavior

Did you ever buy something you knew you shouldn't buy but just couldn't help yourself–something you simply wanted? Maybe it was a spring-break trip to the Bahamas that you really couldn't afford. Objectively, you may have made a bad decision, but not all decisions are made on a purely objective basis. *Psychological* and *social influences* come into play. Let's take a closer look at each of these factors.

Psychological Influences

Under this category, we can identify at least five variables:

1. *Motivation*. The internal process that causes you to seek certain goals.
2. *Perception*. The way you select, organize, and interpret information.
3. *Learning*. Knowledge gained through experience and study.
4. *Attitudes*. Your predisposition to respond in particular ways because of learned values and beliefs.
5. *Personality*. The collection of attributes that characterize an individual.

Social Influences

Here, we find four factors:

1. *Family*.
2. *Reference groups*. Friends or other people with whom you identify.
3. *Economic or social status*.
4. *Culture*. Your set of accepted values.

It shouldn't be surprising that marketers are keenly interested in the effect of all these influences on your buying decisions. For instance, suppose the travel agency that sold you your spring-break getaway found that you bought the

package because you viewed it as a reward for studying hard and doing well academically. In that case, it might promote student summer-travel programs as rewards for a hard year's work at school.

Exercises

1. Shifts in the external marketing environment often necessitate changes in a company's marketing plans. All companies are affected by external factors, but certain factors can have a stronger influence on particular products. Which of these five types of external factors—political/regulatory, economic, competitive, technological, social/cultural—would have the greatest impact on each of the following products: a Toll Brothers home, P&G Tide laundry detergent, Apple iPod, Pfizer heart medicine, and Gap jeans. In matching products with external factors, apply each factor only once. Be sure to explain exactly how a given factor might affect product sales.

2. Experts have ascribed a number of attributes to Generation Y—people born between 1976 and 2001. On a scale of 1 to 10 (with 10 being the highest), indicate the extent to which each of the following attributes applies to you:

Attribute	To No Extent					To a Great Extent				
You're committed to integrity and honesty	1	2	3	4	5	6	7	8	9	10
You're family oriented and close to your parents	1	2	3	4	5	6	7	8	9	10
You're accepting of differences among people	1	2	3	4	5	6	7	8	9	10
You're upbeat and optimistic about the future	1	2	3	4	5	6	7	8	9	10
You're education focused	1	2	3	4	5	6	7	8	9	10
You're independent	1	2	3	4	5	6	7	8	9	10
You're goal oriented	1	2	3	4	5	6	7	8	9	10
You're fairly good at coping	1	2	3	4	5	6	7	8	9	10

9.10 Careers in Marketing

The field of marketing is extensive, and so are the opportunities for someone graduating with a marketing degree. While one person may seek out the excitement of an advertising agency that serves multiple clients, another might prefer to focus on brand management at a single organization. For someone else, working as a buyer for a retail chain is appealing. A few people might want to get into marketing research. Others might have an aptitude for supply chain management or *logistics management*, the aspect of supply chain management that focuses on the flow of products between suppliers and customers. Many people are attracted to sales positions because of the potential financial rewards. Let's look more closely at a few of your options.

Advertising

If you're interested in advertising, you'll probably start out at an **advertising agency**—a marketing consulting firm that develops and executes promotional campaigns for clients. Professionals work on either the "creative" side (developing ads and other campaign materials) or the business side (acting as liaisons between the firm and its clients). If you're new, you'll probably begin as an assistant and work your way up. You might, for example, start as an assistant copywriter, helping to develop advertising messages. Or you could assist an account coordinator, helping in the management of accounts, including the planning and implementation of marketing campaigns.

Brand and Product Management

Brand and product managers are responsible for all aspects of the development and marketing of assigned products. They oversee the marketing program, including marketing research, pricing, distribution, and promotion. They track and analyze sales, gather feedback from customers, and assess the competition. You'd probably join the company as a brand assistant assigned to a more senior-level manager. After a few years, you may be promoted to assistant brand manager and, eventually, to brand manager. At this point, you'd be given responsibility for your own brand or product.

Marketing Research

Marketing researchers meet with company managers to determine their information needs. Then they gather and analyze relevant data, write reports, and present their findings and recommendations. If you want to get into this field, you'll need to acquire some skills in disciplines outside marketing, including statistics, research methods, and psychology. You'll start out as an assistant, but you may advance comparatively quickly.

Supply Chain and Logistics Management

Effective supply chain management is vital to success in today's business environment. Those who start their careers in supply chain management typically work in one of the following areas: purchasing and supply management, transportation and logistics, operations management, or inventory management and control. If this field appeals to you, you'll need to take courses in several disciplines: management, marketing, operations management, and accounting. If you want to specialize in logistics management, you'll be happy to know that many organizations–manufacturers, wholesalers, retailers, service providers, and transportation carriers–are looking for people interested in physical distribution. If you want to go into this field, you'll need strong quantitative skills in addition to a background in business with a specialization in marketing.

Retailing

Retailing offers all sorts of options, such as merchandise buying and store management. As a buyer, you'd select and buy merchandise for a department, a store, or maybe even an entire chain. Store managers display merchandise, supervise personnel, and handle day-to-day operations. Graduates looking for jobs in both areas generally start as trainees and work their way up.

Sales

Many marketing graduates begin their careers in sales positions, often for service organizations, such as insurance, real estate, and financial-services companies. Others are employed in the wholesale and retail trades or enter the manufacturing sector, selling anything from industrial goods to pharmaceuticals. To succeed in sales, you need a thorough understanding of customers' needs and an extensive knowledge of your product. You should also be able to communicate well, and you'll need strong interpersonal skills. Bear in mind that experience in sales is excellent preparation for almost any position in business.

Key Takeaways

- The field of marketing is extensive, and so are the opportunities for someone graduating with a marketing degree.
- A few of the options available include advertising, brand and product management, marketing research, supply chain and logistics management, retailing, and sales.

Exercise

Do you find a career in marketing interesting? Why or why not? Which of the following marketing career options are most appealing to you–advertising, brand and product management, marketing research, supply chain and logistics management, retailing, or sales? Why?

9.11 Cases and Problems

The Economics of Online Annoyance

You've just accessed a Web page and begun searching for the information you want to retrieve. Suddenly the page is plastered from top to bottom with *banner ads*. Some pop up, some float across the screen, and in some, animated figures dance and prance to inane music. As a user of the Internet, feel free to be annoyed. As a student of business, however, you should stop and ask yourself a few questions: Where do banner ads come from? Who stands to profit from them?

To get a handle on these questions, go to the How Stuff Works Web site (http://computer.howstuffworks.com/web-advertising.htm) and read the article "How Web Advertising Works," by Marshall Brain. When you've finished, answer the following questions *from the viewpoint of a company advertising on the Web*:

1. What are the advantages and disadvantages of banner ads? Why are they less popular with advertisers today than they were about ten years ago?
2. What alternative forms of Web advertising are more common today? (For each of these alternative forms, describe the type of ad, explain how it's more effective than banner advertising, and list any disadvantages.)
3. Why are there so many ads on the Web? Is it easy to make money selling ads on the Web? Why, or why not?
4. Assume that you're in charge of Web advertising for a company that sells cell-phone ring tones. On which sites would you place your ads and what type of ads would you use? Why?

Pushing Cigarettes Overseas

A senior official of the United Nation's World Health Organization (WHO) claims that the marketing campaigns of international tobacco companies are targeting half a billion young people in the Asia Pacific region by linking cigarette smoking to glamorous and attractive lifestyles. WHO accuses tobacco companies of "falsely associating use of their products with desirable qualities such as glamour, energy and sex appeal, as well as exciting outdoor activities and adventure" (Agence France Presse, 2008). WHO officials have expressed concern that young females are a major focus of these campaigns.

The organization called on policymakers to support a total ban on tobacco advertising saying that "the bombardment of messages through billboards, newspapers, magazines, radio and television ads, as well as sports and fashion sponsorships and other ploys, are meant to deceive young people into trying their first stick" (Associated Press, 2008). WHO stresses the need for a total ban on advertising as partial bans let tobacco companies switch from one marketing scheme to another.

WHO officials believe that extensive tobacco advertising gives young people the false impression that smoking is normal and diminishes their ability to comprehend that it can kill. Representatives of the organization assert that the tobacco industry is taking advantage of young people's vulnerability to advertising.

Instructions: Read the following articles and provide your opinion on the questions that follow:

- Agence France Presse (AFP), "WHO: Half a Billion Young Asians at Risk from Tobacco Addiction," May 30, 2008, http://afp.google.com/article/ALeqM5hfIqvMVfuC5AIdasEdZ20BsmiDfQ.

Provide your opinion on the following :

- U.S. laws prohibit advertising by the tobacco companies. Should developing countries in which cigarette smoking is promoted by the international tobacco companies follow suit—should they also ban tobacco advertising?
- Are U.S. companies that engage in these advertising practices acting unethically? Why or why not?
- Should international policymakers support a total ban on tobacco advertising? Why or why not?
- If tobacco advertising was banned globally, what would be the response of the international tobacco companies?

The Global View (AACSB)

Made in China—Why Not Sell in China?

One of Wow Wee's recent robots, Roboscooper, is manufactured in China. Why shouldn't it sell the product in China? In fact, the company has introduced its popular robot to the Chinese market through a Toys "R" Us store in Hong Kong. Expanding into other parts of China, however, will require a well-crafted, well-executed marketing plan. You're director of marketing for Wow Wee, and you've been asked to put together a plan to expand sales of Roboscooper in China. You can be introduced to Roboscooper by going to the product section of Wow Wee's site: http://www.wowwee.com/en/products/toys/robots/robotics/roboscooper. To get some background on selling toys in China, go to the Voice Of America Times Web site (https://www.voanews.com/archive/china-could-soon-become-booming-toy-market) and read the article "China Could Soon Become Booming Toy Market." Then, draw up a brief marketing plan for increasing sales in China, being sure to include all the following components:

- Profile of your target market (gender, age, income level, geographic location, interests, and so forth)
- Proposed changes to the company's current marketing mix: modifications to product design, pricing, distribution, and promotional strategies

- Estimated sales in units for each of the next five years, including a list of the factors that you considered in arriving at your projections
- Discussion of threats and opportunities posed by expansion in the Chinese market

Agence France Presse, "WHO: Half a Billion Young Asians at Risk from Tobacco Addiction," May 30, 2008, http://afp.google.com/article/ALeqM5hfIqvMVfuC5AIdasEdZ20BsmiDfQ (accessed January 22, 2012).

PRODUCT DESIGN AND DEVELOPMENT

Learning Objectives

1. Define *product*.
2. Describe the four major categories of product developments: new-to-the-market, new-to-the-company, improvement of existing product, and extension of product line.
3. Explain where product ideas come from.
4. Explain how an idea turns into a business opportunity.
5. Describe the four types of utility provided by a product: time, place, ownership, and form.
6. Explain how to research an industry.
7. Forecast demand for a product.
8. Learn how to use breakeven analysis to estimate the number of sales units at which net income is zero.
9. Describe the process of developing a product that meets customer needs.
10. Learn how to protect your product idea by applying for a patent.

10.1 Riding the Crest of Innovation

Have you ever wanted to go surfing but couldn't find a body of water with decent waves? You no longer have a problem: the PowerSki Jetboard makes its own waves. This innovative product combines the ease of waterskiing with the excitement of surfing. A high-tech surfboard with a forty-five-horsepower, forty-five-pound watercraft engine, the PowerSki Jetboard has the power of a small motorcycle. Experienced surfers use it to get to the top of rising ocean waves, but if you're just a weekend water-sports enthusiast, you can get your adrenaline going by skimming across the surface of a local lake at forty miles an hour. All you have to do is submerge the tail of the board, slide across on your belly, and stand up (with the help of a flexible pole). To innocent bystanders, you'll look like a very fast water-skier without a boat.

To see the PowerSki Jetboard in action, visit the company's Web site at http://www.powerski.com. Watch the streaming videos that demonstrate what the Jetboard can do.

Where do product ideas like the PowerSki Jetboard come from? How do people create products that meet customer needs? How are *ideas* developed and turned into actual *products*? How do you forecast demand for a product? How do you protect your product ideas? These are some of the questions that we'll address in this chapter.

10.2 What Is a Product?

Basically, a <mark>product</mark> is something that can be marketed to customers because it provides them with a benefit and satisfies a need. It can be a physical *good*, such as the PowerSki Jetboard, or a *service*, such as a haircut or a taxi ride. The distinction between goods and services isn't always clear-cut. Say, for example, that a company hires a professional to provide an in-house executive training program on "netiquette" (e-mail etiquette). Off the top of our heads, most of us would say that the company is buying a service. What if the program is offered online? We'd probably still argue that the product is a service. But what if the company buys training materials that the trainer furnishes on DVD? Is the customer still buying a service? Probably not: we'd have to say that when it buys the DVD, the company is buying a tangible good. In this case, the product that satisfies the customer's need has both a tangible component (the training materials on DVD) and an intangible component (the educational activities performed by the seller). Not surprisingly, many products have both tangible and intangible components. If, for example, you buy a Hewlett-Packard computer, you get not only the computer (a tangible good) but certain promises to answer any technical questions that you might have and certain guarantees to fix your computer if it breaks within a specified time period (intangible services).

Types of Product Developments

New product developments can be grouped into four major categories: new-to-the-company, improvement of existing product, extension of product line, and new-to-the-market.

Figure 10.1. Holiday decorating kits have extended Just Born's product line beyond Peeps.

For examples of the first three types of new product developments, we'll take a look at Just Born. The company is known for its famous "Marshmallow Peeps," and consequently its management is very interested in marshmallows. It conducted research that revealed that families use marshmallows in lots of ways, including crafts and decorating. This led Just Born to develop an Easter decorating kit that used Peeps marshmallows. It was such a hit that the company followed by creating decorating kits for Halloween and the Christmas season. Because similar products are made by other companies, the decorating kits are not "new to the market" but are "new to the company." Now, let's look at another product development involving Just Born's also famous Mike & Ike's. The marketing people at Just Born discovered that teenagers prefer to buy candies that come in pouches (which fit into their pants pockets) rather than in small boxes. In

response, the company reduced the piece size, added some new ingredients, and put the Mike & Ike's in pouches. This "improvement in an existing product" resulted in a 20 percent annual sales jump for Mike & Ike's. Our last look at Just Born demonstrates an approach used by the company to "extend its existing product line." Most of us like chocolate and most of us also like marshmallow, so how about putting them together? This is just what Just Born did—the company extended its Peeps product line to include "Peeps in a chocolate egg." Consumers loved the combination, and its success prompted the company to extend its product line again and launch a chocolate crispy version for Easter.

New-to-the-Market Products

The PowerSki Jetboard is a "new-to-the-market product." Before it was invented, no comparable product existed. Launching a new-to-the-market product is very risky, and only about 10 percent of products created fall into this category. On a positive note, introducing a new product to the market can be very profitable, because the product often enjoys a temporary monopolistic position.

Entreprenerial Start-Ups

Inventors of new-to-the-market products often form entrepreneurial start-ups to refine their product idea and bring it to market. This was the path taken by Bob Montgomery, inventor of the PowerSki Jetboard. As is typical of entrepreneurial start-ups, the company that Montgomery founded has these characteristics (Coulter, 2001):

- It's *characterized by innovative products and/or practices*. Before the PowerSki Jetboard was invented, no comparable product existed.
- Its *goals include profitability and growth*. Because the patented Jetboard enjoys a temporary monopolistic position, PowerSki potentially could be very profitable.
- *It focuses on new opportunities*. Bob Montgomery dreamed of creating the first motorized surfboard. This dream began when he and a few of his surfer friends (all around age twelve) missed a wave because it was too far down the beach for them to catch. He imagined that if he was on a motorized surfboard (instead of an ordinary one that you had to paddle), he would have been able to catch that wave. His dream became the mission of his company: "PowerSki International Corp. was founded to deliver the patented PowerSki Jetboard, the world's only motorized surfboard, and its engine technology to the world market. It's PowerSki's goal to bring the experience of surfing to everyone on lakes, rivers, seas, and the ocean. 'Now everybody has an ocean, and can ride an endless wave'" (PowerSki's Web site, 2011).
- *Its owners are willing to take risks. Anybody* who starts *any* business is taking a risk of some kind. The key to *entrepreneurial* risk is related to the idea of innovation: as Woody Allen once put it, "If you're not failing every now and again, it's a sign you're not doing anything very innovative" (Brainy Quote, 2008).

How to Take a Calculated Risk

As Montgomery learned, the introduction of an *innovative* product to the market is more unpredictable, and thus more risky, than the introduction of a market-tested product. Starting up a store to sell an improved version of an existing surfboard entails one level of risk; starting up a business to market the first motorized surfboard entails quite another. Even though the introduction of new-to-the-market products are more risky, some of this risk can be avoided.

What if, for example, Montgomery had brought the Jetboard to market only to discover that many of the buyers in his target market—water-sports enthusiasts—couldn't easily maneuver the Jetboard? We could then say that he took an unnecessarily risky step in bringing his product to market, but we could also say that he simply attempted to market his product without adequate information. Surely a little research would have alerted Montgomery to the probable consequences of his decision to go to market when he did and with his product in its current state of development.

A couple of final words, therefore, about introducing an entirely new product to the market. First, this type of product introduction is about carefully *calculated* risks, not *unnecessary* risks. Second, though little is certain in the entrepreneurial world, most decision making can be improved with input from one or both of two sources:

1. Information gathered from research
2. Knowledge gained from personal experience

Again, you can't be *certain* about any results, but remember that *uncertainty* reflects merely the lack of complete knowledge or information; thus, the more knowledge and information that you can bring to bear on a situation, the less uncertain—and the less risky—the decision becomes (Coulter, 2001). In short, always do your homework, and if you're new to entrepreneurship or to your market, make it a point to work with people who know from experience what they're talking about.

Key Takeaways

- A **product** is something that can be marketed to customers because it provides them with a benefit and satisfies a need. Products can be goods or services or a combination of both.
- A "new-to-the-company product" is a good or a service that is new to the company but has been sold by a competitor in the past—for example, Peeps marshmallow Easter decorating kits.
- An "improvement in an existing product" is an enhancement of a product already on the market—for example, a change of ingredients and packaging for Mike & Ike's.
- An "extension to an existing product line" is a new product developed as a variation of an already existing product—for example, Peeps chocolate eggs.
- A "new-to-the-market product" is a good or a service that has not been available to consumers or manufacturers in the past—for example, the PowerSki Jetboard.

- Four characteristics of the entrepreneurial start-up are:

  1. It's characterized by innovative products and/or practices.
  2. Its goals include profitability and growth.
  3. It focuses on new opportunities.
  4. Its owners are willing to take risks.

- Entrepreneurship is about carefully *calculated* risks, not *unnecessary* risks. Most entrepreneurial decision making can be improved with input from one or both of two sources:

  1. Information gathered from research
  2. Knowledge gained from personal experience

10.3 Where Do Product Ideas Come From?

For some people, coming up with a great product idea is a gratifying adventure. For most, however, it's a daunting task. The key to coming up with a product idea is identifying something that customers want—or, perhaps more important, filling an unmet customer need. In coming up with a product idea, ask not "what do I want to sell?" but rather "what does the customer want to buy?" (Thurm, 2005) With this piece of advice in mind, let's get back to the task of coming up with a product idea. Nobel Prize–winning chemist Linus Pauling suggested that "the best way to have a good idea is to have lots of ideas," and though this notion might seem a little whimsical at first, it actually makes a lot of sense, especially if you're trying to be innovative in the entrepreneurial sense. Every year, for example, companies launch about thirty thousand new food, beverage, and beauty products, and up to 90 percent fail within a year (Catalina, 2011; Kotler & Armstrong, 2008). You might need ten good ideas just to have one that stands a chance.

Purple Cow Ideas

So where do these ideas come from? Product ideas can originate from almost anywhere. How many times have you looked at a product that just hit the market and said, "I could have thought of that"? Just about anybody can come up with a product *idea*; basically, you just need a little imagination. Success is more likely to result from a truly remarkable product—something that grabs the attention of consumers. Entrepreneur and marketing consultant Seth Godin refers to truly remarkable products as "purple cows" (Godin, 2003). He came up with the term while driving through the countryside one day. As he drove along, his interest was attracted by the hundreds of cows dotting the countryside. After a while, however, he started to ignore the cows because looking at them had become tedious. For one thing, they were all brown, and it occurred to him that a glimpse of a *purple* cow would be worth writing home about. People would tend to remember a purple cow; in fact, they might even want one.

Who thinks up "purple cow" ideas? Where do the truly remarkable business ideas come from? As we pointed out in an earlier chapter, entrepreneurs and small business owners are a rich source of new product ideas (according to the Small Business Administration, 55 percent of all new product innovations come from small businesses). Take Dean Kamen, inventor of the Segway Human Transporter, a battery-operated vehicle that responds to the rider's movements: lean forward and you can go straight ahead at 12.5 miles per hour; to stop, just tilt backward. This revolutionary product is only one of Kamen's many remarkable business ideas. He invented his first product—a wearable infusion pump for administering chemotherapy and other drugs—while he was still a college undergraduate (Segway, 2011; Finder, 2006). Jacob Dunnack is also getting an early entrepreneurial start. At *age six*, Jacob became frustrated one day when he took his baseball bat to his grandmother's house but forgot to take some baseballs as well. His solution? A hollow baseball bat that holds baseballs. Dunnack's invention, now called the JD Batball, was quickly developed and sold in stores such as Toys "R" Us (The Great Idea Finder, 2011; SolidWorks Express, 2011).

Why do so many entrepreneurs and small businesspeople come up with so many purple cows? For one thing, entrepreneurs are often creative people; moreover, they're often willing to take risks. This is certainly true of Bob Montgomery, inventor of the PowerSki Jetboard (which undoubtedly qualifies as a purple cow). With more than twenty years' experience in the water-sports industry and considerable knowledge of the personal-watercraft market, Montgomery finally decided to follow his long-cherished dream of creating an entirely new and conceptually different product—one that would offer users ease of operations, high performance, speed, and quality. His creative efforts have earned him the prestigious *Popular Science* "Best of What's New" award (PowerSki Jet boards, 2011).

To remain competitive, medium and large organizations alike must also identify product development opportunities. Many companies actively solicit product ideas from people inside the organization, including marketing, sales, research, and manufacturing personnel, and some even establish internal "entrepreneurial" units. Others seek product ideas from

outside the organization by talking to customers and paying attention to what the competition is doing. In addition to looking out for new product ideas, most companies constantly seek out ways to make incremental improvements in existing products by adding features that will broaden their consumer appeal. As you can see from [Figure 10.2 "Sales from New Products"](), the market leaders in most industries are the firms that are most successful at developing new products.
Figure 10.2: Sales from New Products

A novel approach to generating new-to-the-world product ideas is hiring "creativity" consultants. One of the best is Doug Hall, who's been called "America's Number 1 Idea Guru." At a Cincinnati idea factory called Eureka!Ranch, Hall and other members of his consulting firm specialize in helping corporate executives get their creative juices flowing (Eureka!Ranch, 2011). Hall's job is getting people to invent products that make a real difference to consumers, and his strategies are designed to help corporate clients become more innovative—to jump-start their brains. As Hall puts it, "You have to swing to hit home runs" (CNN Money, 1997). Eureka!Ranch's client list includes Disney, Kellogg, Johnson & Johnson, and Procter & Gamble, as well as a number of budding entrepreneurs. Hall boasts that the average home uses eighteen goods or services that the Ranch helped shape, and if he's right, you yourself have probably benefited from one of the company's idea-generating sessions (Eureka!Ranch, 2011).

10.4 Identifying Business Opportunities

An idea turns into a business opportunity when it has commercial potential—when you can make money by selling the product. But needless to say, not all ideas generate business opportunities. Consider these products that made the list of the "Top 25 Biggest Product Flops of All Time" (WalletPop, 2011):

- *Bic underwear*. When you think of Bic you think of inexpensive pens and disposable razors and lighters. But disposable underwear? Women didn't find the idea of buying intimate attire from a pen manufacturer appealing, and the disposability factor was just plain weird.

Figure 10.3. There might be many creative ways for Bic to extend its product lines, aside from the disposable underwear idea. Can you think of a product idea that might be more successful for Bic?

- *Harley Davidson perfume*. Even its loyal fans found the idea of Harley-Davidson perfume peculiar (and they weren't terribly fond of the Harley-Davidson aftershave, either). Perhaps they were afraid they would end up smelling like a motorcycle.
- *Bottled water for pets*. OK, so people love their pets and cater to them, but does it really make sense to serve Thirsty Cat! and Thirsty Dog! bottled water to your four-legged friends? Even though the water came in tantalizing flavors such as Crispy Beef and Tangy Fish, it never caught on. Do you wonder why?
- *Colgate kitchen entrees*. Colgate's entrance into food products wasn't well received. Maybe the company believed customers would buy into the idea of eating one of its prepared meals and then brushing their teeth with Colgate toothpaste. For most of us, the name Colgate doesn't get our taste buds tingling.

Utility

Remember: being in business is not about you—it's about the customer. Successful businesspeople don't ask themselves "What do I want to sell?" but rather "What does the customer want to buy?" *Customers buy products to fill unmet needs and because they expect to derive some value or utility from them.* People don't buy Alka-Seltzer because they like the taste or even because the price is right: they buy it because it makes their indigestion go away. They don't shop at

Amazon.com because the Web site is entertaining: they shop there because they want their purchases delivered quickly. The realization that this kind of service would meet customer needs made Amazon.com a genuine business opportunity.

Products provide customers with four types of utility or benefit:

1. **Time utility**. The value to a consumer of having a good or a service available at a convenient time. A concessionaire selling bottled water at a summer concert is making liquid refreshment available when it's needed.
2. **Place utility**. The value to a consumer of having a product available in a convenient location. A street vendor selling hotdogs outside an office building is making fast food available where it's needed.
3. **Ownership utility**. Value created by transferring a product's ownership. A real estate agent helping a young couple buy a home is transferring ownership from someone who doesn't need it to someone who does.
4. **Form utility**. The value to consumers from changing the composition of a product. A company that makes apparel is turning raw material (fabric) into a form (clothing) that people need. A company that produces liquid detergent, rather than powdered detergent, is adding form utility for some consumers.

How can you decide whether an idea provides utility and has the potential to become a business opportunity? You should start by asking yourself the questions in Figure 10.4: if you can't come up with good answers to these questions, you probably don't have a highly promising product. On the other hand, if you conclude that you have a potential product for which people would pay money, you're ready to take the next step: analyze the market to see whether you should go forward with the development of the product.

Figure 10.4: When Is an Idea a Business Opportunity?

- An idea turns into a business opportunity when it has commercial potential—when you can make money by selling the product.
- Time utility provides value by having a product available at a convenient time.
- Place utility provides value by having a product available in a convenient location.
- Ownership utility provides value by transferring a product's ownership.
- Form utility provides value by changing the composition of a product.

Exercise

Provide two examples of each of the four types of utility: time, place, ownership, and form. Don't use the examples given in the book.

10.5 Understand Your Industry

Before you invest a lot of time and money to develop a new product, you need to understand the industry in which it's going to be sold. As inventor of the PowerSki Jetboard, Bob Montgomery had the advantage of being quite familiar with the industry that he proposed to enter. With more than twenty years' experience in the water-sports and personal-watercraft industry, he felt at home in this business environment. He knew who his potential customers were, and he knew who his competitors were. He had experience in marketing similar products, and he was familiar with industry regulations.

Most people don't have the same head start as Montgomery. So, how does the average would-be businessperson learn about an industry? What should you want to know about it? Let's tackle the first question first.

Evaluating Your Industry

Before you can study an industry, you need to know what industry to study. An **industry** is a group of related businesses: they do similar things and they compete with each other. In the footwear industry, for example, firms make footwear, sell it, or both. Players in the industry include Nike and Adidas, both of which specialize in athletic footwear; but the industry is also sprinkled with companies like Candies (which sells young women's fashion footwear) and Florsheim (quality men's dress shoes).

Let's say that you want to know something about the footwear industry because your potential purple cow is a line of jogging shoes designed specifically for older people (those over sixty-five) who live in the Southeast. You'd certainly need a broad understanding of the footwear industry, but would general knowledge be enough? Wouldn't you feel more comfortable about pursuing your idea if you could focus on a smaller segment of the industry—namely, the segment that specializes in products similar to the one you plan to sell? Here's a method that will help you narrow your focus (Allen, 2001).

Segmenting Your Market

Begin with the overall industry—in this case, the footwear industry. Within this industry, there are several groups of customers, each of which is a ==market==. You're interested in the *consumer market*—retail customers. But this, too, is a fairly broad market; it includes everybody who buys shoes at retail. Your next step, then, is to subdivide this market into smaller ==market segments==—groups of potential customers with common characteristics that influence their buying decisions. You can use a variety of standard characteristics, including *demographics* (age, sex, income), *geography* (region, climate, city size), and *psychographics* (lifestyle, activities, interests). The segment you're interested in consists of older people (a demographic variable) living in the Southeast (a geographic variable) who jog (a psychographic variable). Within this market segment, you might want to subdivide further and find a ==niche==—an unmet need. Your niche might turn out to be providing high-quality jogging shoes to active adults living in retirement communities in Florida.

The goal of this process is to identify progressively narrower sectors of a given industry. You need to become familiar with the whole industry—not only with the footwear industry but also with the retail market for jogging shoes designed for older people. You also need to understand your niche market, which consists of older people who live active lives in Florida.

Now that we know something about the process of focusing in on an industry, let's look at another example. Suppose

that your product idea is offering dedicated cruises for college students. You'd begin by looking at the recreational-activities *industry*. Your *market* would be people who travel for leisure, and within that market, you'd focus on the *market segment* consisting of people who take cruises. Your *niche* would be college students who want to take cruises.

Assessing Your Competition

Now that you've identified your industry and its various sectors, you're ready to consider such questions as the following (Allen, 2001):

- Is the industry growing or contracting? Are sales revenues increasing or decreasing?
- Who are your major competitors? How does your product differ from those of your competitors?
- What opportunities exist in the industry? What threats?
- Has the industry undergone recent changes? Where is it headed?
- How important is technology to the industry? Has it brought about changes?
- Is the industry mature, or are new companies successfully entering it?
- Do companies in the industry make reasonable profits?

Where do you find answers to questions such as these? A good place to start is by studying your competitors: Who are their customers? What products do they sell? How do they price their products? How do they market them? How do they treat their customers? Do they seem to be operating successfully? Observe their operations and buy their goods and services. Search for published information on your competitors and the industry. For example, there's a great deal of information about companies on the Internet, particularly in company Web sites. The Internet is also a good source of industry information. Look for the site posted by the industry trade association. Find out whether it publishes a magazine or other materials. Talk with people in the industry—business owners, managers, suppliers; these people are usually experts. And talk with customers. What do they like or dislike about the products that are currently available? What benefits are they looking for? What benefits are they getting?

Key Takeaways

- Before developing a new product, you need to understand the industry in which it will be sold.
- An **industry** is a group of related businesses that do similar things and compete with each other.
- To research an industry, you begin by studying the overall industry and then progressively narrow your search by looking at smaller sectors of the industry, including **markets** (or groups of customers) and **market segments** (smaller groups of customers with common characteristics that influence their buying decisions).
- Within a market segment, you might want to subdivide further to isolate a **niche**, or unmet need.

10.6 Forecasting Demand

It goes without saying, but we'll say it anyway: without enough customers, your business will go nowhere. So, before you delve into the complex, expensive world of developing and marketing a new product, ask yourself questions like those in Figure 10.5: When to Develop and Market a New Product. When Bob Montgomery asked himself these questions, he concluded that he had two groups of customers for the PowerSki Jetboard: (1) the dealerships that would sell the product and (2) the water-sports enthusiasts who would buy and use it. His job, therefore, was to design a product that dealers would want to sell and enthusiasts would buy. When he was confident that he could satisfy these criteria, he moved forward with his plans to develop the PowerSki Jetboard.
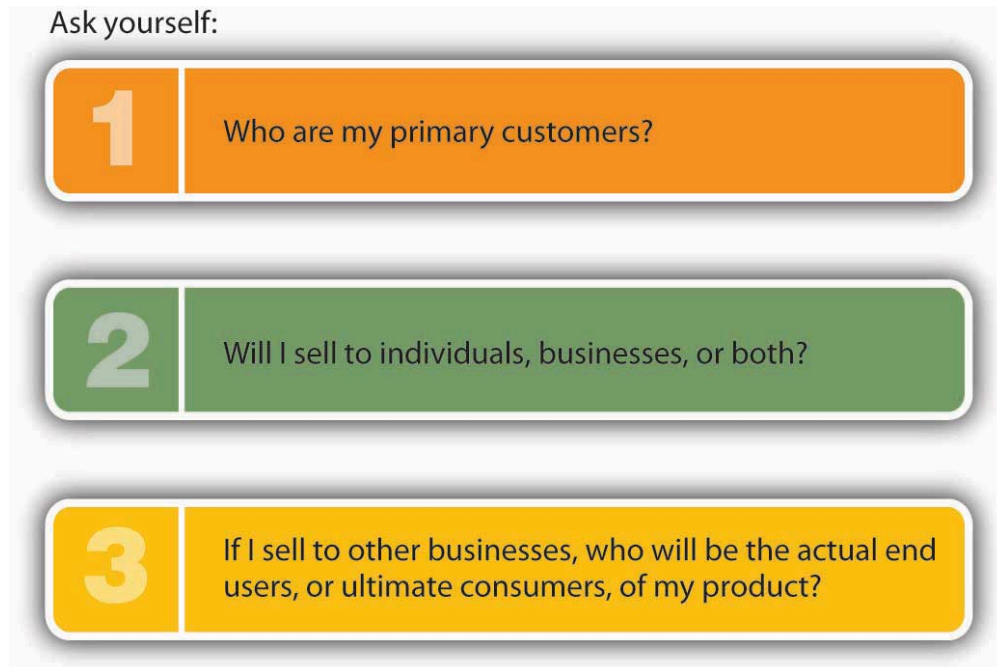

Figure 10.5: When to Develop and Market a New Product

After you've identified a group of potential customers, your next step is finding out as much as you can about what they think of your product idea. Remember: because your ultimate goal is to roll out a product that satisfies customer needs, you need to know ahead of time what your potential customers want. Precisely what are their unmet needs? Ask them questions such as these (Ulrich & Eppinger, 2000; Allen, 2001):

- What do you like about this product idea? What don't you like?
- What improvements would you make?
- What benefits would you get from it?
- Would you buy it? Why, or why not?
- What would it take for you to buy it?

Before making a substantial investment in the development of a product, you need to ask yourself yet another question: are there enough customers willing to buy my product at a price that will allow me to make a profit? Answering this question means performing one of the hardest tasks in business: forecasting demand for your proposed product. There are several possible approaches to this task that can be used alone or in combination.

People in Similar Businesses

Though some businesspeople are reluctant to share proprietary information, such as sales volume, others are willing to help out individuals starting new businesses or launching new products. Talking to people in your prospective industry (or one that's similar) can be especially helpful if your proposed product is a service. Say, for example, that you plan to open a pizza parlor with a soap opera theme: customers will be able to eat pizza while watching reruns of their favorite soap operas on personal TV/DVD sets. If you visited a few local restaurants and asked owners how many customers they served every day, you'd probably learn enough to estimate the number of pizzas that you'd serve during your first year. If the owners weren't cooperative, you could just hang out and make an informal count of the customers.

Potential Customers

You can also learn a lot by talking with potential customers. Ask them how often they buy products similar to the one you want to launch. Where do they buy them and in what quantity? What factors affect demand for them? If you were contemplating a frozen yogurt store in Michigan, it wouldn't hurt to ask customers coming out of a bakery whether they'd buy frozen yogurt in the winter.

Published Industry Data

To get some idea of the total market for products like the one you want to launch, you might begin by examining pertinent industry research. For example, to estimate demand for jogging shoes among consumers sixty-five and older, you could look at data published on the industry association's website, National Sporting Goods Association (Running USA, 2011; National Sporting Goods Association, 2011). Here you'd find that forty million jogging/running shoes were sold in the United States in 2008 at an average price of $58 per pair. The Web site also reports that the number of athletes who are at least forty and who participate in road events increased by more than 50 percent over a ten year period (USA Track & Field, 2011). To find more specific information—say, the number of joggers older than sixty-five—you could call or e-mail USA Track and Field. You might find this information in an eighty-seven-page statistical study of retail sporting-goods sales published by the National Sporting Goods Association (2011). If you still don't get a useful answer, try contacting organizations that sell industry data. American Sports Data, for instance, provides demographic information on no fewer than twenty-eight fitness activities, including jogging (American Sports Data, 1987). You'd want to ask them for data on the number of joggers older than sixty-five living in Florida. There's a lot of valuable and available industry-related information that you can use to estimate demand for your product.

Now, let's say that your research turns up the fact that there are three million joggers older than sixty-five and that six hundred thousand of them live in Florida, which attracts 20 percent of all people who move when they retire (Zagier, 2003). How do you use this information to estimate the number of jogging shoes that you'll be able to sell during your first year of business? First, you have to estimate your **market share**: your portion of total sales in the older-than-sixty-five jogging shoe market in Florida. Being realistic (but having faith in an excellent product), you estimate that you'll capture 2 percent of the market during your first year. So you do the math: 600,000 pairs of jogging shoes sold in Florida × 0.02 (a 2 percent share of the market) = 12,000, the estimated first-year demand for your proposed product.

Granted, this is just an estimate. But at least it's an educated guess rather than a wild one. You'll still want to talk with people in the industry, as well as potential customers, to hear their views on the demand for your product. Only

then would you use your sales estimate to make financial projections and decide whether your proposed business is financially feasible. We'll discuss this process in a later chapter.

Exercise

Your friends say you make the best pizzas they've ever eaten, and they're constantly encouraging you to set up a pizza business in your city. You have located a small storefront in a busy section of town. It doesn't have space for an eat-in restaurant, but it will allow customers to pick up their pizzas. You will also deliver pizzas. Before you sign a lease and start the business, you need to estimate the number of pizzas you will sell in your first year. At this point you plan to offer pizza in only one size.

Before arriving at an estimate, answer these questions:

1. What factors would you consider in estimating pizza sales?
2. What assumptions will you use in estimating sales (for example, the hours your pizza shop will be open)?
3. Where would you obtain needed information to calculate an estimate?

Then, estimate the number of pizzas you will sell in your first year of operations.

10.7 Breakeven Analysis

Forecasting sales of shoes has started you thinking. Selling twelve thousand pair of shoes the first year you run the business sounds great, but you still need to find an answer to the all-important question: are there enough customers willing to buy my jogging shoes at a price that will allow me to make a profit? Is there some way to figure out the level of sales I would need to avoid *losing* money—to "break even"? Fortunately, an accountant friend of yours informs you that there is. Not surprisingly, it's called ==**breakeven analysis**==, and here's how it works: to break even (have no profit or loss), *total sales revenue must exactly equal all your expenses (both variable and fixed)*. To determine the level of sales at which this will occur, you need to do the following:

1. Determine your total ==**fixed costs**==, which are so called because the total cost doesn't change as the quantity of goods sold changes:

    ◦ Fixed costs = $210,000 salaries + $60,000 rent + $10,000 advertising + $8,000 insurance + 12,000 other fixed costs = $300,000

2. Identify your ==**variable costs**==. These are costs that vary, in total, as the quantity of goods sold changes but that stay constant on a per-unit basis. State variable costs on a per-unit basis:

    ◦ Variable cost per unit = $40 (cost of each pair of shoes) + $5 sales commission = $45

3. Determine your <u>contribution margin per unit</u>: selling price per unit less variable cost per unit:

    ◦ Contribution margin per unit = $80 selling price minus $45 variable cost per unit = $35

4. Calculate your <u>breakeven point in units</u>: fixed costs : contribution margin per unit:

    ◦ Breakeven in units = $300,000 fixed costs : $35 contribution margin per unit = 8,571 units

Your calculation means that if you sell 8,571 pairs of shoes, you will end up with zero profit (or loss) and will exactly break even.

If your sales estimate is realistic (a big "if"), then you should be optimistic about starting the business. All your fixed costs will be covered once you sell 8,571 pairs of shoes. Any sales above that level will be pure profit. So, if you sell your expected level of twelve thousand pairs of shoes, you'll make a profit of $120,015 for the first year. Here's how we calculated that profit:

• 12,000 expected sales level − 8,571 breakeven sales level = 3,429 units × $35 contribution margin per unit = $120,015 first-year profit

As you can see, breakeven analysis is pretty handy. It allows you to determine the level of sales that you must reach to avoid losing money and the profit you'll make if you reach a higher sales goal. Such information will help you plan for your business.

- Breakeven analysis is a method of determining the level of sales at which the company will break even (have no profit or loss).
- The following information is used in calculating the breakeven point: fixed costs, variable costs, and contribution margin per unit.
- Fixed costs are costs that don't change when the amount of goods sold changes. For example, rent is a fixed cost.
- Variable costs are costs that vary, in total, as the quantity of goods sold changes but stay constant on a per-unit basis. For example, sales commissions paid based on unit sales are a variable cost.
- Contribution margin per unit is the excess revenue per unit over the variable cost per unit.
- The breakeven point in units is calculated with this formula: fixed costs divided by contribution margin per unit (selling price per unit less variable cost per unit).

Exercise

For the past ten years, you've worked at a PETCO Salon as a dog groomer. You're thinking of starting your own dog grooming business. You found a place you could rent that's right next to a popular shopping center, and two of your friends (who are also dog groomers) have agreed to work for you. The problem is that you need to borrow money to start the business and your banker has asked for a breakeven analysis. You have prepared the following cost estimates for your first year of operations:

Fixed Costs	
Salaries	$105,000
Rent and utilities	$36,000
Advertising	$2,000
Equipment	$3,000

Variable Cost per Dog	
Shampoo	$2.00
Coat conditioner	$1.50
Pet cologne	$0.75
Dog treats	$1.25
Hair ribbons	$0.50

You went online and researched grooming prices in your area. Based on your review, you have decided to charge $32 for each grooming.

- Part 1:

  - What's the breakeven point in units—how many dogs will you need to groom in the first year to break even?
  - If you and your two employees groomed dogs five days a week, seven hours a day, fifty weeks a year, how many dogs would each of you need to groom each day? Is this realistic given that it takes one hour to groom a dog?

- Part 2:

  - If you raised your grooming fee to $38, how many dogs would you need to groom to break even?
  - At this new price, how many dogs will each of you have to groom each day (assuming, again, that the three of you groom dogs fifty weeks a year, five days a week, seven hours a day)?

- Part 3:

  - Would you start this business?
  - What price would you charge to groom a dog?
  - How could you lower the breakeven point and make the business more profitable?

10.8 Product Development

Like PowerSki, every organization—whether it produces goods or provides services—sees Job 1 as furnishing customers with quality products. The success of a business depends on its ability to identify the unmet needs of consumers and to develop products that meet those needs at a low cost (Ulrich & Eppinger, 2000). In other words, effective product development results in goods and services that can be sold at a profit. In addition, it results in high-quality products that not only satisfy consumer needs but also can be developed in a timely, cost-efficient manner. Accomplishing these goals entails a collaborative effort by individuals from all areas of an organization: operations management (including representatives from engineering, design, and manufacturing), marketing, accounting, and finance. In fact, companies increasingly assign representatives from various functional areas who work together as a **project team** throughout the product development processes. This approach allows individuals with varied backgrounds and experience to provide input as the product is being developed.

Product Development Is a Risky Proposition

Not surprisingly, developing profitable products is difficult, and the success rate is low. On average, for every successful product, a company has twelve failures. At this rate, the firms on the *Fortune* 1000 list waste over $60 billion a year in research and development (Ulwick & Eisenhauer, 2006). There are several reasons why product development is such a risky proposition:

- *Trade-offs*. You might, for instance, be able to make your jogging shoes lighter than your competitors', but if you do, they probably won't wear as well. They could be of higher quality, but that will make them more costly (they might price themselves out of the market).
- *Time pressure*. Developing a product can require hundreds of decisions that must be made quickly and with imperfect information.
- *Economics*. Because developing a product requires a lot of time and money, there's always pressure to make sure that the project not only results in a successful product but also gets it to market at the most opportune time. Failure to be first to market with an otherwise desirable new product can cost a company a great deal of money.

Even so, organizations continue to dedicate immense resources to developing new products. Your supermarket, for example, can choose from about one hundred thousand items to carry on its shelves—including twenty thousand *new* products every year. Unfortunately, the typical supermarket can stock only thirty thousand products (Hannaford, 2006).

The Product Development Process

The **product development process** is a series of activities by which a product idea is transformed into a final product. It can be broken down into the seven steps summarized in Figure 10.6: The Product Development Process.
Figure 10.6: *The Product Development Process*

Evaluate Opportunities and Select the Best Product Idea

If you're starting your first business, you might have only one product idea. But existing organizations often have several ideas for new products, as well as improvements to existing ones. Where do they come from? They can come from individuals within the organization or from outside sources, such as customers. Typically, various ideas are reviewed and evaluated by a team of individuals, who identify the most promising ideas for development. They may rely on a variety of criteria: Does the proposed product fill an unmet need of our customers? Will enough people buy our product to make it commercially successful? Do we have the resources and expertise to make it?

Get Feedback to Refine the Product Concept

From the selected product idea, the team generates an initial **product concept** that describes what the product might look like and how it might work. Members talk both with other people in the organization and with potential buyers to identify customer needs and the benefits that consumers will get from the product. They study the industry in which the product will be sold and investigate competing products. They brainstorm various *product designs*—that is, the specifications for how the product is to be made, what it's to look like, and what performance standards it's to meet.

Based on information gathered through this process, the team will revise the product concept, probably pinpointing several alternative models. Then they'll go back to potential customers and get their feedback on both the basic concept and the various alternatives. Based on this feedback, the team will decide what the product will look like, how it will work, and what features it will have.

Make Sure the Product Performs and Appeals to Consumers

The team then decides how the product will be made, what components it will require, and how it will be assembled. It will decide whether the product should be made in-house or outsourced to other companies. For products to be made in-house, the team determines where parts will be obtained. During this phase, team members are involved in design work to ensure that the product will be appealing, safe, and easy to use and maintain.

Design with Manufacturing in Mind

As a rule, there's more than one way to make any product, and some methods are more expensive than others. During the next phase, therefore, the team focuses its attention on making a high-quality product at the lowest possible cost, working to minimize the number of parts and simplify the components. The goal is to build both quality and efficiency into the manufacturing process.

Build and Test Prototypes

A **prototype** is a physical model of the product. In the next phase, prototypes are produced and tested to make sure that the product meets the customer needs that it's supposed to. The team usually begins with a preliminary prototype from which, based on feedback from potential customers, a more sophisticated model will then be developed. The process

of building and testing prototypes will continue until the team feels comfortable that it has fashioned the best possible product. The final prototype will be extensively tested by customers to identify any changes that need to be made before the finished product is introduced.

Ramp Up Production and Run Market Tests

During the production **ramp-up stage**, employees are trained in manufacturing and assembly processes. Products turned out during this phase are carefully inspected for residual flaws. Samples are often demonstrated or given to potential customers for testing and feedback.

Launch the Product

In the final stage, the firm starts ongoing production and makes the product available for widespread distribution.

Key Takeaways

- The success of a business depends on its ability to identify the unmet needs of consumers and to develop products that meet those needs at a reasonable cost.
- Accomplishing these goals requires a collaborative effort by individuals from all areas of the organization: operations management (including representatives from engineering, design, and manufacturing), marketing, accounting, and finance.
- Representatives from these various functional areas often work together as **project teams** throughout the **product development process**, which consists of a series of activities that transform a product idea into a final product.

- This process can be broken down into seven steps:

    1. Evaluate opportunities and select the best product mix
    2. Get feedback to refine the **product concept** that describes what the product might look like and how it might work
    3. Make sure that the product performs and appeals to consumers
    4. Design with manufacturing in mind to build both quality and efficiency into the manufacturing process
    5. Build and test **prototypes**, or physical models of the product
    6. Run market tests and enter the **ramp-up stage** during which employees are trained in the production process
    7. Launch the product

10.9 Protecting Your Idea

You can protect your rights to your idea with a **patent** from the U.S. Patent and Trademark Office, which grants you "the right to exclude others from making, using, offering for sale, or selling" the invention in the United States for twenty years (U.S. Patent and Trademark Office, 2011).

What do you need to know about applying for a patent? For one thing, document your idea as soon as you think of it. Simply fill out a form, stating the purpose of your invention and the current date. Then sign it and get someone to witness it. The procedure sounds fairly informal, but you may need this document to strengthen your claim that you came up with the idea before someone else who also claims it. Later, you'll apply formally for a patent by filling out an application (generally with the help of a lawyer), sending it to the U.S. Patent and Trademark Office, and waiting. Nothing moves quickly through the U.S. Patent and Trademark Office, and it takes a long time for any application to get through the process.

Will your application get through at all? There's a good chance if your invention meets all the following criteria:

- *It's new.* No one else can have known about it, used it, or written about it before you filed your patent application (so keep it to yourself until you've filed).
- *It's not obvious.* It has to be sufficiently different from everything that's been used for the purpose in the past (you can't patent a new color for a cell phone).
- *It has utility.* It can't be useless; it must have some value.

Applying for a U.S. patent is only the first step. If you plan to export your product outside the United States, you'll need patent protection in each country in which you plan to do business, and as you've no doubt guessed, getting a foreign patent isn't any easier than getting a U.S. patent. The process keeps lawyers busy: during a three-year period, PowerSki International had to take out more than eighty patents on the PowerSki Jetboard. It still has a long way to go to match the number of patents issued to some extremely large corporations. Microsoft, for example, recently obtained its ten thousandth patent (Fried, 2011).

Clearly, the patent business is booming. The U.S. Patent and Trademark Office issued more than a half million patents in 2010 (U.S. Patent and Trademark Office, 2011). One reason for the recent proliferation of patents is the high-tech boom: over the last decade, the number of patents granted has increased by more than 50 percent.

Key Takeaways

- You can protect your rights to your idea with a **patent** from the U.S. Patent and Trademark Office.
- A patent grants you "the right to exclude others from making, using, offering for sale, or selling" the invention in the United States for twenty years.
- To be patentable, an invention must meet all the following criteria: it's new (no one else can have known about it, used it, or written about it before you filed your patent application); it's not obvious (it's sufficiently different from everything that's been used for the purpose in the past); and it has utility (it must have some value; it can't be useless).

A friend of yours described a product idea she had been working on. It is a child's swing set with a sensor to stop the swing if anyone walks in front of it. She came to you for advice on protecting her product idea. What questions would you need to ask her to determine whether her product idea is patentable? How would she apply for a patent? What protection would the patent give her? How long would the patent apply?

10.10 Cases and Problems

Breaking Even on Burgers

You and your business partner plan to open a gourmet burger restaurant. Your partner estimated the new business will sell a hundred fifty thousand burgers during its first year and a half of operations. You want to determine the number of burgers you must sell to break even during this period.

Here are the figures you know so far:

- The variable cost for each burger is $0.97 each.
- The fixed cost of making burgers for eighteen months is $140,000 (this includes costs such as rent, utilities, insurance).
- You will sell your burgers for $1.99 each.
- At the $1.99 per-unit selling price, how many burgers will you have to sell to break even?

Part 1: Using the previous information, manually calculate the breakeven number of burgers. How close is the breakeven number of burgers to your partner's sales estimate of one hundred fifty thousand burgers? How confident are you that your restaurant will be profitable?

Part 2: Now, recalculate the breakeven number of burgers using a higher selling price. Pretend that your likely customers are burger fanatics and will pay $2.79 for a burger (rather than $1.99). Also pretend that the variable cost for each burger and your fixed costs won't change (variable cost per burger is still $0.97 and fixed costs are still $140,000). Manually calculate the number of burgers you must sell to break even at this higher selling price. Are you now more confident that the business will succeed?

Part 3: Without recalculating breakeven, answer these two questions:

1. If the variable cost for each burger went down from $0.97 to $0.80 per burger (and your selling price stayed at $1.99), would you need to sell more or fewer burgers to break even?
2. If fixed costs went down from $140,000 to $100,000 (and your selling price stayed at $1.99 and variable cost per burger returned to $0.97), would you need to sell more or fewer burgers to break even?

Being a "Big Idea" Person

Imagine a career in which you design the products people use every day. If you're a "big idea" person, have an active imagination, have artistic flair, and possess the ability to understand how products function, then a career in product design and development might be for you. To learn what opportunities are available in this field, go to the Job Bank section of the Product Development and Management Association's Web site (https://jobs.pdma.org/) and click on "View Posted Jobs." Explore the various job openings by clicking on a position (to highlight it); and then clicking on the "View Job Details" button at the bottom of the screen. Find a position that interests you and look for answers to these questions:

1. What's the job like?
2. What educational background, work experience, and skills are needed for the job?
3. What aspects of the job appeal to you? What aspects are unappealing?
4. Are you cut out for a career in product design and development? Why, or why not?

Ethics Angle (AACSB)

Who's Getting Fat from Fast Food?

Product liability laws cover the responsibility of manufacturers, sellers, and others for injuries caused by defective products. Under product liability laws, a toy manufacturer can be held liable if a child is harmed by a toy that's been marketed with a design flaw. The manufacturer can also be held liable for defects in marketing the toy, such as giving improper instructions on its use or failing to warn consumers about potential dangers. But what if the product isn't a toy, but rather a fast-food kid's meal? And what if the harm isn't immediately obvious but emerges over time?

These questions are being debated in the legal and health professions (and the media). Some people believe that fast-food restaurants should be held responsible (at least in part) for childhood obesity. They argue that fast-food products—such as kids' meals made up of high-calorie burgers, fried chicken fingers, French fries, and sugary soft drinks—are helping to make U.S. children overweight. They point out that while restaurant chains spend billions each year to advertise fast food to children, they don't do nearly enough to warn parents of the dangers posed by such foods. On the other side of the debate are restaurant owners, who argue that they're not the culprits. They say that their food can be a part of a child's diet—if it's eaten in moderation.

There's no disputing that 15 percent of American children are obese and that fast-food consumption by children has increased by 500 percent since 1970. Most observers also accept the data furnished by the U.S.

Surgeon General: that obesity in the United States claims some three hundred thousand lives a year and costs $117 billion in health care. The controversy centers on the following questions:

1. Who really is to blame for the increase in obesity among U.S. children?
2. Under current consumer-protection laws, is fast-food marketing aimed at children misleading?
3. Should fast-food restaurants be held legally liable for the health problems associated with their products?

What's your opinion? If you owned a fast-food restaurant, what action (if any) would you take in response to the charges leveled by critics of your industry?

Team-Building Skills (AACSB)

The Great Idea

Get together with members of your team and brainstorm ideas for a new-to-the-market product. Begin the brainstorming session by asking each person to write an idea on a sticky note. Post the idea and repeat the process four times. After the team has evaluated and discussed the ideas, all members should vote. Each gets ten votes, which can be placed on one idea or spread over many. Once the voting ends, add up the votes received by each idea and declare one idea the winner.

Write a group report that answers the following questions:

1. Product Idea

   ◦ What is the idea?
   ◦ How would the idea work?
   ◦ Who would our customers be?
   ◦ What unmet need does it fill?

2. Industry

   ◦ What is the product's industry, segment, and niche?
   ◦ Is the industry growing or contracting?
   ◦ Who are our major competitors?
   ◦ How does our product differ from those of our competitors?
   ◦ What opportunities exist in the industry? What threats?

3. Product

   ◦ What will the product look like?
   ◦ What features will it have?
   ◦ How will customers benefit from our product?
   ◦ Why will customers buy the product from us?

- Why will our product be financially successful?

What to Do When the "False" Alarm Goes Off

If someone on the street tried to sell you a "Rolex" watch for $20, you'd probably suspect that it's a fake. But what about a pair of New Balance athletic shoes? How do you know they're authentic? How can you tell? Often you can't. Counterfeiters are getting so good at copying products that even experts have trouble telling a fake from the real thing. What if the counterfeit product in question was a prescription drug? Even worse, what if it had been counterfeited with unsterile equipment or contained no active ingredients?

How likely is it that you'll buy a counterfeit product in the next year? Unfortunately, it's very likely. To learn a little more about the global counterfeiting business.   Read the the *Washington Post* article "Counterfeit Goods That Trigger the 'False' Alarm" https://www.washingtonpost.com/archive/lifestyle/2005/01/04/counterfeit-goods-that-trigger-the-false-alarm/39d22d1c-8256-4830-8287-ccdd563f748d/. After you read these articles, answer the following questions:

1. How has the practice of counterfeiting changed over time? What factors have allowed it to escalate?
2. What types of products are commonly counterfeited, and why might they be unsafe? What counterfeit products are particularly dangerous?
3. How do the counterfeiters get goods onto the market? How can you reduce your chances of buying fake goods?
4. Why is counterfeiting so profitable? How can counterfeiters compete on price with those making the authentic goods? How do counterfeiters harm U.S. businesses?
5. What efforts are international companies and governments (including China) making to stop counterfeiters?
6. If you know that a product is fake, is it ethical to buy it?

OPERATIONS MANAGEMENT IN MANUFACTURING AND SERVICE INDUSTRIES

Learning Objectives

1. Define operations management, and discuss the role of the operations manager in a manufacturing company.
2. Describe the decisions made in planning the production process in a manufacturing company.
3. Describe four major types of facility layouts: process, product, cellular, and fixed position.
4. Identify the activities undertaken by the operations manager in overseeing the production process in a manufacturing company.
5. Explain how to create and use both PERT and Gantt charts.
6. Explain how manufacturing companies use technology to produce and deliver goods in an efficient, cost-effective manner.
7. List the characteristics that distinguish service operations from manufacturing operations.
8. Describe the decisions made in planning the product delivery process in a service company.
9. Identify the activities undertaken to manage operations in a service organization.
10. Explain how manufacturing and service companies alike use total quality management and outsourcing to provide value to customers.

11.1 Operations Management in Manufacturing

Like PowerSki, every organization–whether it produces goods or provides services–sees Job 1 as furnishing customers with quality products. Thus, to compete with other organizations, a company must convert resources (materials, labor, money, information) into goods or services as efficiently as possible. The upper-level manager who directs this transformation process is called an *operations manager*. The job of **operations management (OM)**, then, consists of all the activities involved in transforming a product idea into a finished product, as well as those involved in planning and controlling the systems that produce goods and services. In other words, operations managers manage the process that transforms inputs into outputs. Figure 11.1: The Transformation Process illustrates this traditional function of operations management.
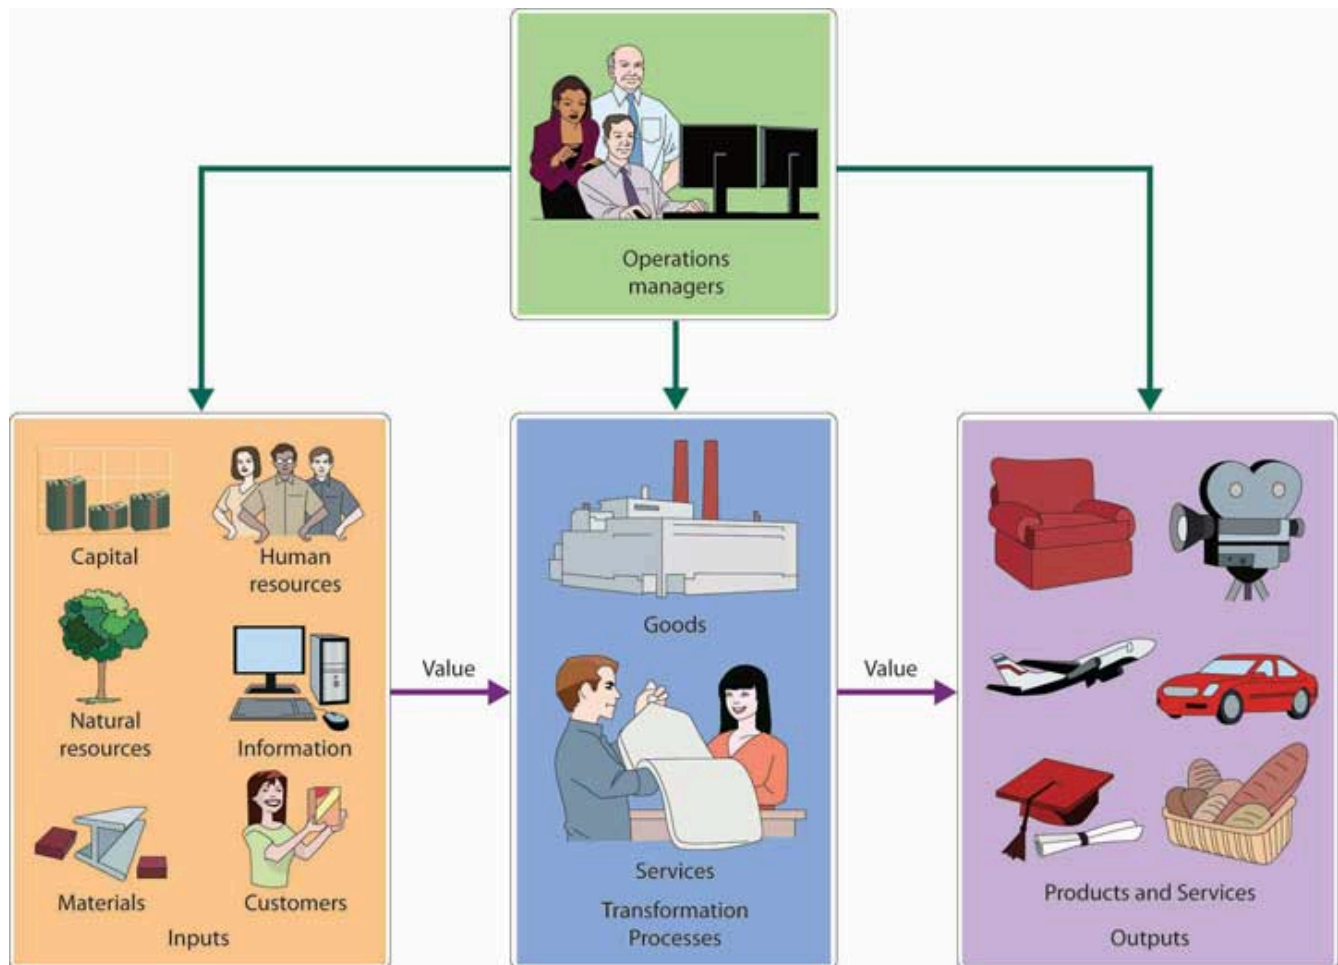

Figure 11.1: The Transformation Process

In the rest of this chapter, we'll discuss the major activities of operations managers. We'll start by describing the role that operations managers play in the various processes designed to produce goods and offer services. Next, we'll look at the production of goods in manufacturing firms; then, we'll describe operations management activities in companies that provide services. We'll wrap up the chapter by explaining the role of operations management in such processes as quality control and outsourcing.

Operations Management in Manufacturing

Like PowerSki, all manufacturers set out to perform the same basic function: *to transform resources into finished goods*. To perform this function in today's business environment, manufacturers must continually strive to improve operational efficiency. They must fine-tune their production processes to focus on quality, to hold down the costs of materials and labor, and to eliminate all costs that add no value to the finished product. Making the decisions involved in the effort to attain these goals is the job of the operations manager. That person's responsibilities can be grouped as follows:

- *Production planning.* During production planning, managers determine how goods will be produced, where production will take place, and how manufacturing facilities will be laid out.
- *Production control.* Once the production process is under way, managers must continually schedule and monitor the activities that make up that process. They must solicit and respond to feedback and make adjustments where needed. At this stage, they also oversee the purchasing of raw materials and the handling of inventories.
- *Quality control.* Finally, the operations manager is directly involved in efforts to ensure that goods are produced according to specifications and that quality standards are maintained.

Let's take a closer look at each of these responsibilities.

Planning the Production Process

The decisions made in the planning stage have long-range implications and are crucial to a firm's success. Before making decisions about the operations process, managers must consider the goals set by marketing managers. Does the company intend to be a low-cost producer and to compete on the basis of price? Or does it plan to focus on quality and go after the high end of the market? Perhaps it wants to build a reputation for reliability. What if it intends to offer a wide range of products? To make things even more complicated, all these decisions involve trade-offs. Upholding a reputation for reliability isn't necessarily compatible with offering a wide range of products. Low cost doesn't normally go hand in hand with high quality.

With these factors in mind, let's look at the specific types of decisions that have to be made in the production planning process. We've divided these decisions into those dealing with production methods, site selection, facility layout, and components and materials management.

Production-Method Decisions

The first step in production planning is deciding which type of production process is best for making the goods that your company intends to manufacture. In reaching this decision, you should answer such questions as the following:

- How much input do I receive from a particular customer before producing my goods?
- Am I making a one-of-a-kind good based solely on customer specifications, or am I producing high-volume standardized goods to be sold later?
- Do I offer customers the option of "customizing" an otherwise standardized good to meet their specific needs?

One way to appreciate the nature of this decision is by comparing three basic types of processes or methods: *make-*

to-order, *mass production*, and *mass customization*. The task of the operations manager is to work with other managers, particularly marketers, to select the process that best serves the needs of the company's customers.

Make-to-Order

At one time, most consumer goods, such as furniture and clothing, were made by individuals practicing various crafts. By their very nature, products were *customized* to meet the needs of the buyers who ordered them. This process, which is called a ==make-to-order strategy==, is still commonly used by such businesses as print or sign shops that produce low-volume, high-variety goods according to customer specifications.

Mass Production

Figure 11.2. Automakers produce a high volume of cars in anticipation of future demand.

By the early twentieth century, however, a new concept of producing goods had been introduced: ==mass production (or make-to-stock strategy)== is the practice of producing high volumes of identical goods at a cost low enough to price them for large numbers of customers. Goods are made in anticipation of future demand (based on forecasts) and kept in inventory for later sale. This approach is particularly appropriate for standardized goods ranging from processed foods to electronic appliances.

Mass Customization

But there's a disadvantage to mass production: customers, as one contemporary advertising slogan puts it, can't "have it their way." They have to accept standardized products as they come off assembly lines. Increasingly, however, customers are looking for products that are designed to accommodate individual tastes or needs but can still be bought at reasonable prices. To meet the demands of these consumers, many companies have turned to an approach called ==mass customization==, which (as the term suggests) combines the advantages of customized products with those of mass production.

   This approach requires that a company interact with the customer to find out exactly what the customer wants and then manufacture the good, using efficient production methods to hold down costs. One efficient method is to mass-produce a product up to a certain cut-off point and then to customize it to satisfy different customers.

   The list of companies devoting at least a portion of their operations to mass customization is growing steadily. One of the best-known mass customizer is Nike, which has achieved success by allowing customers to configure their own athletic shoes, apparel, and equipment through Nike's iD program. The Web has a lot to do with the growth of mass customization. Levi's, for instance, lets a woman find a pair of perfect fitting jeans by going through an online fitting process that first identifies her "curve" type: *slight* (straight figure), *demi* (evenly proportioned), *bold* (curvy figure, which experiences waist gapping in the back), and supreme (curviest shape, which needs a higher rise in the back). Oakley offers customized sunglasses, goggles, watches, and backpacks, while Mars, Inc. can make M&M's in any color the customer wants (say, school colors) as well as add text and pictures to the candy[1].

   Naturally, mass customization doesn't work for all types of goods. Most people don't care about customized detergents or paper products (although a customized Kleenex tissue box with your picture on it and a statement that says, "go ahead…cry over me!" might come in handy after a relationship breakup with your significant other (Windisman, 2008).) And while many of us like the idea of customized clothes, footwear, or sunglasses from Levi's, Nike, or Oakley, we often aren't willing to pay the higher prices they command.

Facilities Decisions

After selecting the best production process, operations managers must then decide where the goods will be manufactured, how large the manufacturing facilities will be, and how those facilities will be laid out.

Site Selection

In choosing a location, managers must consider several factors:

- To minimize shipping costs, both for raw materials coming into the plant and for finished goods going out, managers often want to locate plants close to suppliers, customers, or both.
- They generally want to locate in areas with ample numbers of skilled workers.
- They naturally prefer locations where they and their families will enjoy living.
- They want locations where costs for resources and other expenses—land, labor, construction, utilities, and taxes—are low.
- They look for locations with a favorable business climate—one in which, for example, local governments might offer financial incentives (such as tax breaks) to entice them to do business in their locales.

Managers rarely find locations that meet all these criteria. As a rule, they identify the most important criteria and

aim at satisfying them. In deciding to locate in San Clemente, California, for instance, PowerSki was able to satisfy three important criteria: (1) proximity to the firm's suppliers, (2) availability of skilled engineers and technicians, and (3) favorable living conditions. These factors were more important than operating in a low-cost region or getting financial incentives from local government. Because PowerSki distributes its products throughout the world, proximity to customers was also unimportant.

Capacity Planning

Now that you know *where* you're going to locate, you have to decide on the quantity of products that you'll produce. You begin by *forecasting* demand for your product. As we discussed in [Chapter 10: Product Design and Development](), forecasting isn't easy. To estimate the number of units that you're likely to sell over a given period, you have to understand the industry that you're in and estimate your likely share of the market by reviewing industry data and conducting other forms of research.

Once you've forecasted the demand for your product, you can calculate the ==capacity== requirements of your production facility—the maximum number of goods that it can produce over a given time under normal working conditions. In turn, having calculated your capacity requirements, you're ready to determine how much investment in plant and equipment you'll have to make, as well as the number of labor hours required for the plant to produce at capacity.

Like forecasting, capacity planning is difficult. Unfortunately, failing to balance capacity and projected demand can be seriously detrimental to your bottom line. If you set capacity too low (and so produce less than you should), you won't be able to meet demand, and you'll lose sales and customers. If you set capacity too high (and turn out more units than you should), you'll waste resources and inflate operating costs.

Key Takeaways

- The job of **operations management** is to oversee the process of transforming resources into goods and services.
- The role of operations managers in the manufacturing sector includes production planning, production control, and quality control.
- During production planning, managers determine how goods will be produced (production process), where production will take place (site selection), and how manufacturing facilities will be laid out (layout planning).
- In selecting the appropriate production process, managers compare three basic methods: **make-to-order strategy** (goods are made to customer specifications), **mass production** or **make-to-stock strategy** (high volumes of goods are made and held in inventory for later sale), and **mass customization** (high volumes of customized goods are made).
- In choosing the site for a company's manufacturing operations, managers look for locations that minimize shipping costs, have an ample supply of skilled workers, provide a favorable community for workers and their families, offer resources at low cost, and have a favorable business climate.
- Managers estimate the quantity of products to be produced by forecasting demand for their product and then calculating the capacity requirements of the production facility—the maximum number of goods that it can produce over a given period under normal working conditions.

11.2 Facility Layouts

The next step in production planning is deciding on plant <mark>layout</mark>—how equipment, machinery, and people will be arranged to make the production process as efficient as possible. In this section, we'll examine four common types of facility layouts: process, product, cellular, and fixed position.

The <mark>process layout</mark> groups together workers or departments that perform similar tasks. *Goods in process* (goods not yet finished) move from one workstation to another. At each position, workers use specialized equipment to perform a particular step in the production process. To better understand how this layout works, we'll look at the production process at the Vermont Teddy Bear Company. Let's say that you just placed an order for a personalized teddy bear—a "hiker bear" with khaki shorts, a white T-shirt with your name embroidered on it, faux-leather hiking boots, and a nylon backpack with sleeping bag. Your bear begins at the fur-cutting workstation, where its honey-brown "fur" coat is cut. It then moves to the stuffing and sewing workstation to get its insides and have its sides stitched together. Next, it moves to the dressing station, where it's outfitted with all the cool clothes and gear that you ordered. Finally, it winds up in the shipping station and starts its journey to your house. For a more colorful "Online Mini-Tour" of this process, log on to the Vermont Teddy Bear website at http://www.vermontteddybear.com/Static/Tour-Welcomestation.aspx (or see Figure 11.3: Process Layout at Vermont Teddy Bear Company).
Figure 11.3: Process Layout at Vermont Teddy Bear Company

In a <mark>product layout</mark>, high-volume goods are produced efficiently by people, equipment, or departments arranged in an *assembly line*—that is, a series of workstations at which already-made parts are *assembled*. Just Born, a candy maker located in Bethlehem, Pennsylvania, makes a product called Marshmallow Peeps on an assembly line. First, the ingredients are combined and whipped in huge kettles. Then, sugar is added for color. At the next workstation, the mixture—colored warm marshmallow—is poured into baby-chick–shaped molds carried on conveyor belts. The conveyor-belt parade of candy pieces then moves forward to stations where workers add eyes or other details. When the finished candy reaches the packaging area, it's wrapped for shipment to stores around the world. To take an online tour of the Marshmallow Peeps production process, see Figure 11.4: Product Layout at Just Born, Inc.
Figure 11.4: Product Layout at Just Born, Inc.

Both product and process layouts arrange work by *function*. At the Vermont Teddy Bear Company, for example, the cutting function is performed in one place, the stuffing-and-sewing function in another place, and the dressing function in a third place. If you're a cutter, you cut all day; if you're a sewer, you sew all day: that's your function. The same is true for the production of Marshmallow Peeps at Just Born: if your function is to decorate peeps, you stand on an assembly line and decorate all day; if your function is packing, you pack all day.

Arranging work by function, however, isn't always efficient. Production lines can back up, inventories can build up, workers can get bored with repetitive jobs, and time can be wasted in transporting goods from one workstation to another. To counter some of these problems, many manufacturers have adopted a ==cellular layout==, in which small teams of workers handle all aspects of building a component, a "family" of components, or even a finished product. Each team works in a small area, or cell, equipped with everything that it needs to function as a self-contained unit. Machines are sometimes configured in a U-shape, with people working inside the U. Because team members often share duties, they're trained to perform several different jobs. Teams monitor both the quantity and the quality of their own output. This arrangement often results in faster completion time, lower inventory levels, improved quality, and better employee morale. Cellular manufacturing is used by large manufacturers, such as Boeing, Raytheon, and Pratt & Whitney (Chaneski, 1998), as well as by small companies, such as Little Enterprise, which makes components for robots (Modern Machine Shop Magazine, 2001; Little Enterprises, Inc., 2011). Figure 11.5: Cellular Layout illustrates a typical cellular layout.

Task in the manufacturing process

Employee

Work flow
Figure 11.5: Cellular Layout

It's easy to move teddy bears and marshmallow candies around the factory while you're making them, but what about airplanes or ships? In producing large items, manufacturers use **fixed-position layout** in which the product stays in one place and the workers (and equipment) go to the product. This is the arrangement used by General Housing Corporation in constructing modular homes. Each house is constructed at the company's factory in Bay City, Michigan, according to the customer's design. Because carpenters, electricians, plumbers, and others work on each building inside the climate-controlled factory, the process can't be hindered by weather. Once it's done, the house is transported in modules to the owner's building site and set up in one day. For a closer view of General Housing Corporation's production process, go to the General Housing Web site at http://www.genhouse.com.

Exercise

As the purchasing manager for a company that flies corporate executives around the world, you're responsible for buying everything from airplanes to onboard snacks. You plan to visit all the plants that make the things you buy: airplanes, passenger seats, TV/DVDs that go in the back of the passenger seats, and the specially designed uniforms (with embroidered company logos) worn by the flight attendants. What type of layout should you expect to find at each facility—process, product, or fixed-position? What will each layout look like? Why is it appropriate for the company's production process? Could any of these plants switch to a cellular layout? What would this type of layout look like? What would be its advantages?

11.3 Managing the Production Process in a Manufacturing Company

Once the production process is in place, the attention of the operations manager shifts to the daily activities of **materials management**, which encompass the following activities: purchasing, inventory control, and work scheduling.

Purchasing and Supplier Selection

The process of acquiring the materials and services to be used in production is called <mark>purchasing</mark> (or *procurement*). For many products, the costs of materials make up about 50 percent of total manufacturing costs. Not surprisingly, then, materials acquisition gets a good deal of the operations manager's time and attention.

As a rule, there's no shortage of vendors willing to supply parts and other materials, but the trick is finding the *best* suppliers. In selecting a supplier, operations managers must consider such questions as the following:

- Can the vendor supply the needed quantity of materials at a reasonable price?
- Is the quality good?
- Is the vendor reliable (will materials be delivered on time)?
- Does the vendor have a favorable reputation?
- Is the company easy to work with?

Getting the answers to these questions and making the right choices—a process known as supplier selection—is a key responsibility of operations management.

E-Purchasing

Technology is changing the way businesses buy things. Through *e-purchasing* (or *e-procurement*), companies use the Internet to interact with suppliers. The process is similar to the one you'd use to find a consumer good—say, a forty-two-inch LCD high-definition TV—over the Internet. You might start by browsing the Web sites of TV manufacturers, such as Sony or Samsung, or electronics retailers, such as Best Buy. To gather comparative prices, you might go to a comparison-shopping Web site, such as Amazon.com, the world's largest online retailer. You might even consider placing a bid on eBay, an online marketplace where sellers and buyers come together to do business through auctions. Once you've decided where to buy your TV, you'd complete your transaction online, even paying for it electronically.

If you were a purchasing manager using the Internet to buy parts and supplies, you'd follow basically the same process. You'd identify potential suppliers by going directly to private Web sites maintained by individual suppliers or to public Web sites that collect information on numerous suppliers. You could do your shopping through online catalogs, or you might participate in an online marketplace by indicating the type and quantity of materials you need and letting suppliers bid on prices. (Some of these e-marketplaces are quite large. Covisint, for example, which was started by automakers to coordinate online transactions in the auto industry, is used by more than two hundred and fifty thousand suppliers in the auto industry, as well as suppliers in the health care field.) (Jingzhi, 2011) Finally, just as you paid for your TV electronically, you could use a system called **electronic data interchange (EDI)** to process your transactions and transmit all your purchasing documents.

The Internet provides an additional benefit to purchasing managers by helping them communicate with suppliers and potential suppliers. They can use the Internet to give suppliers specifications for parts and supplies, encourage them to bid on future materials needs, alert them to changes in requirements, and give them instructions on doing business with their employers. Using the Internet for business purchasing cuts the costs of purchased products and saves administrative costs related to transactions. And it's faster for procurement and fosters better communications.

Inventory Control

If a manufacturer runs out of the materials it needs for production, then production stops. In the past, many companies guarded against this possibility by keeping large inventories of materials on hand. It seemed like the thing to do at the time, but it often introduced a new problem—wasting money. Companies were paying for parts and other materials that they wouldn't use for weeks or even months, and in the meantime, they were running up substantial storage and insurance costs.

Most manufacturers have since learned that to remain competitive, they need to manage inventories more efficiently. This task requires that they strike a balance between two threats to productivity: losing production time because they've run out of materials, and wasting money because they're carrying too much inventory. The process of striking this balance is called **inventory control**, and companies now regularly rely on a variety of inventory-control methods.

Just-in-Time Production

One method is called **just-in-time (JIT) production**: the manufacturer arranges for materials to arrive at production facilities *just in time* to enter the manufacturing process. Parts and materials don't sit unused for long periods, and the costs of "holding" inventory are significantly cut. JIT, however, requires considerable communication and cooperation between the manufacturer and the supplier. The manufacturer has to know what it needs, and when. The supplier has to commit to supplying the right materials, of the right quality, at exactly the right time.

Material Requirements Planning

Another method, called **material requirements planning (MRP)**, relies on a computerized program both to calculate the quantity of materials needed for production and to determine when they should be ordered or made. Let's say, for example, that you and several classmates are planning a fund-raising dinner for the local animal shelter. First, you estimate how many people will attend—say, fifty. Next, you plan the menu—lasagna, garlic bread, salad, and cookies. Then, you determine what ingredients you'll need to make the food. Next, you have to decide when you'll need your ingredients. You don't want to make everything on the afternoon of the dinner; some things—like the lasagna and cookies—can be made ahead of time. Nor do you want to buy all your ingredients at the same time; in particular, the salad ingredients would go bad if purchased too far in advance. Once you've made all these calculations and decisions, you work out a schedule for the production of your dinner that indicates the order and timing of every activity involved. With your schedule in hand, you can determine when to buy each ingredient. Finally, you do your shopping.

Figure 11.6. Making lasagna requires decision making and calculations to ensure a yummy final product.

Though the production process at most manufacturing companies is a lot more complex than planning a dinner (even for fifty), an MRP system is designed to handle similar problems. The program generates a production schedule based on estimated output (your food-preparation timetable for fifty guests), prepares a list of needed materials (your shopping list), and orders the materials (goes shopping).

The basic MRP focuses on material planning, but there's a more sophisticated system—called <mark>manufacturing resource planning (MRP II)</mark>—that goes beyond material planning to help monitor resources in all areas of the company. Such a program can, for instance, coordinate the production schedule with HR managers' forecasts for needed labor.

Work Scheduling

As we've seen, manufacturers make profits by transforming inputs (materials and other resources) into outputs (finished goods). We know, too, that production activities, like all business activities, have to be *controlled*: they have to be monitored to ensure that actual performance satisfies planned performance. In production, the control process starts when operations managers decide not only *which* goods and *how many* will be produced, but *when*. This detailed information goes into a <mark>master production schedule (MPS)</mark>. To draw up an MPS, managers need to know where materials are located and headed at every step in the production process. For this purpose, they determine the *routing* of all materials—that is, the work flow of each item based on the sequence of operations in which it will be used.

Key Takeaways

- Once the production process is under way, the attention of the operations manager shifts to the daily activities of **materials management**, which encompasses materials **purchasing**, **inventory control**, and work scheduling.
- Because material costs often make up about 50 percent of total manufacturing costs, vendor selection and material acquisition gets a good deal of the operations manager's time and attention.
- In recent years, the purchasing function has been simplified through technology advances, including e-

purchasing and **electronic data interchange (EDI)**, which process transactions and transmit purchasing documents.

- Commonly used inventory control methods include **just-in-time (JIT) production**, by which materials arrive just in time to enter the manufacturing process, and **material requirements planning (MRP)**, which uses computer programming to determine material needs.
- To schedule jobs, managers create a **master production schedule (MPS)**.

Exercise

What is e-purchasing (or e-procurement)? How does it work? What advantages does it give a purchasing manager? How does it benefit a company? How does it change the relationship between purchasing managers and vendors?

11.4 Graphical Tools: PERT and Gantt Charts

Because they also need to control the timing of all operations, managers set up *schedules*: They select jobs to be performed during the production process, assign tasks to work groups, set timetables for the completion of tasks, and make sure that resources will be available when and where they're needed. There are a number of scheduling techniques. We'll focus on two of the most common—*Gantt* and PERT *charts*.

Gantt Charts

A **Gantt chart**, named after the designer, Henry Gantt, is an easy-to-use graphical tool that helps operations managers determine the status of projects. Let's say that you're in charge of making the "hiking bear" that we ordered earlier from the Vermont Teddy Bear Company. Figure 11.7: Gantt Chart for Vermont Teddy Bear is a Gantt chart for the production of one hundred of these bears. As you can see, it shows that several activities must be completed before the bears are dressed: the fur has to be cut, stuffed, and sewn; and the clothes and accessories must be made. Our Gantt chart tells us that by day six, all accessories and clothing have been made. The stuffing and sewing, however (which must be finished before the bears are dressed), isn't scheduled for completion until the end of day eight. As operations manager, you'll have to pay close attention to the progress of the stuffing and sewing operations to ensure that finished products are ready for shipment by their scheduled date.

Activity/Day	1	2	3	4	5	6	7	8	9	10	11	12	13
Cut fur	■	■											
Stuff and sew fur			■	■	■	■	▨	▨					
Cut material	■	■											
Sew clothes			■	■									
Embroider T-shirt					■	■							
Cut accessories	■												
Sew accessories		■	■										
Dress bears									▨	▨	▨		
Package bears												▨	
Ship bears													▨
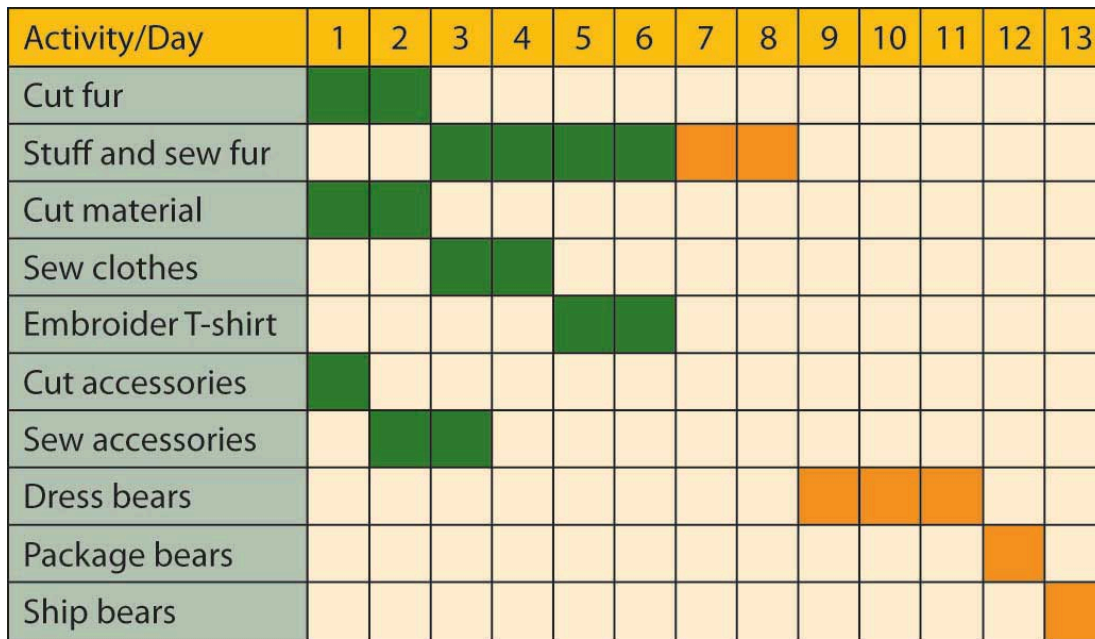

Lot size: 100 bears

All activities are scheduled to begin at their earliest start time.

■ Completed work

▨ Work to be completed

Figure 11.7: Gantt Chart for Vermont Teddy Bear

PERT Charts

Gantt charts are useful when the production process is fairly simple and the activities aren't interrelated. For more complex schedules, operations managers may use ==PERT charts==. PERT (which stands for *Program Evaluation and Review Technique*) is designed to diagram the activities required to produce a good, specify the time required to perform each activity in the process, and organize activities in the most efficient sequence. It also identifies a *critical path*: the sequence of activities that will entail the greatest amount of time. Figure 11.8: PERT Chart for Vermont Teddy Bear is a PERT diagram showing the same process for producing one "hiker" bear at Vermont Teddy Bear.
Figure 11.8: PERT Chart for Vermont Teddy Bear

Our PERT chart shows how the activities involved in making a single bear are related. It indicates that the production process begins at the cutting station. Next, the fur that's been cut for this particular bear moves first to the stuffing and sewing stations and then to the dressing station. At the same time that its fur is moving through this sequence of steps, the bear's clothes are being cut and sewn and its T-shirt is being embroidered. Its backpack and tent accessories are also being made at the same time. Note that fur, clothes, and accessories all meet at the dressing station, where the bear is dressed and outfitted with its backpack. Finally, the finished bear is packaged and shipped to the customer's house.

What was the critical path in this process? The path that took the longest amount of time was the sequence that included cutting, stuffing, dressing, packaging, and shipping—a sequence of steps taking sixty-five minutes. If you wanted to produce a bear more quickly, you'd have to save time on this path. Even if you saved the time on any of the other paths—say, the sequence of steps involved in cutting, sewing, and embroidering the bear's clothes—you still wouldn't finish the entire job any sooner: the finished clothes would just have to wait for the fur to be stuffed and sewn and moved to the dressing station. In other words, we can gain efficiency only by improving our performance on one or more of the activities along the critical path.

Exercise

Earning a college degree requires not only a lot of hard work but also, as you know, a lot of planning. You must, for example, complete a specified number of credits and take many required courses, particularly in your major. Deciding which courses to take and when to take them can be complicated when some of them have prerequisites. A PERT chart—which diagrams the activities required to complete a goal—might help you determine the order in which you should take courses for your major. Pick a major that interests you and find out what courses you'd need to complete it. Then prepare a PERT chart showing all the courses you'd plan to take each semester to complete your major. (For example, if you select the accounting major, include only accounting courses; don't include your other business courses or your elective courses.) Identify the critical path laid out in your chart. What happens if you fail to take one of your critical-path courses on time?

11.5 The Technology of Goods Production

PowerSki founder and CEO Bob Montgomery spent sixteen years designing the Jetboard and bringing it to production. At one point, in his efforts to get the design just right, he'd constructed thirty different prototypes. Needless to say, this process took a very long time, but even so, Montgomery thought that he could handle the designing of the engine without the aid of a computer. Before long, however, he realized that it was impossible to keep track of all the changes.

Computer-Aided Design

That's when Montgomery turned to computer technology for help and began using a **computer-aided design (CAD)** software package to design not only the engine but also the board itself and many of its components. The CAD program enabled Montgomery and his team of engineers to test the product digitally and work out design problems before moving to the prototype stage.

The sophisticated CAD software allowed Montgomery and his team to put their design paper in a drawer and to start building both the board and the engine on a computer screen. By rotating the image on the screen, they could even view the design from every angle. Having used their CAD program to make more than four hundred design changes, they were ready to test the Jetboard in the water. During the tests, onboard sensors transmitted data to portable computers, allowing the team to make adjustments from the shore while the prototype was still in the water. Nowadays, PowerSki uses *collaboration software* to transmit design changes to the suppliers of the 340 components that make up the Jetboard.

Computer-Aided Manufacturing

For many companies, the next step is to link CAD to the manufacturing process. A **computer-aided manufacturing (CAM)** software system determines the steps needed to produce the component and instructs the machines that do the work. Because CAD and CAM programs can "talk" with each other, companies can build components that satisfy exactly the requirements set by the computer-generated model. CAD/CAM systems permit companies to design and manufacture goods faster, more efficiently, and at a lower cost, and they're also effective in helping firms monitor and improve quality. CAD/CAM technology is used in many industries, including the auto industry, electronics, and clothing.

Computer-Integrated Manufacturing

By automating and integrating all aspects of a company's operations, **computer-integrated manufacturing (CIM)** systems have taken the integration of computer-aided design and manufacturing to a higher level—and are in fact revolutionizing the production process. CIM systems expand the capabilities of CAD/CAM. In addition to design and production applications, they handle such functions as order entry, inventory control, warehousing, and shipping. In the manufacturing plant, the CIM system controls the functions of **industrial robots**—computer-controlled machines used to perform repetitive tasks that are also hard or dangerous for human workers to perform.

Flexible Manufacturing Systems

Finally, a CIM system is a common element in **flexible manufacturing systems (FMS)**, in which computer-controlled equipment can easily be adapted to produce a variety of goods. An FMS has immense advantages over traditional production lines in which machines are set up to produce only one type of good. When the firm needs to switch a production line to manufacture a new product, substantial time and money are often spent in modifying equipment. An FMS makes it possible to change equipment setups merely by reprogramming computer-controlled machines. Such flexibility is particularly valuable to companies that produce customized products.

Key Takeaways

- In addition to creating high-quality products, companies must produce and deliver goods and services in an efficient, cost-effective manner.
- Sophisticated software systems, including **computer-aided design (CAD)**, **computer-aided manufacturing (CAM)**, **computer-integrated manufacturing (CIM)**, and **flexible manufacturing systems (FMS)**, are becoming increasingly important in this area.
- Computer-aided design software (CAD) is used to create models representing the design of a product.
- Many companies link CAD systems to the manufacturing process through computer-integrated manufacturing (CIM) systems that not only determine the steps needed to produce components but also instruct machines to do the necessary work.
- A CAD/CAM system can be expanded by means of computer-integrated manufacturing (CIM), which integrates various operations (from design through production) with functional activities ranging from order taking to shipping.
- A CIM system is a common element in a flexible manufacturing system (FMS), in which computer-controlled equipment can easily be adapted to produce a variety of goods.

Exercise

The design and production of both goods and services can be facilitated by various high-tech tools, including CAD, CAM, CIM, and FMS. What does CAD software do, and how does it improve a design process? What is CAM, and why is it beneficial to integrate CAD and CAM programs? How do CIM systems expand the capabilities of CAD/CAM? What is an FMS, and what are its advantages over traditional manufacturing systems?

11.6 Operations Management for Service Providers

As the U.S. economy has changed from a goods producer to a service provider, the predominance of the manufacturing sector has declined substantially over the last sixty years. Today, only about 9 percent of U.S. workers are employed in manufacturing, in contrast to 30 percent in 1950 (The Global Language Monitor, 2010; Strauss, 2010). Most of us now hold jobs in the service sector, which accounts for 77 percent of U.S. gross domestic product (International Monetary Fund, 2010; Wikipedia, 2011). Wal-Mart is now America's largest employer, followed by IBM, United Parcel Service (UPS), McDonald's, and Target. Not until we drop down to the seventh-largest employer—Hewlett Packard—do we find a company with even a manufacturing component (24/7 Wall Street, 2011).

Figure 11.9. Wal-Mart employs more than a million people in the United States.

Though the primary function of both manufacturers and service providers is to satisfy customer needs, there are several important differences between the two types of operations. Let's focus on three of them:

- *Intangibility*. Manufacturers produce tangible products—things that can be touched or handled, such as automobiles and appliances. Service companies provide intangible products, such as banking, entertainment, or education.
- *Customization*. Manufactured goods are generally standardized; one twelve-ounce bottle of Pepsi is the same as any other twelve-ounce bottle of Pepsi. Services, by contrast, are often customized to satisfy the specific needs of a customer. When you go to the barber or the hairdresser, you ask for a haircut that looks good on you because of the shape of your face and the texture of your hair. When you go to the dentist, you ask him or her to fill or pull the tooth that's bothering you.
- *Customer contact*. You could spend your entire working life assembling cars in Detroit and never meet a customer who bought a car that you helped to make. But if you were a waitress, you'd interact with customers every day. In fact, their satisfaction with your product would be determined in part by the service that you provided. Unlike manufactured goods, many services are bought and consumed at the same time.

Figure 11.11. Here is just one of the over twelve thousand Burger King restaurants across the globe.

Not surprisingly, operational efficiency is just as important in service industries as it is in manufacturing. To get a better idea of the role of operations management in the service sector, we'll look closely at Burger King (BK), home of the Whopper, and the world's second-largest restaurant chain (Burger King, 2011). BK has grown substantially since selling the first Whopper (for $0.37) almost half a century ago. The instant success of the fire-grilled burger encouraged the Miami founders of the company to expand by selling franchises. Today, there are 12,200 BK company- and independently-owned franchised restaurants in seventy-three countries (seven thousand of which are in the United States), and they employ almost forty thousand people (SEC, 2010). More than eleven million customers visit BK each day (Burger King, 2011).

Operations Planning

When starting or expanding operations, businesses in the service sector must make a number of decisions quite similar to those made by manufacturers:

- What services (and perhaps what goods) should they offer?
- How will they provide these services?
- Where will they locate their business, and what will their facilities look like?
- How will they forecast demand for their services?

Let's see how service firms like BK answer questions such as these[1].

Operations Processes

Service organizations succeed by providing services that satisfy customers' needs. Companies that provide transportation, such as airlines, have to get customers to their destinations as quickly and safely as possible. Companies

that deliver packages, such as FedEx, must pick up, sort, and deliver packages in a timely manner. Colleges must provide quality educations. Companies that provide both services and goods, such as Domino's Pizza, have a dual challenge: they must produce a quality good and deliver it satisfactorily.

Service providers that produce goods can, like manufacturers, adopt either a *make-to-order* or a *make-to-stock* approach to manufacturing them. BK, which encourages patrons to customize burgers and other menu items, uses a make-to-order approach. BK can customize products because it builds sandwiches one at a time rather than batch-process them. Meat patties, for example, go from the grill to a steamer for holding until an order comes in. Then the patty is pulled from the steamer and requested condiments are added. Finally, the completed sandwich chutes to a counter worker, who gives it to the customer. In contrast, many of BK's competitors, including McDonald's, rely on a make-to-stock approach in which a number of sandwiches are made at the same time with the same condiments. If a customer wants, say, a hamburger without onions, he or she has to wait for a new batch of patties to be grilled. The procedure could take up to five minutes, whereas BK can process a special order in thirty seconds.

Like manufacturers, service providers must continuously look for ways to improve operational efficiency. Throughout its sixty-year history, BK has introduced a number of innovations that have helped make the company (as well as the fast-food industry itself) more efficient. BK, for example, was the first to offer drive-through service (which now accounts for 70 percent of its sales (Krummert, 2011).).

It was also a BK vice president, David Sell, who came up with the idea of moving the drink station from behind the counter so that customers could take over the time-consuming task of filling cups with ice and beverages. BK was able to cut back one employee per day at every one of its more than eleven thousand restaurants. Material costs also went down because customers usually fill cups with more ice, which is cheaper than a beverage. Moreover, there were savings on supply costs because most customers don't bother with lids, and many don't use straws. On top of everything else, most customers liked the system (for one thing, it allowed them to customize their own drinks by mixing beverages), and as a result, customer satisfaction went up, as well. Overall, the new process was a major success and quickly became the industry standard.

Facilities

When starting or expanding a service business, owners and managers must invest a lot of time in selecting a location, determining its size and layout, and forecasting demand. A poor location or a badly designed facility can cost customers, and inaccurate estimates of demand for products can result in poor service, excessive costs, or both.

Site Selection

People in the real estate industry often say that the three most important factors to consider when you're buying a home are location, location, location. The same principle applies when you're trying to locate a service business. To be successful in a service industry, you need to be accessible to your customers. Some service businesses, such as cable-TV providers, package-delivery services, and e-retailers, go to their customers. Many others, however—hotels, restaurants, stores, hospitals, and airports—have to attract customers to their facilities. These businesses must locate where there's a high volume of available customers. Let's see how BK decides where to place a restaurant.

"Through the light and to the right." This is a favorite catchphrase among BK planners who are looking for a promising spot for a new restaurant (at least in the United States). In picking a location, BK planners perform a detailed analysis of demographics and traffic patterns, yet the most important factor is usually *traffic count*—the number of cars or people that pass by a specific location in the course of a day. In the United States, where we travel almost everywhere by car, BK looks for busy intersections, interstate interchanges with easy off and on ramps, or such "primary destinations" as

shopping malls, tourist attractions, downtown business areas, or movie theaters. In Europe, where public transportation is much more common, planners focus on subway, train, bus, and trolley stops.

Once planners find a site with an acceptable traffic count, they apply other criteria. It must, for example, be easy for vehicles to enter and exit the site, which must also provide enough parking to handle projected dine-in business. Local zoning must permit standard signage, especially along interstate highways. Finally, expected business must be high enough to justify the cost of the land and building.

Size and Layout

Because manufacturers do business out of plants rarely visited by customers, they base the size and layout of their facilities solely on production needs. In the service sector, however, most businesses must design their facilities with the customer in mind: they must accommodate the needs of their customers while keeping costs as low as possible. Performing this twofold task isn't easy. Let's see how BK has met the challenge.

For its first three decades, almost all BK restaurants were pretty much the same. They all sat on one acre of land (located "through the light and to the right"), had about four thousand square feet of space, and held seating for seventy customers. All kitchens were roughly the same size. As long as land was cheap and sites were readily available, this system worked well enough. By the early 1990s, however, most of the prime sites had been taken, if not by BK itself, then by one of its fast-food competitors or other businesses needing a choice spot, including gas stations and convenience stores. With everyone bidding on the same sites, the cost of a prime acre of land had increased from $100,000 to over $1 million in a few short years.

To continue growing, BK needed to change the way it found and developed its locations. Planners decided that they had to find ways to reduce the size of a typical BK restaurant. For one thing, they could reduce the number of seats, because the business at a typical outlet had shifted over time from 90 percent inside dining and 10 percent drive-through to a 50-50 split. BK customers tended to be in a hurry, and more customers preferred the convenience of drive-through "dining."

David Sell (the same executive who had recommended letting customers fill their own drink cups) proposed to save space by wrapping Whoppers in paper instead of serving them in the cardboard boxes that took up too much space in the back room of every restaurant. So BK switched to a single paper wrapper with the label "Whopper" on one side and "Cheese Whopper" on the other. To show which product was inside, employees just folded the wrapper in the right direction. Ultimately, BK replaced pallets piled high with boxes with a few boxes full of wrappers.

Ideas like these helped BK trim the size of a restaurant from four thousand square feet to as little as one thousand. In turn, smaller facilities enabled the company to enter markets that were once cost prohibitive. Now BK could locate profitably in airports, food courts, strip malls, center-city areas, and even schools. The company even designed 10-foot-by-10-foot kiosks that could be transported to special events, stadiums, and concerts.

Capacity Planning

Estimating capacity needs for a service business isn't the same thing as estimating those of a manufacturer. A manufacturer can predict overall demand, produce the product, store it in inventory, and ship it to a customer when it's ordered. Service providers, however, can't store their products for later use: hairdressers can't "inventory" haircuts, hospitals can't "inventory" operations, and amusement parks can't "inventory" roller-coaster rides. Service firms have to build sufficient capacity to satisfy customers' needs on an "as-demanded" basis. Like manufacturers, service providers must consider many variables when estimating demand and capacity:

- How many customers will I have?
- When will they want my services (which days of the week, which times of the day)?
- How long will it take to serve each customer?
- How will external factors, such as weather or holidays, affect the demand for my services?

Figure 11.11. Retailers have to be prepared to accommodate much heavier traffic than normal during the holiday season.

Forecasting demand is easier for companies like BK, which has a long history of planning facilities, than for brand-new service businesses. BK can predict sales for a new restaurant by combining its knowledge of customer-service patterns at existing restaurants with information collected about each new location, including the number of cars or people passing the proposed site and the effect of nearby competition.

Managing Operations

Overseeing a service organization puts special demands on managers, especially those running firms, such as hotels, retail stores, and restaurants, that have a high degree of contact with customers. Service firms provide customers with personal attention and must satisfy their needs in a timely manner. This task is complicated by the fact that demand can vary greatly over the course of any given day. Managers, therefore, must pay particular attention to employee work schedules and (in some cases) inventory management. Let's see how BK deals with these problems.

Scheduling

In manufacturing, managers focus on scheduling the *activities* needed to transform raw materials into finished goods. In service organizations, they focus on scheduling *workers* so that they're available to handle fluctuating customer demand. Each week, therefore, every BK store manager schedules employees to cover not only the peak periods of breakfast, lunch, and dinner, but also the slower periods in between. If he or she staffs too many people, labor cost per sales dollar will be too high. If there aren't enough employees, customers have to wait in lines. Some get discouraged, and even leave, and many may never come back.

Scheduling is made easier by information provided by a point-of-sale device built into every BK cash register. The register keeps track of every sandwich, beverage, and side order sold by the hour, every hour of the day, every day of the week. Thus, to determine how many people will be needed for next Thursday's lunch hour, the manager reviews last Thursday's data, using sales revenue and a specific BK formula to determine the appropriate staffing level. Each manager can adjust this forecast to account for other factors, such as current marketing promotions or a local sporting event that will increase customer traffic.

Inventory Control

Businesses that provide both goods and services, such as retail stores and auto-repair shops, have the same inventory-control problems as manufacturers: keeping levels too high costs money, while running out of inventory costs sales. Technology, such as the point-of-sale registers used at BK, makes the job easier. BK's system tracks everything sold during a given time and lets each store manager know how much of everything should be kept in inventory. It also makes it possible to count the number of burgers and buns, bags and racks of fries, and boxes of beverage mixes at the beginning or end of each shift. Because there are fixed numbers of supplies—say, beef patties or bags of fries—in each box, employees simply count boxes and multiply. In just a few minutes, the manager knows whether the inventory is correct (and should be able to see if any theft has occurred on the shift).

Key Takeaways

- Though the primary function of both manufacturers and service providers is to satisfy customer needs, there are several important differences between the two types of operations.
- While manufacturers produce tangible, generally standardized products, service firms provide intangible products that are often customized to satisfy specific needs. Unlike manufactured goods, many services are bought and consumed at the same time.
- Operational efficiency is just as important in service industries as it is in manufacturing.
- Operations managers in the service sector make many decisions that are similar to those made by manufacturers: they decide which services to offer, how to provide these services, where to locate their businesses, what their facilities will look like, and what the demand will be for their services.
- Service providers that produce goods can, like manufacturers, adopt either a make-to-order approach (in which products are made to customer satisfaction) or make-to-stock approach (in which products are made for inventory) to manufacturing them.
- Estimating **capacity** needs for a service business is more difficult than for a manufacturer. Service

providers can't store their services for later use: services must be delivered on an as-needed basis.
- Overseeing a service organization puts special demands on managers, especially services requiring a high degree of contact with customers.
- Given the importance of personalized service, scheduling workers is more complex in the service industry than in manufacturing. In manufacturing, operations managers focus on scheduling the *activities* needed to produce goods; in service organizations, they focus on scheduling *workers* to ensure that enough people are available to handle fluctuating customer demand.

Exercise

Starting a new business can be an exciting adventure. Here's your chance to start a "pretend" business. Select a service business that you'd like to open, and answer these questions. Provide an explanation for each answer:

1. What services (and perhaps goods) will I provide?
2. How will I provide these services?
3. Where will I locate my business?
4. What will the facilities look like (how large will the facilities be and what will the layout look like)?
5. How many customers will I serve each day?
6. When will my customers want my services (which days of the week, which times of the day)?
7. How long will it take to serve each customer?
8. Why will my business succeed? Why will my customers return?

[1]Information on Burger King was obtained from an interview with David Sell, former vice president of Central, Eastern, and Northern Europe divisions and president of Burger King France and Germany.

11.7 Producing for Quality

What do you do if you get it home and your brand-new DVD player doesn't work? What if you were late for class because it took you twenty minutes to get a burger and order of fries at the drive-through window of a fast-food restaurant? Like most people, you'd probably be more or less disgruntled. As a customer, you're constantly assured that when products make it to market, they're of the highest possible quality, and you tend to avoid brands that have failed to live up to your expectations or to producers' claims. You're told that workers in such businesses as restaurants are there to serve you, and you probably don't go back to establishments where you've received poor-quality service.

But what is *quality*? According to the American Society for Quality, ==quality== refers to "the characteristics of a product or service that bear on its ability to satisfy stated or implied needs" (American Society of Quality, 2011). When you buy a DVD player, you expect it to play DVDs. When it doesn't, you question its quality. When you go to a drive-through window, you expect to be served in a reasonable amount of time. If you're forced to wait, you conclude that you're the victim of poor-quality service.

Quality Management

To compete today, companies must deliver quality goods and services that satisfy customers' needs. This is the objective of quality management. ==Total quality management (TQM)==, or quality assurance, includes all the steps that a company takes to ensure that its goods or services are of sufficiently high quality to meet customers' needs. Generally speaking, a company adheres to TQM principles by focusing on three tasks:

1. Customer satisfaction
2. Employee involvement
3. Continuous improvement

Let's take a closer look at these three principles.

Customer Satisfaction

Companies that are committed to TQM understand that the purpose of a business is to generate a profit by satisfying customer needs. Thus, they let their customers define *quality* by identifying and offering those product features that satisfy customer needs. They encourage customers to tell them how to make the right products, both goods and services, that work the right way.

Armed with this knowledge, they take steps to make sure that providing quality is a factor in every facet of their operations—from design, to product planning and control, to sales and service. To get feedback on how well they're doing, many companies routinely use surveys and other methods to monitor customer satisfaction. By tracking the results of feedback over time, they can see where they need to improve.

Employee Involvement

Successful TQM requires that everyone in the organization, not simply upper-level management, commits to satisfying the customer. When customers wait too long at a drive-through window, it's the responsibility of a number of employees, not the manager alone. A defective DVD isn't solely the responsibility of the manufacturer's quality control department; it's the responsibility of every employee involved in its design, production, and even shipping. To get everyone involved in the drive for quality assurance, managers must communicate the importance of quality to subordinates and motivate them to focus on customer satisfaction. Employees have to be properly trained not only to do their jobs but also to detect and correct quality problems.

In many companies, employees who perform similar jobs work as teams, sometimes called **quality circles**, to identify quality, efficiency, and other work-related problems, to propose solutions, and to work with management in implementing their recommendations.

Continuous Improvement

An integral part of TQM is **continuous improvement**: the commitment to making constant improvements in the design, production, and delivery of goods and services. Improvements can almost always be made to increase efficiency, reduce costs, and improve customer service and satisfaction. Everyone in the organization is constantly on the lookout for ways to do things better.

Statistical Process Control

Companies can use a variety of tools to identify areas for improvement. A common approach in manufacturing is called **statistical process control**. This technique monitors production quality by testing a sample of output to see whether goods in process are being made according to predetermined specifications.

Assume for a moment that you work for Kellogg's, the maker of Raisin Bran cereal. You know that it's the company's goal to pack two scoops of raisins in every box of cereal. How can you test to determine whether this goal is being met? You could use a statistical process control method called *sampling distribution*. On a periodic basis, you would take a box of cereal off the production line and measure the amount of raisins in the box. Then you'd record that amount on a *control chart* designed to compare actual quantities of raisins with the desired quantity (two scoops). If your chart shows that several samples in a row are low on raisins, you'd shut down the production line and take corrective action.

Benchmarking

Sometimes it also helps to look outside the organization for ideas on how to improve operations and to learn how your company compares with others. Companies routinely use **benchmarking** to compare their performance on a number of dimensions with the performance of other companies that excel in particular areas. Frequent benchmark targets include L.L. Bean, for its superior performance in filling orders; 3M, for its record of introducing innovative products; Motorola, for its success in maintaining consistent quality standards; and Mary Kay Cosmetics, for its skills in inventory control (Nuese, 1995).

International Quality Standards

As a consumer, wouldn't you like to know which companies ensure that their products meet quality specifications? Some of us would like to know which companies take steps to protect the environment. Some consumers want to know which companies continuously improve their performance in both of these areas—that is, practice both quality management and environmental management. By the same token, if you were a company doing a good job in these areas, wouldn't you want potential customers to know? It might be worth your while to find out whether your suppliers were also being conscientious in these areas—and even your suppliers' suppliers.

ISO 9000 and ISO 14000

Through the International Organization for Standardization (ISO), a nongovernmental agency based in Switzerland, it's possible to find this kind of information. The resources of this organization will enable you to identify those organizations that have people and processes in place for delivering products that satisfy customers' quality requirements. You can also find out which organizations work to reduce the negative impact of their activities on the environment. Working with representatives from various countries, the organization has established the **ISO 9000** family of international standards for quality management and the **ISO 14000** family of international standards for environmental management.

ISO standards focus on the way a company does its work, not on its output (though there's certainly a strong correlation between the way in which a business functions and the quality of its products). Compliance with ISO standards is voluntary, and the certification process is time-consuming and complex. Even so, hundreds of thousands of organizations around the world are ISO 9000 and ISO 14000 certified (ISO, 2009). ISO certification has become an internationally recognized symbol of quality management and is almost essential to be competitive in the global marketplace.

Outsourcing

PowerSki's Web site states that "PowerSki International has been founded to bring a new watercraft, the PowerSki Jetboard, and the engine technology behind it, to market" (PowerSki, 2011). That goal was reached in May 2003, when the firm emerged from a lengthy design period. Having already garnered praise for its innovative product, PowerSki was ready to begin mass-producing Jetboards. At this juncture, the management team made a strategic decision that's not uncommon in manufacturing today. Rather than producing Jetboards in-house, they opted for **outsourcing**: having outside vendors manufacture the engines, fiberglass hulls, and associated parts. Assembly of the final product took place in a manufacturing facility owned by All American Power Sports in Moses Lake, Washington. This decision doesn't mean that the company relinquished control over quality; in fact, every component that goes into the PowerSki Jetboard is manufactured to exact specifications set by PowerSki. One advantage of outsourcing its production function is that the management team can thereby devote its attention to refining its product design and designing future products.

Outsourcing in the Manufacturing Sector

Outsourcing the production of its engines, hulls, and other components enables PowerSki to reduce the cost of

producing each Jetboard through manufacturing efficiencies and lower labor costs. All components that go into the Jetboard are made to PowerSki's specifications and are inspected upon arrival to ensure that they meet the company's high-quality standards.

Understandably, outsourcing is becoming an increasingly popular option among manufacturers. For one thing, few companies have either the expertise or the inclination to produce everything needed to make a product. Today, more firms, like PowerSki, want to specialize in the processes that they perform best—and outsource the rest. Like PowerSki, they also want to take advantage of outsourcing by linking up with suppliers located in regions with lower labor costs.

Outsourcing in the Service Sector

Outsourcing is by no means limited to the manufacturing sector. Service companies also outsource many of their noncore functions. Your school, for instance, probably outsources such functions as food services, maintenance, bookstore sales, printing, groundskeeping, security, information-technology (IT) support, and even residence operations.

Key Takeaways

- Today, companies that compete in both the manufacturing and service sectors must deliver **quality** goods and services that satisfy customers' needs. Many companies achieve this goal by adhering to principles of **total quality management (TQM)**.
- Companies using a TQM approach focus on customer satisfaction, engage all members of the organization in quality efforts, and strive for **continuous improvement** in the design, production, and delivery of goods and services. They also **benchmark** other companies to find ways to improve their own performance.
- To identify areas for improvement, companies can use a technique called **statistical process control (SPC)**, which monitors quality by testing to see whether a sample of output is being made to predetermined specifications.
- Another cost-saving approach is **outsourcing**—having outside vendors manufacture components or even entire products or provide services, such as information-technology support or service center operations.
- Outsourcing is an appealing option for companies without the expertise in producing everything needed to make a product or those that want to take advantage of low labor costs in developing countries.

Exercises

1. You know that organizations adhering to the principles of TQM focus on three tasks: customer satisfaction, employee involvement, and continuous improvement. Think about the course-registration

process at your school. Does the process appear to be managed according to TQM principles? Is it designed to satisfy the customer (you)? Do employees in the registrar's office, as well as others involved in the process, focus on customer satisfaction? Does anyone seem to be on the lookout for ways to do things better?

2.   Ever wonder how Coca-Cola is made? Go to http://www.coca-colabottling.co.id/eng/ourbusiness/index.php?act=virtualplant to link to Coca-Cola's Web site to learn how the soda drink is made (and get to play a few games on http://www.coca-colabottling.co.id/eng/funstuff/index.php?act=games). After gaining an understanding of the production process to make the soda, pretend that you've just been hired by Coca-Cola as operations manager for a new bottling plant. Your first assignment is to set up a plant somewhere in the United States. Next, identify the planning decisions you'd make and indicate what you would decide. Now, fast-forward two years to the point where the plant is up and running. What responsibilities do you have at this point? What technologies do you use to make your job easier? Finally, quality control is vital to Coca-Cola. What activities are you responsible for that ensure that the soda made at your plant meets Coca-Cola's strict quality standards?

11.8 Cases and Problems

How to Build a BMW

How'd you like to own a Series 3 BMW? How about a convertible priced at $48,000 for those warm summer days? Or maybe a less expensive coupe for $39,000? Or, if you need more space for hauling camping equipment, dogs, or kids, maybe you would prefer a wagon at $37,000? We can't help you finance a BMW, but we can show you how they're made. Go to http://www.bmw-plant-munich.com/ to link to the BMW Web site for a virtual tour of the company's Munich, Germany, plant.

First, click on "Location" and then on "The Plant in Figures." Before going any further, answer the following questions:

1. How many associates (employees) work in the plant?
2. How many apprentices (trainees) work there? Why does the plant have trainees?
3. How many cars are made in the plant each day? How many engines?

Next, click on "Production" to open a drop-down list that looks like this:

Fascination Production

Press Shop

Body Shop

Paint Shop

Engine Assembly

Assembly

Click on "Fascination Production," and watch a video that zips you through the production steps needed to make a BMW. Continue your tour by clicking on each progressive step taken to build a quality car: press shop, body shop, paint shop, engine assembly and final assembly. After reading about and watching the brief video describing the work done in a particular area of the plant, pause and answer the following questions (you will answer this set of questions five times—once for each of these areas of the factory: press shop, body shop, paint shop, engine assembly, and final assembly):

1. What production steps occurred in this area of the plant?
2. What technology does BMW use in the production process?
3. Approximately what percentage of the work was done by people?
4. What procedures were followed to ensure the production of high-quality vehicles?

Wanted: Problem Solvers and Creative Thinkers

If you had a time machine plus a craving for a great hamburger, you could return to the early 1950s and swing by Dick and Mac McDonald's burger stand in San Bernardino, California. Take a break from eating and watch the people in the kitchen. You'll see an early application of operations management in the burger industry. Dick and Mac, in an effort to sell more burgers in less time, redesigned their kitchen to use assembly-line procedures. As the number of happy customers grew, word spread about their speedy system, and their business thrived. Curiously, it wasn't Dick and Mac who made McDonald's what it is today, but rather a traveling milkshake-mixer salesman named Ray Kroc. He visited the hamburger stand to learn how they could sell twenty thousand shakes a year. When he saw their operations and the lines of people walking away with bags filled with burgers, fries, and shakes, he knew he had a winner. In cooperation with the McDonald brothers, he started selling franchises around the country, and the rest is history.

So, what does this story have to do with a career in operations management? If you're a problem solver like Dick and Mac (who discovered a way to make burgers faster and cheaper) or a creative thinker like Ray Kroc (who recognized the value in an assembly-line burger production system), then a career in operations management might be for you. The field is broad and offers a variety of opportunities. To get a flavor of the choices available, go to http://careers-in-business.com/omoptions.htm to review a few operations management positions listed. Provide a brief description of each position. Indicate how interesting you find each position by rating it using a five-point scale (with 1 being uninteresting and 5 being very interesting). Based on your assessment, pick the position you find most interesting and the one you find least interesting. Explain why you made your selections.

Ethics Angle

In many ways, Eastman Kodak (a multinational manufacturer and distributor of photographic equipment and supplies) is a model corporate citizen. *Fortune* magazine has ranked it as one of the country's most admired companies, applauding it in particular for its treatment of minorities and women. Its community-affairs programs and contributions have also received praise, but Eastman Kodak remains weak in one important aspect of corporate responsibility: it has consistently received low scores on environmental practices. For example, the watchdog group Scorecard rated Eastman Kodak's Rochester, New York, facility as the third-worst emitter of airborne carcinogens in the United States. Other reports have criticized the company for dumping cancer-causing chemicals into the nation's waters.

Go to the Eastman Kodak Web site (https://www.kodak.com/NO/nb/corp/Blog/Blog_Post/?contentId=4295012977) and read its own assessment of its environmental practices. Then answer the following questions:

- Based on the information provided on its Web site, how favorable do you feel about Eastman Kodak's environmental practices?
- In what ways is the company responding to criticisms of its environmental practices and improving them?
- Do the statements on the Web site mesh with the criticism that the company has received? If not, what accounts for the differences?

Team-Building Skills (AACSB)

Growing Accustomed to Your Fit

Instead of going to the store to try on several pairs of jeans that may or may not fit, wouldn't it be easier to go online and order a pair of perfect-fitting jeans? Lands' End has made this kind of shopping possible through mass-customization techniques and some sophisticated technology.

To gain some firsthand experience at shopping for mass-customized goods, have each member of your team go to Nike's By You site at https://www.nike.com/nike-by-you. Each team member should go through the process of customizing a different Nike product but stop right before placing an order. After everyone has gone through the process, get together and write a report in which the team explains exactly what's entailed by online mass customization and details the process at Nike. Be sure to say which things impressed you and which didn't. Explain why Nike developed this means of marketing products and, finally, offer some suggestions on how the process could be improved.

The Global View (AACSB)

What's the State of Homeland Job Security?

Over the past several decades, more and more U.S. manufacturers began outsourcing production to such low-wage countries as Mexico and China. The number of U.S. manufacturing jobs dwindled, and the United States became more of a service economy. People who were directly affected were understandably unhappy about this turn of events, but most people in this country didn't feel threatened. At least, not until service jobs also started going to countries that, like India, have large populations of well-educated, English-speaking professionals. Today, more technology-oriented jobs, including those in programming and Internet communications, are being outsourced to countries with lower wage rates. And tech workers aren't alone: the

jobs of accountants, analysts, bankers, medical technicians, paralegals, insurance adjusters, and even customer-service representatives have become candidates for overseas outsourcing.

Many U.S. workers are concerned about job security (though the likelihood of a particular individual's losing a job to an overseas worker is still fairly low). The issues are more complex than merely deciding where U.S. employers should be mailing paychecks, and politicians, economists, business executives, and the general public differ about the causes and consequences of foreign outsourcing. Some people think it's a threat to American quality of life, while others actually think that it's a good thing.

Spend some time researching trends in outsourcing. Formulate some opinions, and then answer the following questions:

1. About what percentage of U.S. jobs have left the country in the last five years? What percentage will probably leave in the next five years?
2. What kinds of jobs are being outsourced, and where are they going? What kinds of jobs can't be outsourced?
3. How does global outsourcing help U.S. businesses? How does it hinder them?
4. How has the trend in outsourcing manufacturing and service operations to foreign countries helped average Americans? How has it harmed them?
5. Does overseas outsourcing help or hurt the U.S. economy? In what ways?

USING FINANCIAL INFORMATION AND ACCOUNTING

Learning Objectives

1. Why are financial reports and accounting information important, and who uses them?
2. What are the differences between public and private accountants, and how has federal legislation affected their work?
3. What are the six steps in the accounting cycle?
4. In what terms does the balance sheet describe the financial condition of an organization?
5. How does the income statement report a firm's profitability?
6. Why is the statement of cash flows an important source of information?
7. How can ratio analysis be used to identify a firm's financial strengths and weaknesses?
8. What major trends affect the accounting industry today?

12.1 Future Glory

Figure 12.1

Theresa Lee always knew she would start her own business; it was just a matter of time. In 2013, after working as a designer in the Bay Area for more than a decade, Lee cofounded Future Glory, which specializes in handmade leather bags and accessories, now made in a small studio in the Dogpatch neighborhood of San Francisco.

Lee would be the first to tell you that she is a creative person and not so great with numbers and other business details. But the business details, including financial statements and cash flow, are key to any company. That's where accounting software like QuickBooks Online comes in handy. QuickBooks is a global online accounting program that has helped tech-savvy entrepreneurs take the worry out of crunching the numbers that can make or break their business ventures.

Intuit, the global leader in accounting software, has revolutionized the approach taken by small businesses with its products, including QuickBooks and TurboTax, programs that can be used by new businesses, independent contractors, product sellers, accountants, and other types of businesses. The company estimates more than two million global customers are currently using the online version of QuickBooks. Intuit provides online support that includes expert help, a resource blog, accounting advice, and other features utilized by QuickBooks users and those wanting more information about how to track typical business accounting functions.

As Lee points out, using a cloud-based accounting program has helped her gain control over company finances and provided insight into key business components such as profit and loss, cost of goods sold, and labor. In addition, QuickBooks' ability to work with other apps has helped her manage e-commerce sales efficiently. Lee uses Shopify as an e-commerce platform and PayPal as a payment system. By using a version of these apps designed to work with QuickBooks, Lee can import sales data (line items, fees, and taxes) as well as customer information into the accounting program. In addition, Shopify e-commerce data automatically syncs with QuickBooks, allowing her to keep bookkeeping activities to a minimum and giving her more time to focus on designing and creating new products and fulfilling the social goals of her business.

According to Lee, a significant part of her operation is dedicated to providing training and jobs to members of the local community. In addition, Future Glory supports various social causes, donating a portion of revenue to various organizations that assistant women and children in need.

Keeping a close eye on financial and accounting information is an important part of any business, whether it's a startup or a global conglomerate. The continuing revolution in technology has enabled bookkeeping and accounting activities to be done more efficiently while giving business owners, particularly small businesses like Future Glory, the time to spend expanding their business and giving back to their local communities.

Financial information is central to every organization. To operate effectively, businesses must have a way to track income, expenses, assets, and liabilities in an organized manner. Financial information is also essential for decision-making. Managers prepare financial reports using accounting, a set of procedures and guidelines for companies to follow when preparing financial reports. Unless you understand basic accounting concepts, you will not be able to "speak" the standard financial language of businesses. This module examines the role of accounting in business, how accounting contributes to a company's overall success, the three primary financial statements, and careers in accounting.

12.2 Accounting: More than Numbers

Prior to 2001, accounting topics rarely made the news. That changed when Enron Corp.'s manipulation of accounting rules to improve its financial statements hit the front pages of newspapers. The company filed bankruptcy in 2001, and its former top executives were charged with multiple counts of conspiracy and fraud. Arthur Andersen, Enron's accounting firm, was indicted and convicted of obstruction of justice, and in 2002, the once-respected firm went out of business. Soon financial abuses at other companies—among them Tyco, Adelphia, WorldCom, and more recently Madoff Investment Securities—surfaced. Top executives at these and other companies were accused of knowingly flouting accepted accounting standards to inflate current profits and increase their compensation. Many were subsequently convicted:

- Investment securities broker Bernard Madoff and his accountant bilked investors out of more than $65 billion; Madoff is currently serving a 150-year prison term.
- Andrew Fastow, Enron's former chief financial officer, and Ben Glisan Jr., its former treasurer, pleaded guilty and received prison terms of 10 and five years, respectively. The company's former chairman, Ken Lay, and CEO, Jeffrey Skilling, were convicted of multiple charges.
- Bernard Ebbers, WorldCom's CEO, was sentenced to 25 years in prison for conspiracy, securities fraud, and filing false reports with regulatory agencies—crimes that totaled $11 billion in accounting fraud.
- Tyco's CEO L. Dennis Kozlowski was fined $70 million and sentenced to 8 to 25 years.

These and other cases raised critical concerns about the independence of those who audit a company's financial statements, questions of integrity and public trust, and issues with current financial reporting standards. Investors suffered as a result because the crisis in confidence sent stock prices tumbling, and companies lost billions in value.

So it's no surprise that more people are paying attention to accounting topics. We now recognize that accounting is the backbone of any business, providing a framework to understand the firm's financial condition. Reading about accounting irregularities, fraud, **audit** (financial statement review) shortcomings, out-of-control business executives, and bankruptcies, we have become very aware of the importance of accurate financial information and sound financial procedures.

All of us—whether we are self-employed, work for a local small business or a multinational Fortune 100 firm, or are not currently in the workforce—benefit from knowing the basics of accounting and financial statements. We can use this information to educate ourselves about companies before interviewing for a job or buying a company's stock or bonds. Employees at all levels of an organization use accounting information to monitor operations. They also must decide which financial information is important for their company or business unit, what those numbers mean, and how to use them to make decisions.

Figure 12.2. This advertisement by the U.S. Marshals Service underscores the greed and financial abuse caused by Bernard Madoff, as his personal belongings were seized by the government and auctioned off to help pay for the $65 billion lost by individuals who invested in his financial securities firm. Madoff is serving a jail term of 150 years for his fraudulent actions. What should be the lessons learned by executives and accounting professionals about Madoff's behavior?

This chapter starts by discussing why accounting is important for businesses and for users of financial information. Then it provides a brief overview of the accounting profession and the post-Enron regulatory environment. Next it presents an overview of basic accounting procedures, followed by a description of the three main financial statements–the balance sheet, the income statement, and the statement of cash flows. Using these statements, we then demonstrate how ratio analysis of financial statements can provide valuable information about a company's financial condition. Finally, the chapter explores current trends affecting the accounting profession.

Accounting Basics

Accounting is the process of collecting, recording, classifying, summarizing, reporting, and analyzing financial activities. It results in reports that describe the financial condition of an organization. All types of organizations–businesses, hospitals, schools, government agencies, and civic groups–use accounting procedures. Accounting provides a framework for looking at past performance, current financial health, and possible future performance. It also provides a framework for comparing the financial positions and financial performances of different firms. Understanding how to prepare and interpret financial reports will enable you to evaluate two companies and choose the one that is more likely to be a good investment.

The accounting system shown in Figure 12.3 converts the details of **financial transactions** (sales, payments, purchases, and so on) into a form that people can use to evaluate the firm and make decisions. Data become information, which in turn becomes reports. These reports describe a firm's financial position at one point in time and its financial performance during a specified period. Financial reports include *financial statements*, such as balance sheets and income statements, and special reports, such as sales and expense breakdowns by product line.

Classify, summarize, and analyze data. → Prepare financial reports. → Use financial reports to evaluate the firm and make decisions.

Figure 12.3: The Accounting System

Who Uses Financial Reports?

The accounting system generates two types of financial reports, as shown in Figure 12.4 internal and external. Internal reports are used within the organization. As the term implies, **managerial accounting** provides financial information that managers inside the organization can use to evaluate and make decisions about current and future operations. For instance, the sales reports prepared by managerial accountants show how well marketing strategies are working, as well as the number of units sold in a specific period of time. This information can be used by a variety of managers within the company in operations as well as in production or manufacturing to plan future work based on current financial data. Production cost reports can help departments track and control costs, as well as zero in on the amount of labor needed to produce goods or services. In addition, managers may prepare very detailed financial reports for their own use and provide summary reports to top management, providing key executives with a "snapshot" of business operations in a specific timeframe.

Financial accounting focuses on preparing external financial reports that are used by outsiders; that is, people who have an interest in the business but are not part of the company's management. Although they provide useful information for managers, these reports are used primarily by lenders, suppliers, investors, government agencies, and others to assess the financial strength of a business.

To ensure accuracy and consistency in the way financial information is reported, accountants in the United States follow **generally accepted accounting principles (GAAP)** when preparing financial statements. The **Financial Accounting Standards Board** is a private organization that is responsible for establishing financial accounting standards used in the United States.

Currently there are no international accounting standards. Because accounting practices vary from country to country, a multinational company must make sure that its financial statements conform to both its own country's accounting standards and those of the parent company's country. Often another country's standards are quite different from U.S. GAAP. In the past, the U.S. Financial Accounting Standards Board and the International Accounting Standards Board (IASB) worked together to develop global accounting standards that would make it easier to compare financial statements of foreign-based companies. However, as of this writing, the two organizations have not agreed on a global set of accounting standards.

Internal Reporting (managerial accounting)

External Reporting (financial accounting)

The Accounting System

Financial reports for internal use by company management:
- Sales reports
- Production cost reports
- Other detailed financial reports

Financial statements for use by investors, lenders, and others outside the organization:
- Balance sheet
- Income statement
- Statement of cash flows
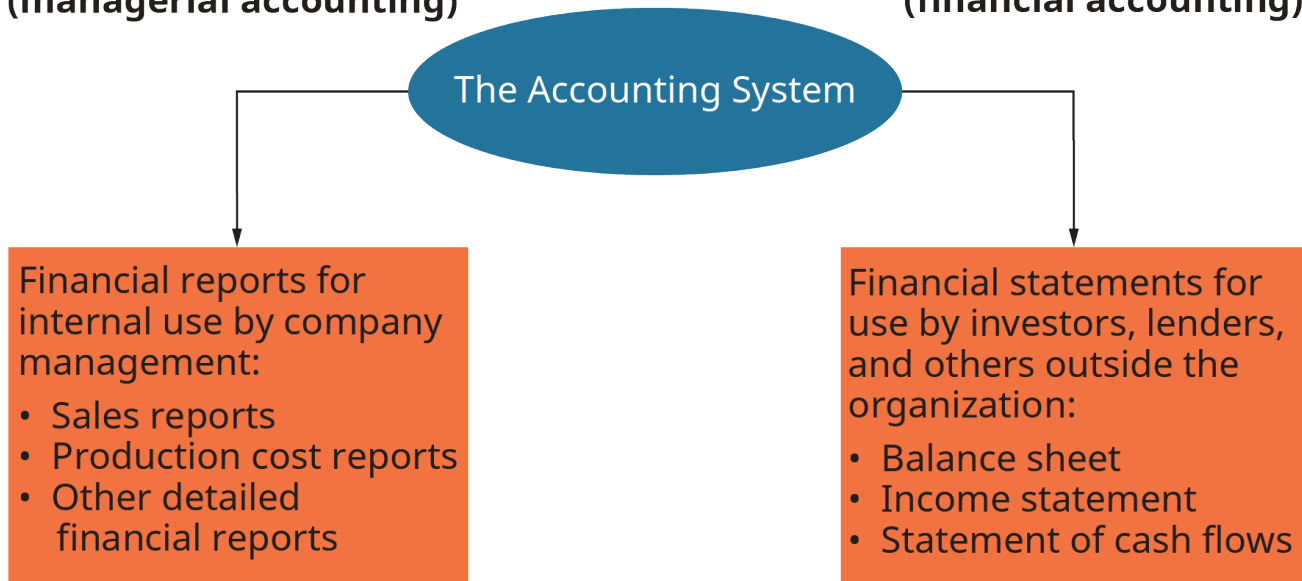

Figure 12.4: Reports Provided by the Accounting System

Financial statements are the chief element of the **annual report**, a yearly document that describes a firm's financial status. Annual reports usually discuss the firm's activities during the past year and its prospects for the future. Three primary financial statements included in the annual report are discussed and shown later in this chapter:

- The balance sheet
- The income statement
- The statement of cash flows

Global Accounting Standards Unlikely to Happen

Imagine being a CFO of a major multinational company with significant operations in 10 other countries. Because the accounting rules in those countries don't conform to GAAP, your staff has to prepare nine sets of financial reports that comply with the host country's rules—and also translate the figures to GAAP for consolidation into the parent company's statements in the United States. It's a massive undertaking for anyone.

The U.S. FASB and the IASB have tried to make this task easier, but progress has been slow. These groups hoped to develop international accounting standards that remove disparities between national and international standards, improve the quality of financial information worldwide, and simplify comparisons of financial statements across borders for both corporations and investors. Unfortunately, it looks like this goal of convergence is slipping away.

More than a decade ago, the FASB and the IASB jointly published a memorandum of understanding (MOU) reaffirming the two organizations' desire to create uniform global accounting standards. "This document underscores our strong commitment to continue to work together with the IASB to bring about a common set

of accounting standards that will enhance the quality, comparability, and consistency of global financial reporting, enabling the world's capital markets to operate more effectively," said Robert Herz, FASB's former chairman. Sir David Tweedie, then chairman of the IASB, agreed: "The pragmatic approach described in the MOU enables us to provide much-needed stability for companies using IFRS [the IASB's International Financial Reporting Standards] in the near term," he commented. (About 150 countries worldwide currently use IFRS.)

As they worked toward convergence, the board members decided to develop a new set of common standards rather than try to reconcile the two standards. These new standards had to be better than existing ones, not simply eliminate differences. Unfortunately, merging GAAP and IFRS into a consistent set of international accounting standards has proven to be very difficult because of different approaches used in the two sets. For example, because of frequent litigation surrounding financial information in the United States, preparers of financial statements demand very detailed rules in all areas of accounting, in contrast to the IASB's approach of setting accounting principles and leaving preparers to apply them to individual situations they encounter. In addition, many companies doing business in the United States fear that moving toward global accounting standards would be very costly and time-consuming in terms of changing accounting software, employee and vendor training, and other business-related practices.

For now, the two organizations agree to disagree on when and if they can "converge" GAAP and IFRS into a global set of standards. However, they continue to keep each other informed about upcoming changes in standards that may impact accounting practices worldwide.

Critical Thinking Questions

1. Is it important to have a single set of international accounting standards for at least publicly owned companies? Defend your answer.
2. Do you think the two organizations will ever come close to uniform global accounting standards? Use a search engine and the archives of CFO magazine, **http://www.cfo.com**, to research this topic, and summarize your findings.

Katz, "The Split over Convergence," CFO, http://ww2.cfo.com, October 17, 2014.

Key Takeaways

*   Accounting involves collecting, recording, classifying, summarizing, reporting, and analyzing a firm's financial activities according to a standard set of procedures.
*   The financial reports resulting from the accounting process give managers, employees, investors,

customers, suppliers, creditors, and government agencies a way to analyze a company's past, current, and future performance.

- Financial accounting is concerned with the preparation of financial reports using generally accepted accounting principles. Managerial accounting provides financial information that management can use to make decisions about the firm's operations.

Exercises

1. Explain who uses financial information.
2. Differentiate between financial accounting and managerial accounting.
3. How do GAAP, the FASB, and the IASB influence the accounting industry?

12.3 The Accounting Profession

When you think of accountants, do you picture someone who works in a back room, hunched over a desk, wearing a green eye shade and scrutinizing pages and pages of numbers? Although today's accountants still must love working with numbers, they now work closely with their clients to not only prepare financial reports but also help them develop good financial practices. Advances in technology have taken the tedium out of the number-crunching and data-gathering parts of the job and now offer powerful analytical tools as well. Therefore, accountants must keep up with information technology trends. The accounting profession has grown due to the increased complexity, size, and number of businesses and the frequent changes in the tax laws. Accounting is now a $95 billion-plus industry. The more than 1.4 million accountants in the United States are classified as either public accountants or private (corporate) accountants. They work in public accounting firms, private industry, education, and government, and about 10 percent are self-employed. The job outlook for accountants over the next decade is positive; the Bureau of Labor Statistics projects that accounting and auditing jobs will increase 11 percent faster than many other industries in the U.S. economy.

Public Accountants

Independent accountants who serve organizations and individuals on a fee basis are called <mark>public accountants</mark>. Public accountants offer a wide range of services, including preparation of financial statements and tax returns, independent auditing of financial records and accounting methods, and management consulting. **Auditing**, the process of reviewing the records used to prepare financial statements, is an important responsibility of public accountants. They issue a formal *auditor's opinion* indicating whether the statements have been prepared in accordance with accepted accounting rules. This written opinion is an important part of a company's annual report.

The largest public accounting firms, called the Big Four, operate worldwide and offer a variety of business consulting services in addition to accounting services. In order of size, they are Deloitte, PwC (PricewaterhouseCoopers), EY (Ernst & Young), and KPMG International (Doherty, 2017). A former member of this group, Arthur Andersen, disbanded in 2002 as a result of the Enron scandal.

To become a <mark>certified public accountant</mark> (CPA), an accountant must complete an approved bachelor's degree program and pass a test prepared by the American Institute of CPAs (AICPA). Each state also has requirements for CPAs, such as several years' on-the-job experience and continuing education. Only CPAs can issue the auditor's opinion on a firm's financial statements. Most CPAs first work for public accounting firms and later may become private accountants or financial managers. Of the more than 418,000 accountants who belong to the AICPA, 47 percent work in public accounting firms and 39 percent in business and industry (AICPA, 2017).

Private Accountants

Accountants employed to serve one particular organization are <mark>private accountants</mark>. Their activities include preparing financial statements, auditing company records to be sure employees follow accounting policies and procedures, developing accounting systems, preparing tax returns, and providing financial information for management decision-making. Whereas some private accountants hold the CPA designation, managerial accountants also have a professional certification program. Requirements to become a <mark>certified management accountant</mark> (CMA) include passing an examination.

Reshaping the Accounting Environment

Although our attention was focused on big-name accounting scandals in the late 1990s and early 2000s, an epidemic of accounting irregularities was also taking place in the wider corporate arena. The number of companies restating annual financial statements grew at an alarming rate, tripling from 1997 to 2002. In the wake of the numerous corporate financial scandals, Congress and the accounting profession took major steps to prevent future accounting irregularities. These measures targeted the basic ways, cited by a report from the AICPA, that companies massaged financial reports through creative, aggressive, or inappropriate accounting techniques, including:

- Committing fraudulent financial reporting
- Stretching accounting rules to significantly enhance financial results
- Following appropriate accounting rules but using loopholes to manage financial results

Why did companies willfully push accounting to the edge–and over it–to artificially pump up revenues and profits? Looking at the companies involved in the scandals, some basic similarities have emerged:

- A company culture of arrogance and above-average tolerance for risk
- Interpretation of accounting policies to their advantage and manipulation of the rules to get to a predetermined result and conceal negative financial information
- Compensation packages tied to financial or operating targets, making executives and managers greedy and pressuring them to find sometimes-questionable ways to meet what may have been overly optimistic goals
- Ineffective checks and balances, such as audit committees, boards of directors, and financial control procedures, that were not independent from management
- Centralized financial reporting that was tightly controlled by top management, increasing the opportunity for fraud
- Financial performance benchmarks that were often out of line with the companies' industry
- Complicated business structures that clouded how the company made its profits
- Cash flow from operations that seemed out of line with reported earnings (You'll learn about this important difference between cash and reported earnings in the sections on the income statement and statement of cash flows.)
- Acquisitions made quickly, often to show growth rather than for sound business reasons; management focused more on buying new companies than making the existing operations more profitable (Krell, 2017).

Companies focused on making themselves look good in the short term, doing whatever was necessary to top past performance and to meet the expectations of investment analysts, who project earnings, and investors, who panic when a company misses the analysts' forecasts. Executives who benefited when stock prices rose had no incentive to question the earnings increases that led to the price gains.

These number games raised serious concerns about the quality of earnings and questions about the validity of financial reports. Investors discovered to their dismay that they could neither assume that auditors were adequately monitoring their clients' accounting methods nor depend on the integrity of published financial information.

Better Numbers Ahead

Over the past 15 years, a number of accounting reforms have been put in place to set better standards for accounting,

auditing, and financial reporting. Investors, now aware of the possibility of various accounting shenanigans, are avoiding companies that use complicated financial structures and off-the-books financing.

In 2002, the **Sarbanes-Oxley Act** (commonly referred to as SOX) went into effect. This law, one of the most extensive pieces of business legislation passed by Congress, was designed to address the investing public's lack of trust in corporate America. It redefines the public corporation–auditor relationship and restricts the types of services auditors can provide to clients. The Act clarifies auditor-independence issues, places increased accountability on a company's senior executives and management, strengthens disclosure of insider transactions (an employee selling stock based on information not known by the public), and prohibits loans to executives.

An independent five-member Public Company Accounting Oversight Board (PCAOB) was given the authority to set and amend auditing, quality control, ethics, independence, and other standards for audit reports. The Act specifies that all PCAOB members be financially literate. Two members must have their CPA designation, and the other three cannot be or have been CPAs. Appointed and overseen by the Securities and Exchange Commission (SEC), the PCAOB can also inspect accounting firms; investigate breaches of securities law, standards, competency, and conduct; and take disciplinary action. The corporate Board registers public accounting firms, as the Act now requires. Altering or destroying key audit documents now carries felony charges and increased penalties.

Other key provisions of the Act cover the following areas:

- *Auditing standards*: The Board must include in its standards several requirements, such as maintaining audit work papers and other documentation for audit reports for seven years, the review and approval of audit reports by a second partner, and audit standards for quality control and review of internal control procedures.
- *Financial disclosure*: Companies must clearly disclose all transactions that may have a material current or future effect on their financial condition, including those that are off the books or with unconsolidated entities (related companies whose results the company is not required to combine with its own financial statements under current accounting rules). Management and major stockholders must disclose transactions such as sales of company stock within two days of the transaction. The company must disclose its code of ethics for senior financial executives. Any significant changes in a company's operations or financial condition must be disclosed "on a rapid and current basis."
- *Financial statement certification*: Chief executive officers and chief financial officers must certify company financial statements, with severe criminal and civil penalties for false certification. If securities fraud results in restatement of financial reports, these executives will lose any stock-related profits and bonuses they received prior to the restatement.
- *Internal controls*: Each company must have appropriate internal control procedures in place for financial reporting, and its annual report must include a report on implementation of those controls to assure the integrity of financial reports.
- *Consulting work*: The Act restricts the non-auditing work auditors may perform for a client. In the past, the large accounting firms had expanded their role to include a wide range of advisory services that went beyond their traditional task of validating a company's financial information. Conflicts of interest arose when the same firm earned lucrative fees for both audit and consulting work for the same client (Guide to the..., 2017; Tysiax, 2017).

Other regulatory organizations also took steps to prevent future abuses. In September 2002, the AICPA Auditing Standards Board (ASB) issued expanded guidelines to help auditors uncover fraud while conducting audits. The New York Stock Exchange stiffened its listing requirements so that the majority of directors at listed companies must be independent and not employees of the corporation. Nor can auditors serve on clients' boards for five years. Companies listed in the Nasdaq marketplace cannot hire former auditors at any level for three years.

In response to the passage of Sarbanes-Oxley and other regulations, companies implemented new control measures and improved existing ones. The burdens in both cost and time have been considerable. Many companies had to redesign and restructure financial systems to improve efficiency. Some finance executives believe that their investment in increased controls has improved shareholder perceptions of their company's ethics. Others, however, reported that

costs depressed earnings and negatively affected stock prices. Despite the changes and costs associated with SOX compliance, 15 years after the law's implementation, many business executives believe that the process has helped them fine-tune financial activities and reporting while addressing dynamic changes in the market and other economic challenges ("Fine-Tuning...," 2017)

Key Takeaways

- Public accountants work for independent firms that provide accounting services—such as financial report preparation and auditing, tax return preparation, and management consulting—to other organizations on a fee basis.

- Private accountants are employed to serve one particular organization and may prepare financial statements, tax returns, and management reports.

- The bankruptcies of companies such as Enron and WorldCom, plus widespread abuses of accounting practices, raised critical issues of auditor independence and the integrity and reliability of financial reports. To set better standards for accounting, auditing, and financial reporting and prevent future accounting irregularities, Congress passed the Sarbanes-Oxley Act in 2002. This Act created an independent board to oversee the accounting profession, set stricter auditing and financial disclosure standards, and placed increased accountability on a company's senior executives and management. In addition, the law restricts auditors from providing certain types of consulting services to clients. Other organizations such as the SEC, the New York Stock Exchange, and accounting industry professional associations issued new regulations and guidelines related to compliance with the Act.

Exercise

1. Compare the responsibilities of public and private accountants. How are they certified?
2. Summarize the major changes affecting accounting and corporate reporting and the reasons for them.

12.4 Basic Accounting Procedures

Using generally accepted accounting principles, accountants record and report financial data in similar ways for all firms. They report their findings in financial statements that summarize a company's business transactions over a specified time period. As mentioned earlier, the three major financial statements are the balance sheet, income statement, and statement of cash flows.

People sometimes confuse accounting with bookkeeping. Accounting is a much broader concept. **Bookkeeping**, the system used to record a firm's financial transactions, is a routine, clerical process. Accountants take bookkeepers' transactions, classify and summarize the financial information, and then prepare and analyze financial reports. Accountants also develop and manage financial systems and help plan the firm's financial strategy.

The Accounting Equation

The accounting procedures used today are based on those developed in the late 15th century by an Italian monk, Brother Luca Pacioli. He defined the three main accounting elements as assets, liabilities, and owners' equity. Assets are things of value owned by a firm. They may be **tangible**, such as cash, equipment, and buildings, or **intangible**, such as a patent or trademarked name. Liabilities—also called *debts*—are what a firm owes to its creditors. Owners' equity is the total amount of investment in the firm minus any liabilities. Another term for owners' equity is *net worth.*

The relationship among these three elements is expressed in the accounting equation:

$$\text{Assets} - \text{Liabilities} = \text{Owners' equity}$$

The accounting equation must always be in balance (that is, the total of the elements on one side of the equals sign must equal the total on the other side).

Suppose you start a coffee shop and put $10,000 in cash into the business. At that point, the business has assets of $10,000 and no liabilities. This would be the accounting equation:

Assets	=	Liabilities	+	Owners' equity
$10,000	=	$0	+	$10,000

The liabilities are zero and owners' equity (the amount of your investment in the business) is $10,000. The equation balances.

To keep the accounting equation in balance, every transaction must be recorded as two entries. As each transaction is recorded, there is an equal and opposite event so that two accounts or records are changed. This method is called **double-entry bookkeeping.**

Suppose that after starting your business with $10,000 cash, you borrow another $10,000 from the bank. The accounting equation will change as follows:

Assets	=	Liabilities	+	Owners' equity	
$10,000	=	$0	+	$10,000	**Initial equation**
$10,000	=	$10,000	+	$0	**Borrowing transaction**
$20,000	=	$10,000	+	$10,000	**Equation after borrowing**

Now you have $20,000 in assets—your $10,000 in cash and the $10,000 loan proceeds from the bank. The bank loan

is also recorded as a liability of $10,000 because it's a debt you must repay. Making two entries keeps the equation in balance.

The Accounting Cycle

The **accounting cycle** refers to the process of generating financial statements, beginning with a business transaction and ending with the preparation of the report. **(Figure)** shows the six steps in the accounting cycle. The first step in the cycle is to analyze the data collected from many sources. All transactions that have a financial impact on the firm—sales, payments to employees and suppliers, interest and tax payments, purchases of inventory, and the like—must be documented. The accountant must review the documents to make sure they're complete.

Step 1:
Analyze business transaction documents.

Step 4:
Prepare trial balance.

Step 2:
Record business transactions in journal.

Step 3:
Post journal entries to ledgers.

Step 5:
Prepare financial statements and management reports from account data.

Step 6:
Analyze reports.
Figure 12.5: The Accounting Cycle

Next, each transaction is recorded in a **journal**, a listing of financial transactions in chronological order. The journal entries are then recorded in **ledgers**, which show increases and decreases in specific asset, liability, and owners' equity accounts. The ledger totals for each account are summarized in a **trial balance**, which is used to confirm the accuracy of the figures. These values are used to prepare financial statements and management reports. Finally, individuals analyze these reports and make decisions based on the information in them.
Figure 12.6. QuickBooks is a well-known software developer that provides business-management solutions to businesses of different sizes. The company's accounting software tools benefit professionals by automating a broad range of accounting and other business tasks. QuickBooks has become standard in the accounting and business fields, assisting in managerial decision-making and streamlining bookkeeping and accounting processes. What accounting functions are typically incorporated into basic accounting software programs?

Technological Advances

Over the past decade, technology has had a significant impact on the accounting industry. Computerized and online accounting programs now do many different things to make business operations and financial reporting more efficient. For example, most accounting packages offer basic modules that handle general ledger, sales order, accounts receivable, purchase order, accounts payable, and inventory control functions. Tax programs use accounting data to prepare tax returns and tax plans. Point-of-sale terminals used by many retail firms automatically record sales and do some of the

bookkeeping. The Big Four and many other large public accounting firms develop accounting software for themselves and for clients.

Accounting and financial applications typically represent one of the largest portions of a company's software budget. Accounting software ranges from off-the-shelf programs for small businesses to full-scale customized enterprise resource planning systems for major corporations. Although these technological advances in accounting applications have made the financial aspects of running a small business much easier, entrepreneurs and other small-business owners should take to time to understand underlying accounting principles, which play an important role in evaluating just how financially sound a business enterprise really is.

Managing Change

Data Analytics Become Effective CPA Tool

Knowledge is power, and understanding what your customers want and how your company can provide it often differentiates you from the competition. As the accounting field continues to take advantage of technological advances, it is important that data analytics become a key element of any accounting professional's toolbox.

Historically described as "paper pushers" who track financial information, today's accountants need to learn about big data and data analytics as part of their continuing education. Not long ago, an accountant's work finished when business financial statements were finalized and tax forms were ready to be filed with federal, state, and local governing bodies. Not anymore. With the revolution of computer technology, automation, and data collection from a myriad of sources, accountants can use data analytics to provide a clearer picture of the overall business environment for their companies and clients on an ongoing basis.

Data analytics can be defined as the process of examining numerous data sets (sometimes called big data) to draw conclusions about the information they contain, with the assistance of specialized systems and software. Using data analytics effectively can help businesses increase revenue, expand operations, maximize customer service, and more. Accountants can use data analytics to make more accurate and detailed forecasts; help companies link diverse financial and nonfinancial data sets, which provides a more comprehensive reporting of their overall performance to shareholders and others; assess and manage risk across the entire organization; and identify possible fraud.

Data analytics can also improve and enhance the auditing process because more information will now be collected, which allows for analysis of *full* data sets in situations where only samples were audited previously. In addition, continuous monitoring will be easier to accomplish using data sets that are comprehensive.

Accounting professionals who can adapt to quickly changing technology such as data analytics will not only expand the scope of their expertise but also provide financial guidance that will give their companies and clients a strong strategic advantage over competitors.

Critical Thinking Questions

1. How can accountants use data analytics to enhance the services they provide to their clients?

2. Is the seismic shift in technology a good thing for professional accountants? Explain your reasoning.

Sources: "Data Analytics," http://searchdatamanagement.techtarget.com, accessed August 11, 2017; Jiali Tang and Khondkar E. Karim, "Big Data in Business Analytics: Implications for the Audit Profession," *The CPA Journal*, http://www.cpajournal.com, June 2017 issue; Clarence Goh, "Are You Ready? Data Analytics Is Reshaping the Work of Accountants," https://www.cfoinnovation.com, February 28, 2017; Norbert Tschakert, Julia Kokina, Stephen Kozlowski, and Miklos Vasarhelyi, "The Next Frontier in Data Analytics," *Journal of Accountancy*, http://www.journalofaccountancy.com, August 1, 2016.

Key Takeaways

- The accounting cycle refers to the process of generating financial statements.

  ◦ It begins with analyzing business transactions, recording them in journals, and posting them to ledgers.
  ◦ Ledger totals are then summarized in a trial balance that confirms the accuracy of the figures.
  ◦ Next the accountant prepares the financial statements and reports.
  ◦ The final step involves analyzing these reports and making decisions. Computers have simplified many of these labor-intensive tasks.

Exercise

1. Explain the accounting equation.
2. Describe the six-step accounting cycle.
3. What role do computers and other technology play in accounting?

12.5 The Balance Sheet

The **balance sheet**, one of three financial statements generated from the accounting system, summarizes a firm's financial position at a specific point in time. It reports the resources of a company (assets), the company's obligations (liabilities), and the difference between what is owned (assets) and what is owed (liabilities), or owners' equity.

The assets are listed in order of their **liquidity**, the speed with which they can be converted to cash. The most liquid assets come first, and the least liquid are last. Because cash is the most liquid asset, it is listed first. Buildings, on the other hand, have to be sold to be converted to cash, so they are listed after cash. Liabilities are arranged similarly: liabilities due in the short term are listed before those due in the long term.

The balance sheet as of December 31, 2018, for Delicious Desserts, Inc., a fictitious bakery, is illustrated in Table 12.1. The basic accounting equation is reflected in the three totals highlighted on the balance sheet: assets of $148,900 equal the sum of liabilities and owners' equity ($70,150 + $78,750). The three main categories of accounts on the balance sheet are explained below.

Table 12.1: Balance Sheet for Delicious Desserts

Delicious Desserts, Inc.			
Balance Sheet as of December 31, 2018			
Assets			
Current assets:			
Cash		$15,000	
Marketable securities		$4,500	
Accounts receivable	$45,000		
Less: Allowance for doubtful accounts	$1,300	$43,700	
Notes receivable		$5,000	
Inventory		$15,000	
Total current assets			$83,200
Fixed assets:			
Bakery equipment	$56,000		
Less: Accumulated depreciation	$16,000	$40,000	
Furniture and fixtures	$18,450		
Less: Accumulated depreciation	$4,250	$14,200	
Total fixed assets			$54,200
Intangible assets:			
Trademark		$4,500	
Goodwill		$7,000	
Total intangible assets			$11,500
Total assets			**$148,900**
Liabilities and owners' equity			
Current liabilities:			
Accounts payable	$30,650		
Notes payable	$15,000		
Accrued expenses	$4,500		
Income taxes payable	$5,000		
Current portion of long-term debt	$5,000		
Total current liabilities		$60,150	
Long-term liabilities:			
Bank loan for bakery equipment	$10,000		
Total long-term liabilities		$10,000	
Total liabilities			$70,150

Delicious Desserts, Inc.			
Balance Sheet as of December 31, 2018			
<u>Owners' equity</u>			
Common stock		$30,000	
(10,000 shares outstanding)			
Retained earnings		<u>$48,750</u>	
Total owners' equity			$78,750
Total liabilities and owners' equity			**$148,900**

Assets

Assets can be divided into three broad categories: current assets, fixed assets, and intangible assets. **Current assets** are assets that can or will be converted to cash within the next 12 months. They are important because they provide the funds used to pay the firm's current bills. They also represent the amount of money the firm can quickly raise. Current assets include:

- **Cash**: Funds on hand or in a bank
- **Marketable securities**: Temporary investments of excess cash that can readily be converted to cash
- **Accounts receivable**: Amounts owed to the firm by customers who bought goods or services on credit
- **Notes receivable**: Amounts owed to the firm by customers or others to whom it lent money
- **Inventory**: Stock of goods being held for production or for sale to customers

Fixed assets are long-term assets used by the firm for more than a year. They tend to be used in production and include land, buildings, machinery, equipment, furniture, and fixtures. Except for land, fixed assets wear out and become outdated over time. Thus, they decrease in value every year. This declining value is accounted for through depreciation. **Depreciation** is the allocation of the asset's original cost to the years in which it is expected to produce revenues. A portion of the cost of a depreciable asset—a building or piece of equipment, for instance—is charged to each of the years in which it is expected to provide benefits. This practice helps match the asset's cost against the revenues it provides. Because it is impossible to know exactly how long an asset will last, estimates are used. They are based on past experience with similar items or IRS guidelines for assets of that type. Notice that, through 2018, Delicious Desserts has taken a total of $16,000 in depreciation on its bakery equipment.

Intangible assets are long-term assets with no physical existence. Common examples are patents, copyrights, trademarks, and goodwill. *Patents* and *copyrights* shield the firm from direct competition, so their benefits are more protective than productive. For instance, no one can use more than a small amount of copyrighted material without permission from the copyright holder. **Trademarks** are registered names that can be sold or licensed to others. One of Delicious Desserts' intangible assets is a trademark valued at $4,500. *Goodwill* occurs when a company pays more for an acquired firm than the value of its tangible assets. Delicious Desserts' other tangible asset is goodwill of $7,000.

Liabilities

==Liabilities== are the amounts a firm owes to creditors. Those liabilities coming due sooner—current liabilities—are listed first on the balance sheet, followed by long-term liabilities.

==Current liabilities== are those due within a year of the date of the balance sheet. These short-term claims may strain the firm's current assets because they must be paid in the near future. Current liabilities include:

- ==*Accounts payable*==: Amounts the firm owes for credit purchases due within a year. This account is the liability counterpart of accounts receivable.
- ==*Notes payable*==: Short-term loans from banks, suppliers, or others that must be repaid within a year. For example, Delicious Desserts has a six-month, $15,000 loan from its bank that is a note payable.
- ==*Accrued expenses*==: Expenses, typically for wages and taxes, that have accumulated and must be paid at a specified future date within the year although the firm has not received a bill
- ==*Income taxes payable*==: Taxes owed for the current operating period but not yet paid. Taxes are often shown separately when they are a large amount.
- *Current portion of long-term debt*: Any repayment on long-term debt due within the year. Delicious Desserts is scheduled to repay $5,000 on its equipment loan in the coming year.

==Long-term liabilities== come due more than one year after the date of the balance sheet. They include bank loans (such as Delicious Desserts' $10,000 loan for bakery equipment), mortgages on buildings, and the company's bonds sold to others.

Owners' Equity

Owners' equity is the owners' total investment in the business after all liabilities have been paid. For sole proprietorships and partnerships, amounts put in by the owners are recorded as capital. In a corporation, the owners provide capital by buying the firm's common stock. For Delicious Desserts, the total common stock investment is $30,000. ==Retained earnings== are the amounts left over from profitable operations since the firm's beginning. They are total profits minus all dividends (distributions of profits) paid to stockholders. Delicious Desserts has $48,750 in retained earnings.

Key Takeaways

- The balance sheet represents the financial condition of a firm at one moment in time, in terms of assets, liabilities, and owners' equity.
- The key categories of assets are current assets, fixed assets, and intangible assets.
- Liabilities are divided into current and long-term liabilities.
- Owners' equity, the amount of the owners' investment in the firm after all liabilities have been paid, is the third major category.

Exercise

1. What is a balance sheet?
2. What are the three main categories of accounts on the balance sheet, and how do they relate to the accounting equation?
3. How do retained earnings relate to owners' equity?

12.6 The Income Statement

The balance sheet shows the firm's financial position at a certain point in time. The **income statement** summarizes the firm's revenues and expenses and shows its total profit or loss over a period of time. Most companies prepare monthly income statements for management and quarterly and annual statements for use by investors, creditors, and other outsiders. The primary elements of the income statement are revenues, expenses, and net income (or net loss). The income statement for Delicious Desserts for the year ended December 31, 2018, is shown in Table 12.2.

Table 12.2: Income Statement for Delicious Desserts

Delicious Desserts, Inc.			
Income Statement for the Year Ending December 31, 2018			
Revenues			
Gross sales		$275,000	
Less: Sales discounts		$2,500	
Less: Returns and allowances		$2,000	
Net sales			$270,500
Cost of Goods Sold			
Beginning inventory, January 1		$18,000	
Cost of goods manufactured		$109,500	
Total cost of goods available for sale		$127,500	
Less: Ending inventory December 31		$15,000	
Cost of goods sold			$112,500
Gross profit			**$158,000**
Operating Expenses			
Selling expenses			
Sales salaries	$31,000		
Advertising	$16,000		
Other selling expenses	$18,000		
Total selling expenses		$65,000	
General and administrative expenses			
Professional and office salaries	$20,500		
Utilities	$5,000		
Office supplies	$1,500		
Interest	$3,600		
Insurance	$2,500		
Rent	$17,000		
Total general and administrative expenses		$50,100	
Total operating expenses			$115,100
Net profit before taxes			**$42,900**
Less: Income taxes			$10,725
Net profit			**$32,175**

Revenues

Revenues are the dollar amount of sales plus any other income received from sources such as interest, dividends, and rents. The revenues of Delicious Desserts arise from sales of its bakery products. Revenues are determined starting with gross sales, the total dollar amount of a company's sales. Delicious Desserts had two deductions from gross sales. *Sales*

discounts are price reductions given to customers that pay their bills early. For example, Delicious Desserts gives sales discounts to restaurants that buy in bulk and pay at delivery. *Returns and allowances* is the dollar amount of merchandise returned by customers because they didn't like a product or because it was damaged or defective. **Net sales** is the amount left after deducting sales discounts and returns and allowances from gross sales. Delicious Desserts' gross sales were reduced by $4,500, leaving net sales of $270,500.

Expenses

Expenses are the costs of generating revenues. Two types are recorded on the income statement: cost of goods sold and operating expenses.

The **cost of goods sold** is the total expense of buying or producing the firm's goods or services. For manufacturers, cost of goods sold includes all costs directly related to production: purchases of raw materials and parts, labor, and factory overhead (utilities, factory maintenance, machinery repair). For wholesalers and retailers, it is the cost of goods bought for resale. For all sellers, cost of goods sold includes all the expenses of preparing the goods for sale, such as shipping and packaging.

Delicious Desserts' cost of goods sold is based on the value of inventory on hand at the beginning of the accounting period, $18,000. During the year, the company spent $109,500 to produce its baked goods. This figure includes the cost of raw materials, labor costs for bakery workers, and the cost of operating the bakery area. Adding the cost of goods manufactured to the value of beginning inventory, we get the total cost of goods available for sale, $127,500. To determine the cost of goods sold for the year, we subtract the cost of inventory at the end of the period:

$$\$127,500 - \$15,000 = \$112,500$$

The amount a company earns after paying to produce or buy its products but before deducting operating expenses is the **gross profit**. It is the difference between net sales and cost of goods sold. Because service firms do not produce goods, their gross profit equals net sales. Gross profit is a critical number for a company because it is the source of funds to cover all the firm's other expenses.

The other major expense category is **operating expenses**. These are the expenses of running the business that are not related directly to producing or buying its products. The two main types of operating expenses are selling expenses and general and administrative expenses. *Selling expenses* are those related to marketing and distributing the company's products. They include salaries and commissions paid to salespeople and the costs of advertising, sales supplies, delivery, and other items that can be linked to sales activity, such as insurance, telephone and other utilities, and postage. *General and administrative expenses* are the business expenses that cannot be linked to either cost of goods sold or sales. Examples of general and administrative expenses are salaries of top managers and office support staff; utilities; office supplies; interest expense; fees for accounting, consulting, and legal services; insurance; and rent. Delicious Desserts' operating expenses totaled $115,100.

Net Profit or Loss

The final figure—or bottom line—on an income statement is the **net profit (or net income)** or **net loss**. It is calculated by subtracting all expenses from revenues. If revenues are more than expenses, the result is a net profit. If expenses exceed revenues, a net loss results.

Several steps are involved in finding net profit or loss. (These are shown in the right-hand column of Table 12.2.) First, cost of goods sold is deducted from net sales to get the gross profit. Then total operating expenses are subtracted from

gross profit to get the net profit before taxes. Finally, income taxes are deducted to get the net profit. As shown in Table 12.2, Delicious Desserts earned a net profit of $32,175 in 2018.

It is very important to recognize that profit does not represent cash. The income statement is a summary of the firm's operating results during some time period. It does not present the firm's actual cash flows during the period. Those are summarized in the statement of cash flows, which is discussed briefly in the next section.

Key Takeaways

- The income statement is a summary of the firm's operations over a stated period of time. The main parts of the statement are revenues (gross and net sales), cost of goods sold, operating expenses (selling and general and administrative expenses), taxes, and net profit or loss.

Exercise

1. What is an income statement? How does it differ from the balance sheet?
2. Describe the key parts of the income statement. Distinguish between gross sales and net sales.
3. How is net profit or loss calculated?

12.7 The Statement of Cash Flows

Net profit or loss is one measure of a company's financial performance. However, creditors and investors are also keenly interested in how much cash a business generates and how it is used. The ==statement of cash flows==, a summary of the money flowing into and out of a firm, is the financial statement used to assess the sources and uses of cash during a certain period, typically one year. All publicly traded firms must include a statement of cash flows in their financial reports to shareholders. The statement of cash flows tracks the firm's cash receipts and cash payments. It gives financial managers and analysts a way to identify cash flow problems and assess the firm's financial viability.

Figure 12.7. Coinstar is a cash cow—literally. The company established a niche counting loose change at the exits of supermarkets and other retailers everywhere. For a small fee, Coinstar's coin-counting machines turn penny jars and piggy banks into cash vouchers, a no-fee eGift card, or a charity donation. Recently Coinstar's parent company, Outerwall, was acquired by a private equity firm in a $1.6 billion deal to take the holding company private. What does the statement of cash flows indicate about a company's financial status?

Using income statement and balance sheet data, the statement of cash flows divides the firm's cash flows into three groups:

- *Cash flow from operating activities*: Those related to the production of the firm's goods or services
- *Cash flow from investment activities*: Those related to the purchase and sale of fixed assets
- *Cash flow from financing activities*: Those related to debt and equity financing

Delicious Desserts' statement of cash flows for 2018 is presented in Table 12.3. It shows that the company's cash and marketable securities have increased over the last year. And during the year the company generated enough cash flow to increase inventory and fixed assets and to reduce accounts payable, accruals, notes payable, and long-term debt.

Table 12.3: Statement of Cash Flows for Delicious Desserts

Delicious Desserts, Inc.		
Statement of Cash Flows for 2018		
Cash Flow from Operating Activities		
Net profit after taxes	$27,175	
Depreciation	1,500	
Decrease in accounts receivable	3,140	
Increase in inventory	(4,500)	
Decrease in accounts payable	(2,065)	
Decrease in accruals	(1,035)	
Cash provided by operating activities		$24,215
Cash Flow from Investment Activities		
Increase in gross fixed assets	($ 5,000)	
Cash used in investment activities		($5,000)
Cash Flow from Financing Activities		
Decrease in notes payable	($ 3,000)	
Decrease in long-term debt	(1,000)	
Cash used by financing activities		($4,000)
Net increase in cash and marketable securities		**$15,215**

Key Takeaways

- The statement of cash flows summarizes the firm's sources and uses of cash during a financial-reporting period.
  - It breaks the firm's cash flows into those from operating, investment, and financing activities.
  - It shows the net change during the period in the firm's cash and marketable securities.

Exercise

1. What is the purpose of the statement of cash flows?
2. Why has cash flow become such an important measure of a firm's financial condition?
3. What situations can you cite from the chapter that support your answer?

12.8 Analyzing Financial Statements

Individually, the balance sheet, income statement, and statement of cash flows provide insight into the firm's operations, profitability, and overall financial condition. By studying the relationships among the financial statements, however, one can gain even more insight into a firm's financial condition and performance. A good way to think about analyzing financial statements is to compare it a fitness trainer putting clients through various well-established assessments and metrics to determine whether a specialized fitness program is paying dividends for the person in terms of better strength, endurance, and overall health. Financial statements at any given time can provide a snapshot of a company's overall health. Company management must use certain standards and measurements to determine whether they need to implement additional strategies to keep the company fit and making a profit.

Ratio analysis involves calculating and interpreting financial ratios using data taken from the firm's financial statements in order to assess its condition and performance. A **financial ratio** states the relationship between financial data on a percentage basis. For instance, current assets might be viewed relative to current liabilities or sales relative to assets. The ratios can then be compared over time, typically three to five years. A firm's ratios can also be compared to industry averages or to those of another company in the same industry. Period-to-period and industry ratios provide a meaningful basis for comparison, so that we can answer questions such as, "Is this particular ratio good or bad?"

It's important to remember that ratio analysis is based on historical data and may not indicate future financial performance. Ratio analysis merely highlights potential problems; it does not prove that they exist. However, ratios can help managers monitor the firm's performance from period to period to understand operations better and identify trouble spots.

Ratios are also important to a firm's present and prospective creditors (lenders), who want to see if the firm can repay what it borrows and assess the firm's financial health. Often loan agreements require firms to maintain minimum levels of specific ratios. Both present and prospective shareholders use ratio analysis to look at the company's historical performance and trends over time.

Ratios can be classified by what they measure: liquidity, profitability, activity, and debt. Using Delicious Desserts' 2018 balance sheet and income statement (Table 12.1 and Table 12.2), we can calculate and interpret the key ratios in each group. Table 12.4 summarizes the calculations of these ratios for Delicious Desserts. We'll now discuss how to calculate the ratios and, more important, how to interpret the ratio value.

Liquidity Ratios

Liquidity ratios measure the firm's ability to pay its short-term debts as they come due. These ratios are of special interest to the firm's creditors. The three main measures of liquidity are the current ratio, the acid-test (quick) ratio, and net working capital.

The **current ratio** is the ratio of total current assets to total current liabilities. Traditionally, a current ratio of 2 ($2 of current assets for every $1 of current liabilities) has been considered good. Whether it is sufficient depends on the industry in which the firm operates. Public utilities, which have a very steady cash flow, operate quite well with a current ratio well below 2. A current ratio of 2 might not be adequate for manufacturers and merchandisers that carry high inventories and have lots of receivables. The current ratio for Delicious Desserts for 2018, as shown in Table 12.4, is 1.4. This means little without a basis for comparison. If the analyst found that the industry average for small bakeries was 2.4, Delicious Desserts would appear to have low liquidity.

The **acid-test (quick) ratio** is like the current ratio except that it excludes inventory, which is the least-liquid current asset. The acid-test ratio is used to measure the firm's ability to pay its current liabilities without selling inventory. The name *acid-test* implies that this ratio is a crucial test of the firm's liquidity. An acid-test ratio of at least 1 is preferred.

But again, what is an acceptable value varies by industry. The acid-test ratio is a good measure of liquidity when inventory cannot easily be converted to cash (for instance, if it consists of very specialized goods with a limited market). If inventory is liquid, the current ratio is better. Delicious Desserts' acid-test ratio for 2018 is 1.1. Because the bakery's products are perishable, it does not carry large inventories. Thus, the values of its acid-test and current ratios are fairly close. At a manufacturing company, however, inventory typically makes up a large portion of current assets, so the acid-test ratio will be lower than the current ratio.

Table 12.4: Ratio Analysis for Delicious Desserts at Year-End 2018

Ratio	Formula	Calculation	Result
Liquidity Ratios			
Current ratio	$\dfrac{\text{Total current assets}}{\text{Total current liabilities}}$	$\dfrac{83,200}{60,150}$	1.4
Acid-test (quick) ratio	$\dfrac{\text{Total current assets-inventory}}{\text{Total current liabilities}}$	$\dfrac{83,200-15,000}{60,150}$	1.1
Net working capital	Total current assets – Total current liabilities	$83,200-$60,150	$23,050
Profitability Ratios			
Net profit margin	$\dfrac{\text{Net profit}}{\text{Net sales}}$	$\dfrac{32,175}{270,500}$	11.9%
Return on equity	$\dfrac{\text{Net profit}}{\text{Total owners' equity}}$	$\dfrac{32,175}{78,750}$	40.9%
Earnings per share	$\dfrac{\text{Net profit}}{\text{Number of shares of common stock outstanding}}$	$\dfrac{32,175}{10,000}$	$3.22
Activity Ratio			
Inventory turnover	$\dfrac{\text{Cost of goods sold}}{\text{Average inventory}}$		
	$\dfrac{\text{Cost of goods sold}}{(\text{Beginning inventory}+\text{Ending inventory})/2}$	$\dfrac{112,500}{(18,000+15,000)/2}$	
		$\dfrac{112,500}{16,500}$	6.8 times
Debt Ratio			
Debt-to-equity ratio	$\dfrac{\text{Total liabilities}}{\text{Owners' equity}}$	$\dfrac{70,150}{78,750}$	89.1%

Net working capital, though not really a ratio, is often used to measure a firm's overall liquidity. It is calculated by subtracting total current liabilities from total current assets. Delicious Desserts' net working capital for 2018 is $23,050. Comparisons of net working capital over time often help in assessing a firm's liquidity.

Profitability Ratios

To measure profitability, a firm's profits can be related to its sales, equity, or stock value. **Profitability ratios** measure how well the firm is using its resources to generate profit and how efficiently it is being managed. The main profitability ratios are net profit margin, return on equity, and earnings per share.

The ratio of net profit to net sales is the **net profit margin**, also called *return on sales*. It measures the percentage of each sales dollar remaining after all expenses, including taxes, have been deducted. Higher net profit margins are better than lower ones. The net profit margin is often used to measure the firm's earning power. "Good" net profit margins

differ quite a bit from industry to industry. A grocery store usually has a very low net profit margin, perhaps below 1 percent, whereas a jewelry store's net profit margin would probably exceed 10 percent. Delicious Desserts' net profit margin for 2018 is 11.9 percent. In other words, Delicious Desserts is earning 11.9 cents on each dollar of sales.

Figure 12.8. For giant retailers such as Macy's, the high expense of operating a brick-and-mortar store counters the elevated markup on merchandise, resulting in slim profit margins. Because competition forces marketers to keep prices low, it is often a retailer's cost-cutting strategy, not initial markup or sales volume, that determines whether a business will be profitable. What expenses other than payroll and the cost of merchandise affect a retailer's net profit margin?

The ratio of net profit to total owners' equity is called **return on equity** **(ROE)**. It measures the return that owners receive on their investment in the firm, a major reason for investing in a company's stock. Delicious Desserts has a 40.9 percent ROE for 2018. On the surface, a 40.9 percent ROE seems quite good. But the level of risk in the business and the ROE of other firms in the same industry must also be considered. The higher the risk, the greater the ROE investors look for. A firm's ROE can also be compared to past values to see how the company is performing over time.

Earnings per share **(EPS)** is the ratio of net profit to the number of shares of common stock outstanding. It measures the number of dollars earned by each share of stock. EPS values are closely watched by investors and are considered an important sign of success. EPS also indicates a firm's ability to pay dividends. Note that EPS is the dollar amount earned by each share, not the actual amount given to stockholders in the form of dividends. Some earnings may be put back into the firm. Delicious Desserts' EPS for 2018 is $3.22.

Activity Ratios

Activity ratios measure how well a firm uses its assets. They reflect the speed with which resources are converted to cash or sales. A frequently used activity ratio is inventory turnover. The **inventory turnover ratio** measures the speed

with which inventory moves through the firm and is turned into sales. It is calculated by dividing cost of goods sold by the average inventory. (Average inventory is estimated by adding the beginning and ending inventories for the year and dividing by 2.) Based on its 2018 financial data, Delicious Desserts' inventory, on average, is turned into sales 6.8 times each year, or about once every 54 days (365 days : 6.8). The acceptable turnover ratio depends on the line of business. A grocery store would have a high turnover ratio, maybe 20 times a year, whereas the turnover for a heavy equipment manufacturer might be only three times a year.

Debt Ratios

==Debt ratios== measure the degree and effect of the firm's use of borrowed funds (debt) to finance its operations. These ratios are especially important to lenders and investors. They want to make sure the firm has a healthy mix of debt and equity. If the firm relies too much on debt, it may have trouble meeting interest payments and repaying loans. The most important debt ratio is the debt-to-equity ratio.

The ==debt-to-equity ratio== measures the relationship between the amount of debt financing (borrowing) and the amount of equity financing (owners' funds). It is calculated by dividing total liabilities by owners' equity. In general, the lower the ratio, the better. But it is important to assess the debt-to-equity ratio against both past values and industry averages. Delicious Desserts' ratio for 2018 is 89.1 percent. The ratio indicates that the company has 89 cents of debt for every dollar the owners have provided. A ratio above 100 percent means the firm has more debt than equity. In such a case, the lenders are providing more financing than the owners.

Key Takeaways

- Ratio analysis is a way to use financial statements to gain insight into a firm's operations, profitability, and overall financial condition. The four main types of ratios are liquidity ratios, profitability ratios, activity ratios, and debt ratios. Comparing a firm's ratios over several years and comparing them to ratios of other firms in the same industry or to industry averages can indicate trends and highlight financial strengths and weaknesses.

Exercise

1. How can ratio analysis be used to interpret financial statements?
2. Name the main liquidity and profitability ratios, and explain what they indicate.
3. What kinds of information do activity ratios give? Why are debt ratios of concern to lenders and investors?

12.9 Trends in Accounting

The post-SOX business environment has brought many changes to the accounting profession. When the public accounting industry could no longer regulate itself back in the late 1990s and early 2000s, it became subject to formal regulation for the first time. This regulatory environment set higher standards for audit procedures, which actually helped public companies fine-tune their financial reporting procedures, despite the added costs and labor hours needed to comply with SOX. Once again the core auditing business, rather than financial advisory and management consulting services, became the primary focus of public accounting firms. The relationship between accountants and their clients has also changed, and the role of chief audit executive has taken on more visibility in many large organizations. In addition, the FASB has made slow but steady progress in making changes related to GAAP, including a separate decision-making framework for users and preparers of private company financial statements (Key Developments…, 2017). There are several other important trends that may affect the accounting industry over the next several years, including cloud computing services, automation, and staffing challenges.

Cloud-Based Services

The internet and cloud technology continue to disrupt many industries, including accounting, and clients expect their accountants to be up to speed on how financial data and other accounting information can be entered, accessed, and discussed in a very short period of time. For the most part, gone are the days when accountants and their support staff spend hours manually inputting data that gets "re-hydrated" into standardized accounting and financial statements, and reams of paper generate a company's weekly, monthly, or yearly reports.

According to recent research, cloud-based accounting firms add five times more clients than traditional accounting firms because businesses expect their accountants to be able to use technology to create the company's financial picture in real time, while assisting them in decision-making about where to go next in terms of profitability, sales, expansion, etc. In addition, it is estimated that more than 90 percent of small and medium-sized companies use cloud-based accounting software, which helps them synthesize the information they collect for their many important financial statements. This use of computerized accounting programs offers many opportunities to accountants to shift their focus when it comes to attracting and retaining business clients (Bell, 2016; and Edwards, 2016).

Automation

In addition to cloud-based services, automation will continue to play an important role in the accounting industry, particularly in auditing services, where the manual gathering and inputting of information can be an inefficient and sometimes inaccurate process. Being able to automate this process will help generate complete sets of data that will improve the overall details of the auditing process. In addition, accountants who can use a client's data files from their business operations and import this information into a tax or accounting software package will streamline the overall accounting process and lessen the tedious work of data entry (Biery, 2017).

Staffing Challenges

As these and other disruptive technologies change the focus of accounting work, the challenge of hiring the right staff to use these new tools intensifies. With accounting processes becoming automated and less time-intensive, some accounting firms are becoming more connected to their clients and increasing their advisory services when it comes to daily business operations. This change in approach will likely have an impact on the type of experienced employees accountants hire in the future. In addition, because most services are now cloud-based and financial data is available rather quickly, businesses are apt to change accounting firms faster than in the past if they are unsatisfied with the services they receive. Accountants have a great opportunity to expand their business portfolios and increase their client list by leveraging technology as part of their overall corporate strategies (Ovaska-Few, 2017).

Managing Change

Attracting and Retaining Millennial CPAs

Much has been written about millennials, the population segment born between 1980 and 2000. As the older baby boomer generation continues to retire, millennials now make up the largest group in the U.S. labor force. This group will continue to shape the workplace over the next few decades.

Businesses and other organizations cannot ignore this group and their expectations about employment. To be successful, today's accounting firms—whether Big 4 firms or small and mid-sized businesses—need to understand what makes millennials tick, what is important to them, what makes them look for new opportunities both within and outside the organization—and how to retain them.
Global accounting services company PwC recently partnered with several other institutions to conduct a two-year generational study about the attitudes of millennial employees. Key findings suggest that millennials want flexibility in their work lives that leads to an enjoyable work-life balance, appreciation for the work they accomplish, challenges that will help them grow in their careers, and continued support from employers. As a result of this study, PwC made several changes to its own work environment to attract and retain millennial workers, including flexible schedules, relaxed dress codes, greater communication at all levels of the company, and a renewed commitment to transparency within the organization.

PwC is not alone in shifting its organizational culture to address some of the issues millennials say are important factors for them within the work environment. For example, Baker Tilly, another top accounting firm, recognizes that more than half its workforce consists of millennials who have helped shape the company's approach to work. The themes of flexibility and trust permeate the company's culture, which reinforces employees' motivation to be engaged in work that is meaningful, satisfying, and helps them develop as individuals.

Here are some other strategies accounting firms might employ to keep their 30-something employees from jumping ship:

- *Initiate onboarding activities quickly*: Although training accounting professionals takes time, companies should engage and train new employees quickly to immerse them in organizational culture and assign them work they view as meaningful.

- *Assign mentors from the start*: Millennials want to know their work makes a difference, so what better way to get them involved right from the start than to make sure they are connected to mentors who can guide their work and career path.
- *Support a flexible approach to work*: Some millennials are in the prime of their career, and many may also be juggling a family life that requires a lot of their time. Companies need to remember that millennials like being productive, although they may not think a long workday equates to a productive one. The use of cloud-based technology encourages employees to do their work in a productive atmosphere that may not take place in the office.

Recognizing generational traits of millennials not only demonstrates commitment on the part of the company, but also helps keep these employees engaged and involved in their work.

Critical Thinking Questions

1. Do you think a shift in thinking when it comes to managing millennials is a smart strategy? Why or why not?
2. Will accounting firms be required to rethink their billing strategies to address millennials' insistence on a more flexible approach to work? Explain your reasoning.

Key Takeaways

- The post-SOX business environment has brought many changes to the accounting profession, including higher standards for audit procedures. In addition, the FASB has made slow but steady progress in making changes related to GAAP; however, the implementation of global accounting standards may not occur anytime soon. Several important trends will continue to impact the accounting industry going forward, including cloud-based services, automation, and staffing challenges, as accountants shift the focus of their practice to one incorporating technological advances and a more comprehensive approach to their companies' and clients' overall business environment.

1. How has the relationship between public accounting firms and their clients changed since SOX became law?
2. Describe how cloud computing and automation are changing the accounting industry.
3. What are some of the challenges encountered by accounting firms when introducing new technologies into their workflow process?

12.10 Cases and Problems

Cash	$30,250
Accounts payable	28,500
Fixtures and furnishings	85,000
Notes payable	15,000
Retained earnings	64,450
Accounts receivable	24,050
Inventory	15,600
Equipment	42,750
Accumulated depreciation on fixtures and furnishings	12,500
Common shares (50,000 shares at $1)	50,000
Long-term debt	25,000
Accumulated depreciation on equipment	7,800
Marketable securities	13,000
Income taxes payable	7,500

b. The following are the account balances for the revenues and expenses of the Windsor Gift Shop for the year ending December 31, 2018. Prepare the income statement for the shop. (Resources, Information)

Rent	$ 15,000
Salaries	23,500
Cost of goods sold	98,000
Utilities	8,000
Supplies	3,500
Sales	195,000
Advertising	3,600
Interest	3,000
Taxes	12,120

2. During the year ended December 31, 2018, Lawrence Industries sold $2 million worth of merchandise on credit. A total of $1.4 million was collected during the year. The cost of this merchandise was $1.3 million. Of this amount, $1 million has been paid, and $300,000 is not yet due. Operating expenses and income taxes totaling $500,000 were paid in cash during the year. Assume that all accounts had a zero balance at the beginning of the year (January 1, 2018). Write a brief report for the company controller that includes calculation of the firm's (a) net profit and (b) cash flow during the year. Explain why there is a difference between net profit and cash flow. (Information, Systems)

3. >A friend has been offered a sales position at Draper Media, Inc., a small publisher of computer-related publications, but wants to know more about the company. Because of your expertise in financial analysis, you offer to help analyze Draper's financial health. Draper has provided the following selected financial

information:

Account balances on December 31, 2018:	
Inventory	$ 72,000
Net sales	450,000
Current assets	150,000
Cost of goods sold	290,000
Total liabilities	180,000
Net profit	35,400
Total assets	385,000
Current liabilities	75,000
Other information	
Number of common shares outstanding	25,000
Inventory at January 1, 2018	48,000

Calculate the following ratios for 2018: acid-test (quick) ratio, inventory turnover ratio, net profit margin, return on equity, debt-to-equity ratio, and earnings per share. Summarize your assessment of the company's financial performance, based on these ratios, in a report for your friend. What other information would you like to have to complete your evaluation? (Information, Systems)

4.   Use the internet and business publications to research how companies and accounting firms are implementing the provisions of the Sarbanes-Oxley Act. What are the major concerns they face? What rules have other organizations issued that relate to Act compliance? Summarize your findings. (Information)

5.   **Team Activity** Two years ago, Rebecca Mardon started a computer consulting business, Mardon Consulting Associates. Until now, she has been the only employee, but business has grown enough to support hiring an administrative assistant and another consultant this year. Before she adds staff, however, she wants to hire an accountant and computerize her financial recordkeeping. Divide the class into small groups, assigning one person to be Rebecca and the others to represent members of a medium-sized accounting firm. Rebecca should think about the type of financial information systems her firm requires and develop a list of questions for the firm. The accountants will prepare a presentation making recommendations to her as well as explaining why their firm should win the account. (Resources, Interpersonal)

6.   One of the best ways to learn about financial statements is to prepare them. Put together your personal balance sheet and income statement, using Table 12.1 and Table 12.2 as samples. You will have to adjust the account categories to fit your needs. Here are some suggestions:

  ◦   Current assets—cash on hand, balances in savings and checking accounts
  ◦   Investments—stocks and bonds, retirement funds
  ◦   Fixed assets—real estate, personal property (cars, furniture, jewelry, etc.)
  ◦   Current liabilities—charge-card balances, loan payments due in one year
  ◦   Long-term liabilities—auto loan balance, mortgage on real estate, other loan balances that will not come due until after one year

- ◦ Income—employment income, investment income (interest, dividends)
- ◦ Expenses—housing, utilities, food, transportation, medical, clothing, insurance, loan payments, taxes, personal care, recreation and entertainment, and miscellaneous expenses

After you complete your personal financial statements, use them to see how well you are managing your finances. Consider the following questions:

a. Should you be concerned about your debt ratio?
b. Would a potential creditor conclude that it is safe or risky to lend you money?
c. If you were a company, would people want to invest in you? Why or why not? What could you do to improve your financial condition? (Information)

Ethics Angle

As the controller of a medium-sized financial services company, you take pride in the accounting and internal control systems you have developed for the company. You and your staff have kept up with changes in the accounting industry and been diligent in updating the systems to meet new accounting standards. Your outside auditor, which has been reviewing the company's books for 15 years, routinely complimented you on your thorough procedures.

The passage of the Sarbanes-Oxley Act, with its emphasis on testing internal control systems, initiated several changes. You have studied the law and made adjustments to ensure you comply with the regulations, even though it has created additional work. Your auditors, however, have chosen to interpret SOX very aggressively—too much so, in your opinion. The auditors have recommended that you make costly improvements to your systems and also enlarged the scope of the audit process, raising their fees. When you question the partner in charge, he explains that the complexity of the law means that it is open to interpretation and it is better to err on the side of caution than risk noncompliance. You are not pleased with this answer, as you believe that your company is in compliance with SOX, and consider changing auditors.

Using a web search tool, locate articles about this topic and then write responses to the following questions. Be sure to support your arguments and cite your sources.

Ethical Dilemma: Should you change auditors because your current one is too stringent in applying the Sarbanes-Oxley Act? What other steps could you take to resolve this situation?

Accountingfly Changes How CPAs Get Hired

Filling accounting positions, especially at the CPA level, can be a challenge. Until a few years ago, businesses other than the Big 4 firms basically had two options: post openings on general job platforms such as Monster and Indeed, or go through a staffing agency that charged a hefty fee for finding just the right accounting professional.

Jeff Phillips, a professional recruiter who previously worked for Monster.com, saw the opportunity to create a job site that caters strictly to accounting and bookkeeping jobs and started Accountingfly.com with brothers John and James Hosman. After studying various industries, the founders decided to focus on accounting because of the "massive imbalance" when it came to recruiting for private and public accountants. In their research, the trio found that most of the talent was snapped up by Big 4 accounting firms, leaving other accounting businesses struggling to find the right experienced people to fill key positions.

Despite the record number of students currently majoring in accounting, Phillips discovered the number of graduates taking the CPA exam was declining rapidly, signaling to him that people were losing interest in public accounting jobs. He sees Accountingfly as a way to alert job seekers (and companies) about the good jobs available for new and experienced CPAs outside of the four major players in the accounting field.

As the accounting talent pool evolves, millennials are looking to make their mark in the industry and tend to look for new jobs with organizations that pay competitive salaries, encourage job flexibility, and offer multiple career opportunities for the long haul. Accountingfly attracts both experienced CPAs and college students to its website by providing job boards, webinars, and virtual career fairs. There are more than one million job seekers and 200,000 user profiles on the website. Recently Accountingfly acquired Going Concern, a leading accounting news website that features original content and an insider's perspective on the people, firms, and culture that shape the accounting profession in this country. According to Phillips, Going Concern has a large, well-informed, highly engaged audience of early-career accountants who could benefit from connecting with accounting firms seeking exceptional talent.

Critical Thinking Questions

1. How does the company's focus on recruiting accountants and related services give Accountingfly a competitive advantage?
2. Do you think Accountingfly's approach can compete with the Big 4's expensive and comprehensive recruiting efforts for new accountants? Explain your reasoning.
3. How can Accountingfly use its recent acquisition of Going Concern as a recruiting tool for experienced CPAs who desire a different career track? Provide some examples to support your answer.

PERSONAL FINANCES

Learning Objectives

1. Offer advice to someone who is burdened with debt.
2. Offer advice to someone whose monthly bills are too high.
3. Define *personal finances* and *financial planning*.
4. Explain the *financial planning life cycle*.
5. Discuss the advantages of a college education in meeting short- and long-term financial goals.
6. Describe the steps you'd take to get a job offer and evaluate alternative job offers, taking benefits into account.
7. Understand the ways to finance a college education.
8. Explain *compound interest* and *the time value of money*.
9. Discuss the value of getting an early start on your plans for saving.
10. Identify the three stages of the *personal-finances planning process*.
11. Explain how to draw up a personal *net-worth statement*, a personal *cash-flow statement*, and a personal *budget*.
12. Discuss the trend in the U.S. savings rate.
13. Define a *subprime loan* and explain the difference between a *fixed-rate mortgage* and an *adjustable-rate mortgage*.
14. Discuss what can go wrong with a subprime loan at an adjustable rate. Discuss what can go wrong with hundreds of thousands of subprime loans at adjustable rates.
15. Define *risk* and explain some of the risks entailed by personal financial transactions.

13.1 Where Does Your Money Go?

Figure 13.1. Carefully managing your personal finances makes it possible for you to buy a new car, go on a vacation, or afford your dream home.

Do you wonder where your money goes? Do you have trouble controlling your spending? Have you run up the balances on your credit cards or gotten behind in your payments and hurt your credit rating? Do you worry about how you'll pay off your student loans? Would you like to buy a new car or even a home someday and you're not sure where the money will come from? If you do have extra money, do you know how to invest it? Do you know how to find the right job for you, land an offer, and evaluate the company's benefits? If these questions seem familiar to you, you could benefit from help in managing your personal finances. This chapter will provide that help.

Where does your money go?

Let's say that you're single and twenty-eight. You have a good education and a good job—you're pulling down $60K working with a local accounting firm. You have $6,000 in a retirement savings account, and you carry three credit cards. You plan to buy a house (maybe a condo) in two or three years, and you want to take your dream trip to the world's hottest surfing spots within five years (or, at the most, ten). Your only big worry is the fact that you're $70,000 in debt, mostly from student loans, your car loan, and credit card debt. In fact, even though you've been gainfully employed for a total of six years now, you haven't been able to make a dent in that $70,000. You can afford the necessities of life and then some, but you've occasionally wondered if you're ever going to have enough income to put something toward that

debt (USA TODAY's, 2011).

Now let's suppose that while browsing through a magazine in the doctor's office, you run across a short personal-finances self-help quiz. There are two sets of three statements each, and you're asked to check off each statement with which you *agree*:

- **Part 1**
- If I didn't have a credit card in my pocket, I'd probably buy a lot less stuff.
- My credit card balance usually goes up at the holidays.
- If I really want something that I can't afford, I put it on my credit card or sign up for a payment plan.

- **Part 2**
- I can barely afford my apartment.
- Whenever something goes wrong (car repairs, doctors' bills), I have to use my credit card.
- I almost never spend money on stuff I don't need, but I always seem to owe a balance on my credit card bill.

At the bottom of the page, you're asked whether you agreed with *any* of the statements in Part 1 and *any* of the statements in Part 2. It turns out that you answered yes in both cases and are thereby informed that you're probably jeopardizing your entire financial future.

Unfortunately, personal-finances experts tend to support the author of the quiz: if you agreed with any statement in Part 1, you have a problem with splurging; if you agreed with any statement in Part 2, your monthly bills are too high for your income.

Building a Good Credit Rating

So, you have a financial problem: according to the quick test you took, you're a splurger and your bills are too high for your income. How does this put you at risk? If you get in over your head and can't make your loan or rent payments on time, you risk hurting your credit—your ability to borrow in the future.

Let's talk about your credit. How do potential lenders decide whether you're a good or bad credit risk? If you're a poor credit risk, how does this affect your ability to borrow, or the rate of interest you have to pay, or both? Here's the story. Whenever you use credit, those you borrow from (retailers, credit card companies, banks) provide information on your debt and payment habits to three national credit bureaus: Equifax, Experian, and TransUnion. The credit bureaus use the information to compile a numerical credit score, generally called a FICO score; it ranges from 300 to 900, with the majority of people falling in the 600–700 range. (Here's a bit of trivia to bring up at a dull party: FICO stands for Fair Isaac Company—the company that developed the score.) In compiling the score, the credit bureaus consider five criteria: payment history—do you pay your bills on time? (the most important), total amount owed, length of your credit history, amount of new credit you have, and types of credit you use. The credit bureaus share their score and other information about your credit history with their subscribers.

So what does this do for you? It depends. If you paid your bills on time, carried only a reasonable amount of debt, didn't max out your credit cards, had a history of borrowing, hadn't applied for a bunch of new loans, and borrowed from a mix of lenders, you'd be in good shape. Your FICO score would be high and lenders would like you. Because of your high credit score, they'd give you the loans you asked for at reasonable interest rates. But if your FICO score is low (perhaps you weren't so good at paying your bills on time), lenders won't like you and won't lend you money (or would lend it to you at high interest rates). A low FICO score can raise the amount you have to pay for auto insurance and cell phone plans and can even affect your chances of renting an apartment or landing a particular job. So it's very, very, very (the last "very" is for emphasis) important that you do everything possible to earn a high credit score. If you don't

know your score, here is what you should do: go to https://www.bankrate.com/quizzle/ and request a free copy of your credit report.

As a young person, though, how do you build a credit history that will give you a high FICO score? Your means for doing this changed in 2009 with the passage of the Credit CARD Act, federal legislation designed to stop credit card issuers from treating its customers unfairly (Irby, 2011). Based on feedback from several financial experts, Emily Starbuck Gerson and Jeremy Simon of CreditCards.com compiled the following list of ways students can build good credit (Gerson & Simon, 2011).

1. *Become an authorized user on your parents' account.* According to the rules set by the Credit CARD Act, if you are under age twenty-one and do not have independent income, you can get a credit card in your own name **only** if you have a cosigner (who is over twenty-one and does have an income). This is a time when a parent can come in handy. Your parent could add you to his or her credit card account as an authorized user. Of course, this means your parent will know what you're spending your money on (which could make for some interesting conversations). But, on the plus side, by piggybacking on your parent's card you are building good credit (assuming, of course, that your parent pays the bill on time).
2. *Obtain your own credit card.* If you can show the credit card company that you have sufficient income to pay your credit card bill, you might be able to get your own card. It isn't as easy to get a card as it was before the passage of the Credit CARD Act, and you won't get a lot of goodies for signing up (as was true before), but you stand a chance.
3. *Get the right card for you.* If you meet the qualifications to get a credit card on your own, look for the best card for you. Although it sounds enticing to get a credit card that gives you frequent flyer miles for every dollar you spend, the added cost for this type of card, including higher interest charges and annual fees, might not be worth it. Look for a card with a low interest rate and no annual fee. As another option, you might consider applying for a retail credit card, such as a Target or Macy's card.
4. *Use the credit card for occasional, small purchases.* If you do get a credit card or a retail card, limit your charges to things you can afford. But don't go in the other direction and put the card in a drawer and never use it. Your goal is to build a good credit history by showing the credit reporting agencies that you can handle credit and pay your bill on time. To accomplish this, you need to use the card.
5. *Avoid big-ticket buys, except in case of emergency.* Don't run up the balance on your credit card by charging high-cost, discretionary items, such as a trip to Europe during summer break, which will take a long time to pay off. Leave some of your credit line accessible in case you run into an emergency, such as a major car repair.
6. *Pay off your balance each month.* If you cannot pay off the balance on your credit card each month, this is likely a signal that you're living beyond your means. Quit using the card until you bring the balance down to zero. When you're first building credit, it's important to pay off the balance on your card at the end of each month. Not only will this improve your credit history, but it will save you a lot in interest charges.
7. *Pay all your other bills on time.* Don't be fooled into thinking that the only information collected by the credit agencies is credit card related. They also collect information on other payments including phone plans, Internet service, rental payments, traffic fines, and even library overdue fees.
8. *Don't cosign for your friends.* If you are twenty-one and have an income, a nonworking, under-age-twenty-one friend might beg you to cosign his credit card application. Don't do it! As a cosigner, the credit card company can make you pay your friend's balance (plus interest and fees) if he fails to meet his obligation. And this can blemish your own credit history and lower your credit rating.
9. *Do not apply for several credit cards at one time.* Just because you can get several credit cards, this doesn't mean that you should. When you're establishing credit, applying for several cards over a short period of time can lower your credit rating. Stick with one card.
10. *Use student loans for education expenses only, and pay on time.* For many, student loans are necessary. But avoid using student loans for noneducational purposes. All this does is run up your debt. When your loans become due, consolidate them if appropriate and don't miss a payment.

What if you've already damaged your credit score—what can you do to raise it? Do what you should have done in the first place: pay your bills on time, pay more than the minimum balance due on your credit cards and charge cards, keep your card balances low, and pay your debts off as quickly as possible. Also, scan your credit report for any errors. If you find any, work with the credit bureau to get them corrected.

Understand the Cost of Borrowing

Because your financial problem was brought on, in part, because you have too much debt, you should stop borrowing. But, what if your car keeps breaking down and you're afraid of getting stuck on the road some night? So, you're thinking of replacing it with a used car that costs $10,000. Before you make a final decision to incur the debt, you should understand its costs. The rate of interest matters a lot. Let's compare three loans at varying interest rates: 6, 10, and 14 percent. We'll look at the monthly payment, as well as the total interest paid over the life of the loan.

$10,000 Loan for 4 Years at Various Interest Rates

Interest Rate	6%	10%	14%
Monthly Payment	$235	$254	$273
Total Interest Paid	$1,272	$2,172	$3,114

If your borrowing interest rate is 14 percent, rather than 6 percent, you'll end up paying an additional $1,842 in interest over the life of the loan. Your borrowing cost at 14 percent is more than twice as much as it is at 6 percent. The conclusion: search for the best interest rates and add the cost of interest to the cost of whatever you're buying before deciding whether you want it and can afford it. If you have to borrow the money for the car at the 14 percent interest rate, then the true cost of the car isn't $10,000, but rather $13,114.

Now, let's explore the complex world of credit cards. First extremely important piece of information: not all credit cards are equal. Second extremely important piece of information: watch out for credit card fees! Credit cards are a way of life for most of us. But they can be very costly. Before picking a credit card, do your homework. A little research can save you a good deal of money. There are a number of costs you need to consider:

- *Finance charge*. The interest rate charged to you often depends on your credit history; those with good credit get the best rates. Some cards offer low "introductory" rates—but watch out; these rates generally go up after six months.
- *Annual fee*. Many credit cards charge an annual fee: a yearly charge for using the card. You can avoid annual fees by shopping around (though there can be trade-offs: you might end up paying a higher interest rate to avoid an annual fee).
- *Over-limit fee*. This fee is charged whenever you exceed your credit line.
- *Late payment fee*. Pretty self-explanatory, but also annoying. Late payment fees are common for students; a study found students account for 6 percent of all overdraft fees (Brackey, 2001). One way to decrease the chance of paying late is to call the credit card company and ask them to set your payment due date for a time that works well for you. For example, if you get paid at the end of the month, ask for a payment date around the 10th of the month. Then you can pay your bill when you get paid and avoid a late fee.
- *Cash advance fee*. While it's tempting to get cash from your credit card, it's pretty expensive. You'll end up paying a fee (around 3 percent of the advance), and the interest rate charged on the amount borrowed can be fairly high.

An alternative to a credit card is a ==**debit card**==, which pulls money out of your checking account whenever you use the card to buy something or get cash from an ATM. These cards don't create a loan when used. So, are they better than

credit cards? It depends—each has its advantages and disadvantages. A big advantage of a credit card is that it helps you build credit. A disadvantage is that you can get in over your head in debt and possibly miss payments (thereby incurring a late payment fee). Debit cards help control spending. Theoretically, you can't spend more than you have in your checking account. But be careful—if you don't keep track of your checking account balance, it's easy to overdraft your account when using your debit card. Prior to July 2010, most banks just accepted purchases or ATM withdrawals even if a customer didn't have enough money in his or her account to cover the transaction. The banks didn't do this to be nice, and they didn't ask customers if they wanted this done—they just overdrafted the customer's account and charged the customer a hefty overdraft fee of around $35 through what they call an "overdraft protection program" (Chu, 2007). Overdraft fees can be quite expensive, particularly if you used the card to purchase a hamburger and soda at a fast-food restaurant.

The Federal Reserve changed the debit card rules in 2010, and now banks must get your permission before they enroll you in an overdraft protection program (Board of Governors of the Federal Reserve System, 2011). If you opt in (agree), things work as before: You can spend or take out more money through an ATM machine than you have in your account, and the bank lets you do this. But it charges you a fee of about $30 plus additional fees of $5 per day if you don't cover the overdraft in five days. If you don't opt in, the bank will not let you overdraft your account. The downside is that you could get embarrassed at the cash register when your purchase is rejected or at a restaurant when trying to pay for a meal. Obviously, you want to avoid being charged an overdraft fee or being embarrassed when paying for a purchase. Here are some things you can do to decrease the likelihood that either would happen (Prater, 2010):

- Ask your bank to e-mail or text you when your account balance is low.
- Have your bank link your debit card account to a savings account. If more money is needed to cover a purchase, the bank will transfer the needed funds from your savings to your checking account.
- Use the online banking feature offered by most banks to check your checking account activity.

A Few More Words about Debt

What should you do now to turn things around—to start getting out of debt? According to many experts, you need to take two steps:

1. Cut up your credit cards and start living on a cash-only basis.
2. Do whatever you can to bring down your monthly bills.

Figure 13.2. Living on a cash-only basis is the first step in getting debt under control.

Step 1 in this abbreviated two-step personal-finances "plan" is probably the easier of the two, but taking even this step can be hard enough. In fact, a lot of people would find it painful to give up their credit cards, and there's a perfectly logical reason for their reluctance: the degree of pain that one would suffer from destroying one's credit cards probably stands in direct proportion to one's reliance on them.

Total U.S. credit card outstanding **debt** stands at $915 billion as of September 2020, out of $4.2 trillion in total consumer debt. According to 2019 Experian Consumer Credit Review, the *average credit card debt per U.S. household* at $6194. According to data released Nov. 1, 2019, by the American Bankers Association, there were 374 million open credit card accounts in the U.S. as of the middle of 2019. Why are these numbers important? Primarily because, *on average*, too many consumers have debt that they simply can't handle. "Credit card debt," says one expert on the problem, "is clobbering millions of Americans like a wrecking ball," (Wyden, 2008) and if you're like most of us, you'd probably like to know whether your personal-finances habits are setting you up to become one of the clobbered.

If, for example, you're worried that your credit card debt may be overextended, the American Bankers Association suggests that you ask yourself a few questions (Lipton, 2008):

- Do I pay only the minimum month after month?
- Do I run out of cash all the time?
- Am I late on critical payments like my rent or my mortgage?
- Am I taking longer and longer to pay off my balance(s)?
- Do I borrow from one credit card to pay another?

If such habits as these have helped you dig yourself into a hole that's steadily getting deeper and steeper, experts recommend that you take three steps as quickly as possible (Lipton, 2008):

1. *Get to know the enemy.* You may not want to know, but you should collect all your financial statements and figure

out exactly how much credit card debt you've piled up.

2. *Don't compound the problem with late fees.* List each card, along with interest rates, monthly minimums, and due dates. Bear in mind that paying late fees is the same thing as tossing what money you have left out the window.

3. *Now cut up your credit cards (or at least stop using them).* Pay cash for everyday expenses, and remember: swiping a piece of plastic is one thing (a little too easy), while giving up your hard-earned cash is another (a little harder).

And, if you find you're unable to pay your debts, don't hide from the problem, as it will not go away. Call your lenders and explain the situation. They should be willing to work with you in setting up a payment plan. If you need additional help, contact a nonprofit credit assistance group such as the National Foundation for Credit Counseling (http://www.nfcc.org).

Why You Owe It to Yourself to Manage Your Debts

Now, it's time to tackle step 2 of our recommended personal-finances miniplan: do whatever you can to bring down your monthly bills. As we said, many people may find this step easier than step 1—cutting up your credit cards and starting to live on a cash-only basis.

If you want to take a gradual approach to step 2, one financial planner suggests that you perform the following "exercises" for one week[1]:

- Keep a written record of everything you spend and total it at week's end.
- Keep all your ATM receipts and count up the fees.
- Take $100 out of the bank and don't spend a penny more.
- Avoid gourmet coffee shops.

Among other things, you'll probably be surprised at how much of your money can become somebody else's money on a week-by-week basis. If, for example, you spend $3 every day for one cup of coffee at a coffee shop, you're laying out nearly $1,100 a year. If you use your ATM card at a bank other than your own, you'll probably be charged a fee that can be as high as $3. The average person pays more than $60 a year in ATM fees, and if you withdraw cash from an ATM twice a week, you could be racking up $300 in annual fees. As for your ATM receipts, they'll tell you whether, on top of the fee that you're charged by that other bank's ATM, your *own* bank is *also* tacking on a surcharge (Sun Trust Banks, 2008; SavingAdvice.com, 2006; Loeb, 2011; Rosenberger, 2008).

If this little exercise proves enlightening—or if, on the other hand, it apparently fails to highlight any potential pitfalls in your spending habits—you might devote the next week to another exercise:

- Put all your credit cards in a drawer and get by on cash.
- Take your lunch to work.
- Buy nothing but groceries and gasoline.
- Use coupons whenever you go to the grocery store (but don't buy anything just because you happen to have a coupon).

The obvious question that you need to ask yourself at the end of week 2 is, "how much did I save?" An equally interesting question, however, is, "what can I do without?" One survey asked five thousand financial planners to name the two expenses that most consumers should find easiest to cut back on. Figure 14.2 "Reducible Expenses" shows the results.

*Other Includes buying a less expensive car, taking a less extravagant vacation, eliminating impulse clothes purchases.
Figure 13.3: Reducible Expenses

You may or may not be among the American consumers who buy thirty-five million cans of Bud Light each and every day, or 150,000 pounds of Starbucks coffee, or 2.4 million Burger King hamburgers, or 628 Toyota Camrys. Yours may not be one of the 70 percent of U.S. households with an unopened consumer-electronics product lying around (Arrington, 2008). And you may or may not be ready to make some major adjustments in your personal-spending habits, but if, at age twenty-eight, you have a good education and a good job, a $60,000 income, and a $70,000 debt—by no means an implausible scenario—there's a very good reason why you should think hard about controlling your modest share of that $2.5 trillion in U.S. consumer debt: your level of indebtedness will be a key factor in your ability—or inability—to reach your longer-term financial goals, such as home ownership, a dream trip, and, perhaps most important, a reasonably comfortable retirement.

The great English writer Samuel Johnson once warned, "Do not accustom yourself to consider debt only as an inconvenience; you will find it a calamity." In Johnson's day, you could be locked up for failing to pay your debts; there were even so-called debtors' prisons for the purpose, and we may suppose that the prospect of doing time for owing money was one of the things that Johnson had in mind when he spoke of debt as a potential "calamity." We don't expect that you'll ever go to prison on account of indebtedness, and we won't suggest that, say, having to retire to a condo in the city instead of a tropical island is a "calamity." We'll simply say that you're more likely to meet your lifetime financial goals—whatever they are—if you plan for them. What you need to know about planning for and reaching those goals is the subject of this chapter.

- Before buying something on credit, ask yourself whether you really need the goods or services, can afford them, and are willing to pay interest on the purchase.
- Whenever you use credit, those you borrow from provide information on your debt and payment habits to three national credit bureaus.
- The credit bureaus use the information to compile a numerical credit score, called a FICO score, which they share with subscribers.
- The credit bureaus consider five criteria in compiling the score: payment history, total amount owed, length of your credit history, amount of new credit you have, and types of credit you use.

- As a young person, you should do the following to build a good credit history that will give you a high FICO score.

  - Become an authorized user on your parents' account.
  - Obtain your own credit card
  - Get the right card for you.
  - Use the credit card for occasional, small purchases
  - Avoid big-ticket buys, except in case of emergency.
  - Pay off your balance each month.
  - Pay all your other bills on time.
  - Don't cosign for your friends.
  - Do not apply for several credit cards at *one time*.
  - Use student loans for education expenses only, and pay on time.

- To raise your credit score, you should pay your bills on time, pay more than the minimum balance due, keep your card balances low, and pay your debts off as quickly as possible. Also, scan your credit report for any errors and get any errors fixed.
- If you can't pay your debt, explain your situation to your lenders and see a credit assistance counselor.
- Before you incur a debt, you should understand its costs. The interest rate charged by the lender makes a big difference in the overall cost of the loan.
- The costs associated with credit cards include finance charges, annual fees, over-limit fees, late payment fees, and cash advance fees.
- The Federal Reserve changed the debit card rules in 2010 and now banks must get your permission before they enroll you in an overdraft protection program.
- If you have a problem with splurging, cut up your credit cards and start living on a cash-only basis.
- If your monthly bills are too high for your income, do whatever you can to bring down those bills.

Exercise

There are a number of costs associated with the use of a credit card, including finance charges, annual fee,

over-limit fee, late payment fee, and cash advance fee. Identify these costs for a credit card you now hold. If you don't presently have a credit card, go online and find an offer for one. Check out these costs for the card being offered.

13.2 Financial Planning

Before we go any further, we need to nail down a couple of key concepts. First, just what, exactly, do we mean by personal finances? *Finance* itself concerns the flow of money from one place to another, and your personal finances concern your money and what you plan to do with it as it flows in and out of your possession. Essentially, then, **personal finance** is the application of financial principles to the monetary decisions that you make either for your individual benefit or for that of your family.

Second, as we suggested in "Where Does Your Money Go?"—and as we'll insist in the rest of this chapter—monetary decisions work out much more beneficially when they're planned rather than improvised. Thus our emphasis on ==financial planning==—**the ongoing process of managing your personal finances in order to meet goals that you've set for yourself or your family.**

Financial planning requires you to address several questions, some of them relatively simple:

- What's my annual income?
- How much debt do I have, and what are my monthly payments on that debt?

Others will require some investigation and calculation:

- What's the value of my assets?
- How can I best budget my annual income?

Still others will require some forethought and forecasting:

- How much wealth can I expect to accumulate during my working lifetime?
- How much money will I need when I retire?

The Financial Planning Life Cycle

Another question that you might ask yourself—and certainly would do if you were a professional in financial planning—is something like, "How will my financial plans change over the course of my life?" Figure 13.4: Financial Life Cycle illustrates the financial life cycle of a typical individual—one whose financial outlook and likely outcomes are probably a lot like yours (Keown, 2007). As you can see, our diagram divides this individual's life into three stages, each of which is characterized by different life events (such as beginning a family, buying a home, planning an estate, retiring). At each stage, too, there are recommended changes in the focus of the individual's financial planning:

- In stage 1, the focus is on building wealth.
- In stage 2, the focus shifts to the process of preserving and increasing the wealth that one has accumulated and continues to accumulate.
- In stage 3, the focus turns to the process of living on (and, if possible, continuing to grow) one's saved wealth.
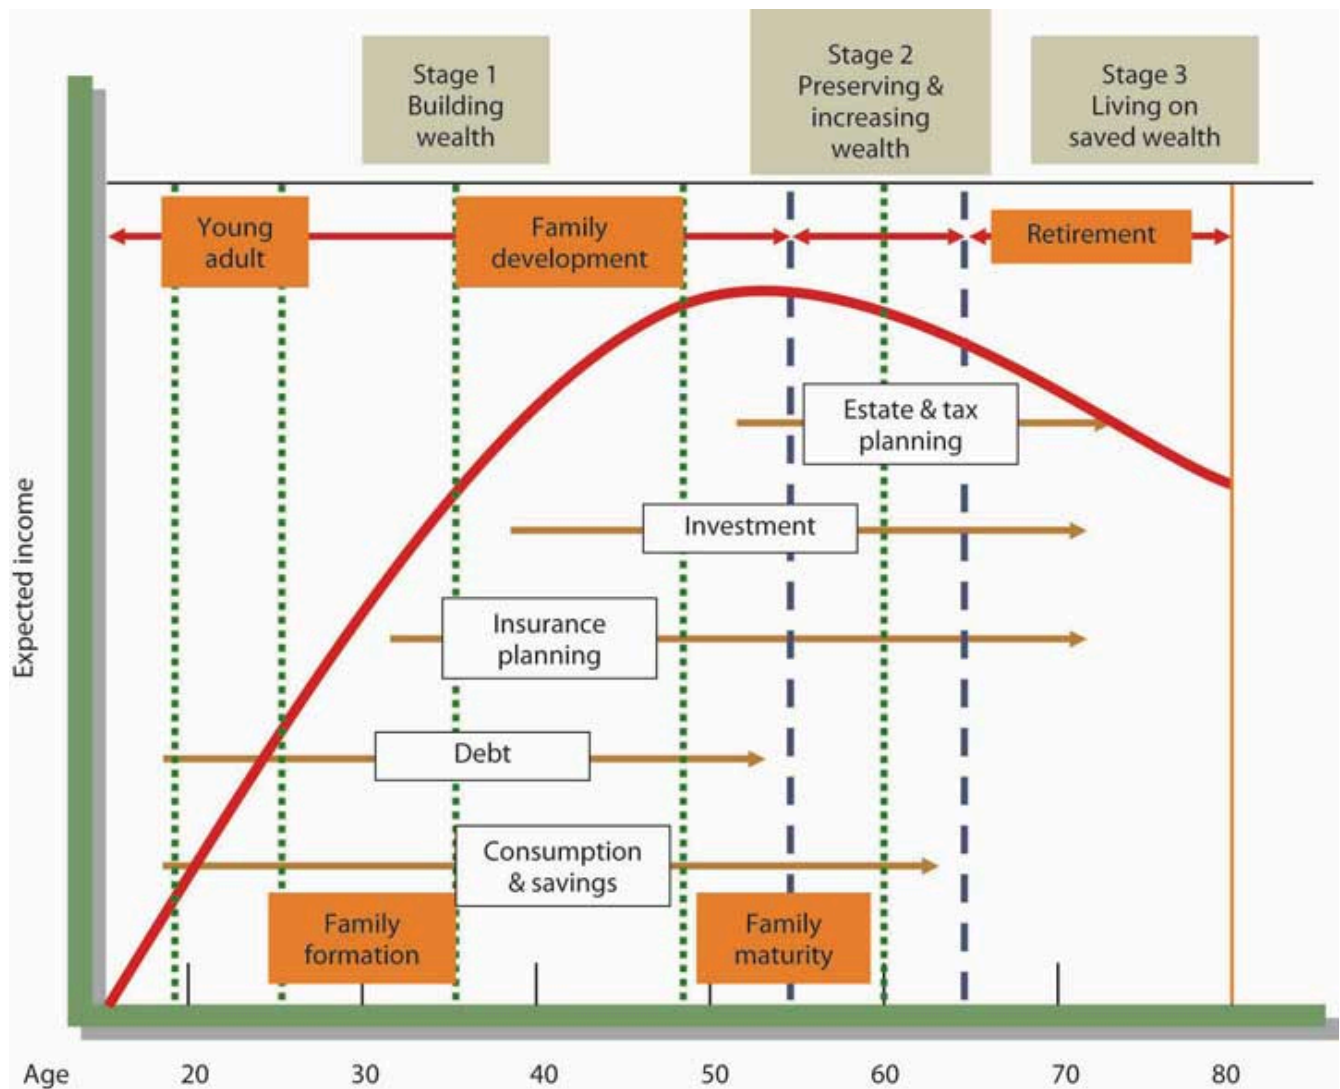

Figure 13.4: Financial Life Cycle

At each stage, of course, complications can set in—say, changes in such conditions as marital or employment status or in the overall economic outlook. Finally, as you can also see, your financial needs will probably peak somewhere in stage 2, at approximately age fifty-five, or ten years before typical retirement age.

Choosing a Career

Until you're eighteen or so, you probably won't generate much income; for the most part, you'll be living off your parents' wealth. In our hypothetical life cycle, however, financial planning begins in the individual's early twenties. If that seems like rushing things, consider a basic fact of life: this is the age at which you'll be choosing your career—not only the sort of work you want to do during your prime income-generating years, but also the kind of lifestyle you want to live in the process (Keown, 2007).

What about college? Most readers of this book, of course, have decided to go to college. If you haven't yet decided, you need to know that college is an extremely good investment of both money and time.

Table 13.1: Education and Average Income, for example, summarizes the findings of a study conducted by the U.S. Census Bureau (U.S. Census Bureau, 2008). A quick review shows that people who graduate from high school can expect to increase their average annual earnings by about 49 percent over those of people who don't, and those who go on to finish college can expect to generate 82 percent more annual income than that. Over the course of the financial life cycle, families headed by those college graduates will earn about $1.6 million more than families headed by high school graduates who didn't attend college. (With better access to health care—and, studies show, with better dietary and health practices—college graduates will also live longer. And so will their children.) (U.S. Census Bureau, 2008)

Table 13.1: Education and Average Income

Education	Average income	Percentage increase over next-highest level
High school dropout	$20,873	–
High school diploma	$31,071	48.9%
College degree	$56,788	82.8%
Advanced higher-education degree	$82,320	45.0%

And what about the debt that so many people accumulate to finish college? For every $1 that you spend on your college education, you can expect to earn about $35 during the course of your financial life cycle (Hansen, 2008). At that rate of return, you should be able to pay off your student loans (unless, of course, you fail to practice reasonable financial planning).

Naturally, there are exceptions to these average outcomes. You'll find English-lit majors stocking shelves at 7-Eleven, and you'll find college dropouts running multibillion-dollar enterprises. Microsoft cofounder Bill Gates dropped out of college after two years, as did his founding partner, Paul Allen. Current Microsoft CEO Steve Ballmer finished his undergraduate degree but quit his MBA program to join Microsoft (where he apparently fit in among the other dropouts in top management). It's always good to remember, however, that though exceptions to rules (and average outcomes) occasionally modify the rules, they invariably fall far short of disproving them: in entrepreneurship as in most other walks of adult life, the better your education, the more promising your financial future. One expert in the field puts the case for the average person bluntly: educational credentials "are about being employable, becoming a legitimate candidate for a job with a future. They are about climbing out of the dead-end job market" (Ramsay, 2008).

Finally, does it make any difference *what* you study in college? To a perhaps surprising extent, not necessarily. Some career areas, such as engineering, architecture, teaching, and law, require targeted degrees, but the area of study designated on your degree often doesn't matter much when you're applying for a job. If, for instance, a job ad says, "Business, communications, or other degree required," most applicants and hires will have those "other" degrees. When poring over résumés for a lot of jobs, potential employers look for the degree and simply note that a candidate has one; they often don't need to focus on the particulars (Roth, 2008).Figure 14.4 "Top 25 Fastest-Growing Jobs, 2006–2016", for example, summarizes a U.S. Bureau of Labor Statistics projection of the thirty fast-growing occupations for the years 2006–2016. Veterinary technicians and makeup artists will be in demand as never before, but as you can see, occupational prospects are fairly diverse[1].

*Figure 13.5: Top 25 Fastest-Growing Jobs, 2006–2016*

Nor, of course, do all degrees pay off equally. In Table 13.2: College Majors and Average Annual Earnings, we've extracted the findings of a study conducted by the National Science Foundation on the earnings of individuals with degrees in various undergraduate fields (Penrice, 1999; Harrington & Sum, 2011). Clearly, some degrees—notably in the engineering

fields—promise much higher average earnings than others. Chemical engineers, for instance, can earn nearly twice as much as elementary school teachers, but there's a catch: if you graduate with a degree in chemical engineering, your average annual salary will be about $67,000 *if you can find a job related to that degree*; if you can't, you may have to settle for as much as 40 percent less (Penrice, 1999). (Supermodel Cindy Crawford cut short her studies in chemical engineering because there was more money to be made on the runway.)

Table 13.2: College Majors and Average Annual Earnings

Major	Average Earnings with Bachelor's Degree	Major	Average Earnings with Bachelor's Degree
Chemical engineering	$67,425	History	$45,926
Aerospace engineering	$65,649	Biology	$45,532
Computer engineering	$62,527	Nursing	$45,538
Physics	$62,104	Psychology	$43,963
Electrical engineering	$61,534	English	$43,614
Mechanical engineering	$61,382	Health technology	$42,524
Industrial engineering	$61,030	Criminal justice	$41,129
Civil engineering	$58,993	Physical education	$40,207
Accounting	$56,637	Secondary education	$39,976
Finance	$55,104	Fine arts	$38,857
Computer science	$52,615	Philosophy	$38,239
Business management	$52,321	Dramatic arts	$37,091
Marketing	$51,107	Music	$36,811
Journalism	$46,835	Elementary education	$34,564
Information systems	$46,519	Special education	$34,196

In short, when you're planning what to do with the rest of your life, it's a good idea to check into the fine points and realities, as well as the statistical data. If you talk to career counselors and people in the workforce, you might be surprised by what you learn about the relationship between certain college majors and various occupations. Onetime Hewlett-Packard CEO Carly Fiorina majored in medieval history and philosophy.

Financing a College Education

Let's revisit one of the facts included in the earlier discussion: for every $1 that you spend on your college education, you can expect to earn about $35 during the course of your financial life cycle. And let's say you're convinced (as you should be) that getting a college degree is a wise financial choice. You still have to deal with the cost of getting your degree. We're sure this won't come as a surprise: attending college is expensive—tuition and fees have gone up sharply, the cost of books has skyrocketed, and living expenses have climbed. Many students can attend college only if they receive some type of financial aid. Though the best way to learn what aid is available to you is to talk with a representative in the financial aid office at your school, this section provides an overview of the types of aid offered to students. Students finance their education through scholarships, grants, education loans, and work-study programs (Witmer, 2011). We'll explore each of these categories of aid:

- *Scholarships*, which don't have to be repaid, are awarded based on a number of criteria, including academic achievement, athletic or artistic talent, special interest in a particular field of study, ethnic background, or religious affiliation. Scholarships are generally funded by private donors such as alums, religious institutions, companies, civic organizations, professional associations, and foundations.
- *Grants*, which also don't have to be repaid, are awarded based on financial need. They're funded by the federal government, the states, and academic institutions. An example of a common federal grant is the Pell Grant, which is awarded to undergraduate students based on financial need. The maximum Pell Grant award for the 2011–12 award year (July 1, 2011, to June 30, 2012) is $5,550 (Federal Student Aid, 2011).
- *Education loans*, which must be repaid, are available to students from various sources, including the federal government, states, and academic institutions. While recent problems in the credit markets have made college loans more difficult to obtain, most students are able to get the loans they need (Snyder, 2008). The loans offered directly to undergraduate students by the federal government include the need-based, subsidized Federal Stafford, the non–need-based unsubsidized Federal Stafford, and the need-based Federal Perkins loans. With the exception of the unsubsidized Federal Stafford, no interest accrues while the student is enrolled in college at least part time. There are also a number of loans available to parents of students, such as the Federal Parent PLUS program. Under this program, parents can borrow federally guaranteed low-interest loans to fund their child's education.
- **Work-study** is a federally sponsored program that provides students with paid, part-time jobs on campus. Because the student is paid based on work done, the funds received don't have to be repaid.

Find a Great Job

As was highlighted earlier, your financial life cycle begins at the point when you choose a career. Building your career takes considerable planning. It begins with the selection of a major in college and continues through graduation as you enter the workforce full time. You can expect to hold a number of jobs over your working life. If things go as they should, each job will provide valuable opportunities and help you advance your career. A big challenge is getting a job offer in your field of interest, evaluating the offer, and (if you have several options) selecting the job that's right for you[2].

Getting a Job Offer

Most likely your college has a career center. The people working there can be a tremendous help to you as you begin your job search. But most of the work has to be done by you. Like other worthwhile projects, your job search project will be very time-consuming. As you get close to graduation, you'll need to block out time to work on this particularly important task.

The first step is to prepare a résumé, a document that provides a summary of educational achievements and relevant job experience. Its purpose is to get you an interview. A potential employer will likely spend less than a minute reviewing your résumé, so its content should be concise, clear, and applicable to the job for which you're applying. For some positions, the person in charge of hiring might read more than a hundred résumés. If you don't want your résumé kicked out right away, be sure it contains no typographical or grammatical errors. Once you've completed your résumé, you can use it to create different versions tailored to specific companies you'd like to work for. Your next step is to write a cover letter, a document accompanying your résumé that explains why you're sending your résumé and highlights your qualifications. You can find numerous tips on writing résumés and cover letters (as well as samples of both) online. Be sure your résumé is accurate: never lie or exaggerate in a résumé. You could get caught and not get the job (or–even

worse—you could get the job, get caught, and then get fired). It's fairly common practice for companies to conduct background checks of possible employees, and these checks will point out any errors. In effect, says one expert, "you jeopardize your future when you lie about your past" (Isaacs, 2011).

After writing your résumé and cover letter, your next task is to create a list of companies you'd like to work for. Use a variety of sources, including your career services office and company Web sites, to decide which companies to put on your list. Visit the "career or employment" section of the company Web sites and search for specific openings.

You could also conduct a general search for positions that might be of interest to you, by doing the following:

- Visiting career Web sites, such as Monster.com or Careerbuilder.com (which maintain large databases of openings for all geographical areas)
- Searching classified ads in online and print newspapers
- Attending career fairs at your college and in your community
- Signing up with career services to talk with recruiters when they visit your campus
- Contacting your friends, family, and college alumni and letting them know you're looking for a job and asking for their help

Once you spot a position you want, send your résumé and cover letter (tailored to the specific company and job). Follow up in a few days to be sure your materials got to the right place, and offer to provide any additional information. Keep notes on all contacts.
Figure 13.6. Preparing well for an interview can make it easier to relax and help the interviewer get to know you.

When you're invited for an interview, visit to the company's Web site and learn as much as you can about the company. Practice answering questions you might be asked during the interview, and think up a few pertinent questions to ask your interviewer. Dress conservatively—males should wear a suit and tie and females should wear professional-looking clothes. Try to relax during the interview (though everyone knows this isn't always easy). Your goal is to get an offer, so let the interviewer learn who you are and how you can be an asset to the company. Send a thank-you note (or thank-you e-mail) to the interviewer after the interview.

Evaluating Job Offers

Let's be optimistic and say that you did quite well in your interviews, and you have two job offers. It's a great problem

to have, but now you have to decide which one to accept. Salary is important, but it's clearly not the only factor. You should consider the opportunities the position offers: will you learn new things on the job, how much training will you get, could you move up in the organization (and if so, how quickly)? Also consider quality of life issues: how many hours a week will you have to work, is your schedule predictable (or will you be asked to work on a Friday night or Saturday at the last minute), how flexible is your schedule, how much time do you get off, how stressful will the job be, do you like the person who will be your manager, do you like your coworkers, how secure is the job, how much travel is involved, where's the company located, and what's the cost of living in that area? Finally, consider the financial benefits you'll receive. These could include health insurance, disability insurance, flexible spending accounts, and retirement plans. Let's talk more about the financial benefits, beginning with health insurance.

- **Employer-sponsored health insurance** plans vary greatly. Some cover the employee only, while others cover the employee, spouse, and children. Some include dental and eye coverage while others don't. Most plans require employees to share some of the cost of the medical plan (by paying a portion of the insurance premiums and a portion of the cost of medical care). But the amount that employees are responsible for varies greatly. Given the rising cost of health insurance, it's important to understand the specific costs associated with a health care plan and to take these costs into account when comparing job offers. More important, it's vital that you have medical insurance. Young people are often tempted to go without medical insurance, but this is a major mistake. An uncovered, costly medical emergency (say you're rushed to the hospital with appendicitis) can be a financial disaster. You could end up paying for your hospital and doctor care for years.
- **Disability insurance** isn't as well known as medical insurance, but it can be as important (if not more so). Disability insurance pays an income to an insured person when he or she is unable to work for an extended period. You would hope that you'd never need disability insurance, but if you did it would be of tremendous value.
- A **flexible spending account** allows a specified amount of pretax dollars to be used to pay for qualified expenses, including health care and child care. By paying for these costs with pretax dollars, employees are able to reduce their tax bill.
- There are two main types of *retirement plans*. One, called a **defined benefit retirement plan**, provides a set amount of money each month to retirees based on the number of years they worked and the income they earned. This form of retirement plan was once very popular, but it's less common today. The other, called a **defined contribution retirement plan**, is a form of savings plan. The employee contributes money each pay period to his or her retirement account, and the employer matches a portion of the contribution. Even when retirement is exceedingly far into the future, it's financially wise to set aside funds for retirement.

Key Takeaways

- *Finance* concerns the flow of money from one place to another; your *personal finances* concern your money and what you plan to do with it as it flows in and out of your possession. **Personal finance** is thus the application of financial principles to the monetary decisions that you make, either for your individual benefit or for that of your family.
- **Financial planning** is the ongoing process of managing your personal finances to meet goals that you've set for yourself or your family.
- The *financial life cycle* divides an individual's life into three stages, each of which is characterized by different life events. Each stage also entails recommended changes in the focus of the individual's financial planning:

1. In stage 1, the focus is on *building* wealth.
2. In stage 2, the focus shifts to the process of *preserving and increasing* the wealth that one has accumulated and continues to accumulate.
3. In stage 3, the focus turns to the process of *living on* (and, if possible, continuing to grow) one's saved wealth.

- According to the model of the financial life cycle, financial planning begins in the individual's early twenties, the age at which most people choose a *career*—both the sort of *work* they want to do during their income-generating years and the kind of *lifestyle* they want to live in the process.
- College is a good investment of both money and time. People who graduate from high school can expect to improve their average annual earnings by about 49 percent over those of people who don't, and those who go on to finish college can expect to generate 82 percent more annual income than that. The area of study designated on your degree often doesn't matter when you're applying for a job: when poring over résumés, employers often look for the degree and simply note that a candidate has one.
- The first step in your job search is to prepare a **résumé**, a document that provides a summary of educational achievements and relevant job experience. Your résumé should be concise, clear, applicable to the job for which you are applying, and free of errors and inaccuracies.
- A **cover letter** is a document that accompanies your résumé and explains why you're sending your résumé and highlights your qualifications.

- To conduct a general search for positions that might be of interest to you, you could:

1. Visit career Web sites, such as Monster.com, Wetfeet.com, or Careerbuilder.com.
2. Search classified ads in online and print newspapers.
3. Attend career fairs at your college and in your community.
4. Talk with recruiters when they visit your campus.
5. Contact people you know, tell them you're looking for a job, and ask for their help.

- When you're invited for an interview, you should research the company, practice answering questions you might be asked in the interview, and think up pertinent questions to ask the interviewer.

- When comparing job offers, consider more than salary. Also of importance are quality of life issues and benefits. Common financial benefits include health insurance, disability insurance, flexible spending accounts, and retirement plans.

1. *Employer-sponsored health insurance* plans vary greatly in coverage and cost to the employee.
2. Disability insurance pays an income to an insured person when he or she is unable to work for an extended period of time.
3. A *flexible spending account* allows a specified amount of pretax dollars to be used to pay for qualified expenses, including health care and child care. By paying for these costs with pretax dollars, employees are able to reduce their tax bill.

- There are two main types of *retirement plans*: a defined benefit plan, which provides a set amount of money each month to retirees based on the number of years they worked and the income they earned, and a defined contribution plan, which is a form of savings plan into which both the employee and employer contribute. A well-known defined contribution plan is a 401(k).

13.3 Time Is Money

The fact that you have to choose a career at an early stage in your financial life cycle isn't the only reason that you need to start early on your financial planning. Let's assume, for instance, that it's your eighteenth birthday and that on this day you take possession of $10,000 that your grandparents put in trust for you. You could, of course, spend it; in particular, it would probably cover the cost of flight training for a private pilot's license—something you've always wanted but were convinced that you couldn't afford for another ten or fifteen years. Your grandfather, of course, suggests that you put it into some kind of savings account. If you just wait until you finish college, he says, and if you can find a savings plan that pays 5 percent interest, you'll have the $10,000 plus another $2,209 to buy a pretty good used car.

The total amount you'll have— $12,209—piques your interest. If that $10,000 could turn itself into $12,209 after sitting around for four years, what would it be worth if you actually held on to it until you did retire—say, at age sixty-five? A quick trip to the Internet to find a compound-interest calculator informs you that, forty-seven years later, your $10,000 will have grown to $104,345 (assuming a 5 percent interest rate). That's not really enough to retire on, but after all, you'd at least have some cash, even if you hadn't saved another dime for nearly half a century. On the other hand, what if that four years in college had paid off the way you planned, so that (once you get a good job) you're able to add, say, another $10,000 to your retirement savings account every year until age sixty-five? At that rate, you'll have amassed a nice little nest egg of slightly more than $1.6 million.

Compound Interest

In your efforts to appreciate the potential of your $10,000 to multiply itself, you have acquainted yourself with two of the most important concepts in finance. As we've already indicated, one is the principle of **compound interest**, which refers to the effect of earning interest on your interest.

Let's say, for example, that you take your grandfather's advice and invest your $10,000 (your *principal*) in a savings account at an annual interest rate of 5 percent. Over the course of the first year, your investment will earn $512 in interest and grow to $10,512. If you now reinvest the entire $10,512 at the same 5 percent annual rate, you'll earn another $537 in interest, giving you a total investment at the end of year 2 of $11,049. And so forth. And that's how you can end up with $104,345 at age sixty-five.

Time Value of Money

You've also encountered the principle of the **time value of money**—the principle whereby a dollar received in the present is worth more than a dollar received in the future. If there's one thing that we've stressed throughout this chapter so far, it's the fact that, for better or for worse, most people prefer to consume now rather than in the future. This is true for both borrowers and lenders. If you borrow money from me, it's because you can't otherwise buy something that you want at the present time. If I lend it to you, it's because I'm willing to postpone the opportunity to purchase something I want at the present time—perhaps a risk-free, ten-year U.S. Treasury bond with a present yield rate of 3 percent.

I'm willing to forego my opportunity, however, only if I can get some compensation for its loss, and that's why I'm going to charge you interest. And you're going to pay the interest because you need the money to buy what you want to buy. How much interest should we agree on? In theory, it could be just enough to cover the cost of my lost opportunity, but there are, of course, other factors. Inflation, for example, will have eroded the value of my money by the time I get

it back from you. In addition, while I would be taking no risk in loaning money to the U.S. government (as I would be doing if I bought that Treasury bond), I am taking a risk in loaning it to you. Our agreed-on rate will reflect such factors (Gallager & Andrews Jr., 2003).

Finally, the time value of money principle also states that a dollar received today starts earning interest sooner than one received tomorrow. Let's say, for example, that you receive $2,000 in cash gifts when you graduate from college. At age twenty-three, with your college degree in hand, you get a decent job and don't have an immediate need for that $2,000. So you put it into an account that pays 10 percent compounded *and* you add another $2,000 ($167 per month) to your account every year for the next eleven years[1]. The left panel of Table 13.3: Why to Start Saving Early (I) shows how much your account will earn each year and how much money you'll have at certain ages between twenty-three and sixty-seven. As you can see, you'd have nearly $52,000 at age thirty-six and a little more than $196,000 at age fifty; at age sixty-seven, you'd be just a bit short of $1 million. The right panel of the same table shows what you'd have if you hadn't started saving $2,000 a year until you were age thirty-six. As you can also see, you'd have a respectable sum at age sixty-seven–but less than half of what you would have accumulated by starting at age twenty-three. More important, even to accumulate that much, *you'd have to add $2,000 per year for a total of thirty-two years, not just twelve.*

Table 13.3: Why to Start Saving Early (I)

Age	Savings accumulated from age 23, with deposits of $2,000 annually until age 67			Savings accumulated from age 36, with deposits of $2,000 annually until age 67		
	Annual deposit	Annual interest earned	Total saved at the end of the year	Annual deposit	Annual interest earned	Total saved at the end of the year
23	$0.00	$0.00	$0.00	$0.00	$0.00	$0.00
24	$2,000	$200.00	$2,200	$0.00	$0.00	$0.00
25	$2,000	$420.00	$4,620	$0.00	$0.00	$0.00
30	$2,000	$1,897.43	$20,871.78	$0.00	$0.00	$0.00
35	$2,000	$4,276.86	$47,045.42	$0.00	$0.00	$0.00
36	$0.00	$4,704.54	$51,749.97	$2,000	$200.00	$2,200.00
40	$0.00	$6,887.92	$75,767.13	$2,000	$1,221.02	$13,431.22
45	$0.00	$11,093.06	$122,023.71	$2,000	$3,187.48	$35,062.33
50	$0.00	$17,865.49	$196,520.41	$2,000	$6,354.50	$69,899.46
55	$0.00	$28,772.55	$316,498.09	$2,000	$11,455.00	$126,005.00
60	$0.00	$46,338.49	$509,723.34	$2,000	$19,669.41	$216,363.53
65	$0.00	$74,628.59	$820,914.53	$2,000	$32,898.80	$361,886.65
67	$0.00	$90,300.60	$993,306.53	$2,000	$40,277.55	$442,503.09

Source: Data from Consumer Credit Counseling Service of Maryland and Delaware Inc., "Power of Saving Early" (2008) (accessed November 15, 2008).

Here's another way of looking at the same principle. Suppose that you're twenty years old, don't have $2,000, and don't want to attend college full-time. You are, however, a hard worker and a conscientious saver, and one of your (very general) financial goals is to accumulate a $1 million retirement nest egg. As a matter of fact, if you can put $33 a month into an account that pays 12 percent interest compounded[1], you can have your $1 million by age sixty-seven. That is, *if you start at age twenty*. As you can see from Table 13.4: Why to Start Saving Early (II), if you wait until you're twenty-one to start saving, you'll need $37 a month. If you wait until you're thirty, you'll have to save $109 a month, and if you procrastinate until you're forty, the ante goes up to $366 a month (Keown, 2007).

Table 13.4: Why to Start Saving Early (II)

First Payment When You Turn	Required Monthly Payment	First Payment When You Turn	Required Monthly Payment
20	$33	30	$109
21	$37	31	$123
22	$42	32	$138
23	$47	33	$156
24	$53	34	$176
25	$60	35	$199
26	$67	40	$366
27	$76	50	$1,319
28	$85	60	$6,253
29	$96		

Source: Arthur J. Keown, *Personal Finance: Turning Money into Wealth*, 4th ed. (Upper Saddle River, NJ: Pearson Education, 2007), 23.

The moral here should be fairly obvious: a dollar saved today not only starts earning interest sooner than one saved tomorrow (or ten years from now) but also can ultimately earn a lot more money in the long run. Starting early means in your twenties—early in stage 1 of your financial life cycle. As one well-known financial advisor puts it, "If you're in your 20s and you haven't yet learned how to delay gratification, your life is likely to be a constant financial struggle" (Clements, 2006).

Key Takeaways

- The principle of **compound interest** refers to the effect of earning interest on your interest.
- The principle of the **time value of money** is the principle whereby a dollar received in the present is worth more than a dollar received in the future.
- The principle of the time value of money also states that a dollar received today starts earning interest sooner than one received tomorrow.
- Together, these two principles give a significant financial advantage to individuals who begin saving early during the financial-planning life cycle.

Exercise

Everyone wants to be a millionaire (except those who are already billionaires). To find out how old you'll be when you become a millionaire, go to http://www.youngmoney.com/calculators/savings_calculators/ millionaire_calculator and input these assumptions:

Age: your actual age

Amount currently invested: $10,000

Expected rate of return (interest rate): 5 percent

Millionaire target age: 65

Savings per month: $500

Expected inflation rate: 3 percent

Click "calculate" and you'll learn when you'll become a millionaire (given the previous assumptions).

Now, let's change things. We'll go through this process three times. Change only the items described. Keep all other assumptions the same as those listed previously.

1. Change the interest rate to 3 percent and then to 6 percent.
2. Change the savings amount to $200 and then to $800.
3. Change your age from "your age" to "your age plus 5" and then to "your age minus 5."

Write a brief report describing the sensitivity of becoming a millionaire, based on changing interest rates, monthly savings amount, and age at which you begin to invest.

---

[1]This 10 percent interest rate is not realistic for today's economic environment. It's used for illustrative purposes only.

13.4 The Financial Planning Process

We've divided the financial planning process into three steps:

1. Evaluate your current financial status by creating a net worth statement and a cash flow analysis.
2. Set short-term, intermediate-term, and long-term financial goals.
3. Use a budget to plan your future cash inflows and outflows and to assess your financial performance by comparing budgeted figures with actual amounts.

Step 1: Evaluating Your Current Financial Situation

Just how are you doing, financially speaking? You should ask yourself this question every now and then, and it should certainly be your starting point when you decide to initiate a more or less formal financial plan. The first step in addressing this question is collecting and analyzing the records of what you *own* and what you *owe* and then applying a few accounting terms to the results:

- Your personal *assets* consist of what you *own.*
- Your personal *liabilities* are what you *owe*—your obligations to various creditors, big and small.

Preparing Your Net-Worth Statement

Your **net worth** (accounting term for your *wealth*) is the difference between your assets and your liabilities. Thus the formula for determining net worth is:

Assets – Liabilities = Net worth

If you own more than you owe, your net worth will be *positive*; if you owe more than you own, it will be *negative.* To find out whether your net worth is on the plus or minus side, you can prepare a personal **net worth statement like the one in Figure 13.7: Net Worth Statement, which we've drawn up for a fictional student named Joe College. (Note that we've included lines for items that may be relevant to some people's net worth statements but left them blank when they don't apply to Joe.)**

Joe College's Personal Net Worth Statement as of August 31, 2012	
ASSETS (what you own)	**Value**
Cash	$ 200
Checking accounts	1,000
Savings accounts/CDs/money market accounts	400
Market value of investments (stocks, bonds, mutual funds)	—
Retirement accounts	—
Market value of real estate	—
Cars	8,000
Furniture and appliances	1,500
Computers	900
Stereo/video equipment/cell phones	400
Jewelry	—
Clothing	300
Other assets	—
Total Assets	**12,700**
LIABILITIES (what you owe)	**Amount**
Credit card balances	1,200
Charge account balances	200
Student loans	7,000
Car loans	2,300
Home mortgage	—
Other liabilities	—
Total Liabilities	**10,700**
Assets – Liabilities = Net worth **Total Net Worth**	**$ 2,000**

Figure 13.7: Net Worth Statement

Assets

Joe has two types of assets:

- First are his *monetary* or *liquid assets*—his cash, the money in his checking accounts, and the value of any savings, CDs, and money market accounts. They're called *liquid* because either they're cash or they can readily be turned into cash.
- Everything else is a *tangible asset*—something that Joe can use, as opposed to an investment. (We haven't given Joe

any *investments*—such financial assets as stocks, bonds, or mutual funds—because people usually purchase these instruments to meet such long-term goals as buying a house or sending a child to college.)

Note that we've been careful to calculate Joe's assets in terms of their <mark>fair market value</mark>—the price he could get by selling them at present, not the price he paid for them or the price that he could get at some future time.

Liabilities

Joe's net worth statement also divides his liabilities into two categories:

- Anything that Joe owes on such items as his furniture and computer are *current liabilities*—debts that must be paid within one year. Much of this indebtedness no doubt ends up on Joe's credit card balance, which is regarded as a current liability because he *should* pay it off within a year.
- By contrast, his car payments and student-loan payments are *noncurrent liabilities*—debt payments that extend for a period of more than one year. Joe is in no position to buy a house, but for most people, their mortgage is their most significant noncurrent liability.

Finally, note that Joe has positive net worth. At this point in the life of the average college student, positive net worth may be a little unusual. If you happen to have negative net worth right now, you're technically *insolvent*, but remember that a major goal of getting a college degree is to enter the workforce with the best possible opportunity for generating enough wealth to reverse that situation.

Preparing Your Cash-Flow Statement

Now that you know something about your financial status *on a given date*, you need to know more about it *over a period of time*. This is the function of a <mark>cash-flow or income statement</mark>, which shows where your money has come from and where it's slated to go.

   Figure 13.8: Cash-Flow Statement is Joe College's cash-flow statement. As you can see, Joe's *income* (his cash *inflows*—money coming in) is derived from two sources: student loans and income from a part-time job. His expenditures (cash *outflows*—money going out) fall into several categories: housing, food, transportation, personal and health care, recreation/entertainment, education, insurance, savings, and other expenses. To find out Joe's *net cash flow*, we subtract his expenditures from his income:

$25,700 − $25,300 = $400

Joe College's Personal Cash-Flow Statement as of August 31, 2012	
CASH INFLOWS (cash coming in)	
Wages (full time in summer/part time during semester)	$ 18,700
Student loan	7,000
Total inflow of cash	**25,700**
CASH OUTFLOWS (cash going out)	
Housing	
Rent	5,400
Utilities (electricity, heat, water, cable)	700
Communication (phone and internet access)	900
Food	
Groceries	2,300
Eating out	1,200
Transportation	
Gas and maintenance	1,400
Car loan payments	1,400
Personal and healthcare	
Medical co-payments and dental	200
Clothing	200
Laundry/cleaning supplies/miscellaneous	100
Recreation/Entertainment	
Night life/movies/concerts	900
Magazines/music/miscellaneous	200
Education	
Tuition	5,500
Books	1,000
Student loan payments	—
Insurance	
Car, health, renter's	1,900
Savings	1,200
Other expenses	800
Total outflow of cash	**25,300**
Cash inflow – Cash outflow = Net cash flow **Net Cash Flow**	$ 400

Figure 13.8: Cash-Flow Statement

Joe has been able to maintain a positive cash flow for the year ending August 31, 2012, but he's cutting it close. Moreover, he's in the black only because of the inflow from student loans—income that, as you'll recall from his net worth statement, is also a noncurrent liability. We are, however, willing to give Joe the benefit of the doubt: Though he's incurring the high costs of an education, he's willing to commit himself to the debt (and, we'll assume, to careful spending) because he regards education as an investment that will pay off in the future.

Remember that when constructing a cash-flow statement, you must record only income and expenditures that pertain to a given period, whether it be a month, a semester, or (as in Joe's case) a year. Remember, too, that you must figure both inflows and outflows *on a cash basis*: you record income only when you receive money, and you record expenditures only when you pay out money. When, for example, Joe used his credit card to purchase his computer, he didn't actually pay out any money. Each monthly payment on his credit card balance, however, is an outflow that must be recorded on his cash-flow statement (according to the type of expense—say, recreation/entertainment, food, transportation, and so on).

Your cash-flow statement, then, provides another perspective on your *solvency*: if you're *insolvent*, it's because you're spending more than you're earning. Ultimately, your net worth and cash-flow statements are most valuable when you use them together. While your net worth statement lets you know what you're worth—how much wealth you have—your cash-flow statement lets you know precisely what effect your spending and saving habits are having on your wealth.

Step 2: Set Short-Term, Intermediate-Term, and Long-Term Financial Goals

We know from Joe's cash-flow statement that, despite his limited income, he feels that he can save $1,200 a year. He knows, of course, that it makes sense to have some cash in reserve in case of emergencies (car repairs, medical needs, and so forth), but he also knows that by putting away some of his money (probably each week), he's developing a habit that he'll need if he hopes to reach his long-term financial goals.

Just what are Joe's goals? We've summarized them in Figure 13.9: Joe's Goals, where, as you can see, we've divided them into three time frames: short-term (less than two years), intermediate-term (two to five years), and long-term (more than five years). Though Joe is still in an early stage of his financial life cycle, he has identified and structured his goals fairly effectively. In particular, they satisfy four criteria of well-conceived goals: they're *realistic* and *measurable*, and Joe has designated both *definite time frames* and *specific courses of action* (Kapoor, et. al., 2007).

Figure 13.9: Joe's Goals

Short-term goals (less than 2 years)	Intermediate-term goals (2-5 years)	Long-term goals (more than 5 years)
• Pay off car loan • Pay off credit card and charge account debt	• Complete college • Take one-month vacation after completing college	• Pay off student loans • Buy a home • Save for retirement

They're also sensible. Joe sees no reason, for example, why he can't pay off his car loan, credit card, and charge account balances within two years. Remember that, with no income other than student-loan money and wages from a part-time job, Joe has decided (rightly or wrongly) to use his credit cards to pay for much of his personal consumption (furniture, electronics equipment, and so forth). It won't be an easy task to pay down these balances, so we'll give him some credit (so to speak) for regarding them as important enough to include paying them among his short-term goals. After finishing college, he'll splurge and take a month-long vacation. This might not be the best thing to do from a financial point of view, but he knows this could be his only opportunity to travel extensively. He is realistic in his classification of student

loan repayment and the purchase of a home as long-term. But he might want to revisit his decision to classify saving for his retirement as a long-term goal. This is something we believe he should begin as soon as he starts working full-time.

Step 3: Develop a Budget and Use It to Evaluate Financial Performance

Once he has reviewed his cash-flow statement, Joe has a much better idea of what cash flowed in for the year that ended August 31, 2012, and a much better idea of where it went when it flowed out. Now he can ask himself whether he's satisfied with his annual inflow (income) and outflow (expenditures). If he's anything like most people, he'll want to make some changes—perhaps to increase his income, to cut back on his expenditures, or, if possible, both. The first step in making these changes is drawing up a personal **budget**—a document that itemizes the sources of his income and expenditures for the coming year, along with the relevant money amounts for each.

   Having reviewed the figures on his cash-flow statement, Joe did in fact make a few decisions:

- Because he doesn't want to jeopardize his grades by increasing his work hours, he'll have to reconcile himself to just about the same wages for another year.
- He'll need to apply for another $7,000 student loan.
- If he's willing to cut his spending by $1,200, he can pay off his credit cards. Toward this end, he's targeted the following expenditures for reduction: rent (get a cheaper apartment), phone costs (switch plans), auto insurance (take advantage of a "good-student" discount), and gasoline (pool rides or do a little more walking). Fortunately, his car loan will be paid off by midyear.

Revising his figures accordingly, Joe developed the budget in Figure 13.10: Joe's Budget for the year ending August 31, 2013. Look first at the column headed "Budget." If things go as planned, Joe expects a cash surplus of $1,600 by the end of the year—enough to pay off his credit card debt and leave him with an extra $400.

Joe College's Budget for year ending August 31, 2013.			
Item	**Budget**	**Actual**	**Variance (actual vs. budgeted)**
CASH INFLOW			
Wages	$ 18,700	$ 19,000	$ 300 favorable
Student loan	7,000	7000	—
Total	**25,700**	**26,000**	**300 favorable**
CASH OUTFLOW			
Housing			
Rent	5,100	5,100	—
Utilities (electricity, heat, water, TV cable)	700	800	100 unfavorable
Communication (phone and internet)	800	800	—
Food			
Groceries	2,300	2,100	200 favorable
Eating out	1,200	1,300	100 unfavorable
Transportation			
Gas and maintenance	1,300	1,400	100 unfavorable
Car loan payments	900	900	—
Personal and healthcare			
Medical co-payments and dental	200	300	100 unfavorable
Clothing	200	300	100 unfavorable
Laundry/cleaning supplies/miscellaneous	100	100	—
Recreation/Entertainment			
Night life/movies/concerts	900	1,000	100 unfavorable
Magazines/music/miscellaneous	200	200	—
Education			
Tuition	5,500	5,500	—
Books	1,000	1,000	—
Insurance			
Car, health, renter's	1,700	1,700	—
Savings	1,200	1,200	—
Other expenses	800	600	200 favorable
Total	**24,100**	**24,300**	**200 unfavorable**
Surplus (Deficit)	$ **1,600**	$ **1,700**	$ **100 favorable**

Figure 13.10: Joe's Budget

Figuring the Variance

Now we can examine the two remaining columns in Joe's budget. Throughout the year, Joe will keep track of his actual income and actual expenditures and will enter the totals in the column labeled "Actual." Like most reasonable people,

however, Joe doesn't really expect his actual figures to match with his budgeted figures. So whenever there's a difference between an amount in his "Budget" column and the corresponding amount in his "Actual" column, Joe records the difference, whether plus or minus, as a **variance**. Two types of variances appear in Joe's budget:

- ***Income variance***. When actual *income* turns out to be higher than expected or budgeted income, Joe records the variance as "favorable." (This makes sense, as you'd find it favorable if you earned more income than expected.) When it's just the opposite, he records the variance as "unfavorable."
- ***Expense variance***. When the actual amount of an *expenditure* is more than he had budgeted for, he records it as an "unfavorable" variance. (This also makes sense, as you'd find it unfavorable if you spent more than the budgeted amount.) When the actual amount is less than budgeted, he records it as a "favorable" variance.

Setting Mature Goals

Before we leave the subject of the financial-planning process, let's revisit the topic of Joe's goals. Another look at Figure 14.9 reminds us that, at the current stage of his financial life cycle, Joe has set fairly simple goals. We know, for example, that Joe wants to buy a home, but when does he want to take this major financial step? And of course, Joe wants to retire, but what kind of lifestyle does he want in retirement? Does he expect, like most people, a retirement lifestyle that's more or less comparable to that of his peak earning years? Will he be able to afford both the cost of a comfortable retirement and, say, the cost of sending his children to college? As Joe and his financial circumstances mature, he'll have to express these goals (and a few others) in more specific terms.

Levels of Mature Goals

Let's fast-forward a decade or so, when Joe's picture of stages 2 and 3 of his financial life cycle have come into clearer focus. If he hasn't done so already, Joe is now ready to identify a primary goal to guide him in identifying and meeting all his other goals (Winger & Frasca, 2003). Suppose that because Joe's investment in a college education has paid off the way he'd planned ten years ago, he's in a position to target a primary goal of financial independence—by which he means a certain financially secure life not only for himself but for his children, as well. Now that he's set this *primary* goal, he can identify a more specific set of goals—say, the following:

- A standard of living that reflects a certain level of comfort—a level associated with the possession of certain assets, both tangible and intangible.
- The ability to provide his children with college educations.
- A retirement lifestyle comparable to that of his peak earning years.

Having set this *secondary* level of goals, Joe's now ready to make specific plans for reaching them. As we've already seen, Joe understands that plans are far more likely to work out when they're focused on specific goals. His next step, therefore, is to determine the goals on which he should focus this next level of plans.

As it turns out, Joe already knows what these goals are, because he's been setting the appropriate goals every year since he drew up the cash-flow statement in Figure 14.8. In drawing up that statement, Joe was careful to create several line items to identify his various expenditures: *housing, food, transportation, personal and health care, recreation/entertainment, education, insurance, savings*, and *other expenses*. When we introduced these items, we pointed out that each one represents a cash outflow—something for which Joe expected to pay. They are, in other words, things that Joe intends to *buy* or, in the language of economics, *consume*. As such, we can characterize them as *consumption goals*.

These "purchases"—what Joe wants in such areas as housing, insurance coverage, recreation/entertainment, and so forth—make specific his secondary goals and are therefore his *third-level* goals.

Figure 13.11: Three-Level Goals/Plans gives us a full picture of Joe's three-level hierarchy of goals.

Figure 13.11: Three-Level Goals/Plans

Present and Future Consumption Goals

A closer look at the list of Joe's consumption goals reveals that they fall into two categories:

1. We can call the first category *present* goals because each item is intended to meet Joe's present needs and those (we'll now assume) of his family—housing, health care coverage, and so forth. They must be paid for as Joe and his family take possession of them—that is, when they use or consume them. All these things are also necessary to meet the first of Joe's secondary goals—a certain standard of living.
2. The items in the second category of Joe's consumption goals are aimed at meeting his other two secondary goals: sending his children to college and retiring with a comfortable lifestyle. He won't take possession of these purchases until sometime in the *future*, but (as is so often the case) there's a catch: they must be paid for out of *current* income.

A Few Words about Saving

Joe's desire to meet this second category of consumption goals–*future* goals such as education for his kids and a comfortable retirement for himself and his wife–accounts for the appearance on his list of the one item that, at first glance, may seem misclassified among all the others: namely, *savings*.

Paying Yourself First

It's tempting to glance at Joe's budget and cash-flow statement and assume that he shares with most of us a common attitude toward saving money: when you're done allotting money for various spending needs, you can decide what to do with what's left over–save it or spend it. In reality, however, Joe's budgeting reflects an entirely different approach. When he made up the budget in Figure 13.10, Joe *started out* with the decision to save $1,600–or at least to avoid spending it. Why? Because he had a goal: to be free of credit card debt. To meet this goal, he planned to use $1,200 of his *current* income to pay off what would continue to hang over his head as a *future* expense (his credit card debt). In addition, he *planned* to have $400 left over after he'd paid his credit card balance. Why? Because he had still longer-term goals, and he intended to get started on them early–as soon as he finished college. Thus his intention from the outset was to put $400 into savings.

In other words, here's how Joe went about budgeting his money for the year ending August 31, 2013 (as shown in Figure 13.10):

1. He calculated his income–total cash inflows from his student loan and his part-time job ($25,700).
2. He subtracted from his total income two targeted consumption goals–credit card payments ($1,200) and savings ($400).
3. He allocated what was left ($24,100) to his remaining consumption goals: housing ($6,600), food ($3,500), education ($6,500), and so forth.

If you're concerned that Joe's sense of delayed gratification is considerably more mature than your own, think of it this way: *Joe has chosen to pay himself first*. It's one of the key principles of personal-finances planning and an important strategy in doing something that we recommended earlier in this chapter–starting early (Keown, 2007).

> *Key Takeaways*
>
> - The financial planning process consists of three steps:
>
>   1. Evaluate your current financial status by creating a net worth statement and a cash flow analysis.
>   2. Set short-term, intermediate-term, and long-term financial goals.
>   3. Use a budget to plan your future cash inflows and outflows and to assess your financial performance by comparing budgeted figures with actual amounts.
>
> - In step 1 of the financial planning process, you determine what you *own* and what you *owe*:
>
>   1. Your personal *assets* consist of what you own.

2. Your personal *liabilities* are what you owe—your obligations to various creditors.

- Most people have two types of assets:

  1. *Monetary* or *liquid assets* include cash, money in checking accounts, and the value of any savings, CDs, and money market accounts. They're called *liquid* because either they're cash or they can readily be turned into cash.
  2. Everything else is a *tangible asset*—something that can be used, as opposed to an investment.

- Likewise, most people have two types of liabilities:

  1. Any debts that should be paid within one year are *current liabilities*.
  2. *Noncurrent liabilities* consist of debt payments that extend for a period of more than one year.

- Your **net worth** is the difference between your assets and your liabilities. **Your net worth statement** will show whether your net worth is on the plus or minus side on a given date.
- In step 2 of the financial planning process, you create a **cash-flow** or **income statement**, which shows where your money has come from and where it's slated to go. It reflects your financial status over a period of time. Your cash *inflows*—the money you have coming in—are recorded as *income*. Your cash *outflows*—money going out—are itemized as *expenditures* in such categories as housing, food, transportation, education, and savings.
- A good way to approach your financial goals is by dividing them into three time frames: short-term (less than two years), intermediate-term (two to five years), and long-term (more than five years). Goals should be realistic and measurable, and you should designate definite time frames and specific courses of action.
- Net worth and cash-flow statements are most valuable when used together: while your net worth statement lets you know what you're worth, your cash-flow statement lets you know precisely what effect your spending and saving habits are having on your net worth.
- If you're not satisfied with the effect of your spending and saving habits on your net worth, you may want to make changes in future inflows (income) and outflows (expenditures). You make these changes in step 3 of the financial planning process, when you draw up your personal **budget**—a document that itemizes the sources of your income and expenditures for a future period (often a year).

- In addition to the itemized lists of inflows and outflows, there are three other columns in the budget:

  1. The "Budget" column tracks the amounts of money that you *plan* to receive or to pay out over the budget period.
  2. The "Actual" column records the amounts that did in fact come in or go out.
  3. The final column records the **variance** for each item—the difference between the amount in the "Budget" column and the corresponding amount in the "Actual" column.

- There are two types of variance:

  1. An *income variance* occurs when actual income is higher than budgeted income (or vice versa).
  2. An *expense variance* occurs when the actual amount of an expenditure is higher than the budgeted amount (or vice versa).

13.5 A House Is Not a Piggy Bank: A Few Lessons from the Subprime Crisis

Joe isn't old enough to qualify, but if his grandfather had deposited $1,000 in an account paying 7 percent interest in 1945, it would now be worth $64,000. That's because money invested at 7 percent compounded will double every ten years. Now, $64,000 may or may not seem like a significant return over fifty years, but after all, the money did all the heavy lifting, and given the miracle of compound interest, it's surprising that Americans don't take greater advantage of the opportunity to multiply their wealth by saving more of it, even in modest, interest-bearing accounts. Ironically, with $790 billion in credit card debt, it's obvious that a lot of American families are experiencing the effects of compound interest—but in reverse (Frank, 2005).

As a matter of fact, though Joe College appears to be on the right track when it comes to saving, many people aren't. A lot of Americans, it seems, do indeed set savings goals, but in one recent survey, nearly 70 percent of the respondents reported that they fell short of their monthly goals because their money was needed elsewhere. About one-third of Americans say that they're putting away something but not enough, and another third aren't saving anything at all. Almost one-fifth of all Americans have net worth of zero—or less (Taylor, 2007; Frank, 2005).

As we indicated in the opening section of this chapter, this shortage of savings goes hand in hand with a surplus in spending. "My parents," says one otherwise gainfully employed American knowledge worker, "are appalled at the way I justify my spending. I think, 'Why work and make money unless you're going to enjoy it?' That's a fine theory," she adds, "until you're sixty, homeless, and with no money in the bank" (Gardner, 2008). And indeed, if she doesn't intend to alter her personal-finances philosophy, she has good reason to worry about her "older adult" years. Sixty percent of Americans over the age of sixty-five have less than $100,000 in savings, and only 30 percent of this group have more than $25,000; 45 percent have less than $15,000. As for income, 75 percent of people over age sixty-five generate less than $35,000 annually, and 30 percent are in the "poverty to near-poverty" range of $10,000 to $20,000 (as compared to 12 percent of the under-sixty-five population) (Rubin, et. al., 2000).

Disposing of Savings

Figure 13.12: U.S. Savings Rate shows the U.S. *savings rate*—which measures the percentage of disposable income devoted to savings for the period 1960 to 2010. As you can see, it suffered a steep decline from 1980 to 2005 and remained at this negligible savings rate until it started moving up in 2008. The recent increase in the savings rate, however, is still below the long-term average of 7 percent (Economic Research, 2008; Dickson, 2007).
Figure 13.12: U.S. Savings Rate

Now, a widespread tendency on the part of Americans to spend rather than save doesn't account entirely for the downward shift in the savings rate. In late 2005, the Federal Reserve cited at least two other (closely related) factors in the decline of savings (Federal Reserve Bank of San Francisco, 2005):

- An increase in the ratio of stock-market wealth to disposable income
- An increase in the ratio of residential-property wealth to disposable income

Assume, for example, that, in addition to your personal savings, you own some stock and have a mortgage on a home. Both your stock and your home are (supposedly) *appreciable assets*—their value used to go up over time. (In fact, if you had taken out your mortgage in 2000, by the end of 2005 your home would have appreciated at double the rate of your disposable personal income.) The decline in the personal savings rate during the mid-2000s, suggested the Fed, resulted in part from people's response to "long-lived bull markets in stocks and housing"; in other words, a lot of people had come to rely on the appreciation of such assets as stocks and residential property as "a substitute for the practice of saving out of wage income."

Subprime Rates and Adjustable Rate Mortgages

Let's assume that you weren't ready to take advantage of the boom in mortgage loans in 2000 but did set your sights on 2005. You may not have been ready to buy a house in 2005 either, but there's a good chance that you got a loan anyway. In particular, some lender might have offered you a so-called **subprime mortgage loan**. Subprime loans are made to borrowers who don't qualify for market-set interest rates because of one or more risk factors—income level, employment status, credit history, ability to make only a very low down payment. As of March 2007, U.S. lenders had written $1.3 trillion in mortgages like yours (Associated Press, 2007).

Granted, your terms might not have been very good. For one thing, interest rates on subprime loans may run from 8 percent to 10 percent and higher(consumeraffairs.com, 2005). In addition, you probably had to settle for an **adjustable-**

rate mortgage (ARM)—one that's pegged to the increase or decrease of certain interest rates that your lender has to pay. When you signed your mortgage papers, you knew that if those rates went up, your mortgage rate—and your monthly payments—would go up, too. Fortunately, however, you had a plan B: with the value of your new asset appreciating even as you enjoyed living in it, it wouldn't be long before you could refinance it at a more manageable and more predictable rate.

The Meltdown

Now imagine your dismay when housing prices started to go *down* in 2006 and 2007. As a result, you weren't able to refinance, your ARM was set to adjust upward in 2008, and foreclosures were already happening all around you—1.3 million in 2007 alone (Lahart, 2008). By April 2008, one in every 519 American households had received a foreclosure notice (RealtyTrac Inc., 2008). By August, 9.2 percent of the $12 trillion in U.S. mortgage loans was delinquent or in foreclosure (Mortgage Bankers Association, 2008; Duhigg, 2008).

Figure 13.13. In 2008, nearly one out of five hundred households in the United States received a foreclosure notice.

The repercussions? Banks and other institutions that made mortgage loans were the first sector of the financial industry to be hit. Largely because of mortgage-loan defaults, profits at more than 8,500 U.S. banks dropped from $35 billion in the fourth quarter of 2006 to $650 million in the corresponding quarter of 2007 (a decrease of 89 percent). Bank earnings for the year 2007 declined 31 percent and dropped another 46 percent in the first quarter of 2008 (Federal Deposit Insurance Corporation, 2007; FDIC, 2008).

Losses in this sector were soon felt by two publicly traded government-sponsored organizations, the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac). Both of these institutions are authorized to make loans and provide loan guarantees to banks, mortgage companies, and other mortgage lenders; their function is to make sure that these lenders have enough money to lend to prospective home buyers. Between them, Fannie Mae and Freddie Mac backed approximately half of that $12 trillion in outstanding mortgage loans, and when the mortgage crisis hit, the stock prices of the two corporations began to drop steadily. In September 2008, amid fears that both organizations would run out of capital, the U.S. government took over their management.

Freddie Mac also had another function: to increase the supply of money available for mortgage loans and new home

purchases, Freddie Mac bought mortgages already written by lenders, pooled them, and sold them as mortgage-backed securities to investors on the open market. Many major investment firms did much the same thing, buying individual subprime mortgages from original lenders (such as small banks), pooling the projected revenue—payments made by the original individual home buyers—and selling securities backed by the pooled revenue.

But when their rates went too high and home buyers couldn't make these payments, these securities plummeted in value. Institutions that had invested in them—including investment banks—suffered significant losses (Tully, 2007). In September 2008, one of these investment banks, Lehman Brothers, filed for bankruptcy protection; another, Merrill Lynch, agreed to sell itself for $50 billion. Next came American International Group (AIG), a giant insurance company that insured financial institutions against the risks they took in loaning and investing money. As its policyholders buckled under the weight of defaulted loans and failed investments, AIG, too, was on the brink of bankruptcy, and when private efforts to bail it out failed, the U.S. government stepped in with a loan of $85 billion (Robb, et. al., 2008). The U.S. government also agreed to buy up risky mortgage-backed securities from teetering financial institutions at an estimated cost of "hundreds of billions" (Mortgage Bankers Association, 2008).

Subprime Directives: A Few Lessons from the Subprime Crisis

If you were one of the millions of Americans who took out subprime mortgages in the years between 2001 and 2005, you probably have some pressing financial problems. If you defaulted on your subprime ARM, you may have suffered foreclosure on your newly acquired asset, lost any equity that you'd built up in it, and taken a hit in your credit rating. (We'll assume that you're not one of the people whose eagerness to get on the subprime bandwagon caused fraudulent mortgage applications to go up by 300 percent between 2002 and 2006.) (Financial Crimes Enforcement Network, 2006).

On the other hand, you've probably learned a few lessons about financial planning and strategy. Let's conclude with a survey of three lessons that you should have learned from your hypothetical adventure in the world of subprime mortgages.

Lesson 1: All mortgages are not created equal. Despite (or perhaps because of) the understandable enticement of home ownership, your judgment may have been faulty in this episode of your financial life cycle. Generally speaking, you're better off with a **fixed-rate mortgage**—one on which the interest rate remains the same regardless of changes in market interest rates—than with an ARM (Keown, 2007). As we've explained at length in this chapter, planning is one of the cornerstones of personal-finances management, and ARMs don't lend themselves to planning. How well can you plan for your future mortgage payments if you can't be sure what they're going to be?

In addition, though interest rates may go up or down, planning for them to go *down* and to take your mortgage payments with them doesn't make much sense. You can wait around to get lucky, and you can even try to get lucky (say, by buying a lottery ticket), but you certainly can't *plan* to get lucky. Unfortunately, the only thing you can really *plan* for is higher rates and higher payments. An ARM isn't a good idea if you don't know whether you can meet payments higher than your initial payment. In fact, if you have reason to believe that you can't meet the *maximum* payment entailed by an ARM, you probably shouldn't take it on.

Lesson 2: It's risky out there. You now know—if you hadn't suspected it already—that planning your personal finances would be a lot easier if you could do it in a predictable economic environment. But you can't, of course, and virtually constant instability in financial markets is simply one economic fact of life that you'll have to deal with as you make your way through the stages of your financial life cycle.

In other words, any foray into financial markets is risky. Basically, *risk* is the possibility that cash flows will be variable (Keown, 2008). Unfortunately, volatility in the overall economy is directly related to just one category of risks. There's a second category—risks related to the activities of various organizations involved in your financial transactions. You've already been introduced to the effects of these forms of financial risk, some of which have affected you directly, some of which have affected you indirectly, and some of which may affect you in the future (Winger & Frasca, 2003):

- *Management risk* is the risk that poor management of an organization with which you're dealing may adversely affect the outcome of your personal-finances planning. If you couldn't pay the higher rate on your ARM, managers at your lender probably failed to look deeply enough into your employment status and income.
- *Business risk* is the risk associated with a product that you've chosen to buy. The fate of your mortgagor, who issued the original product–your subprime ARM–and that of everyone down the line who purchased it in some form (perhaps Freddy Mac and Merrill Lynch) bear witness to the pitfalls of business risk.
- *Financial risk* refers to the risk that comes from ill-considered indebtedness. Freddie Mac, Fannie Mae, and several investment banks have felt the repercussions of investing too much money in financial instruments that were backed with shaky assets (namely, subprime mortgages).

In your own small way, of course, you, too, underestimated the pitfalls of all three of these forms of risk.

Lesson 3: Not all income is equally disposable. Figure 13.14 "Debt-Income Ratio" shows the increase in the ratio of debt to disposable income among American households between 1985 and 2007. As you can see, the increase was dramatic–from 80 percent in the early 1990s to about 130 percent in 2007 (Economist.com, 2007). This rise was made possible by greater access to credit–people borrow money in order to spend it, whether on consumption or on investments, and the more they can borrow, the more they can spend.

In the United States, greater access to credit in the late 1990s and early 2000s was made possible by rising housing prices: the more valuable your biggest asset, the more lenders are willing to lend you, even if what you're buying with your loan–your house–is your biggest asset. As the borrower, your strategy is twofold: (1) Pay your mortgage out of your wage income, and (2) reap the financial benefits of an asset that appreciates in value. On top of everything else, you can count the increased value of your asset as *savings*: when you sell the house at retirement, the difference between your mortgage and the current value of your house is yours to support you in your golden years.

Percent of household disposable income

Figure 13.14: Debt-Income Ration

As we know, however, housing prices had started to fall by the end of 2006. From a peak in mid-2006, they had fallen 8 percent by November 2007, and by April 2008 they were down from the 2006 peak by more than 19 percent–the worst rate of decline since the Great Depression. And most experts expected it to get worse before it gets better, and unfortunately they were right. Housing prices have declined by 33 percent from the mid-2006 peak to the end of 2010 (Streitfeld, 2011; Walayat, 2008).

So where do you stand? As you know, your house is worth no more than what you can get for it on the open market;

thus the asset that you were counting on to help provide for your retirement has *depreciated* substantially in little more than a decade. If you're one of the many Americans who tried to substitute equity in property for traditional forms of income savings, one financial specialist explains the unfortunate results pretty bluntly: your house "is a place to live, not a brokerage account" (Doll, 2006). If it's any consolation, you're not alone: a recent study by the Security Industries Association reports that, for many Americans, nearly half their net worth is based on the value of their home. Analysts fear that many of these people—a significant proportion of the baby-boom generation—won't be able to retire with the same standard of living that they've been enjoying during their wage-earning years (Hoak, 2006).

Key Takeaways

- Personal saving suffered a steep decline from 1980 to 2005 and remained at this negligible savings rate until it started moving up in 2008. The recent increase in the savings rate, however, is still below the long-term average of 7 percent.
- In addition to Americans' tendency to spend rather than save, the Federal Reserve observed that a lot of people had come to rely on the appreciation of such assets as stocks and residential property as a substitute for the practice of saving out of wage income.
- **Subprime loans** are made to would-be home buyers who don't qualify for market-set interest rates because of one or more risk factors—income level, employment status, credit history, ability to make only a very low down payment. Interest rates may run from 8 percent to 10 percent and higher.
- An **adjustable-rate mortgage (ARM)** is a home loan pegged to the increase or decrease of certain interest rates that the lender has to pay. If those rates go up, the mortgage rate and the home buyer's monthly payments go up, too. A **fixed-rate mortgage** is a home loan on which the interest rate remains the same regardless of changes in market interest rates.
- In the years between 2001 and 2005, lenders made billions of dollars in subprime ARM loans to American home buyers. In 2006 and 2007, however, housing prices started to go down. Homeowners with subprime ARM loans weren't able to refinance, their mortgage rates began going up, and foreclosures became commonplace.
- In 2006 and 2007, largely because of mortgage-loan defaults, banks and other institutions that made mortgage loans began losing huge sums of money. These losses carried over to Fannie Mae and Freddie Mac, publicly traded government-sponsored organizations that make loans and provide loan guarantees to banks and other mortgage lenders.
- Next to be hit were major investment firms that had been buying subprime mortgages from banks and other original lenders, pooling the projected revenue—payments made by the original individual home buyers—and selling securities backed by the pooled revenue. When their rates went too high and home buyers couldn't make their house payments, these securities plummeted in value, and the investment banks and other institutions that had invested in them suffered significant losses.

- *Risk* is the possibility that cash flows will be variable. Three types of risk are related to the activities of various organizations that may be involved in your financial transactions:

    1. *Management risk* is the risk that poor management of an organization with which you're dealing may adversely affect the outcome of your personal-finances planning.
    2. *Business risk* is the risk associated with a product that you've chosen to buy.
    3. *Financial risk* refers to the risk that comes from ill-considered indebtedness.

13.6 Cases and Problems

Go to https://www.bankrate.com/quizzle/ and request a free copy of your credit report. Review the report. If you identify any errors, get them fixed. Write a brief report explaining the value of good credit.

Go online and read this article at Forbes.com: "Most Common Resume Lies," by Kate DuBose Tomassi at http://www.forbes.com/workspecial/2006/05/20/resume-lies-work_cx_kdt_06work_0523lies.html. View the slide show of common résumé lies. Answer these questions: What are the most common lies made in résumés? Why is it a bad idea to lie on such a document? What are the potential consequences of misstating facts on your résumé?

It's becoming more difficult for individuals to buy homes. This has meant that many people who would have bought a home have remained in apartments. In big cities, such as New York, sharing an apartment with roommates is a good way to save money. Yet it has some disadvantages. Get together as a team and identify the pros and cons of sharing housing. Pretend that each member of the group has agreed to share one apartment. Create a document that details each member's rights and responsibilities. Decide as a group whether the lease should be in one person's name or in all your names. Explain the pros and cons of both approaches.

You're looking forward to taking a month-long vacation to Australia when you graduate from college in two years. Create a budget for this trip after researching likely costs. Determine how much you'll need for the trip and calculate how much you'd have to save each month to afford the trip.

MANAGING INFORMATION AND TECHNOLOGY

Learning Objectives

1. Distinguish between data and information.
2. Define information system (IS) and identify the tasks of the information systems manager.
3. Explain how IS managers capture, store, and analyze data.
4. Discuss ways in which an IS can be designed to meet the needs of individuals at various organizational levels.
5. Describe the main systems for sharing information through networked computers.
6. Define cloud computing and identify its advantages and disadvantages.
7. Explain how four networking technologies—the Internet, the World Wide Web, intranets, and extranets—make data communication possible.
8. Identify and discuss challenges faced by companies engaged in e-commerce.
9. Identify career opportunities in information management.

14.1 Data versus Information

By the time the company took the plunge and committed $100 million to marketing-related information technology (IT), Caesars had been collecting and storing data about customers for almost a decade. "While the company thought it important to collect customer information," recalls a senior marketing executive, "the problem was we had millions of customers to collect information on, but we had no systematic way of turning it into a marketing decision. We didn't know what to do with it." In other words, Caesars was collecting a lot of *data* but not necessarily any *information*. So what's the difference?

As an example, suppose that you want to know how you're doing in a particular course. So far, you've taken two 20-question multiple-choice tests. On the first, you got questions 8, 11, and 14 wrong; on the second, you did worse, missing items 7, 15, 16, and 19. The items that you got wrong are merely **data**—unprocessed facts. What's important is your total score. You scored 85 on the first exam and 80 on the second. These two numbers constitute **information**—data that have been processed, or turned into some useful form. Knowing the questions that you missed simply supplied you with some data for calculating your scores.

Now let's fast-forward to the end of the semester. At this point, in addition to taking the two tests, you've written two papers and taken a final. You got a 90 and 95 on the papers and a 90 on the final. You now have more processed data, but you still want to organize them into more useful information. What you want to know is your average grade for the semester. To get the information you want, you need yet more data—namely, the weight assigned to each graded item. Fortunately, you've known from day one that each test counts 20 percent, each paper 10 percent, and the final exam 40 percent. A little math reveals an average grade of 87.

Though this is the information you're interested in, it may be mere data to your instructor, who may want different information: an instructor who intends to scale grades, for example, will want to know the average grade for the entire class. You're hoping that the class average is low enough to push your average of 87 up from a B+ to an A− (or maybe even an A−it doesn't hurt to hope for the best). The moral of the story is that what constitutes *information* at one stage can easily become *data* at another: or, one person's information can be another person's data.

As a rule, you want information; data are good only for generating the information. So, how do you convert data into information that's useful in helping you make decisions and solve problems? That's the question we'll explore in the next section.

Information Systems

To gather and process data into information and distribute it to people who need it, organizations develop an **information system (IS)**—the combination of technologies, procedures, and people who collect and distribute the information needed to make decisions and coordinate and control company-wide activities. In most large organizations, the IS is operated by a senior management team that includes a **chief information officer (CIO)** who oversees information and telecommunications systems. There may also be a **chief technology officer** who reports to the CIO and oversees IT planning and implementation. As for **information managers**, their tasks include the following:

- Determining the information needs of members of the organization
- Collecting the appropriate data
- Applying technology to convert data into information
- Directing the flow of information to the right people

Differences in Information Needs

The job is complicated by the fact that information needs vary according to different levels, operational units, and functional areas. Consider, for instance, the information needs of managers at several levels:

- *Top managers* need information for planning, setting objectives, and making major strategic decisions.
- *Middle managers* need information that helps them allocate resources and oversee the activities under their control.
- *First-line managers* require information that helps them supervise employees, oversee daily operations, and coordinate activities.

Figure 14.1: Information Needs and Flows illustrates a hypothetical hierarchy of information needs at Caesars. The president, for example, needs information to determine whether profitability is up or down or if the organization is facing any new competitive threats. At the vice-presidential level, executives need information that will help them in controlling and planning for specific areas of operations. The VP of casino operations, for example, might need to know which operations are most profitable—slots, table games, or other gaming activities. The VP of hotel operations might want to know whether room revenues are going up or down.

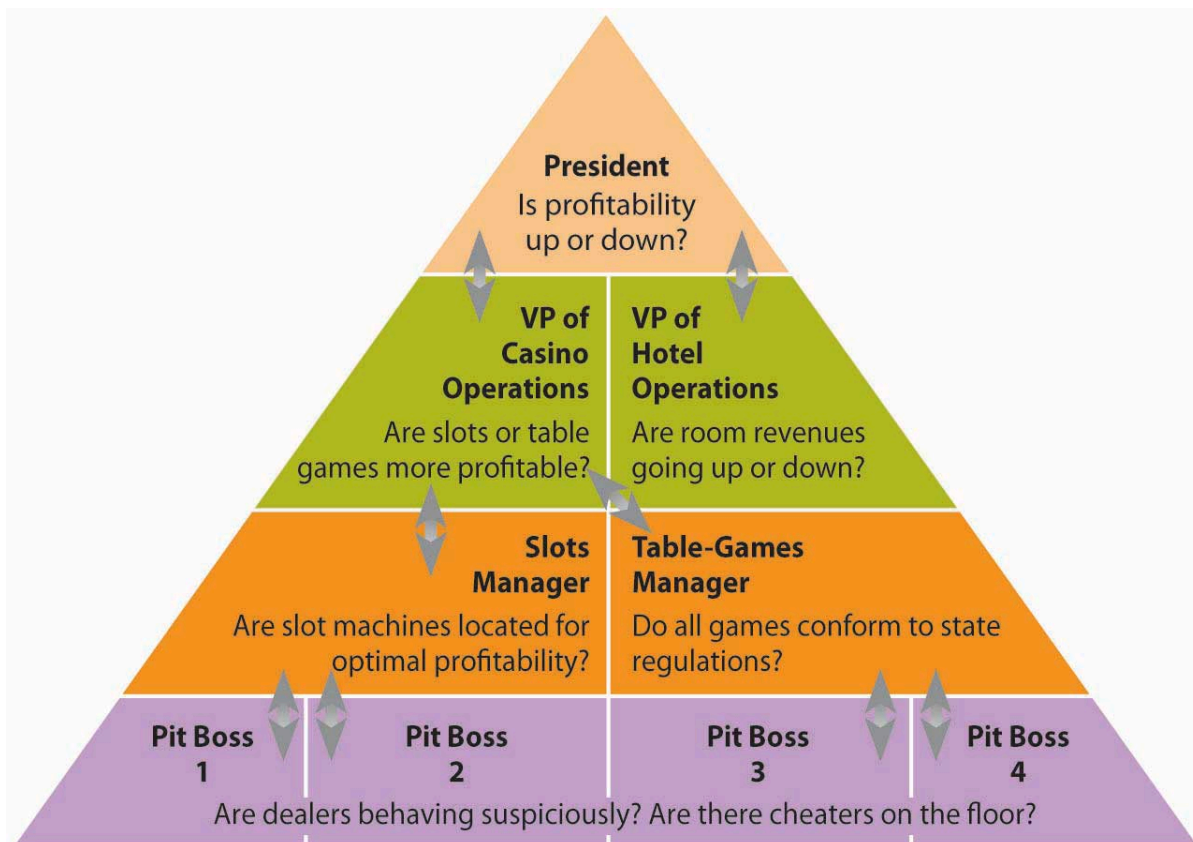

Figure 14.1: Information Needs and Flows

The information needs of middle-level and lower-level managers are different still. The slot-machine manager might want to know whether the placement of machines on the casino floor affects profitability. The poker manager might want to know whether all table games comply with state regulations. At a lower level, the pit manager (who's in charge

of table games in a particular area) needs to know whether there's a card-counter at his blackjack table or whether a dealer's activities are suspicious.

Even at a given level, information needs can vary. A manager on the hotel side of the business, for instance, doesn't care much about profitability at the poker tables, while a pit manager doesn't have much use for hotel housekeeping reports. The reports that an accountant needs would hardly be the same as those needed by a human resources manager.

The Need to Share Information

Having stressed the differences in information needs, we should pause to remind ourselves that the managerial levels, operations, and functions of every organization are intertwined, to a greater or lesser degree. If you'll glance again at Figure 14.1, you'll be reminded that organizations need to share information, that information must flow, and that it must flow in both directions, bottom-up and top-down. At Caesars, for instance, both casino and hotel managers are concerned about security, which is also of interest to managers in different functional areas. Information supplied by the security group is obviously vital to managers in the gaming areas, but HR managers also need it to screen potential employees. Marketing information is clearly important to both casino and hotel operations: to maximize overall profits, the company uses marketing data to fill hotel rooms with customers who spend big in the casinos (Kilby, et. al., 2005).

Caesars's information needs entail more than allowing individuals in a given casino to share information; information has to be shared among all of Caesars's thirty-nine casinos. Thus, Caesars relies on an *integrated IT system* that allows real-time communication among all its properties. Installing the system (in the mid-1990s) was complicated, and not everyone in the organization liked the idea. Some managers felt that information sharing threatened their independence. Others, including some in the IT group, doubted that a large number of separate IT systems could be adequately integrated. To get everyone on board, John Bushy, then senior VP of information technology, pledged that he wouldn't cut his hair until the system was up and running. By the time it was operational in 1997, Bushy had hair down to his shoulders, but it was worth it: Caesars's ability to share real-time information across all its properties has been a major factor in the company's success. Caesars's new system cut costs by $20 million a year, increased brand recognition, and increased the number of customers playing at more than one Caesars property by 72 percent (LeVinson, 2011; Global Supply Chain Management Forum, 2011).

Enterprise Systems

Many large and mid-size companies rely on a highly integrated system called an **enterprise resource planning (ERP) system** to channel information to multiple users. To understand what an ERP system does, forget about the P for *planning* (it really doesn't have much to do with planning) and the R for *resource* (it's an imprecise term) (Koch, 2011). Focus on the E for *enterprise*. An ERP system integrates the computer needs of all activities *across the enterprise* into a single system that serves all users. Such broad integration isn't a simple task, and you wouldn't be the first person to wonder whether it wouldn't be easier to give each department its own computer system. Salespeople, for example, need a system that tracks sales and generates sales reports. Meanwhile, manufacturing personnel don't need to track sales but do need to track inventory. What's the problem with stand-alone computer systems? Quite simply, users in various departments can't share information or communicate with each other.

What If You Don't Have ERP?

Imagine that you're a sales manager for a fairly large manufacturing company that produces and sells treadmills. Like every other department in the organization, you have your own computer system. A local sporting-goods store orders one hundred treadmills through a regional sales representative. It's your job to process the order. It wouldn't be much of a problem for you to go into your computer and place the order. But how would you know if the treadmills were actually in stock and when they could be delivered? How would you know if the customer's credit was any good? You could call the warehouse and ask if the treadmills are in stock. If they are, you'd tell the warehouse manager that you're placing an order and hope that the treadmills are still in stock by the time your order gets there two days later. While you're at it, you'd better ask for an expected delivery date. As a final precaution, you should probably call the finance department and ask about your customer's credit rating. So now you've done your job, and it can hardly be your fault that because the cost of manufacturing treadmills has gone up, accounting has recommended an immediate price increase that hasn't shown up in your computer system yet.

What If You Do Have ERP?

Wouldn't it be easier if you had an ERP system like the one illustrated in Figure 14.2 : ERP System—one that lets you access the same information as every other department? Then you could find out if there were one hundred treadmills in stock, the expected delivery date, your customer's credit rating, and the current selling price—without spending most of the day exchanging phone calls, e-mails, text messages, and faxes. You'd be in a better position to decide whether you can give your customer credit, and you could promise delivery (at a correct price) on a specified date. *Then*, you'd enter the order into the system. The information that you entered would be immediately available to everyone else. The warehouse would know what needs to be shipped, to whom, and when. The accounting department would know that a sale had been made, the dollar amount, and where to send the bill. In short, everyone would have up-to-date information, and no one would have to reinput any data.
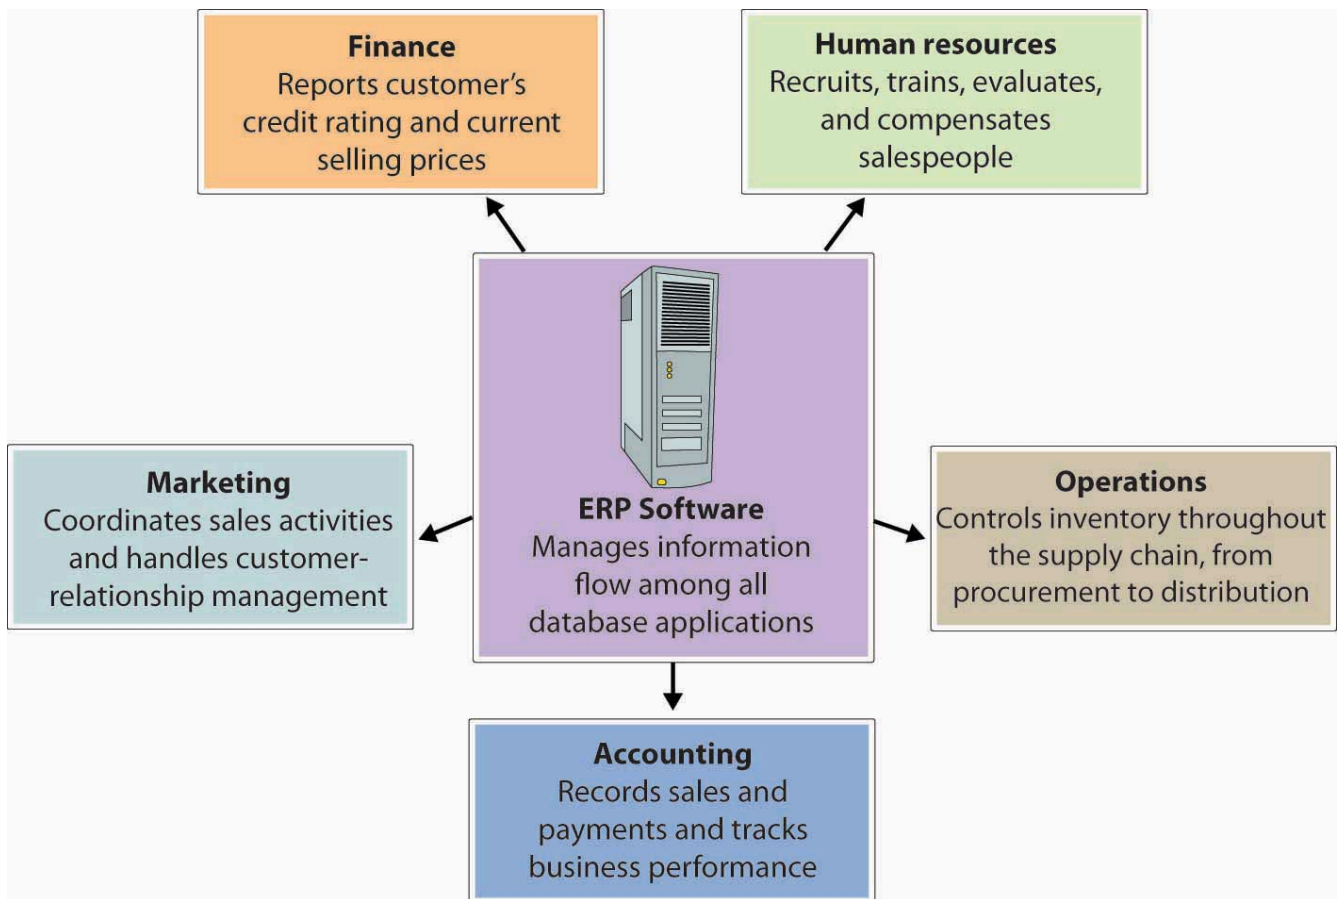

Figure 14.2: ERP System

2. Collecting the appropriate data
3. Applying technology to convert data into information
4. Directing the flow of information to the right people

- The job is complicated by the fact that information needs vary according to different levels, operational units, and functional areas.
- In addition, information must be shared. To channel information to multiple users, large and mid-size companies often rely on a highly integrated system called an **enterprise resource planning (ERP) system**.
- An ERP system integrates the computer needs of all business activities *across the enterprise* into a single computer system that serves all users.

Exercises

1. Using the college-application process as an example, explain the difference between *data* and *information*. Identify the categories of data that you supplied on your college application and the information generated from them by the admissions department.

2. Consider these three positions at Starbucks: retail store manager (in charge of the day-to-day operations at one store), district manager (responsible for the operations at multiple stores), and president of Starbucks North America (in charge of operations throughout the United States, Canada, and Mexico). Identify the information needs of managers at each level.

3. In what ways could a large automobile dealership, with a service shop and a body shop, benefit from an ERP system?

14.2 Managing Data

Did you ever think about how much data you yourself generate? Just remember what you went through to start college. First, you had to fill out application forms asking you about test scores, high school grades, extracurricular activities, and finances, plus demographic data about you and your family. Once you'd picked a college, you had to supply data on your housing preferences, the curriculum you wanted to follow, and the party who'd be responsible for paying your tuition. When you registered for classes, you gave more data to the registrar's office. When you arrived on campus, you gave out still more data to have your ID picture taken, to get your computer and phone hooked up, to open a bookstore account, and to buy an on-campus food-charge card. Once you started classes, data generation continued on a daily basis: your food card and bookstore account, for example, tracked your various purchases, and your ID tracked your coming and going all over campus. And you generated grades.

And all these data apply to just one aspect of your life. You also generated data every time you used your credit card and your cell phone. Who uses all these data? How are they collected, stored, analyzed, and distributed in organizations that have various reasons for keeping track of you?

Data and Databases

To answer such questions, let's go back to our Caesars example. As we've seen, Caesars collects a vast amount of data. Its hotel system generates data when customers make reservations, check in, buy food and beverages, purchase stuff at shops, attend entertainment events, and even relax at the spa. In the casino, customers apply for rewards programs, convert cash to chips (and occasionally chips back to cash), try their luck at the tables and slots, and get complimentary drinks. Then, there are the data generated by the activities of the company itself: employees, for instance, generate payroll and benefits data, and retail operations generate data every time they buy or sell something. Moreover, if we added up all these data, we'd have only a fraction of the amount generated by the company's gaming operations.

How does Caesars handle all these data? First of all, it captures and stores them in several **databases**—electronic collections of related data that can be accessed by various members of the organization. Think of databases as filing cabinets that can hold massive amounts of organized information, such as revenues and costs from hotel activities, casino activities, and events reservations at each of Caesars facilities.

Warehousing and Mining Data

What if Caesars wants to target customers who generate a lot of revenue, by using a program designed to entice return visits? How would it identify and contact these people? Theoretically, it could search through the relevant databases—those that hold customer-contact information (such as name and address) and information about customer activity in the company's hotels, casinos, and entertainment venues. It would be a start, perhaps, but it wouldn't be very efficient. First of all, it would be time-consuming. Plus, what if the same data weren't stored in a similar fashion in each database? In that case, it would be quite hard to combine the data in a meaningful way. To address this problem, Caesars managers will rely on a system like the one illustrated in Figure 14.3: The Data Mining Process, which calls for moving all the relevant data into a **data warehouse**—a centralized database in which data from several databases are consolidated and organized so that they can be easily analyzed.
Figure 14.3: The Data Mining Process

Data Mining

With the data in one central location, management can find out everything it needs to about a particular group of customers. It can also use the data to address some pretty interesting questions. Why do people come to our casinos? How can we keep customers coming back? How can we increase the number of visits per customer? How can we increase the amount they spend on each visit? What incentives (such as free dinners, hotel rooms, or show tickets) do our customers like most? To come up with answers to these questions, they'll perform a technique called **data mining**—the process of searching and analyzing large amounts of data to reveal patterns and trends that can be used to predict future behavior.

Data Mining and Customer Behavior

By data-mining its customer-based data warehouse, Caesars's management can discover previously unknown relationships between the general behavior of its customers and that of a certain group of customers (namely, the most profitable ones). Then, it can design incentives to appeal specifically to those people who will generate the most profit for the company.

To get a better idea of how data mining works, let's simplify a description of the process at Caesars. First, we need

to know how the casino gathered the data to conduct its preliminary analysis. Most customers who play the slots use a Caesars player's card that offers incentives based on the amount of money that they wager on slot machines, video poker, and table games (Caesars, 2011). To get the card, a customer must supply some personal information, such as name, address, and phone number. From Caesars's standpoint, the card is extremely valuable because it can reveal a lot about the user's betting behavior: actual wins and losses, length of time played, preferred machines and coin denominations, average amount per bet, and–most important–the speed with which coins are deposited and buttons pushed (Shook, 2003). As you can see from Figure 15.3 "The Data Mining Process", Caesars's primary data source was *internal*–generated by the company itself rather than provided by an outside source–and drew on a marketing database developed for *customer relationship management* (CRM).

Figure 14.4. Caesars collects data on its customers by using players' cards to gather information and to track betting behavior.

What does the casino do with the data that it's mined? Caesars was most interested in "first trippers"–first-time casino customers. In particular, it wanted to know which of these customers should be enticed to return. By analyzing the data collected from player's-card applications and from customer's actual play at the casino (even if for no more than an hour), Caesars could develop a profile of a profitable customer. Now, when a first-timer comes into any of its casinos and plays for a while, Caesars can instantly tell whether he or she fits the profitable-customer profile. To lure these people back for return visits, it makes generous offers of free or reduced-rate rooms, meals, entertainment, or free chips (the incentive of choice for Caesars's preferred customers). These customers make up 26 percent of all Caesars's customers and generate 82 percent of its revenues. Surprisingly, they're not the wealthy high rollers to whom Caesars had been catering for years. Most of them are regular working people or retirees with available time and income and a fondness for slots. They generally stop at the casino on the way home from work or on a weekend night and don't stay overnight. They enjoy the thrill of gambling, and you can recognize them because they're the ones who can't push the button or pump tokens in fast enough (Loveman, 2003).

14.3 Types of Information Systems

As we saw earlier, different managers, operational units, and functional areas have different information needs. That's why organizations often tailor information systems to meet particular needs. Caesars's IT group, for example, developed the Player Contact System (Dunn, 2003; Dunn, 2003). to help its casino salespeople connect to top customers on a more personal basis. Working from a prioritized list of customer names displayed on a computer screen, the salesperson clicks on a name to view relevant information about the customer, such as background and preferred casino activities. There's even a printed script that can be used to guide the conversation. Such a system isn't very helpful, however, to middle or top-level managers, who need systems to help them carry out their oversight and planning responsibilities. To design marketing programs, for instance, marketing managers rely on summary information gleaned from a dedicated customer-relationship management system. Let's look at some of the widely available information systems designed to support people at the operational and upper-management levels.

Operations Support Systems

==Operations support systems== are generally used by managers at lower levels of the organization—those who run day-to-day business operations and make fairly routine decisions. They may be *transaction processing systems*, *process control systems*, or *design and production systems*.

Transaction Processing Systems

Most of an organization's daily activities are recorded and processed by its ==transaction processing system==, which receives input data and converts them into output—information—intended for various users. Input data are called ==transactions==—events that affect a business. A *financial transaction* is an economic event: it affects the firm's assets, is reflected in its accounting statements, and is measured in monetary terms. Sales of goods to customers, purchases of inventory from suppliers, and salaries paid to employees are all financial transactions. Everything else is a *non-financial transaction*. The marketing department, for example, might add some demographic data to its customer database. The information would be processed by the firm's transaction processing system, but it wouldn't be a financial transaction.

Figure 14.5: Transaction Processing System illustrates a transaction processing system in which the transaction is a customer's electronic payment of a bill. As you can see, transaction processing system output can consist not only of documents sent to outside parties (in this case, notification of payment received), but also of information circulated internally (in the form of reports), as well as of information entered into the database for updating.
Figure 14.5: Transaction Processing System

Process Control Systems

Process control refers to the application of technology to monitor and control physical processes. It's useful, for example, in testing the temperature of food as it's being prepared or gauging the moisture content of paper as it's being manufactured. Typically, it depends on sensors to collect data periodically. The data are then analyzed by a computer programmed either to make adjustments or to signal an operator.

Caesars uses process-control technology to keep customers happy. At any given point, some slot machines are down, whether because a machine broke or ran out of money or somebody hit the jackpot. All these contingencies require immediate attention by a service attendant. In the past, service personnel strolled around looking for machines in need of fixing. Now, however, a downed slot machine sends out an "I need attention" signal, which is instantly picked up by a monitoring and paging system called MessengerPlus and sent to a service attendant.

Design and Production Systems

As we saw in Chapter 11: Operations Management in Manufacturing and Service Industries, modern companies rely heavily on technology to design and make products. **Computer-aided design (CAD)** software, for instance, enables designers to test computer models digitally before moving new products into the prototype stage. Many companies link CAD systems to the manufacturing process through **computer-aided manufacturing (CAM)** systems that not only determine the steps needed to produce components but also instruct machines to do the necessary work. A CAD/CAM system can be expanded by means of **computer-integrated manufacturing (CIM)**, which integrates various operations

(from design through manufacturing) with functional activities ranging from order taking to final shipment. The CIM system may also control industrial robots–computer-run machines that can perform repetitive or dangerous tasks. A CIM system is a common element in a <mark>flexible manufacturing system</mark>, which makes it possible to change equipment setups by reprogramming computer-controlled machines that can be adapted to produce a variety of goods. Such flexibility is particularly valuable to makers of customized products.

Management Support Systems

Mid- and upper-level managers rely on a variety of information systems to support decision-making activities, including *management information systems*, *decision support systems*, *executive support systems*, and *expert systems*.

Management Information Systems

A <mark>management information system</mark> extracts data from a database to compile reports, such as sales analyses, inventory-level reports, and financial statements, to help managers make routine decisions. The type and form of the report depend on the information needs of a particular manager. At Caesars, for example, several reports are available each day to a games manager (who's responsible for table-game operations and personnel): a customer-analysis report, a profitability report, and a labor-analysis report (Shook, 2003).

Decision Support Systems

A <mark>decision support system</mark> is an interactive system that collects, displays, and integrates data from multiple sources to help managers make nonroutine decisions. For example, suppose that a gaming company is considering a new casino in Pennsylvania (which has recently legalized slot machines). To decide whether it would be a wise business move, management could use a decision support system like the one illustrated in Figure 15.6: Decision Support System. The first step is to extract data from internal sources to decide whether the company has the financial strength to expand its operations. From external sources (such as industry data and Pennsylvania demographics), managers might find the data needed to determine whether there's sufficient demand for a casino in the state. The decision support system will apply both types of data as variables in a quantitative *model* that managers can analyze and interpret. People must make the final decision, but in making sense of the relevant data, the decision support system makes the decision-making process easier–and more reliable (Webopedia, 2011).
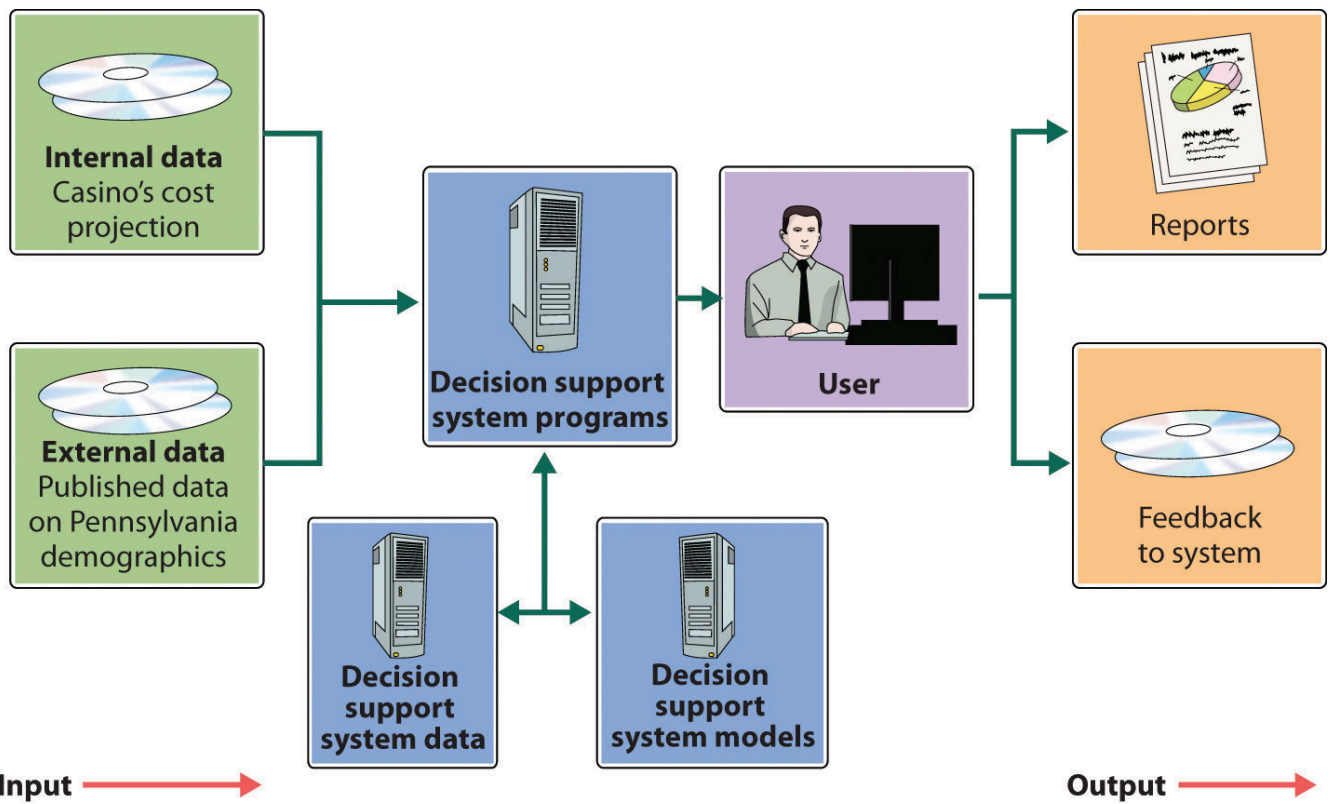

Figure 14.6: Decision Support System

Executive Information Systems

As we observed in [Chapter 6: Managing for Business Success](#), senior managers spend a good deal of their time planning and making major decisions. They set performance targets, determine whether they're being met, and routinely scan the external environment for opportunities and threats. To accomplish these tasks, they need relevant, timely, easily understood information. Often, they can get it through an **executive information system**, which provides ready access to strategic information that's customized to their needs and presented in a convenient format. Using an executive information system, for example, a gaming-company executive might simply touch a screen to view key summary information that highlights in graphical form a critical area of corporate performance, such as revenue trends. After scanning this summary, our executive can "drill down" to retrieve more detailed information—for example, revenue trends by resort or revenue trends from various types of activities, such as gaming, hotel, retail, restaurant, or entertainment operations.

Artificial Intelligence

Artificial intelligence is the science of developing computer systems that can mimic human behavior. Ever since the term was coined in 1956, artificial intelligence has always seemed on the verge of being "the next big thing." Unfortunately, optimistic predictions eventually collided with underwhelming results, and many experts began to doubt that it would ever have profitable applications (Webopedia, 2011). In the last decade, however, some significant advances have been made in artificial intelligence—albeit in the area of game playing, where activities are generally governed by

small sets of well-defined rules. But even the game-playing environment is sometimes complex enough to promote interesting developments. In 1997, for example, IBM's Deep Blue—a specialized computer with an advanced chess-playing program—defeated the world's highest-ranked player (Webopedia, 2011).

More recently, several artificial intelligence applications have been successfully put to commercial use. Let's take a brief look at two of these: *expert systems* and *face-recognition technology*.

Expert Systems

Expert systems are programs that mimic the judgment of experts by following sets of rules that experts would follow. They're useful in such diverse areas as medical diagnosis, portfolio management, and credit assessment. For example, you've called the customer-service department of your credit-card company because you want to increase your credit line. Don't expect to talk to some financial expert who's authorized to say yes or no. You'll be talking to a service representative with no financial expertise whatsoever. He or she will, however, have access to an expert system, which will give you an answer in a few seconds. How does it work? The expert system will prompt the representative to ask you certain questions about your salary and living expenses. It will also check internal corporate data to analyze your purchases and payment behavior, and, based on the results, it will determine whether you get an increase and, if so, how much.

At Caesars, an expert system called the Revenue Management System helps to optimize the overall profitability of both hotel and casino operations. When a customer requests a room, the program accesses his or her profile in the database and consults certain "rules" for assessing the application (Goff, 2004). One rule, for example, might be, "If the customer has wagered more than $100,000 in the past year, add 10 points." Eventually, the system decides whether your application will be accepted (and at what rate) by adding up points determined by the rules. While a tightwad may not get a room even when there are vacancies, a high roller may get a good rate on a luxury suite even if the hotel is nearly full.

Face-Recognition Technology

Caesars uses another particularly interesting, and sophisticated, application of artificial intelligence. In the hotel-casino business, it's crucial to identify and turn away undesirable visitors. One tool for this task is a digital camera-surveillance system that uses *face-recognition technology*. Using this technology, a program classifies a person's face according to the presence/absence or extent of certain unique features, such as dimpled chins, receding jaws, overbites, and long or short noses. If there's a match on, for example, fifteen features between a person being scanned and someone in the company database, a staff member decides whether the two people are the same. If a security manager then concludes that the face belongs to a skilled card-counter, the customer will be discouraged from playing blackjack; if it belongs to a known cheater, the individual will be escorted out of the casino. The system, however, does more than spot undesirables. It can also identify high rollers and send information about customers to managers on the floor. That's why a Caesars manager can greet a preferred customer at the door with his favorite drink and a personalized greeting, such as "Hi, Bill! How's Karen? Did you ever get that vintage Corvette? Here, have a gin rickey on the house" (Duffy, 2003; Gallagher, 2004).

- Information needs vary according to managerial level (top, middle, or first-line).

- An IS, or information system, can be divided into two categories:

  1. Those that meet the needs of low-level managers
  2. Those that meet the needs of middle- and upper-level managers

- Low-level managers–those who run day-to-day operations and make routine decisions–use **operations support systems**, which usually fall into three categories: transaction processing systems, process control systems, and computer-aided design software.

  1. Most daily activities are recorded and processed by a **transaction processing system**, which receives input data and converts them into output–information–intended for various users.
  2. **Process control** refers to the application of technology to monitor and control physical processes, such as food preparation. The system depends on sensors to collect data for analysis by a computer programmed either to make adjustments or to signal an operator.
  3. Technology can be used to design and make products. **Computer-aided design (CAD)** software, for instance, enables designers to test computer models digitally before moving new products into the prototype stage.

- Mid- and upper-level managers may use one of four types of **management support system** to assist in decision-making activities: management information systems, decision support systems, executive information systems, and expert systems.

  1. A **management information system** extracts data from a database to compile reports, such as sales analyses, needed for making routine decisions.
  2. A **decision support system** is an interactive system that collects and integrates data from multiple sources to assist in making nonroutine decisions.
  3. To develop plans and make major decisions, managers may gather relevant, timely, easily understood information through an **executive information system**; an EIS provides ready access to strategic information that's customized to their needs and presented in a convenient format.
  4. An **expert system** mimics expert judgment by following sets of rules that experts would follow; it relies on **artificial intelligence**–the science of developing computer systems that can mimic human behavior.

Exercise

For each of the following situations, select the appropriate management support system to aid the user:

decision support system, executive support system, or expert system. In each case, describe the management support system that you recommend.

- You're trying to identify a rash on your arm.
- You own two golf courses in the Northeast, and you're thinking about building one in Florida. You need to gather and analyze information about your current operations in the Northeast, as well as external information about the golf industry in Florida.
- You own three McDonald's franchises. Every morning, you want to know the revenues and costs at each store. You're also interested in a breakdown of revenues by product and costs by category of expense (salaries, food and ingredients, maintenance, and so on).

14.4 Computer Networks and Cloud Computing

Once it's grown beyond just a handful of employees, an organization needs a way of sharing information. Imagine a flower shop with twenty employees. The person who takes phone orders needs access to the store's customer list, as do the delivery person and the bookkeeper. Now, the store may have one computer and everyone could share it. It's more likely, however, that there are a number of computers (several for salespeople, one for delivery, and one for bookkeeping). In this case, everyone needs to be sure that customer records have been updated on all computers every time that a change is required.

Networks

Likewise, many companies want their personal computers to run their own software and process data independently. But they also want people to share databases, files, and printers, and they want them to share **applications software** that performs particular tasks, including word processing, creating and managing spreadsheets, designing graphical presentations, and producing high-quality printed documents (*desktop publishing*).

The solution in both cases is *networking*—linking computers to one another. The two major types of networks are distinguished according to geographical coverage:

- A **local area network (LAN)** links computers that are in close proximity—in the same building or office complex. They can be connected by cables or by wireless technology. Your university might have a LAN system that gives you access to resources, such as registration information, software packages, and printers. Figure 14.7: Local Area Network (LAN) illustrates a LAN that's connected to another network by means of a *gateway*—a processor that allows dissimilar networks to communicate with one another.
Figure 14.7: Local Area Network (LAN)

- Because a **wide area network (WAN)** covers a relatively large geographical area, its computers are connected by telephone lines, wireless technology, or even satellite.

Like the one in Figure 14.7, some networks are **client-server systems**, which include a number of client machines (the ones used by employees for data input and retrieval) and a server (which stores the database and the programs used to process the data). Such a setup saves time and money and circulates more-accurate information.

Cloud Computing

A cloud is a "visible mass of condensed water vapor floating in the atmosphere, typically high above the ground" (Dictionary.com, 2011). The term "**cloud computing**" means performing computer tasks using services provided over the Internet (Pinola, 2011). So how do you connect the two definitions? When IT professionals diagrammed computer systems, they used a cloud symbol to represent the Internet. So when you hear or read that an individual or company is using the "cloud" or technology firms, such as IBM, Hewlett-Packard, and Salesforce.com, are offering cloud services, just substitute the word "Internet" for "cloud" and things will make sense.

   You might be surprised to learn that you're already using the cloud—that is if you use Facebook (which is very likely—in fact, just mentioning Facebook here might prompt you to stop studying and check out your friends' pages). How do you know that Facebook is a cloud application? Remember the trick: just substitute the word "Internet" for "cloud." The Facebook computer application lets you store information about yourself and share it with others using the Internet.

Business Applications

Think about the functional areas of business you've explored in this text: accounting, finance, human resources, management, marketing, operations, and product design. Now imagine you're Katrina Lane, senior vice president and chief technology officer for Caesars Entertainment, who is responsible for the information technology needed to handle multiple tasks in all these functional areas. You're sitting at your desk when Gary Loveman, chief executive officer of Caesars, walks in and gives you the news. Caesars just purchased the Planet Hollywood Casino and Resort in Las Vegas and will open up two new casinos in Ohio in 2012. This is good news for the company, but it means a lot of work for you and your staff.

You wonder whether this might be the time to outsource some of your computing tasks to a technology firm specializing in cloud computing. You remember an example that really makes sense (Gil, 2011): Right now, whenever Microsoft comes out with a new version of Word, Caesars has to pay $350 per PC for the latest version. Wouldn't it make more sense to rent the use of the Microsoft Word program from a cloud vendor for say $5 a month (or $60 a year)? Given that the average time between new releases of Word is two years, your total cost per PC would be $120 (2 × $60)—a savings of about $230 per PC ($350 – $120). Your employees wouldn't mind; instead of working offline, they would just login to the Internet and work with their online version using the files that were saved for them. And the members of your IT staff would be pleased that they wouldn't need to install the new version of Word on all your PCs.

The As-A-Service Group

Companies can contract for various cloud computing services. The Microsoft Word example discussed previously is classified as ==software as a service (SaaS)==. This type of service gives companies access to a large assortment of software packages without having to invest in hardware or install and maintain software on its own computers. The available software, which includes e-mail and collaboration systems and customer relationship management programs, can be customized and used by an individual client or shared among several clients. A second type of service is called ==infrastructure as a service (IaaS)==. Instead of providing users with software, a technology firm offering infrastructure as a service provides hardware, including servers, central processing units, network equipment, and disk space (Thrive Networks, 2009). The most successful IaaS provider is Amazon Web Services (Best Price Computers, 2011). The company rents computer power and storage to users who access their data via the Internet. The last as-a-service model is called ==platform as a service (PaaS)==. Those offering platform as a service provide services that enable users to develop customized web applications. Because they don't have to start from scratch but rather build on existing platforms made available by the service provider, the web applications can be developed quickly.

Advantages and Disadvantages of Cloud Computing

In making your final decision (as the pretend chief technology officer for Caesars) you should consider these advantages and disadvantages of cloud computing:

Advantages

Shifting some of Caesars's IT functions to the cloud would produce a number of advantages:

1. *Cost Savings*—By "renting" software rather than buying it, Caesars can reduce its costs. The monthly fee to "use" the software is generally less than the combined cost of buying, installing, and maintaining the software internally. On the hardware site, housing Caesars's data in a service provider's facilities, rather than in-house, reduces the large outlay of cash needed to build and maintain data centers.
2. *Speed of Delivery*—Purchasing and installing software and data processing equipment can be time consuming. A cloud computing service provider could get Caesars's applications up and running in only a few weeks.
3. *Scalable*—Caesars is constantly expanding both in the number of casinos it owns and geographically. In this ever-changing environment, it's difficult to gauge the level of our technology needs. If we overestimate our requirements, we end up paying for technology we don't need. If we underestimate, efficiency goes down, and the experience for our customers diminishes. By using cloud computing we are able to have exactly what we need at our disposal at any point in time.
4. *Employees Can Be Mobile*—The use of cloud computing will free workers from their desks and allow them to work wherever they are. As applications move to the cloud, all that is needed for our employees to connect to their "offices" is the Internet. This mobility benefit also makes it easier for employees to collaborate on projects and connect with others in the company.
5. *Information Technology Staff*—Although our current staff is extremely qualified and dedicated, finding experienced and knowledgeable staff is a continuing problem particularly in the casino industry which suffers from historically high turnover. By using cloud computing, we reduce our human resource needs by shifting some of our work to outside vendors who are able to hire and keep well qualified individuals (in part because IT professionals enjoy working for technology companies).

Disadvantages

Although the advantages of moving to a cloud environment outnumber the disadvantages, the following disadvantages are cause for concern:

1. *Disruption in Internet Service*—If Caesars moves some of its applications to the cloud, its employees can work on these applications on any device and in any location as long as they have an Internet connection. But what if the Internet is unavailable because of a disruption? Depending on the length of the disruption, this could create serious problems for Caesars.
2. *Security*—Many companies are reluctant to trust cloud service providers with their data because they're afraid it might become available to unauthorized individuals or criminals. This is a particular problem for Caesars, which collects and stores sensitive client information and has to constantly be on the lookout for fraudulent activity of staff and customers (Eve, 2011).
3. *Service Provider System Crash*—Organizations considering moving to the cloud are justifiably concerned about the possibility of a computer service crash at their service providers' facilities. It looks like this concern was warranted. In April of 2011, Amazon Web Service (a leading cloud services provider) experienced an outage in one of its large web-connected data centers. The outage crashed its system and brought down the Web sites of a number of companies, including the location-based social network, Foursquare (Lohr, 2011). It took more than thirty-six hours to get all seventy or so of the crashed sites up and running.

Go or No Go?

So, pretend chief technology officer for Caesars, what's your decision: will you get on the cloud or stay on the ground?

If you are curious about what the real chief technology officer did, she took the high road and transferred a number of applications to Salesforce.com's Web-based Force.com's cloud applications service (Salesforce.com, 2011).

Key Takeaways

- Once an organization has grown to more than a few employees, it needs to network individual computers to allow them to share information and technologies.
- A **client-server system** links a number of client machines (for data input and retrieval) with a server (for storing the database and the programs that process data).
- Many companies want personal computers to run their own software and process data independently.
- But they also want individuals to share databases, files, printers, and **applications software** that perform particular types of work (word processing, creating and managing spreadsheets, and so forth).

- There are two systems that can satisfy both needs.

  1. A **local area network (LAN)** links computers in close proximity, connecting them by cables or by wireless technology.
  2. A **wide area network (WAN)** covers a relatively large geographical area and connects computers by telephone lines, wireless technology, or satellite.

- The term "**cloud computing**" means performing computer tasks using services provided over the Internet.
- The **software as a service (SaaS)** category of cloud computing gives companies access to a large assortment of software packages without having to invest in hardware or install and maintain software on its own computers.
- A technology firm offering **infrastructure as a service** provides users with hardware, including servers, central processing units, network equipment, and disk space.
- Those offering the **platform as a service** category of cloud computing provide services that enable users to develop customized web applications.
- Shifting IT functions to the cloud produces a number of advantages, including cost savings, speedy delivery of software, scalability (you pay for only what you need), employee mobility, and a reduction in information technology staff.
- The following disadvantages of cloud computing are cause for concern: disruption in internet service, security issues, and unreliability of service provider systems.

Exercises

1. What's the difference between a LAN and a WAN? Give an example of the use to which each type of system can be put. Does your college maintain either type of computer network?
2. In what ways could your college benefit from cloud computing? In responding, consider the three types of services offered by cloud service providers: software as a service, infrastructure as a service, and

platform as a service. What type of security issues might your college administrators be concerned with?

14.5 Data Communications Networks

In addition to using networks for information sharing within the organization, companies use networks to communicate and share information with those outside the organization. All this is made possible by ==**data communication networks**==, which transmit digital data (numeric data, text, graphics, photos, video, and voice) from one computer to another using a variety of wired and wireless communication channels. Let's take a closer look at the networking technologies that make possible all this electronic communication—in particular, the *Internet* (including the *World Wide Web*), *intranets*, and *extranets*.

The Internet and the World Wide Web

Though we often use the terms *Internet* and *World Wide Web* interchangeably, they're not the same thing (Webopedia, 2011). The **Internet** is an immense global network comprising smaller interconnected networks linking millions of computers around the world. Originally developed for the U.S. military and later adapted for use in academic and government research, the Internet experienced rapid growth in the 1990s, when companies called ==**Internet service providers**== were allowed to link into the Internet infrastructure in order to connect paying subscribers. Today, Internet service providers, such as CompuServe, America Online (AOL), MSN, and Comcast, enable us to use the Internet to communicate with others through e-mail, texting, instant messaging, online conferencing, and so on. These services also connect us with third-party providers of information, including news stories, stock quotes, and magazine articles.

The ==**World Wide Web**== (or simply "the Web") is just a portion of the Internet—albeit a large portion. The Web is a subsystem of computers that can be accessed on the Internet using a special protocol, or language, known as *hypertext transfer protocol* (HTTP). What's the difference between the Internet and the Web? According to Tim Berners-Lee (one of the small team of scientists who developed the concept for the Web in 1989), the Internet is a network of networks composed of cables and computers. You can use it to send "packets" of information from one computer to another, much like sending a postcard. If the address on the packet is accurate, it will arrive at the correct destination in much less than a second. Thus, the Internet is a packet-delivery *service* that delivers such items as e-mail messages all over the globe. The Web, by contrast, is composed of *information*—documents, pictures, sounds, streaming videos, and so on. It's connected not through cables, but rather through *hypertext links* that allow users to navigate between resources on the Internet (Griffiths, 2011).

Because it's driven by programs that communicate between computers connected to the Internet, the Web couldn't exist without the Internet. The Internet, on the other hand, could exist without the Web, but it wouldn't be nearly as useful. The Internet itself is enormous, but it's difficult to navigate, and it has no pictures, sounds, or streamed videos. They exist on computers connected to the Web, which also makes it much easier to retrieve information. The creation of Web ==**browsers**==—software, such as Microsoft's Internet Explorer and Netscape Navigator, that locates and displays Web pages—opened up the Internet to a vast range of users. Almost 80 percent of individuals in the United States use the Internet regularly (Internet World Stats, 2011; Kessler, 2011). So, who's in charge of the Web? No one owns it, but an organization called the World Wide Web Consortium (W3C) oversees the development and maintenance of standards governing the way information is stored, displayed, and retrieved on it (Wikipedia, 2011).

The Technology of the Web

Figure 14.8: Google

Let's look a little more closely at some of the technologies that enable us to transmit and receive data over the Web. Documents on the Web are called *Web pages*, and they're stored on *Web sites*. Each site is maintained by a *Webmaster* and opens with a *home page*. Each Web page is accessed through a unique address called a *uniform resource locator (URL)*. For example, if you want to find statistics on basketball star LeBron James, you could type in the URL address https://stats.nba.com/player/2544/career/. The prefix *https://* is the protocol name, *http://www.nba.com* the domain name, *player* the subdirectory name, and *2544/career* the document name (or Web page). A computer that retrieves Web pages is called a **Web server**. A **search engine** is a software program that scans Web pages containing specified keywords and provides a list of documents containing them. The most popular search engine is Google; others include Bing and Yahoo!.

Intranets and Extranets

What's the difference among the Internet, an intranet, and an extranet? It depends on who can and can't access the information on the network. The Internet is a public network that anyone can use. A company's **intranet**, on the other hand, is a private network using Internet technologies that's available only to employees; access is controlled by a software program called a **firewall**. The information available on an intranet varies by company but may include internal job postings, written company policies, and proprietary information, such as price lists meant for internal use only.

   An **extranet** is an intranet that's partially available to certain parties outside the organization. Say, for example, you've posted the following information on your intranet: company policies, payroll and benefit information, training programs, parts specifications and inventories, and production schedules. To allow suppliers to bid on contracts, you might give them access to sections of the site disclosing parts specifications, inventories, and production schedules. All other sections would be off limits. You'd control access to employee-only and supplier-accessible sections by means of usernames and passwords. As you can see from Figure 14.9: How an Extranet Works, which illustrates some of the connections made possible by an extranet, access can be made available to customers and business partners, as well.
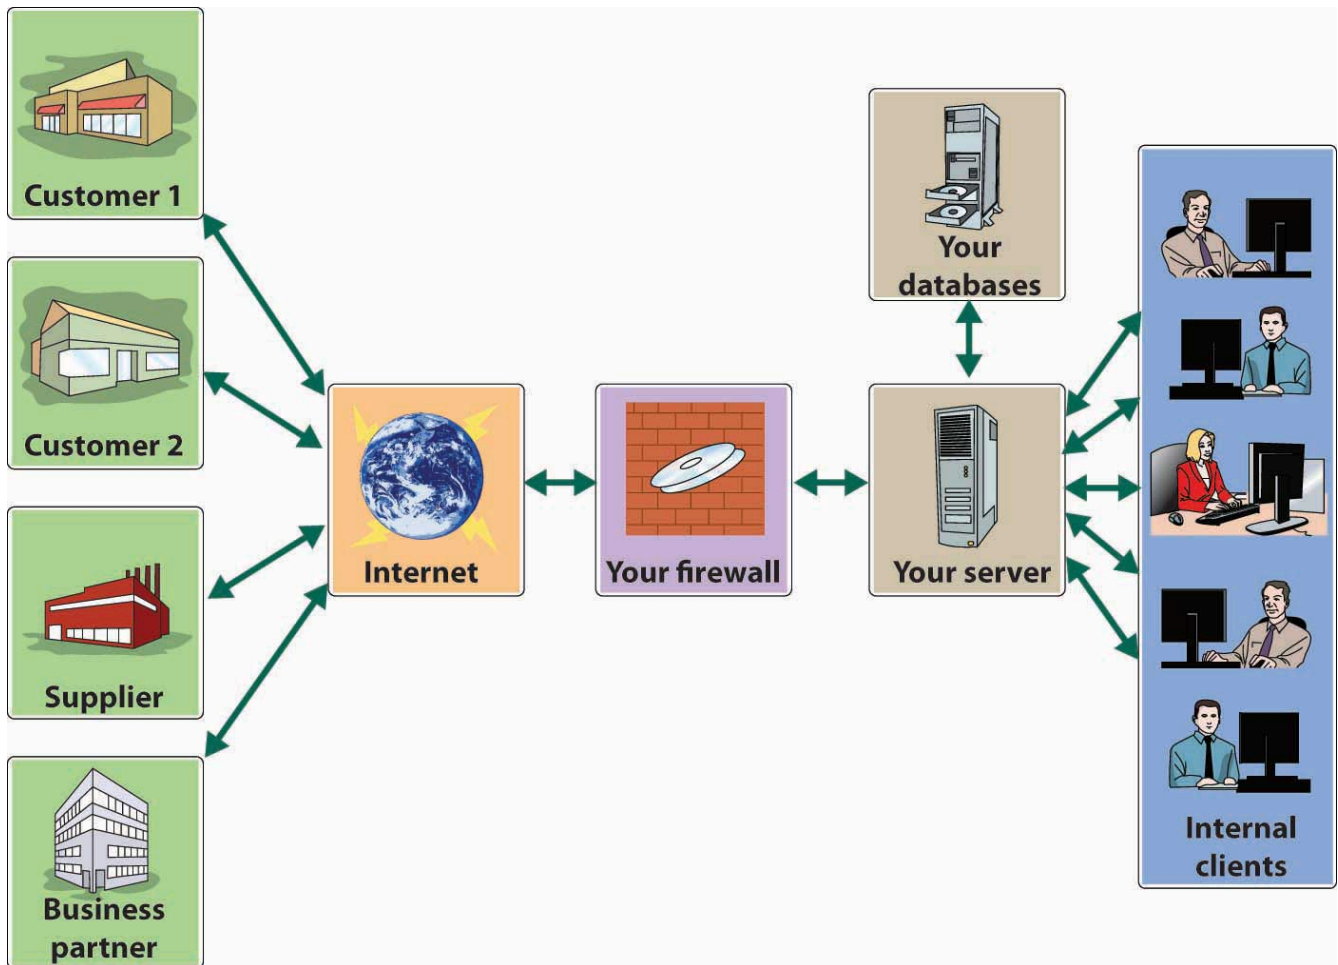

Figure 14.9: How an Extranet Works

E-Commerce

The level of <mark>e-commerce</mark>—conducting business over the Internet—varies by company. Some companies, such as Amazon.com, rely on the Internet for their existence. Others, especially smaller firms, have yet to incorporate the Internet into their business models, but these companies belong to a dwindling group: about half of small companies and 90 percent of large companies have Web sites, and a third of the companies that maintain Web sites sell products through them (Marketing Charts, 2011; Cambell, 2011). Larger companies now find that they must do business over the Internet, including selling and buying goods.

Why Business Uses the Internet

Businesses use the Internet for four purposes: *presenting information, selling products, distributing digital products*, and *acquiring goods and services*.

Presenting Information

By posting a Web site, a company can tell people about itself, its products, and its activities. Customers can also check the status of orders or account balances. Information should always be current, complete, and accurate. Customers should be able to find and navigate the site, which should be able to accommodate them during high-use periods.

Selling Products

Selling over the Internet—whether to individuals or to other businesses—enables a business to enlarge its customer base by reaching buyers outside its geographical area. A company selling over the Internet must attract customers to its site, make the buying process simple, assure customers that the site is secure, and provide helpful information.

Distributing Digital Products

Some companies use the Internet to sell and deliver such digital products as subscriptions to online news services, software products and upgrades, and music and video products. In these businesses, the timely delivery of products is crucial. Sales of digital products over the Internet are expected to increase substantially in the future, particularly sales of digital music (Sisario, 2011; Phillips. 2004).

Acquiring Goods and Services

E-purchasing (which was introduced in Chapter 11: Operations Management in Manufacturing and Service Industries) saves time, speeds up delivery, reduces administrative costs, and fosters better communications between a firm and its suppliers. Most importantly, it cuts the costs of purchased products because it's now feasible for buyers to request competitive bids and do comparative shopping. Many companies now use a technology called **electronic data interchange** to process transactions and transmit purchasing documents directly from one IS to another. Figure 14.10: Electronic Data Interchange System and Value-Added Networks shows an electronic data interchange system at a company that subscribes to a *value-added network*—a private system supplied by a third-party firm—over which it conducts a variety of transactions.
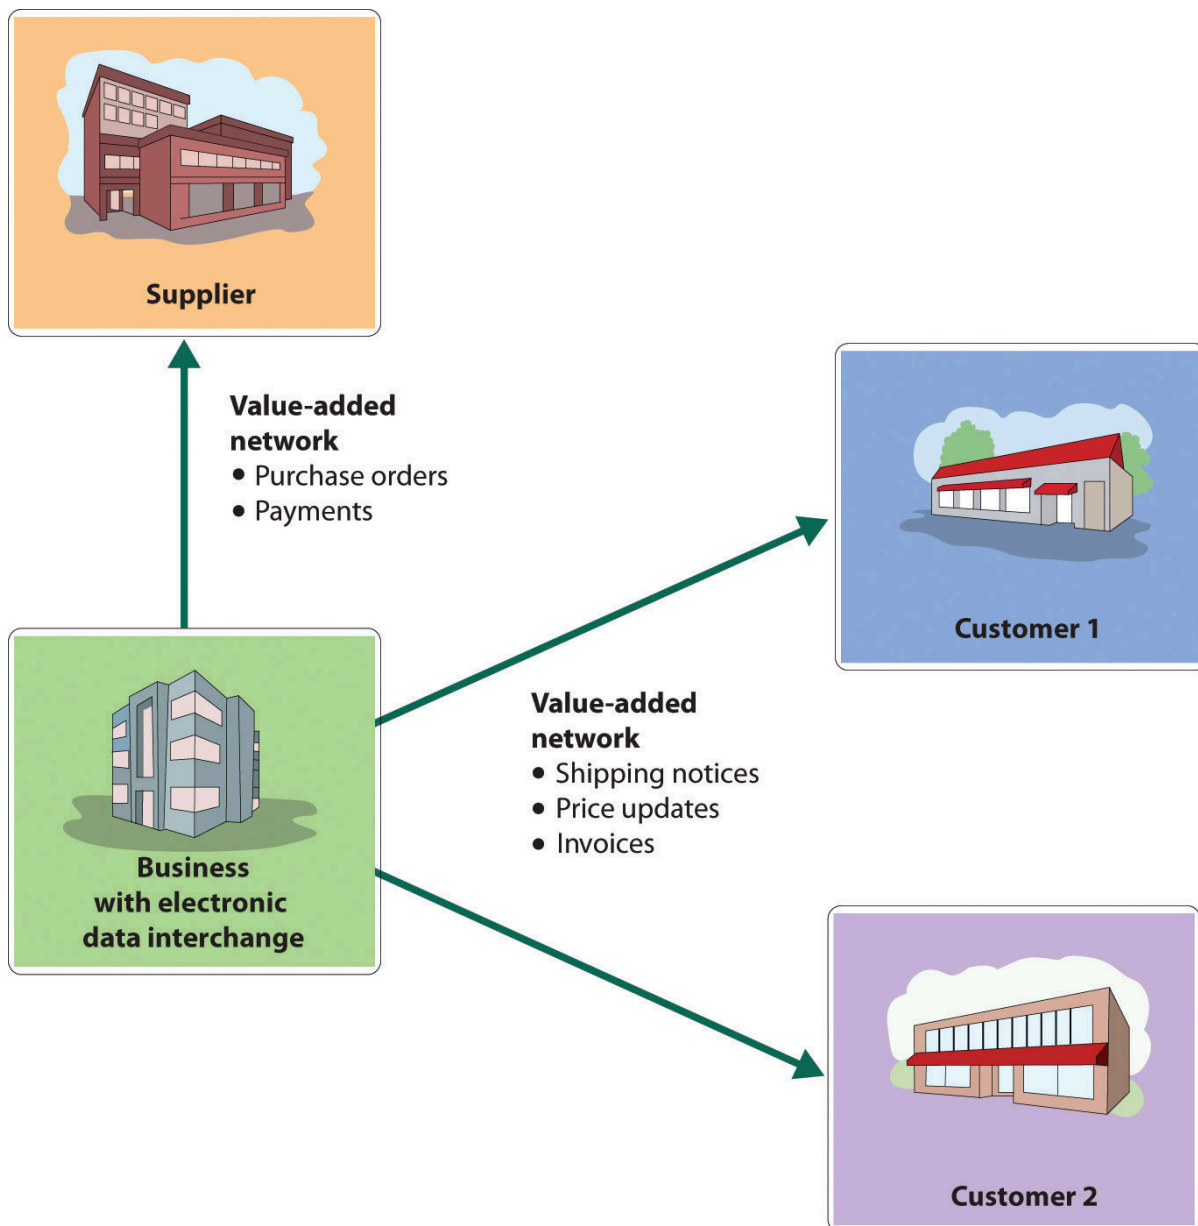

Figure 14.10: Electronic Data Interchange System and Value-Added Networks

The Virtual Company

Imagine a company that retails products for schoolteachers over the Internet—for example, books, software, and teaching supplies purchased from various manufacturers and distributors. It would need facilities to store inventories and personnel to handle inventories and fill customer orders. But what if this company decided to get out of the traditional retail business? What if it decided instead to team up with three trading partners—a book publisher, a software developer, and a manufacturer of office supplies? Our original company could re-create itself as a Web site for marketing the books, software, and supplies provided by its partners, without taking physical possession of them. It would become a **virtual company**. Its partners would warehouse their own products and furnish product descriptions, prices, and delivery times. Meanwhile, the virtual company, besides promoting all three lines of products, would verify

customer orders and forward them to its partners, who would ship their own products directly to customers. All four partners would be better off, because they'd be competing in a business in which none of them could compete by itself. This business approach has allowed Spun.com, a CD, DVD, and game Internet retailer, to avoid carrying the $8 million inventory that it would have needed to support its sales. Rather than hold its own inventory, Spun.com merely passes the orders on to Alliance Entertainment (a home entertainment products wholesale distributor), which ships them directly to customers (Research at Penn, 2011).

Key Takeaways

- **Data communication networks** transmit digital data from one computer to another computer using a variety of wired and wireless communication channels.
- One such network, the **Internet**, is an immense global network of smaller interconnected networks linking millions of computers.
- By connecting paying subscribers into the Internet infrastructure, a company called an **Internet service provider** provides services, such as e-mail, online conferencing, and instant messaging.
- A large portion of the Internet, the **World Wide Web** ("the Web"), is a subsystem of computers that can be accessed by means of a special protocol known as *hypertext transfer protocol* (HTTP).
- Computers on the Web are connected with **hypertext links** that permit users to navigate among Internet resources.
- A Web **browser** is software that locates and displays Web pages.
- Though the Web couldn't exist without the Internet, it's the Web that provides such multimedia material as pictures, sounds, and streaming videos.
- Businesses use the Internet for four purposes: presenting information, selling products, acquiring goods and services, and distributing digital products.
- While the Internet is a public network that anyone can use, a company's **intranet** is a private network that's available only to its employees; access is controlled by a software program called a *firewall*.
- An **extranet** is an intranet that's partially available to certain outside parties, such as suppliers.

Exercises

1. If asked by your instructor, how would you explain the difference between the Internet and the World Wide Web?

2. Identify ten specific ways in which your college uses the Internet.

14.6 Security Issues in Electronic Communication

E-commerce has presented businesses with opportunities undreamt of only a couple of decades ago. But it also has introduced some unprecedented challenges. For one thing, companies must now earmark more than 5 percent of their annual IT budgets for protecting themselves against disrupted operations and theft due to computer crime and sabotage (Alexander, 2011). The costs resulting from cyber crimes—criminal activity done using computers or the Internet—are substantial and increasing at an alarming rate. A 2010 study of forty-five large U.S. companies revealed that the median cost of cybercrime for the companies in the study was $3.8 million a year (Ponemon, 2010). And some cybercrimes involve viruses that can spread rapidly from computer to computer creating enormous damage. It's estimated, for example, that damage to 50,000 personal computers and corporate networks from the so-called Blaster worm in August 2003 totaled $2 billion, including $1.2 billion paid by Microsoft to correct the problem (Shukovsky, 2011). The battle against technology crime is near the top of the FBI's list of priorities, behind only the war against terrorism and espionage (Alexander, 2011). In addition to protecting their own operations from computer crime, companies engaged in e-commerce must clear another hurdle: they must convince consumers that it's safe to buy things over the Internet—that credit-card numbers, passwords, and other personal information are protected from theft or misuse. In this section, we'll explore some of these challenges and describe a number of the efforts being made to meet them.

Data Security

In some ways, life was simpler for businesspeople before computers. Records were produced by hand and stored on paper. As long as you were careful to limit access to your records (and remembered to keep especially valuable documents in a safe), you faced little risk of someone altering or destroying your records. In some ways, storing and transmitting data electronically is a little riskier. Let's look at two data-security risks associated with electronic communication: *malicious programs* and *spoofing*.

Malicious Programs

Some people get a kick out of wreaking havoc with computer systems by spreading a variety of destructive programs. Once they're discovered, they can be combated with antivirus programs that are installed on most computers and that can be updated daily. In the meantime, unfortunately, they can do a lot of damage, bringing down computers or entire networks by corrupting operating systems or databases.

Viruses, Worms, and Trojan Horses

The cyber vandal's repertory includes "viruses," "worms," and "Trojan horses." Viruses and worms are particularly dangerous because they can copy themselves over and over again, eventually using up all available memory and closing down the system. Trojan horses are viruses that enter your computer by posing as some type of application. Some sneak in by pretending to be virus-scanning programs designed to rid your computer of viruses. Once inside, they do just the opposite.

Spoofing

It's also possible for unauthorized parties to gain access to restricted company Web sites—usually for the purpose of doing something illegal. Using a technique called "spoofing," culprits disguise their identities by modifying the address of the computer from which the scheme has been launched. Typically, the point is to make it look as if an incoming message has originated from an authorized source. Then, once the site's been accessed, the perpetrator can commit fraud, spy, or destroy data. You could, for example, spoof a manufacturing firm with a false sales order that seems to have come from a legitimate customer. If the spoof goes undetected, the manufacturer will incur the costs of producing and delivering products that were never ordered (and will certainly never be paid for).

Every day, technically savvy thieves (and dishonest employees) steal large sums of money from companies by means of spoofing or some other computer scheme. It's difficult to estimate the dollar amount because many companies don't even know how much they've lost.

Revenue Theft

In addition to the problems of data security faced by every company that stores and transmits information electronically, companies that sell goods or provide services online are also vulnerable to activities that threaten their revenue sources. Two of the most important forms of computer crime are *denial of service* and *piracy.*

Denial of Service

A denial-of-service attack does exactly what the term suggests: it prevents a Web server from servicing authorized users. Consider the following scenario. Dozens of computers are whirring away at an online bookmaker in the offshore gambling haven of Costa Rica. Suddenly a mass of blank incoming messages floods the company's computers, slowing operations to a trickle. No legitimate customers can get through to place their bets. A few hours later, the owner gets an e-mail that reads, "If you want your computers to stay up and running through the football season, wire $40,000 to each of 10 numbered bank accounts in Eastern Europe."

You're probably thinking that our choice of online gambling as an example of this scheme is a little odd, but we chose it because it's real: many companies in the online-gambling industry suffer hundreds of such attacks each year (Baker & Grow, 2004). Because most gambling operations opt to pay the ransom and get back to business as usual, denial of service to businesses in the industry has become a very lucrative enterprise.

Online gambling operations are good targets because they're illegal in the United States, where they can't get any help from law-enforcement authorities. But extortionists have been known to hit other targets, including Microsoft and the Recording Industry Association of America. The problem could become much more serious if they start going after e-commerce companies and others that depend on incoming orders to stay afloat.

Piracy

Technology makes it easier to create and sell intellectual property, but it also makes it easier to steal it. Because digital products can be downloaded and copied almost instantly over the Internet, it's a simple task to make perfect replicas of your favorite copyright-protected songs, movies, TV shows, and computer software, whether for personal use or further

distribution. When you steal such materials, you're cheating the countless musicians, technicians, actors, programmers, and others involved in creating and selling them. Theft cuts into sales and shrinks corporate profits, often by staggering amounts. Entertainment-industry analysts estimate that $30 billion worth of songs were illegally downloaded in the five year period ending in 2009 (Recording Industry Association of America, 2011). The software industry estimates that the global market for pirated software reached $59 billion in 2010 (Epstein, 2011).

So, what's being done to protect the victimized companies? Actually, quite a lot, even though it's a daunting task, both in the United States and abroad (AudioMicro, 2010). In 1998, Congress passed the Digital Millennium Copyright Act, which outlaws the copying of copyright-protected music (unless you're copying legally acquired music for your own use). The penalties are fairly stiff: up to three years in prison and $250,000 in fines (Recording Industry Association of America, 2011; World Law Direct, 2011). To show that it means business, the music industry is also hauling offenders into court, but legal action is costly and prosecuting teenage music lovers doesn't accomplish much. Some observers believe that the best solution is for the industry to accelerate its own efforts to offer its products online (Green, 2011). Initial attempts seem to be working: people who are willing to obey copyright laws have downloaded more than ten billion songs from the iTunes site alone (Apple, 2011).

Firewalls

Builders install firewalls (or fireproof walls) in structures to keep a fire that starts in one part of a building from entering another part. Companies do something similar to protect their computer systems from outside intruders: they install virtual firewalls—software and hardware systems that prevent unauthorized users from accessing their computer networks.

You can think of the firewall as a gatekeeper that stands at the entry point of the company's network and monitors incoming and outgoing traffic. The firewall system inspects and screens all incoming messages to prevent unwanted intruders from entering the system and causing damage. It also regulates outgoing traffic to prevent employees from inappropriately sending out confidential data that shouldn't leave the organization.

Risks to Customers

Many people still regard the Internet as an unsafe place to do business. They worry about the security of credit-card information and passwords and the confidentiality of personal data. Are any of these concerns valid? Are you really running risks when you shop electronically? If so, what's being done to make the Internet a safer place to conduct transactions? Let's look a little more closely at the sort of things that tend to bother some Internet users (or, as the case may be, nonusers), as well as some of the steps that companies are taking to convince people that e-commerce is safe.

Credit-Card Theft

One of the more serious barriers to the growth of e-commerce is the perception of many people that credit-card numbers can be stolen when they're given out over the Internet. Though virtually every company takes considerable precautions, they're not entirely wrong. Cyber criminals, unfortunately, seem to be tirelessly creative. One popular scheme involves setting up a fraudulent Internet business operation to collect credit-card information. The bogus company will take orders to deliver goods—say, Mother's Day flowers—but when the day arrives, it will have disappeared

from cyberspace. No flowers will get delivered, but even worse, the perpetrator can sell or use all the collected credit-card information.

Password Theft

Many people also fear that Internet passwords–which can be valuable information to cyber criminals–are vulnerable to theft. Again, they're not altogether wrong. There are schemes dedicated entirely to stealing passwords. In one, the cyber thief sets up a Web site that you can access only if you register, provide an e-mail address, and select a password. The cyber criminal is betting that the site will attract a certain percentage of people who use the same password for just about everything–ATM accounts, e-mail, employer networks. Having finagled a password, the thief can try accessing other accounts belonging to the victim. So, one day you have a nice cushion in your checking account, and the next you're dead broke.

Invasion of Privacy

If you apply for a life-insurance policy online, you may be asked to supply information about your health. If you apply for a mortgage online, you may be asked questions about your personal finances. Some people shy away from Internet transactions because they're afraid that such personal information can be stolen or shared with unauthorized parties. Once again, they're right: it does happen.

How Do "Cookies" Work?

In addition to data that you supply willingly, information about you can be gathered online without your knowledge or consent (Reputation.com, 2011). Your online activities, for example, can be captured by something called a *cookie*. The process is illustrated in Figure 14.11: How Cookies Work. When you access a certain Web site, it sends back a unique piece of information to your browser, which proceeds to save it on your hard drive. When you go back to the same site, your browser returns the information, telling the site who you are and confirming that you've been there before. The problem is not that the cookie can identify you in the same way as a name or an address. It is, however, linked to other information about you–such as the goods you've bought or the services you've ordered online. Before long, someone will have compiled a profile of your buying habits. The result? You'll soon be bombarded with advertisements targeted to your interests. For example, let's suppose you check out the Web site for an online diet program. You furnish some information but decide that the program is not for you. The next time you log on, you may be greeted by a pop-up pushing the latest miracle diet.
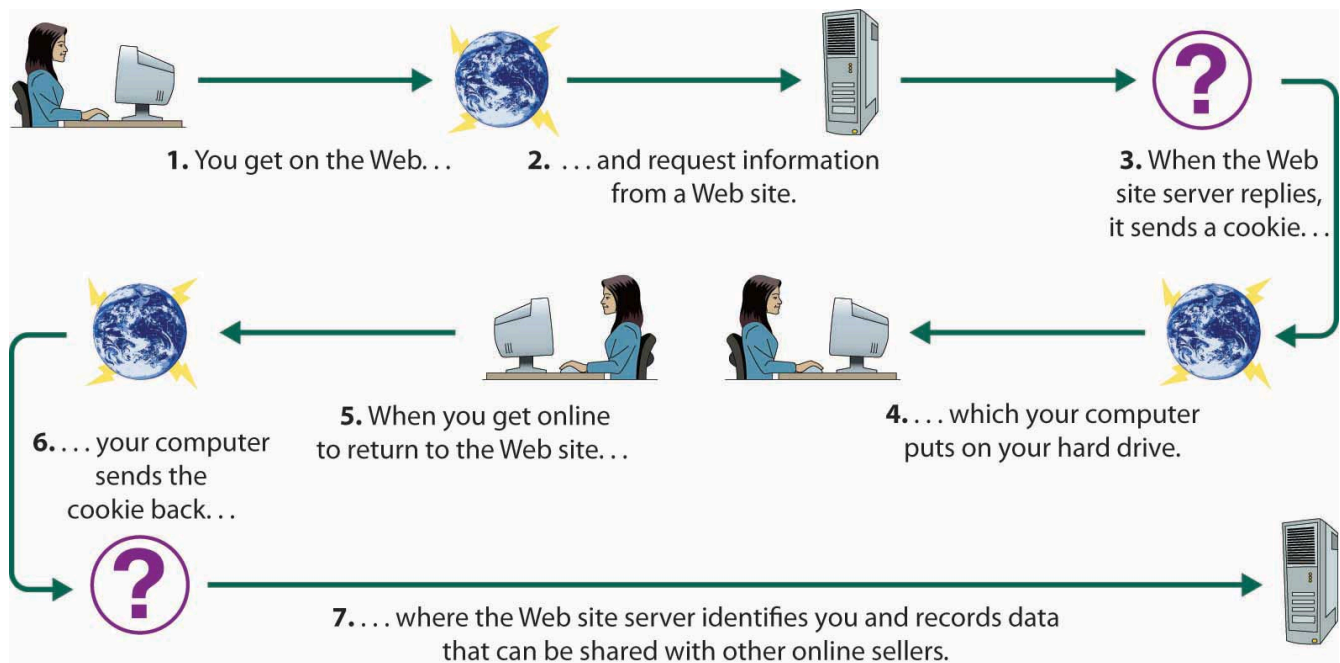

Figure 14.11: How Cookies Work

1. You get on the Web...

2. ...and request information from a Web site.

3. When the Web site server replies, it sends a cookie...

4. ...which your computer puts on your hard drive.

5. When you get online to return to the Web site...

6. ...your computer sends the cookie back...

7. ...where the Web site server identifies you and records data that can be shared with other online sellers.

Cookies aren't the only form of online espionage. Your own computer, for example, monitors your Internet activities and keeps track of the URLs that you access.

Shoring Up Security and Building Trust

So, what can companies do to ease concerns about the safety of Internet transactions? First, businesses must implement internal controls for ensuring adequate security and privacy. Then, they must reassure customers that they're competent to safeguard credit-card numbers, passwords, and other personal information. Among the most common controls and assurance techniques, let's look at *encryption* and *seals of assurance*.

Encryption

The most effective method of ensuring that sensitive computer-stored information can't be accessed or altered by unauthorized parties is **encryption**—the process of encoding data so that only individuals (or computers) armed with a secret code (or key) can decode it. Here's a simplified example: You want to send a note to a friend on the other side of the classroom, but you don't want anyone else to know what it says. You and your friend could devise a code in which you substitute each letter in the message with the letter that's two places before it in the alphabet. So you write A as C and B as D and so on. Your friend can decode the message, but it'll look like nonsense to anyone else. This is an oversimplification of the process. In the real world, it's much more complicated: data are scrambled using a complex code, the key for unlocking it is an algorithm, and you need certain computer hardware to perform the encryption/decryption process.

Certificate Authorities

The most commonly used encryption system for transmitting data over the Internet is called *secure sockets layer* (SSL). You can tell whether a Web site uses SSL if its URL begins with *https* instead of *http*. SSL also provides another important security measure: when you connect to a site that uses SSL (for example, your bank's site), your browser will ask the site to authenticate itself—prove that it is who it says it is. You can be confident that the response is correct if it's verified by a **certificate authority**—a third-party (such as VeriSign) that verifies the identify of the responding computer and sends you a digital certificate of authenticity stating that it trusts the site.

Key Takeaways

- Though a source of vast opportunities, **e-commerce**—conducting business over the Internet—also presents some unprecedented challenges, particularly in the area of security.

  1. *Malicious programs*, such as viruses and worms, can wreak havoc with computer systems.
  2. Unauthorized parties may gain access to restricted company Web sites in order to steal funds or goods.
  3. **Firewalls**—software and hardware systems that prevent unauthorized users from accessing computer networks—help to reduce the risks of doing business online.

- Companies that do business online are also vulnerable to illegal activities.

  1. A *denial-of-service attack*, for example, prevents a Web server from servicing authorized users; the culprit demands a ransom to stop the attack.
  2. Companies that use the Internet to create and sell intellectual property (such as songs, movies, and software) face the problem of *piracy*.
  3. The theft of digital products, which can be downloaded and copied almost instantly over the Internet, not only cheats the individuals and organizations that create them, but also reduces sales and shrinks corporate profits.

- Finally, online businesses must convince consumers that it's safe to buy things over the Internet—that credit-card numbers, passwords, and other personal information are protected from theft.

- One effective method for protecting computer-stored information is **encryption**—the process of encoding data so that only individuals (or computers) armed with a secret code (or key) can decode it.

  1. A commonly used encryption scheme is a *secure sockets layer* (SSL), which directs the user's browser to ask a site to authenticate itself.
  2. Often, the user receives a digital certificate of authenticity, verifying that a third-party security provider called a **certificate authority** has identified a computer.

14.7 Careers in Information Management

The number and variety of opportunities in the IS field have grown substantially as organizations have expanded their use of IT. In most large organizations, the senior management team includes a **chief information officer (CIO)** who oversees information and telecommunications systems. A large organization might also have a **chief technology officer** who reports to the CIO and oversees IT planning and implementation.

Most entry-level IS jobs require a business degree with a major in information systems. Many people supplement their IS majors with minors in computer science or some other business area, such as accounting, finance, marketing, or operations management.

If you're starting out with an IS degree, you may choose to follow either a management path or a technical path. At Kraft Foods, for example, IS professionals can focus on one of two areas: applications development (a management focus) and information technology (a technology focus). "Applications development," according to the company itself, "calls for an ability to analyze [Kraft's] clients' needs and translate them into systems applications. Information technology calls for the ability to convert business systems specifications into technical specifications and to provide guidance and technical counsel to other Kraft professionals" (Kraft Foods, 2006). Despite the differences in focus, Kraft encourages IS specialists to develop expertise in both areas. After all, it's the ability to apply technical knowledge to business situations that makes IS professionals particularly valuable to organizations. (By the way, if you want a career in casinos, you can major in casino management at a number of business schools.)

Key Takeaways

- The number and variety of opportunities in the information systems (IS) field have grown substantially as companies have expanded their use of information technology.
- The senior management team in large organizations includes a chief information officer who oversees information and a chief technology officer who oversees IT planning and implementation.
- Most entry-level IS jobs require a business degree with a major in information systems.
- Many supplement their IS majors with computer science or some other business area, such as accounting, finance, marketing, or operations management.
- Those entering organizations with IS degrees may choose to follow either a management or a technology path.

Exercise

Why is studying IT important to you as a student? How will competency in this area help you get and keep a job in the future?

14.8 Cases and Problems

Campus Commando or Common Criminal?

Do you want to be popular (or at least more prominent) on campus? You could set up a Web site that lets fellow students share music files over the campus network. All you have to do is seed the site with some of your own downloaded music and let the swapping begin. That's exactly what Daniel Peng did when he was a sophomore at Princeton. It was a good idea, except for one small hitch: it was illegal, and he got caught. Unimpressed with Peng's technological ingenuity, the Recording Industry Association of America (RIAA) sued him, and he was forced to settle for $15,000. Instead of delivering music, Peng's Web site now asks visitors to send money to help defray the $15,000 and another $8,000 in legal costs.

To learn more about the case, read these articles from the Daily Princetonian: "Peng, RIAA Settle Infringement Case" https://www.dailyprincetonian.com/article/2003/05/peng-riaa-settle-infringement-case.

After researching the topic, answer the following questions:

1. The practice of sharing commercial music files is illegal. Do you think that it's also unethical? Why, or why not?
2. What steps to curb the practice are being taken by the music industry? By college administrators? By the government? Do you approve of these steps? Have they been effective?
3. What, ultimately, do you see as the solution to the problem?

Source: Josh Brodie, "Peng, RIAA Settle Infringement Case," *The Daily Princetonian*, https://www.dailyprincetonian.com/article/2003/05/peng-riaa-settle-infringement-case accessed November 14, 2011).

CampusCupid.com

It's no secret that college can be fun. For one thing, you get to hang around with a bunch of people your own age. Occasionally, you want to spend time with just one special someone, but finding that special person on a busy campus can take some of the fun out of matriculating. Fortunately, you're in the same love boat with a lot of other people, so one possible solution—one that meshes nicely with your desire to go into business—is to start an online dating service that caters to your school. Inasmuch as online dating is nothing new, you can do some preliminary research. For example, go to the Internetnews Web site (http://www.internetnews.com/ec-news/article.php/2228891/Online+Personals+Big+Profits+Intense+Competition.htm) and read the article "Online Personals: Big Profits, Intense Competition."

Next, you and several of your classmates should work as a team to create a business model for an online dating service at your school. After working out the details, submit a group report that covers the following issues:

1. *Services*. How will you earn revenues? What services will you offer? How will you price these services? What forms of payment will you accept? Will you sell ads? If so, what kinds?
2. *Appearance*. What will your site look like? Will it have graphics? Sound? Video? What will your domain name be? What information will you collect from customers? What information will you provide to visitors?
3. *Operations*. What criteria will you use to match customers? How will your customers interface with the Web site? How will they connect with each other? Will you design your own software or buy or lease it from vendors? Before you answer, go the PG Dating websites (http://www.datingpro.com/dating) and check out their dating software.
4. *Attracting Customers*. How will you attract customers to the site? How will you monitor and analyze site activity?
5. *Security*. How will you guarantee confidentiality? How will you ensure that your site is secure? How will you limit access to students at your school?
6. *Opportunities and Challenges*. What opportunities do e-businesses offer? What challenges do they create? How would your business model change if you decided to run it as a traditional business rather than as an e-business?

The Global View (AACSB)

"Hong Kong—Traditional Chinese"

Hewlett-Packard (HP) provides technology solutions to individuals, businesses, and institutions around the world. It generates annual revenues of $80 billion from the sale of IT products, including computers, printers, copiers, digital photography, and software. Anyone in the United States who wants to buy an HP product, get technical support, download software, learn about the company, or apply for a job can simply go to the HP Web site. But what if you live in Hong Kong? How would you get answers to your questions? You'd do the same thing as people in this country do—go to HP's Web site.

Try to imagine, however, the complex process of developing and maintaining a Web site that serves the needs of customers in more than seventy countries. To get a better idea, go to the HP Web site (http://www.hp.com). Start by looking at HP's line of notebooks and checking its prices. Then, review the company information (click on "About HP" in the bottom right) that's posted on the site, and, finally, look for a job—it's good practice (click on "Jobs" in the bottom right).

Now pretend that you live in Hong Kong and repeat the process. Start by going to the same HP Web site (http://www.hp.com). Click on the United States (next to U.S. flag in the bottom left) and then Asia and Oceania. If you can read Chinese, click on "Hong Kong–Traditional Chinese." Otherwise, click on "Hong Kong–English." Then, answer the following questions:

1. How easy was it to navigate the site and to switch back and forth between the U.S. and Hong Kong sections of the site?
2. Identify at least five differences between the two sections.
3. Does HP's Web site meet the needs of customers in both the United States and Hong Kong? Why, or why not? How could it be improved?

THE LEGAL AND REGULATORY ENVIRONMENT OF BUSINESS

1. Define *law* and explain how it differs from a *legal system*.
2. Explain the concept of the *rule of law* and discuss the role of *flexibility* and *fairness* in a legal system governed by the rule of law.
3. Discuss the primary functions of law in the United States.
4. Distinguish between *criminal law* and *civil law*, and understand the roles of *plaintiffs* and *defendants* in both criminal and civil cases.
5. Define a *tort*, explain *tort law*, and discuss an *intentional tort*.
6. Define a *negligence tort* and discuss the elements of a negligence claim.
7. Explain a *contract* and discuss the requirements of an enforceable contract.
8. Explain the concepts of *respondeat superior* and *scope of employment* and discuss their roles in an employment contract.
9. Define *product liability* and discuss the three grounds, or "theories of recovery," for a claim of product liability.
10. Discuss the three forms of manufacturer's negligence that may be claimed in a product-liability case.
11. Define *strict liability* and explain the *doctrine of strict liability in tort*.
12. Define a *warranty* and distinguish between *express warranties* and *implied warranties*.
13. Identify the primary goal of tort law and distinguish between *compensatory damages* and *punitive damages*.
14. Explain the difference between *private law* and *public law*.
15. Define *statutory law* and give examples of statutory laws at various governmental levels.
16. Explain *externalities* and show why taxation is used as a means of addressing them.
17. Discuss the idea of *market failure* and the principle of *efficiency* as a foundation of law.
18. Define *administrative law* and discuss the role of federal *administrative agencies* in making and enforcing administrative laws.
19. Define *case law* and explain the concepts of *precedent* and *judicial review*.

15.1 Law and the Legal System

In the eighteenth century, when the legal and regulatory environment of everything was a lot simpler than it is today, the great Irish satirist Jonathan Swift likened laws to cobwebs because they seem to stretch in every direction to catch innocent flies while failing utterly to stop wasps and other creatures responsible for much greater crimes against human comfort. Like George McGovern, many people no doubt find this comparison at least as true today as it was in Swift's time. After all, in order to be law-abiding innkeepers (or just plain citizens), we must negotiate a vast web of constitutional law, federal law, regulatory law, and state and local law; criminal law, civil law, and common law; substantive law and procedural law; public law and private law; and business law, which includes contract law, product-liability law, patent law, consumer-protection law, environmental law, employment and labor law, insurance law, cyberlaw, agency law, and a host of other forms of law. In fact, being a truly law-abiding citizen is virtually out of the question. According to one estimate, the average American driver deserves ten speeding tickets a day. Other underpenalized violations range from stealing cable TV and scalping tickets to exhibitionism and illegal fishing and hunting (Sexton, 2008).

A System of Rules and Principles

Perhaps, however, we should examine the issue of the laws in our lives from a more positive perspective. As a veteran lawmaker, for example, George McGovern certainly appreciates the value of <mark>law</mark>, which is basically a body of enforceable rules and principles of conduct. Clearly, his criticisms are directed not at the existence of laws, but rather at certain facets of administrative and statutory law—in particular, the way specific statutes can be applied to the activities of a small business owner in the state of Connecticut. What he calls for, in effect, is a little more flexibility in the enforcement of certain rules and principles.

In a very basic—and very important—sense, McGovern's point about legal obstacles to daily business-related activities is well taken. In the United States, as in all complex societies, we've entrusted the responsibility for adopting and enforcing legal rules and principles to government. In so doing, we've approved the formation of a <mark>legal system</mark>—the institutions and processes that actually enforce our rules and principles (Roszkowski, 2002). That system, like any other, works because its key elements are stable and interact in reliable ways. When it's applied systematically, in other words, law isn't always as flexible as it should be in doing what it's supposed to do—namely, preserving peace and stability so that members of society can pursue their various social and economic activities.

Flexibility

At the same time, however, we should point out that, on a certain level, *flexibility* is a hallmark of law in the United States. Why do we say "on a certain level"? For one thing, it apparently isn't sufficiently flexible on the level on which George McGovern was obliged to deal with it. In all probability, a small hotel like the Stratford Inn doesn't need to meet the same fire regulations as a hotel with 1,500 guest rooms, 100,000 square feet of meeting space, three four-star restaurants, and a five-story parking garage. Laws, however, can't be written to take care of each and every contingency that arises during the course of life in the real world—the one in which millions of people and organizations are constantly pursuing different social and economic activities. When it comes to law, therefore, we settle for general "rules and principles," and the key to flexibility in a legal system is flexibility on the level at which rules and principles are *applied*. In the United

States, the legal system evolves to respond to changes in social norms and commercial activities, and through the court system, it's prepared to address each issue or dispute on its own terms (Cheesman, 2006).

Fairness

There are, of course, abuses and mistakes by judges and juries, and procedural mishaps occasionally tip the scales of justice in the wrong direction. Sometimes—as in George McGovern's case—innocent parties are forced to bear the cost of defending themselves in court. On the whole, however, the U.S. legal system is remarkably fair.

The Rule of Law: Predictability and Fairness. How do we know what's legally "fair" and what isn't? (Price & Krug, 2000) Granted, depending on who's enforcing the rules of the game, just about anything can be "fair" and just about anything can be "foul." Legal tradition in the United States, however, rests on the principle of the ==**rule of law**==—the principle by which government legitimately exercises its authority only in accordance with publicly declared laws that are adopted and enforced according to established procedure. All members of society know what the laws are and the conditions under which they should be applied. Under the rule of law, then, the legal system establishes the rules of the game, adopting and enforcing them in a reasonably *predictable* manner.

Unfortunately, the principle of predictability doesn't in itself guarantee that a legal system is committed to *fairness*. If, for example, the law allows only certain people to vote—say, property owners—it extends a guarantee of fairness in the electoral process only to property owners. People who don't own property would have a good reason to complain of social injustice in electoral matters, but only property owners could claim a right to fairness in the courts. Even under the rule of law, therefore, a legal system can achieve a reasonable degree of fairness in any given social or economic activity only if it also guarantees *equal treatment* of all members of society. Admittedly, the U.S. legal system hasn't always been successful in guaranteeing equal treatment under the law—the original thirteen states, for example, granted the vote only to white male property owners, and women couldn't vote in every state until 1920. Since 1868, however, U.S. courts have used the Equal Protection Clause of the Fourteenth Amendment to the Constitution to check a range of potentially discriminatory and unfair actions by governments at every level.

Functions of Law

Laws such as the Equal Protection Clause are designed to serve a general function—namely, the promotion of social justice. This is just one of several primary functions served by law in the United States (Cheesman, 2006):

- *Keeping the peace* (e.g., designating some activities as ==**crimes**==—violations of statutes for which the law imposes punishment)
- *Shaping moral standards* (e.g., laws discouraging such activities as drug or alcohol abuse)
- *Promoting social justice* (e.g., laws prohibiting discrimination in such areas as voting and employment)
- *Maintaining the status quo* (e.g., laws preventing the forcible overthrow of the government)
- *Facilitating orderly change* (e.g., laws and practices requiring public scrutiny of proposed statutes)
- *Facilitating planning* (e.g., laws that enable businesses to evaluate the risks that they may be taking in a commercial venture)
- *Providing a basis for compromise* (e.g., laws and practices making it possible to resolve disputes without taking them to trial)
- *Maximizing individual freedom* (e.g., laws ensuring such rights as freedom of speech and religion)

- *Law* is a body of enforceable rules and principles of conduct. When we entrust the responsibility for adopting and enforcing legal rules and principles to government, we approve the formation of a *legal system*—the institutions and processes that actually enforce our laws. That system works because its key elements are stable and interact in reliable ways.
- U.S. legal tradition rests on the principle of the **rule of law**—the principle by which government legitimately exercises its authority only in accordance with publicly declared laws that are adopted and enforced according to established procedure. Under the rule of law, the legal system adopts and enforces laws in a reasonably predictable manner. The principle of *predictability*, however, doesn't in itself guarantee that a legal system is fair. A legal system can achieve a reasonable degree of *fairness* only if it also guarantees *equal treatment* of all members of society.
- When it's applied systematically, law isn't always as flexible as it should be in preserving the peace and stability that members of society need to pursue their various social and economic activities. But because laws can't be written to cover each and every contingency, we settle for general "rules and principles." The key to *flexibility* in a legal system is flexibility in *applying* legal rules and principles.

- U.S. law serves several primary functions:

  1. Keeping the peace
  2. Shaping moral standards
  3. Promoting social justice
  4. Maintaining the status quo
  5. Facilitating orderly change
  6. Facilitating planning
  7. Providing a basis for compromise
  8. Maximizing individual freedom

Individuals in the United States are guaranteed equal treatment under the law. Do you believe that all individuals do in fact receive equal treatment? Support your answer with examples.

15.2 Criminal versus Civil Law

In the case of George McGovern and his Stratford Inn, we saw what sort of legal entanglements could discourage even a veteran lawmaker from pursuing a modest dream of business ownership. What about you? How easily discouraged would you be? Put yourself in the following scenario, which could happen to anybody:

> When you were in high school, you worked part time and over the summers for your father, a house painter. Now that you're in college, you've decided to take advantage of that experience to earn some money during your summer vacation. You set yourself up as a house-painting business and hire your college roommate to help you out. One fine summer day, the two of you are putting a coat of Misty Meadow acrylic latex on the exterior of a two-story Colonial. You're working on the ground floor around the door of the house while your roommate is working from scaffolding over the garage. Looking up, you notice that, despite several warnings, your roommate has placed his can of paint at his feet rather than fixed it to the ladder bracing the platform. You're about to say something yet one more time, but it's too late: He accidentally kicks the bucket (so to speak), which bounces off the homeowner's red sports car, denting the hood and splattering it with Misty Meadow. As luck would have it, the whole episode is witnessed by the homeowner's neighbor, who approaches the scene of the disaster just as your roommate has climbed down from the scaffold. "Man, you must be dumber than a bag of hammers," says the neighbor to your roommate, who's in no mood for unsolicited opinions, and before you know what's happening, he breaks the neighbor's nose with a single well-placed punch.
> The homeowner sues you and your roommate for negligence, and the neighbor sues you and your roommate for assault and battery(Moran, 2008).

Clearly, being an employer—even of just one person—isn't nearly as simple as you thought it would be. What should you have known about the basics of *employment law* in the state where you intended to paint houses? What should you have known about *tort law*? What about *tax law*? If you have to pay damages as a result of the homeowner's negligence claim, can you at least deduct them as business expenses?

Welcome to the ==**_legal environment of business_**==—the place where business interacts with the legal system. Besides the fact that these interactions are usually quite complicated, what valuable lessons should you learn from your experience once your case has been *adjudicated* (resolved in court)? You probably won't be surprised to learn that your roommate is liable for negligence in kicking over the paint bucket, but you may be dismayed to learn that you are, too. When it comes to the claim of assault and battery, your roommate is also liable for that, but you may be protected from liability. As for the damages that you'll probably have to pay in order to settle the homeowner's negligence suit, you'll be pleased to learn that you can indeed write them off as "ordinary" business expenses (unless they're paid by your insurance company).

As we work our way through this chapter, we'll look a little more closely at the types of law involved in your case, but we'll start by observing that, in at least one respect, your roommate's predicament can be more instructive than yours. That's because assault and battery violates statutes established by two different types of law—*criminal* and *civil*.

Criminal Law

It's a *crime* to make unauthorized and harmful physical contact with another person (*battery*). In fact, it's a crime even to *threaten* such contact (*assault*). ==**Criminal law**== prohibits and punishes wrongful conduct, such as assault and battery, murder, robbery, extortion, and fraud. In criminal cases, the ==**plaintiff**==—the party filing the complaint—is usually a government body acting as a representative of society. The ==**defendant**==—the party charged in the complaint—may be

an individual (such as your roommate) or an organization (such as a business). Criminal punishment includes fines, imprisonment, or both.

Civil Law

Assault and battery may also be a matter of ==civil law==–law governing disputes between private parties (again, individuals or organizations). In civil cases, the *plaintiff* sues the *defendant* to obtain compensation for some wrong that the defendant has allegedly done the plaintiff. Thus your roommate may be sued for monetary damages by the homeowner's neighbor, with whom he made unauthorized and harmful physical contact.

Tort Law

Complaints of assault and battery fall under a specific type of civil law called *tort law*. A ==tort== is a civil wrong–an injury done to someone's person or property. The punishment in tort cases is the monetary compensation that the court orders the defendant to pay the plaintiff.

Intentional Torts

In categorizing the offense for which your roommate may be sued, we can get even more specific: assault and battery is usually an ==intentional tort==–an intentional act that poses harm to the plaintiff. Note that *intent* here refers to the *act* (directing a blow at another person), not to the *harm caused* (the broken nose suffered as a result of the blow).

Intentional torts may also pose harm to a party's property or economic interests (Kubasek, et. al., 2009):

- *Intentional torts against property* may take three forms: (1) entering another person's land or placing an object on another person's land without the owner's permission; (2) interfering with another person's use or enjoyment of personal property; or (3) permanently removing property from the rightful owner's possession.
- *Intentional torts against economic interests* are the most common torts when it comes to disputes in business. The three most important forms are (1) making a false statement of material fact about a business product; (2) enticing someone to breach a valid contract; and (3) going into business for the sole purpose of taking business from another concern (i.e., not for the purpose of making a profit).

On a more personal note, you may want to avoid *defamation*–communicating to a third party information that's harmful to someone's reputation. If you put the information in some permanent form (e.g., write it or present it on TV or on the Internet), it's called *libel*; if you deliver it orally, it's called *slander*. You can also be held liable for *intentional infliction of emotional distress* if you direct outrageous conduct at someone who's likely to suffer extreme emotional pain as a result (Kubasek, et. al., 2009).

Table 15.1: Categories of Intentional Torts provides a more complete list of intentional torts, along with the types of compensatory damages normally awarded in each type of case. As we'll see in the following sections of this chapter, intentional torts comprise just one category of torts. The others are *negligence torts* and *strict liability torts*.

Table 15.1: Categories of Intentional Torts

Category	Type	Definition	Compensatory Damages Usually Awarded
	Assault	Threatening immediate harm or offensive contact	For medical bills, lost wages, and pain and suffering
	Battery	Making unauthorized harmful or offensive contact with another person	
	Defamation	Communicating to a third party information that's harmful to someone's reputation	For measurable financial losses
Against persons	Invasion of privacy	Violating someone's right to live his or her life without unwarranted or undesired publicity	For resulting economic loss or pain and suffering
	False imprisonment	Restraining or confining a person against his or her will and without justification	For treatment of physical injuries and lost time at work
	Intentional infliction of emotional distress	Engaging in outrageous conduct that's likely to cause extreme emotional distress to the party toward whom the conduct is directed	For treatment of physical illness resulting from emotional stress
	Trespass to realty	Entering another person's land or placing an object on another person's land without the owner's permission	For harm caused to property and losses suffered by rightful owner
Against property	Trespass to personalty	Interfering with another person's use or enjoyment of personal property	For harm to property
	Conversion	Permanently removing property from the rightful owner's possession	For full value of converted item
	Disparagement	Making a false statement of material fact about a business product	For actual economic loss
	Intentional interference with a contract	Enticing someone to breach a valid contract	For loss of expected benefits from contract
Against economic interests	Unfair competition	Going into business for the sole purpose of taking business from another concern	For lost profits
	Misappropriation	Using an unsolicited idea for a product or marketing method without compensating the originator of the idea	For economic losses

Source: Adapted from Nancy A. Kubasek, Bartley A. Brennan, and M. Neil Browne, *The Legal Environment of Business: A Critical Thinking Approach*, 5th ed. (Upper Saddle River, NJ: Pearson Education, 2009), 348.

As we indicated, your roommate may have committed assault and battery in violation of both criminal and civil statutes. Consequently, he may be in double trouble: not only may he be sued for a civil offense by the homeowner's neighbor, but he may also be prosecuted for a criminal offense by the proper authority in the state where the incident took place. It's also conceivable that he may be sued but not prosecuted, or vice versa. Everything is up to the discretion of the complaining parties—the homeowner's neighbor in the civil case and the prosecutor's office in the criminal case.

Why might one party decide to pursue a case while the other decides not to? A key factor might be the difference in the burden of proof placed on each potential plaintiff. Liability in civil cases may be established by a *preponderance of the evidence*—the weight of evidence necessary for a judge or jury to decide in favor of the plaintiff (or the defendant). Guilt in criminal cases, however, must be established by *proof beyond a reasonable doubt*—doubt based on reason and common sense after careful, deliberate consideration of all the pertinent evidence. Criminal guilt thus carries a tougher standard of proof than civil liability, and it's conceivable that even though the plaintiff in the civil case believes that he can win by a preponderance of the evidence, the prosecutor may feel that she can't prove criminal guilt beyond a reasonable doubt.

Finally, note that your roommate would be more likely to face criminal prosecution if he had committed assault and battery with *criminal intent*—with the intent, say, to kill or rob the homeowner's neighbor or to intimidate him from testifying about the accident with the paint bucket. In that case, in most jurisdictions, his action would be not only a crime but a **felony**—a serious or "inherently evil" crime punishable by imprisonment. Otherwise, if he's charged

with criminal wrongdoing at all, it will probably be for a ==misdemeanor==—a crime that's not "inherently evil" but that is nevertheless prohibited by society (Cheesman, 2006).

Table 15.2: Civil versus Criminal Law summarizes some of the key differences in the application of criminal and civil law.

Table 15.2: Civil versus Criminal Law

	Civil Law	Criminal Law
Parties	Individual or corporate plaintiff vs. individual or corporate defendant	Local, state, or federal prosecutor vs. individual or corporate defendant
Purpose	Compensation or deterrence	Punishment/deterrence/rehabilitation
Burden of proof	Preponderance of the evidence	Beyond a reasonable doubt
Trial by jury/ jury vote	Yes (in most cases)/specific number of votes for judgment in favor of plaintiff	Yes/unanimous vote for conviction of defendant
Sanctions/ penalties	Monetary damages/equitable remedies (e.g., injunction, specific performance)	Probation/fine/imprisonment/capital punishment

Source: Adapted from Henry R. Cheesman, *Contemporary Business and Online Commerce Law: Legal, Internet, Ethical, and Global Environments*, 5th ed. (Upper Saddle River, NJ: Pearson Education, 2006), 127.

Key Takeaways

- The *legal environment of business* is the area in which business interacts with the legal system.
- **Criminal law** prohibits and punishes wrongful conduct. The **plaintiff**—the party filing the complaint—is usually a government body acting as a representative of society. The **defendant**—the party charged in the complaint—may be an individual or an organization. Criminal punishment includes fines, imprisonment, or both. **Civil law** refers to law governing disputes between private parties. In civil cases, the plaintiff sues the defendant to obtain compensation for some wrong that the defendant has allegedly done the plaintiff.
- Tort law covers **torts**, or civil wrongs—injuries done to someone's person or property. The punishment in tort cases is the monetary compensation that the court orders the defendant to pay the plaintiff.
- An **intentional tort** is an intentional act that poses harm to the plaintiff. Intentional torts may be committed against a person, a person's property, or a person's economic interests. In addition to intentional torts, the law recognizes *negligence torts* and *strict liability torts*.
- Liability in civil cases may be established by a *preponderance of the evidence*—the weight of evidence necessary for a judge or jury to decide in favor of the plaintiff (or the defendant). Guilt in criminal cases must be established by *proof beyond a reasonable doubt*—doubt based on reason and common sense after careful, deliberate consideration of all the pertinent evidence.
- A crime may be a **felony**—a serious or "inherently evil" crime punishable by imprisonment—or a **misdemeanor**—a crime that's not "inherently evil" but that is nevertheless prohibited by society.

You own a moving company. One of your workers let go of a chair he was carrying up a staircase. Unfortunately, a tenant of the building was walking up the stairs at the time and was seriously hurt in the incident. Can your company be sued? Would the case fall under criminal or civil law?

Now, let's say that your worker was going up the stairs with a chair when the tenant yelled at him for blocking her way. In anger, your worker threw the chair at her and cases serious harm. What actions can be taken against your employee?

15.3 Negligence Torts

We can now get back to your role in this case, though doing so means first taking a closer look at further aspects of your roommate's role. You and your roommate are being sued by the homeowner for a different type of tort—a **negligence tort**, which results not from intentional wrongdoing, but from *carelessness*. When he placed that can of paint at his feet, where he might easily dislodge it as he moved around the platform, your roommate allowed his conduct to fall below a certain standard of care—namely, the degree of care necessary to protect others from an unreasonable likelihood of harm.

Elements of a Negligence Claim

To prove that the act in question was negligent, the homeowner must demonstrate the four elements of a negligence claim (Cheesman, 2006):

1. *That the defendant (your roommate and, ultimately, you) owed a* duty of care *to the plaintiff (the homeowner)*. <mark>Duty of care</mark> refers simply to the basic obligation that one person owes another—the duty not to cause harm or an unreasonable risk of harm.
2. *That the defendant* breached *his duty of care*. Once it has been determined that the defendant owed a duty of care, the court will ask whether he did indeed fail to perform that duty. Did he, in other words, fail to act as a reasonable person would act? (In your roommate's case, by the way, it's a question of acting as a reasonable *professional* would act.)
3. *That the defendant's* breach of duty of care *caused injury to the plaintiff or the plaintiff's property*. If the bucket of paint had fallen on his own car, your roommate's carelessness wouldn't have been *actionable*—wouldn't have provided cause for legal action—because the plaintiff (the homeowner) would have suffered no injury to person or property. What if the paint bucket had hit and shattered the homeowner's big toe, thus putting an end to his career as a professional soccer player? In that case, you and your roommate would be looking at much higher damages. As it stands, the homeowner can seek compensation only to cover the damage to his car.
4. *That the defendant's action did in fact cause the injury in question*. There must be a direct cause-and-effect relationship between the defendant's action and the plaintiff's injury. In law, this relationship is called a *cause in fact* or *actual cause*. For example, what if the homeowner had taken one look at his dented, paint-spattered car and collapsed from a heart attack? Would your roommate be liable for this injury to the plaintiff's person? Possibly, though probably not. Most actions of any kind set in motion a series of consequent actions, and the court must decide the point beyond which a defendant is no longer liable for these actions. The last point at which the defendant is liable for negligence is called a *proximate cause* or *legal cause*. The standard for determining proximate cause is generally *foreseeability*. Your roommate couldn't reasonably foresee the possibility that the owner of the car beneath his platform might have a heart attack as a result of some mishap with his paint bucket. Thus he probably wouldn't be held liable for this particular injury to the plaintiff's person.

Negligence and Employer Liability

At this point, you yourself may still want to ask an important question: "*Why me*?" Why should *you* be held liable for

negligence? Undoubtedly you owed your client (the homeowner) a duty of care, but you personally did nothing to breach that duty. And if you didn't breach any duty of care, how could you have been the cause, either actual or proximate, of any injury suffered by your client? Where does he get off suing *you* for negligence?

The Law of Contracts

To answer these questions, we must enter an extremely important area of civil law—the law of contracts. A **contract** is an exchange of promises or an exchange of a promise for an act, and because it involves an *exchange*, it obviously involves at least two parties. As you can see in Figure 15.1: Parties to a Contract, an *offeror* makes an offer to enter into a contract with an *offeree*. The offeror offers to do something in particular (or to refrain from doing something in particular), and if the offeree accepts this offer, a contract is created. As you can also see, both offer and acceptance must meet certain conditions.

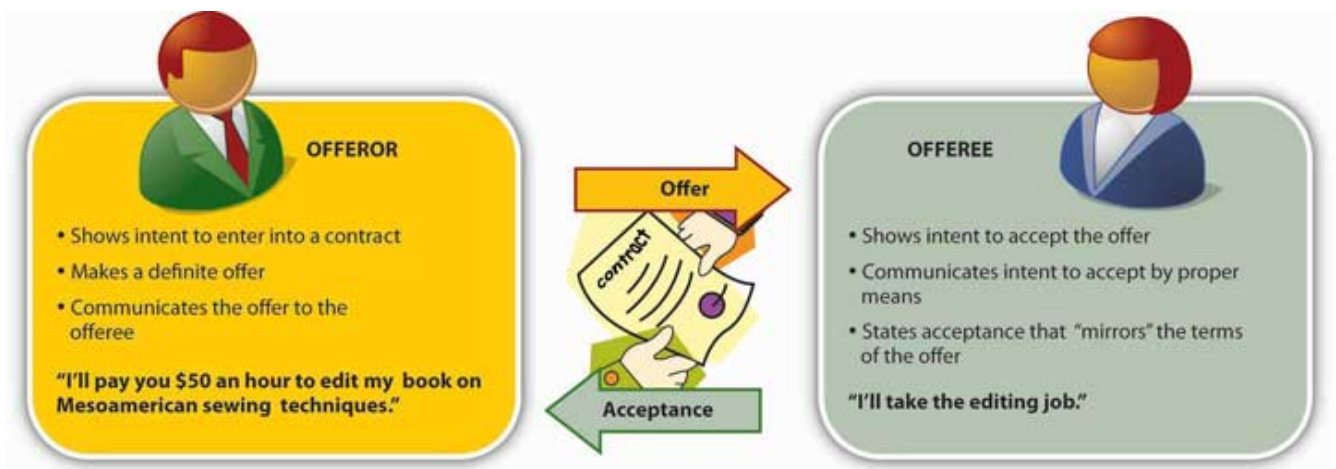

Figure 15.1: Parties to a Contract

A contract is **legally enforceable**: if one party fails to do what he or she has promised to do, the other can ask the courts to enforce the agreement or award damages for injury sustained because the contract has been **breached**—because a promise made under the contract hasn't been kept or an act hasn't been performed. A contract, however, can be enforced only if it meets four requirements (Cheesman, 2006):

- *Agreement*. The parties must have reached a mutual agreement. The offeror must have made an *offer*, and the offeree must have replied with an *acceptance*.
- *Consideration*. Each promise must be made in return for the performance of a legally sufficient act or promise. If one party isn't required to exchange something of legal value (e.g., money, property, a service), an agreement lacks sufficient consideration.
- *Contractual capacity*. Both parties must possess the full legal capacity to assume contractual duties. Limitations to full capacity include mental illness and such diminished states as intoxication (Roszkowski, 2002).
- *Lawful object*. The purpose of the contract must be legal. A contract to commit an unlawful act or to violate public policy is *void* (without legal force).

Employment Contracts

Here's where you come in: an employment relationship like the one that you had with your roommate is a contract. Under this contract, both parties have certain duties (you're obligated to compensate your roommate, for instance, and he's obligated to perform his assigned tasks in good faith). The law assumes that, when performing his employment duties, your employee is under your *control*—that you control the time, place, and method of the work (Moran, 2008). This is a key concept in your case.

Respondeat Superior

U.S. law governing employer-employee contracts derives, in part, from English common law of the seventeenth century, which established the doctrine known as *respondeat superior*—"Let the master answer [for the servant's actions]." This principle held that when a servant was performing a task for a master, the master was liable for any damage that the servant might do (a practical consideration, given that servants were rarely in any position to make financial restitution for even minor damages) (Kubasek et. al., 2009; Law Library, 2008). Much the same principle exists in contemporary U.S. employment law, which extends it to include the "servant's" violations of tort law. Your client—the homeowner—has thus filed a *respondeat superior* claim of negligence against you as your roommate's employer.

Scope of Employment

In judging your responsibility for the damages done to the homeowner's car by your employee, the court will apply a standard known as **scope of employment**: an employee's actions fall within the scope of his employment under two conditions: (1) if they are performed in order to fulfill contractual duties owed to his employer and (2) if the employer is (or could be) in some control, directly or indirectly, over the employee's actions (Law Library, 2008).

If you don't find much support in these principles for the idea that your roommate was negligent but you weren't, that's because there isn't much. Your roommate was in fact your employee; he was clearly performing contractual duties when he caused the accident, and as his employer, you were, directly or indirectly, in control of his activities. You may argue that the contract with your roommate isn't binding because it was never put in writing, but that's irrelevant because employment contracts don't have to be in writing (Moran, 2008). You could remind the court that you repeatedly told your employee to put his paint bucket in a safer place, but this argument won't carry much weight: in general, courts consider an employee's forbidden acts to be within the scope of his employment (Law Library, 2008).

On the other hand, the same principle protects you from liability in the assault-and-battery case against your roommate. The court will probably find that his aggressive response to the neighbor's comment wasn't related to the business at hand or committed within the scope of his employment; in responding to the neighbor's insult to his intelligence, he was acting independently of his employment contract with you.

Finally, now that we've taken a fairly detailed look at some of the ways in which the law works to make business relationships as *predictable* as possible, let's sum up this section by reminding ourselves that the U.S. legal system is also *flexible*. In its efforts to resolve your case, let's say that the court assesses the issues as follows:

> The damage to the homeowner's car amounts to $3,000. He can't recover anything from your roommate, who owns virtually nothing but his personal library of books on medieval theology. Nor can he recover anything from your business-liability insurer because you never thought your business would need any insurance (and couldn't afford it anyway). So that leaves you: can the homeowner recover damages from you personally? Legally, yes: although you didn't go through the simple formalities of creating a sole proprietorship (see Chapter 4.2 for a

refresher on sole proprietorships), you are nevertheless liable for the contracts and torts of your business. On the other hand, you're not worth much more than your roommate, at least when it comes to financial assets. You have a six-year-old stereo system, a seven-year-old panel truck, and about $200 in a savings account—what's left after you purchased the two ladders and the platform that you used as scaffolding. The court could order you to pay the $3,000 out of future earnings but it doesn't have to. After all, the homeowner knew that you had no business-liability insurance but hired you anyway because he was trying to save money on the cost of painting his house. Moreover, he doesn't have to pay the $3,000 out of his own pocket because his personal-property insurance will cover the damage to his car.

You should probably consider yourself lucky. Had your case gone to court, it would have been subject to the *rules of civil procedure* outlined in Figure 15.2: Stages in a Civil Lawsuit. As you might suspect, civil suits are time-consuming. Research shows that litigation takes an average of 24.2 months from the time a complaint is filed until a judgment is rendered (25.6 months if you're involved in a tort lawsuit).
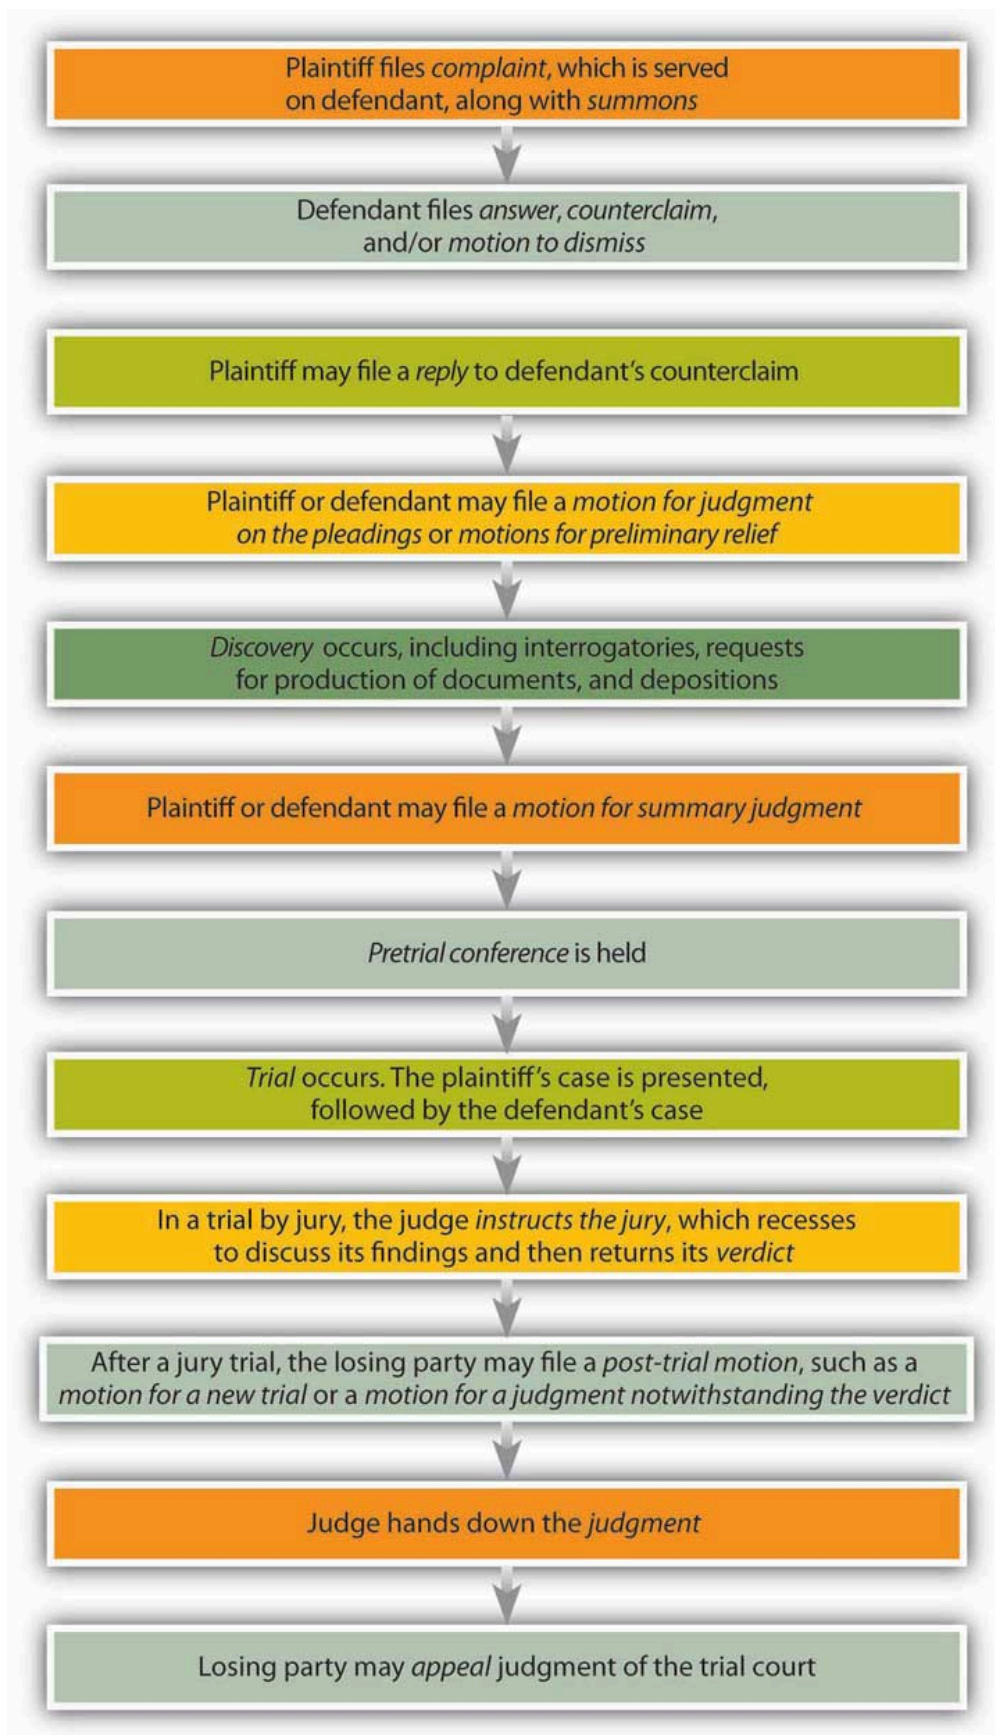

Figure 15.2: Stages in a Civil Lawsuit

And of course it's expensive. Let's say that you have a $40,000-a-year job and decide to file a civil suit. Your lawyer will charge you between $200 and $350 an hour. At that rate, he or she will consume your monthly net income of about $1,800 in nine hours' worth of work. But what about your jury award? Won't that more than compensate you for your legal fees? It depends, but bear in mind that, according to one study, the median award in civil cases is $33,000 (Judicial Council of California, 2008) (Cohen & Smith, 2004). And you could lose.

Key Takeaways

- A **negligence tort** results from *carelessness*. In order to prove a negligence claim, a plaintiff must demonstrate four elements:

    1. *That the defendant owed a* duty of care *to the plaintiff*. **Duty of care** refers to the basic obligation not to cause harm or an unreasonable risk of harm.
    2. *That the defendant* breached *his duty of care*. Did the defendant fail to act as a reasonable person would act?
    3. *That the defendant's* breach of duty of care *caused injury to the plaintiff or the plaintiff's property*.
    4. *That the defendant's action did in fact cause the injury in question*. The direct cause-and-effect relationship between the defendant's action and the plaintiff's injury is called a *cause in fact* or *actual cause*. The point beyond which a defendant is no longer liable for the actions set in motion by his or her carelessness is called a *proximate cause* or *legal cause*. The standard for determining proximate cause is generally *foreseeability*: could the defendant reasonably foresee the possibility of the injury suffered by the plaintiff?

- A **contract** is an exchange of promises or an exchange of a promise for an act. An *offeror* makes an offer to enter into a contract with an *offeree*—that is, to do something in particular (or to refrain from doing something in particular). If the offeree accepts this offer, a contract is created.

- A contract is *legally enforceable*: if one party fails to do what he or she has promised to do, the other can ask the courts to enforce the agreement or award damages for injury sustained because the contract has been *breached*. An enforceable contract must meet four requirements:

    1. *Agreement*. The parties must have reached a mutual agreement.
    2. *Consideration*. Each promise must be made in return for the performance of a legally sufficient act or promise.
    3. *Contractual capacity*. Both parties must possess the full legal capacity to assume contractual duties.
    4. *Lawful object*. The purpose of the contract must be legal.

- The law assumes that, in an employer–employee contract, the employer *controls* the time, place, and method of the employee's work. The doctrine of *respondeat superior*—"Let the master answer [for the servant's actions]"—applies to employer–employee contracts. In judging an employer's responsibility for the damages caused by an employee's negligence, the court will apply the standard of *scope of employment*: an employee's actions fall within the scope of his employment under two conditions: (1) if they are performed in order to fulfill contractual duties owed to his employer and (2) if the employer is (or could be) in some control, directly or indirectly, over the employee's actions.

15.4 Product Liability

In addition to intentional and negligence torts, U.S. law recognizes a third category of torts: <mark>strict liability torts</mark> involve actions that are inherently dangerous and for which a party may be liable no matter how carefully he or she (or it) performs them. To better appreciate the issues involved in cases of strict liability, let's take up the story of your legal adventures in the world of business where we left off:

> Having escaped the house-painting business relatively unscathed, you head back home to rethink your options for gainful employment over your summer vacation. You've stored your only remaining capital assets—the two ladders and the platform that you'd used for scaffolding—in your father's garage, where one afternoon, your uncle notices them. Examining one of the ladders, he asks you how much weight it's designed to hold, and you tell him what the department manager at Ladders 'N' Things told you—three hundred pounds per rung. He nods as if this is a good number, and, sensing that he might want to buy them, you hasten to add that though you got them at a cut-rate price because of a little rust, they're virtually brand-new. As it turns out, he doesn't want to buy them, but he does offer to pay you $35 an hour to take them to his house and help him put up new roofing. He's easygoing, he's family, and he probably won't sue you for anything, so you jump at the opportunity.
>
> Everything goes smoothly until day two, when you're working on the scaffolding two stories off the ground. As you're in the process of unwrapping a bundle of shingles, one of the ladders buckles, bringing down the platform and depositing you on your uncle's stone patio with a cervical fracture.

Fortunately, there's no damage to your spinal cord, but you're in pain and you need surgery. Now it's your turn to sue somebody. But whom? And for what?

Pursuing a Claim of Product Liability

It comes as no surprise when your lawyer advises an action for <mark>product liability</mark>—a claim of injury suffered because of a defective product (in your case, of course, the ladder). The legal concept of product liability, he explains, developed out of the principles of tort law. He goes on to say that in cases of product liability, there are three grounds for pursuing a claim and seeking damages—what lawyers call three "theories of recovery":

- Negligence
- Strict liability
- Breach of warranty

As the plaintiff, he emphasizes, you'll want to use as many of these three grounds as possible (Kubasek, et. al., 2009).

Grounds of Negligence

In selecting defendants in your case, you'll start with the manufacturer of the ladder. Manufacturer's negligence—carelessness—can take three different forms (Kubasek, et. al., 2009):

- *Negligent failure to warn*. The manufacturer may be liable if the company knew (or should have known) that, without a warning, the ladder would be dangerous in ordinary use or in any reasonably foreseeable use. It's

possible, for example, that you made the ladder's collapse more likely by placing it at a less than optimal angle from the wall of the house. That mistake, however, is a reasonably foreseeable use of the product, and if the manufacturer failed to warn you of this possibility, the company is liable for failure to warn.

- ◦ *Negligent failure to warn.* The manufacturer may be liable if the company knew (or should have known) that, without a warning, the ladder would be dangerous in ordinary use or in any reasonably foreseeable use. It's possible, for example, that you made the ladder's collapse more likely by placing it at a less than optimal angle from the wall of the house. That mistake, however, is a reasonably foreseeable use of the product, and if the manufacturer failed to warn you of this possibility, the company is liable for failure to warn (Baldwin, et. al., 1998).
- ◦ *Negligent design.* As the term suggests, this principle applies to defectively designed products. In law, a product is defective if, despite any warnings, the risk of harm outweighs its usefulness in doing what it's designed to do. If, for example, your ladder left the manufacturer's facility with rivets that were likely to break when weight was placed on it, the ladder may be judged defective in its design.
- *Negligent design.* As the term suggests, this principle applies to defectively designed products. In law, a product is defective if, despite any warnings, the risk of harm outweighs its usefulness in doing what it's designed to do. If, for example, your ladder left the manufacturer's facility with rivets that were likely to break when weight was placed on it, the ladder may be judged defective in its design.

Figure 16.3. The U.S. Consumer Product Safety Commission has overseen the recall of thousands of baby cribs that it determined to have defective designs.

- *Negligence per se.* The manufacturer may be liable if the ladder fails to meet legal standards. According to standards set by the Occupational Safety and Health Administration (OSHA), for example, the rungs on your ladder should be corrugated or covered with skid-resistant material to minimize slipping. If you're injured because they're not, the manufacturer may be liable on grounds of negligence per se (Occupational Safety and Health Administration, 2003).

If you decide to apply the concept of negligence in suing the manufacturer of the ladder, you must prove the four elements of a negligence case that we detailed above—namely, the following:

1. That the defendant (the manufacturer) owed you a duty of care
2. That the defendant breached this duty of care
3. That the defendant's breach of duty of care caused injury to you or your property
4. That the defendant's action did in fact cause the injury in question

Grounds of Strict Liability

For the sake of argument, let's say that your lawyer isn't very confident about pursuing a claim of negligence against the manufacturer of your ladder. The company doesn't appear to have been careless in any of the three forms prescribed by law, and it will in any case be difficult to demonstrate all four elements required in negligence cases. He suggests instead that you proceed on grounds of strict liability, pointing out that the principle of strict liability often makes the plaintiff's legal task less exacting. But (you ask) if the company wasn't *negligent*, how can it be *liable*, either "strictly" or in any other sense? Under the *doctrine of strict liability in tort*, he replies, you don't have to prove negligence on the manufacturer's part. He goes on to explain that under this doctrine, your right to compensation for injury is based on two legal suppositions:

1. Certain products put people at risk of injury no matter how much care is taken to prevent injury.
2. Consumers should have some means of seeking compensation if they're injured while using these products (Cheesman, 2006).

Day in and day out, of course, people use ladders quite successfully. According to the Consumer Product Safety Commission (CPSC), however, every year accidents involving ladders cause three hundred deaths and one hundred thirty thousand injuries requiring emergency medical treatment (American Ladder Institute, 2011; ConsumerAffairs.com, 2007). In a certain number of these instances, the ladder is defective, and in cases of strict liability, it doesn't matter how much care was taken by the manufacturer to prevent defects. This seems a little harsh to you, but your lawyer explains that, in establishing the doctrine of strict liability in tort, the court cited two reasons for making the grounds of liability so strict (Greenman v. Yuba Power Products, 2011):

- The manufacturer can protect itself by taking steps to anticipate and prevent hazardous product features, but the public can't.
- The manufacturer can protect itself by purchasing insurance and passing the cost on to the public in the form of higher product prices. Again, the public enjoys no such protection.

Under these conditions, the manufacturer is willing to take a risk—namely, the risk of making available a product that's potentially dangerous, especially if defective. The manufacturer thus takes the first step in a process whereby this product reaches a consumer who may suffer "overwhelming misfortune" by using it, especially if it has become defective *during the process that takes it from the manufacturer to the user*. "Even if he is not negligent in the manufacture of the product," declared the court, the manufacturer "is *responsible for its reaching the market*" (italics added). There's no way of telling when or how a product will become defective or of predicting how or how many people will be injured by it. Defects and injuries, however, are "constant" dangers when people use such products, and users must therefore have some form of "constant protection" under law. That protection is established by the doctrine of strict liability in tort. Why should the manufacturer be held responsible for such defects and injuries? Because, reasoned the court, "the manufacturer is best situated to afford…protection."

And this, explains your lawyer, is why you're going to sue the manufacturer of your ladder on grounds of strict liability.

Strict Liability in the Distribution Chain

You're excited about the prospect of recovering monetary damages from the manufacturer of your ladder, but you continue to wonder (on completely hypothetical grounds, of course) whether the doctrine of strict liability is as fair as it should be. What about all the other businesses involved in the process of getting the product from the manufacturer to the user—especially the one that did in fact introduce the defect that caused all the trouble? Does the doctrine of strict liability relieve them of all liability in the case? Indeed not, your lawyer assures you. The concept of strict liability not only provides more practical grounds for suing the manufacturer but also supports your right to pursue claims against members of the manufacturer's distribution chain (see [Chapter 9: Marketing: Providing Value to Customers](#)) (Cheesman, 2006). That's one reason, he points out, why product-liability lawsuits against businesses that sell such "unreasonably dangerous" products as ladders (or even deliver them to worksites) went up a hundredfold between 1950 and 2001, to a total of $205 billion (Shawn, 2006).

Now, let's say that your lawyer has given your defective ladder to a forensic laboratory in order to find out exactly what caused it to buckle and you to fall. As it turns out, the clue to the problem is the small patch of rust that brought down the price you paid for the ladder when you bought it. The ladder, concludes the lab, had for some time been in close proximity to liquid nitrogen, which can corrode various metals, including aluminum (Baker & Lee, 1993). Sure enough, further investigation reveals that the entire shipment of ladders had been stored for nearly two years in a Ladders 'N' Things warehouse next to an inventory of liquid-nitrogen–based fertilizer. Your lawyer advises you that, in addition to your strict-liability case against the manufacturer of the ladder, you have a strong negligence case against the retailer from which you purchased it.

Figure 15.4: Negligence versus Strict Liability provides a simplified overview of the difference between negligence and strict liability as grounds for a product-liability claim.
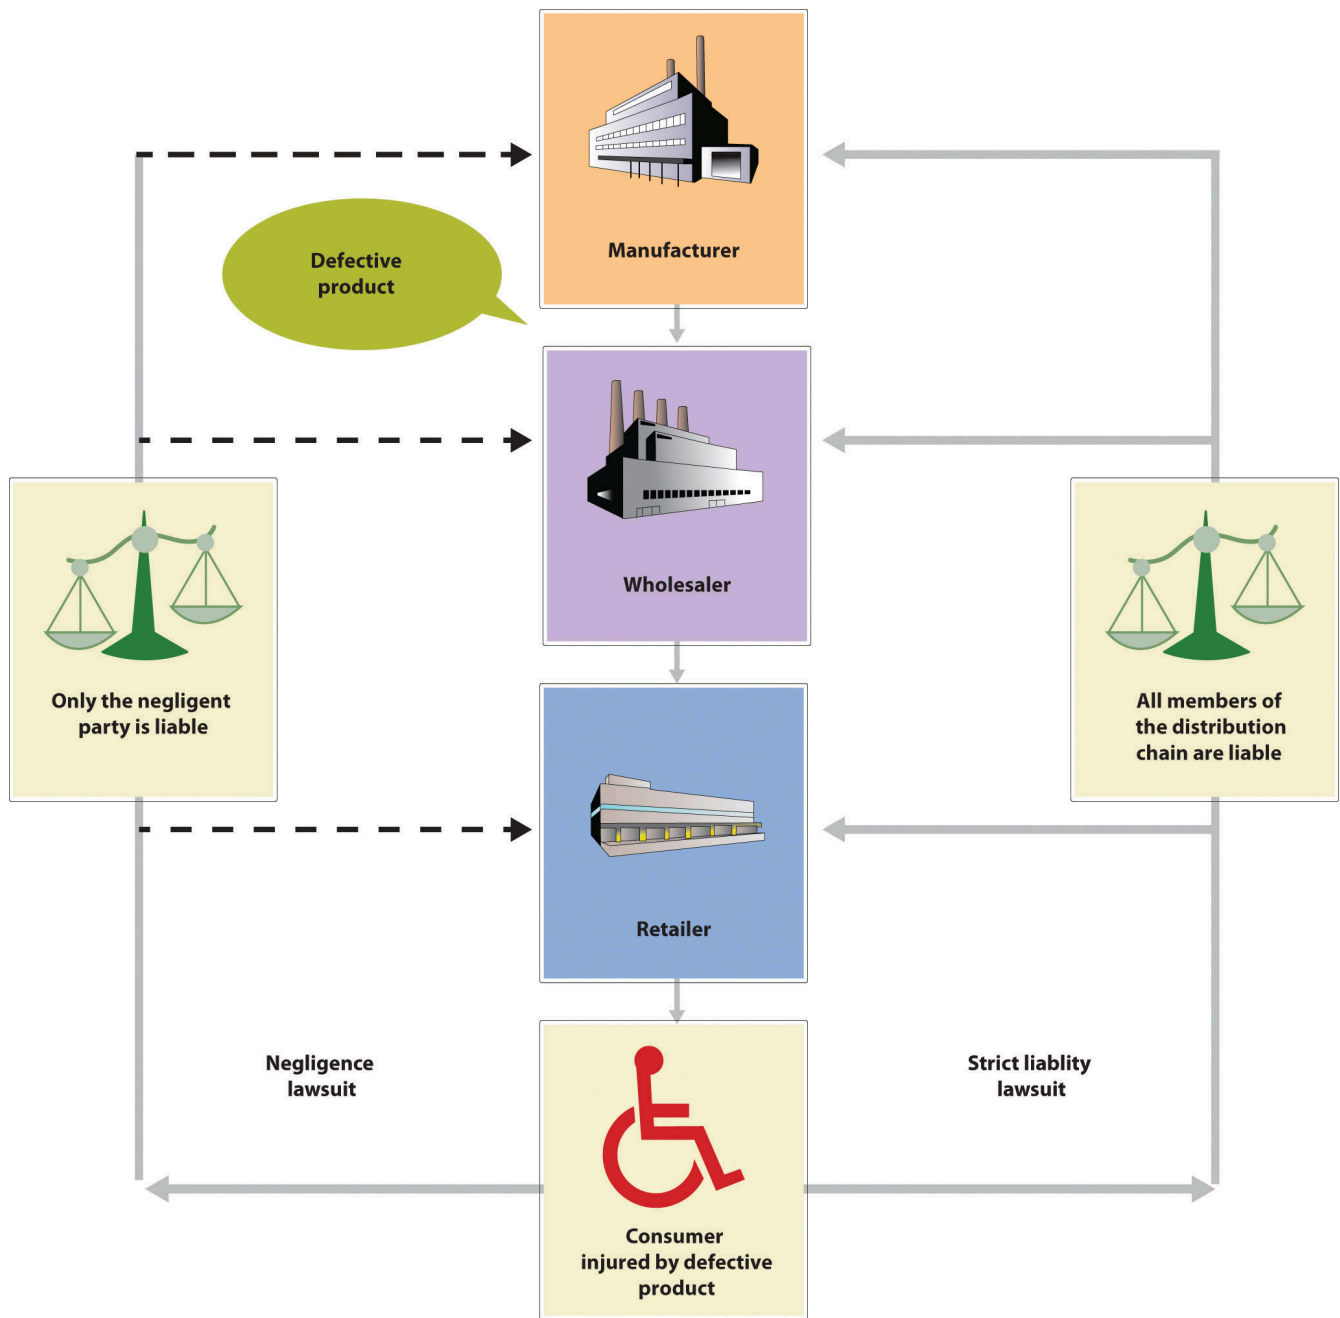

Figure 15.4: Negligence versus Strict Liability

Grounds of Breach of Warranty

Moreover, adds your lawyer, there's one more matter to be considered in determining liability for your injury. Had not the department manager at Ladders 'N' Things assured you that the ladder would support a weight of three hundred pounds per rung? Your uncle had asked you about the weight capacity of the ladder because he knew that the roofing job meant putting heavy bundles of shingles on the scaffold. A ladder that holds three hundred pounds per rung is a Type IA extra-heavy–duty ladder suitable for such jobs as roofing and construction. According to the lab, however, the construction of your ladder is that of a Type II medium-duty-commercial ladder made for lighter-weight tasks

(Guide4Home, 2008). The manager at Ladders 'N' Things, explains your lawyer, may have been guilty of *breach of warranty*—yet further grounds for holding the retailer liable in your product-liability case.

Types of Warranties

A <mark>warranty</mark> is a guarantee that a product meets certain standards of performance. In the United States, warranties are established by the <mark>**Uniform Commercial Code (UCC)**</mark>, a system of statutes designed to make commercial transactions consistent in all fifty states. Under the UCC, a warranty is based on contract law and, as such, constitutes a binding promise. If this promise—the promise that a product meets certain standards of performance—isn't fulfilled, the buyer may bring a claim of product liability against the seller or maker of the promise.

Express Warranties

An <mark>**express warranty**</mark> is created when a seller affirms that a product meets certain standards of quality, description, performance, or condition. The seller can make an express warranty in any of three ways:

- By describing the product
- By making a promise of fact about the product
- By providing a model or sample of the product

Sellers aren't obligated to make express warranties. When they do make them, it's usually made through advertisements, catalogs, and so forth, but they needn't be made in writing; they can be oral or even inferred from the seller's behavior. They're valid even if they're made by mistake.

Implied Warranties

There are two types of <mark>**implied warranties**</mark>—that is, warranties that arise automatically out of transactions:

- In making an *implied warranty of merchantability*, the seller states that the product is reasonably fit for ordinary use. In selling you a ladder, for example, Ladders 'N' Things affirms that it satisfies any promises made on its packaging, meets average standards of quality, and should be acceptable to other users.
- An *implied warranty of fitness for a particular purpose* affirms that the product is fit for some specific use. Let's say, for example, that you had asked the manager at Ladders 'N' Things whether the ladder you had in mind was fit for holding a scaffolding platform for painting a house; if the manager had assured you that it was, he would have created an implied warranty of fitness for a particular purpose.

Table 15.3: What Warranties Promise provides a more complete overview of the different types of warranties, including more-detailed descriptions of the promises that may be entailed by each.

Table 16.3: What Warranties Promise

Type of Warranty	Means by Which the Warranty May Be Created	Promises Entailed by the Warranty
Express warranty	Seller confirms that product conforms to the following: • All statements of fact or promise made about it • Any description of it • Any model or sample of it	Product meets certain standards of quality, description, performance, or condition
Implied warranty of merchantability	Law implies certain promises	Product: • Is fit for ordinary purposes for which it's used • Is adequately contained, packaged, and labeled • Is of an even kind, quality, and quantity within each unit • Conforms to any promise or statement of fact made on container or label • Passes without objection in the trade • Meets a fair, average, or middle range of quality
Implied warranty of fitness for a particular purpose	Law implies certain promises	Product is fit for the purpose for which the buyer acquires it *if* • Seller has reason to know the particular purpose for which it will be used • Seller makes a statement that it will serve that purpose • Buyer relies on seller's statement and purchases it

Source: Adapted from Henry R. Cheesman, *Contemporary Business and Online Commerce Law: Legal, Internet, Ethical, and Global Environments*, 5th ed. (Upper Saddle River, NJ: Pearson Education, 2006), 366.

What kinds of warranties did you receive when you bought your ladder? Naturally, you received implied warranties of merchantability, which arose out of your transaction with Ladders 'N' Things. You also received an implied warranty of fitness for a particular purpose (that the ladder would hold a scaffolding platform) and an express warranty (that it would a bear a weight of three hundred pounds per rung).

Do you have a case for product liability on grounds of breach of warranty? Arguably, says your lawyer, Ladders 'N' Things breached an implied warranty of merchantability because it sold you a ladder with a defect (corrosion damage) that made it unfit for ordinary use. It's also possible that the retailer breached an express warranty—the manager's assurance that the ladder would bear a weight of three hundred pounds per rung. First, the court will want to know whether that express warranty was a contributing factor—not necessarily the sole factor—in your decision to buy the ladder. If not, you probably can't recover for breach of the express warranty.

Second, there's the complex issue of whether that express warranty was tantamount to an assurance that the ladder could be used for such a job as roofing. Apparently your uncle thought it was, but that will be a matter for your lawyer to argue and the court to decide. It will all depend, in other words, on the flexibility and fairness of the legal system.

Product Liability and Agency Law

When your lawyer has wrapped up his explanation of warranties and ways of breaching them, you feel compelled to

ask one last question: Why is Ladders 'N' Things, an entire corporate chain of retail stores, liable for breach of warranty committed by one department manager at one local outlet? Your lawyer replies that it's a matter of <mark>agency</mark>, which he defines for you as a legal relationship between two parties in which one party acts on behalf of, and under the control of, another. In a *principal-agent relationship* like the one diagrammed in Figure 15.5: Agency Relationship the *agent* is acting on behalf of the *principal.*

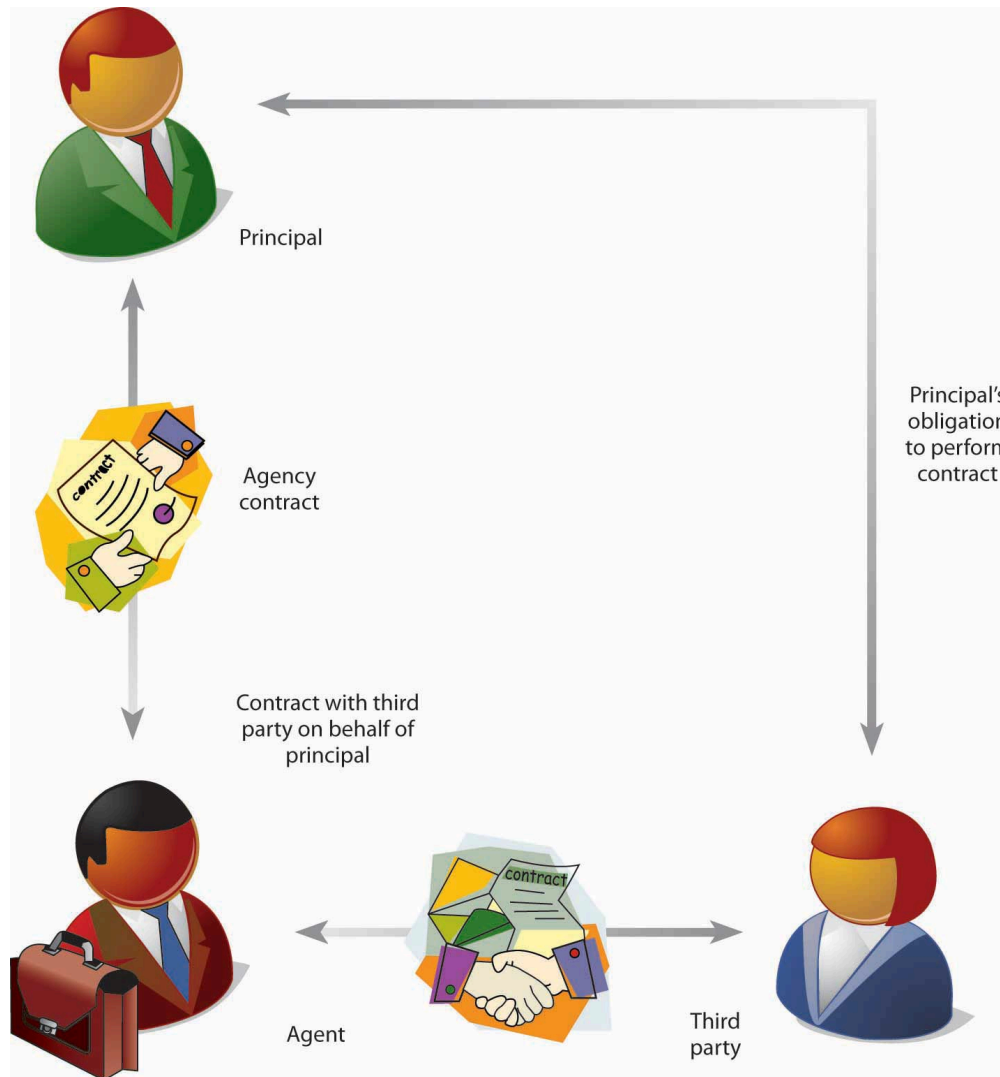

Figure 15.5: Agency Relationship

A lawyer acting on behalf of a client is an agent, as is a real estate broker acting on behalf of a homeowner or a partner acting on behalf of a partnership. Perhaps the most common type of agency relationship is the one that applies to your case—the salesperson who's acting on behalf of a retailer. If this sort of legal arrangement sounds familiar, that's probably because employer-employee relationships are also agency relationships.

Agency law is actually a mixture of contract law and tort law (Cheesman, 2006). In order to appoint an agent, for example, a person must possess the *capacity*—the legal ability—to make a contract, and agency agreements must in general meet the four elements of a valid contract that we discussed in an earlier section of this chapter. As we've also seen, an agent (such as the department manager at your local Ladders 'N' Things outlet) can make the principal for whom he or she is acting liable for such torts as breach of warranty. The same thing is true of the warehouse manager who

stored your ladder next to a shipment of liquid-nitrogen–based fertilizer; acting on behalf of Ladders 'N' Things, he or she exposed the company to liability for negligence.

Seeking Damages

So, what's your best course of action? You could sue both the manufacturer and the retailer, but to streamline things, your lawyer files only a strict-liability suit against the manufacturer, who agrees to settle out of court and pay damages. The manufacturer subsequently sues Ladders 'N' Things, charging that the retailer's negligence and breach of warranty were contributing causes of your injury. The jury agrees that the retailer's actions were proximate causes of your injury and orders Ladders 'N' Things to contribute to the fund of damages that the manufacturer has agreed to pay you (Economy Engineering v. Commonwealth, 1992).

The Goals of Tort Law

Imposing damages is the chief means by which the legal system meets the primary goal of tort law—compensating injured parties, or, more precisely, *restoring victims to the conditions that they would have been in had their injuries never taken place*. As we just saw, you settled out of court, but only after your attorney had notified the ladder manufacturer of your intent to seek damages. As the victim of a tort, you may have sought two major types of damages (Kubasek, et. al., 2009).

Compensatory Damages

The most common type of damages sought by plaintiffs, **compensatory damages** are monetary awards intended to meet the primary goal of legal action in tort cases. Some measures of compensatory damages are easier to establish than others—say, such expenses as medical costs. Likewise, if your injury keeps you from working at your job or profession, the court can calculate the amount that you would have earned while you were incapacitated. Things get more complicated when plaintiffs make claims involving pain and suffering or emotional distress (which may include both present and future physical and mental impairment). In deciding whether or not to award compensatory damages for such claims, it's the job of judges and juries to use common sense, good judgment, and general experience (Law Library, 2008).

Punitive Damages

Awarded in addition to compensatory damages, **punitive damages** are intended to deter similar injurious conduct in the future. Some experts regard punitive damages as particularly useful in discouraging manufacturers from making unsafe products: if there were no risk of punitive damages, they argue, a manufacturer might find it cheaper to market an unsafe product and compensate injured consumers than to develop a safer product. To determine whether punitive damages are called for, a court usually considers "the degree of reprehensibility of the defendant's conduct"—that is, the extent to which the defendant's action was flagrant or unconscionable (BMW of North America v. Gore, 1996; Kubasek, et. al., 2009).

The Goals of Contract Law

Note that basically the same types of damages are available in cases involving contract law, which we discussed previously. In contract law, the purpose of imposing monetary damages is to correct the wrong done when a contract is breached. *Compensatory damages* are paid by the party that breached the contract to compensate for losses suffered by the nonbreaching party. As in tort law, in other words, compensatory damages are awarded to restore the victim (the nonbreaching party) to the condition that he or she (or it) would have been in had the contract not been breached. Because each party entered into the contractual bargain in order to receive some benefit from it, the purpose of compensatory damages is to restore the "benefit of the bargain" to the nonbreaching party (Cheesman, 2006).

Courts typically don't award *punitive damages* for breach of contract. They may be considered, however, if the breaching of the contract is accompanied by some kind of intentional tort, such as fraud or intentional failure to act fairly in discharging the contract (Cheesman, 2006). The purpose of punitive damages is to punish the breaching party, to deter it from similar conduct in the future, and to set an example for other parties to legal contracts.

As you can see from Figure 15.6: Remedies for Breach, there are two categories of contractual breach. A *minor breach* occurs when the breaching party has achieved a level of *substantial performance*–that is, completed nearly all the terms of the contract. In the event of a minor breach, the nonbreaching party may seek damages. A *material break* occurs when one party renders *inferior performance*–performance that destroys the value of the contract. In such cases, the nonbreaching party may seek to rescind the contract and to recover damages to compensate for any payments made to the breaching party (Cheesman, 2006).

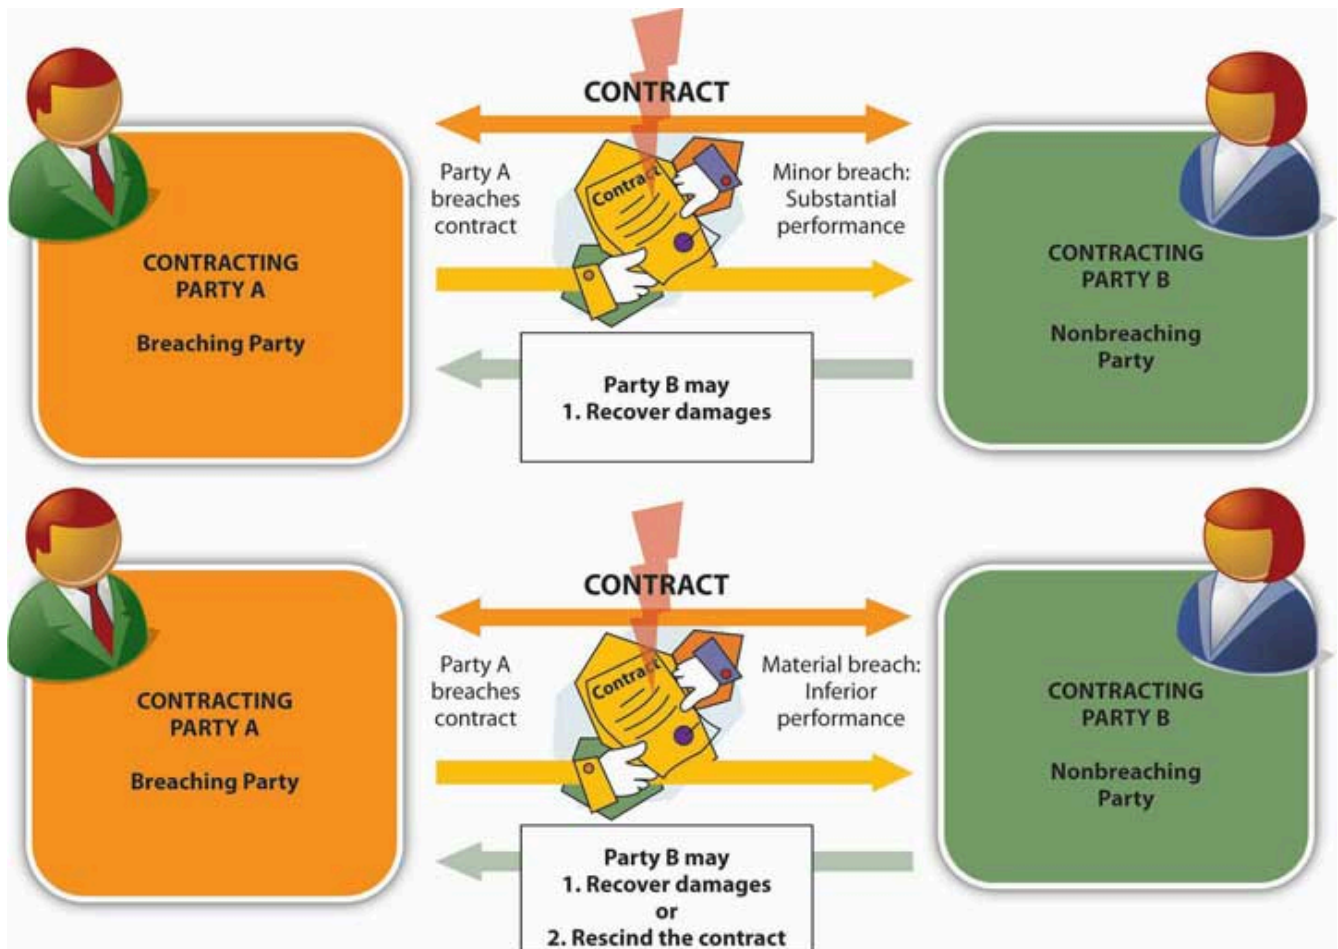

Figure 15.6: Remedies for Breach

Key Takeaways

- **Product liability** is a claim of injury suffered because of a defective product. In such cases, there are three grounds for pursuing a claim and seeking damages (that is, three "theories of recovery"): negligence, strict liability, and breach of warranty. Most plaintiffs use as many of these three grounds as possible.

- In a product-liability case, a manufacturer's negligence can take three different forms:

  1. *Negligent failure to warn*. The manufacturer may be liable if the company knew (or should have known) that, without a warning, the ladder would be dangerous in ordinary use or in any reasonably foreseeable use.
  2. *Negligent design*. A product is defective if, despite any warnings, the risk of harm outweighs its usefulness in doing what it's designed to do.
  3. *Negligence per se*. The manufacturer may be liable if the ladder fails to meet legal standards.

- **Strict liability torts** involve actions that are inherently dangerous and for which a party may be liable no matter how carefully he or she performs them. Under the *doctrine of strict liability in tort*, the plaintiff doesn't have to prove negligence on the manufacturer's part, nor does it matter how much care was taken by the manufacturer to prevent defects. The doctrine of strict liability rests on two legal conclusions:

  1. The manufacturer can protect itself by taking steps to anticipate and prevent hazardous product features, but the public can't.
  2. The manufacturer can protect itself by purchasing insurance and passing the cost on to the public in the form of higher product prices; the consumer has no such protection. The manufacturer is liable under the doctrine of strict liability for any harm that comes to a person from using the product, especially if it has become defective during the process of getting the product from the manufacturer to the user. The concept of strict liability also supports the plaintiff's right to pursue claims against members of the manufacturer's distribution chain.
  3. Breaching a **warranty**—a guarantee that a product meets certain standards of performance—is grounds for recovering in a product-liability case. An **express warranty** is created when a seller affirms that a product meets certain standards of quality, description, performance, or condition. An **implied warranty** arises automatically out of a transaction and takes one of two forms: (1) an *implied warranty of merchantability* (which states that the product is reasonably fit for ordinary use) and (2) an *implied warranty of fitness for a particular purpose* (which states that the product is fit for some specific use).
  4. **Agency** is a legal relationship between two parties in which one party acts on behalf of, and under the control of, another. In a *principal–agent relationship*, the *agent* is acting on behalf of the *principal*. Employer-employee relationships are also agency relationships.
  5. The primary goal of tort law is restoring the victim to the condition that he or she would have been in had no injury ever taken place. Likewise, the primary goal of contract law is restoring the nonbreaching party to the condition that he or she would have been in had the contract not been breached. To achieve these goals, the legal system provides for monetary awards in the form of **compensatory damages**. Another form of monetary award, **punitive damages**, is intended to

punish, to deter similar injurious conduct in the future, or to set an example.

Exercise

Upbeat Pharmaceutical Company manufactures a flu vaccine. Several people who got the vaccine became ill. One of them required hospitalization for two weeks. Medical experts believe the vaccine was the cause of their illnesses. Do the people who got sick after taking the vaccine have a valid claim against Upbeat? On what basis?

15.5 Some Principles of Public Law

Both tort law and contract law fall into the larger domain of **private law**, which deals with private relationships among individuals and organizations. In addition, of course, there are numerous types of law that deal with the relationship of government to private individuals and other private entities, including businesses. This is the area of **public law**, which falls into three general categories (Kubasek, 2009):

- *Criminal law*, which we've already introduced, prohibits and punishes wrongful conduct.
- *Constitutional law* concerns the laws and basic legal principles set forth by the U.S. Constitution.
- *Administrative law* refers to statutes and regulations related to the activities of certain legal bodies known as *administrative agencies*. We'll have more to say about administrative agencies and administrative law later in the chapter.

Public law obviously has a major impact on the activities of both individuals and businesses in the United States, and in the following section, we'll discuss the nature of this impact and the reasons why so many private activities are subject to the rules and principles of public law. Like most areas of the law, public law is an extremely complex field of study, and to keep things manageable we're going to explore this field by focusing on three less-than-glamorous legal issues: *why cigarette littering is against the law*, *why cigarettes cost so much*, and *why businesses ban smoking in the workplace*.

Why Cigarette Littering Is against the Law

Having sold the Stratford Inn in 1991, former senator George McGovern didn't have to worry about the Connecticut Clean Indoor Air Act of 2004, which banned smoking in such places as the bar of his hotel (Spigel, 2011). Like similar statutes in many states, the Connecticut law was enacted in response to the health hazards of secondary smoke in closed environments (an estimated three thousand nonsmokers die from smoke-related lung cancer every year).

Interestingly, shortly after the new statewide antismoking law went into effect, officials in Connecticut noticed a curious phenomenon: cigarette litter—packaging, lighting materials, and, especially, butts—had begun to accumulate at an unprecedented rate in outdoor areas surrounding drinking establishments, exacerbating an already serious environmental problem. Unless you've lived your entire life indoors, you have undoubtedly noticed that cigarette butts are a fixture of the great American outdoors: Americans smoke about 360 billion cigarettes a year and discard 135 million pounds of butts, much of which ends up as litter (Cigarette Butt Litter, 2008). In fact, cigarettes account for 20 percent of all the litter in the United States, 18 percent of which ends up in local streams and other waterways.

Figure 15.7. Cigarettes account for 20 percent of all litter.

In 2006, U.S. Senator Joseph Lieberman of Connecticut introduced the Cigarette Litter Prevention Act, a federal statute that would require cigarette producers to attach environmental warnings to their packaging (Liebermann Lands Legislation…, 2006). In Connecticut itself, however, statewide antilittering law covers only state property, land, and waters (Frisman, 2008). When it comes to private property, such as most areas adjacent to restaurants and bars, it's left to local communities to police littering violations. The town council of Wallingford, for example, recently took action on a proposed ordinance to fine business owners who fail to clean up the litter on their doorsteps and in their parking lots. The law also targets proprietors who continue to sweep cigarette and other litter into storm drains—a major source of waterway pollution. "I'm not a big fan of making laws to do stuff like this," admitted one town councilor, "but if people don't do it, then they have to be told to do it" (The Record-Journal, 2008).

The Wallingford ordinance calls for a written warning followed by a fine of $90 for each day that the offending litter isn't removed. Connecticut state law carries a maximum fine of $199 plus a surcharge of half the fine. As for litter "thrown, blown, scattered, or spilled" from a motor vehicle, Connecticut law regards it as evidence that the driver has in fact littered, but the statute applies only to state land and waters. The issue of litterbug drivers, however, is a much bigger concern to lawmakers in certain other states. In California, for example, Vehicle Code Section 23111 states that "no person in any vehicle and no pedestrian shall throw or discharge from or upon any road or highway or adjoining area, public or private, any lighted or nonlighted cigarette, cigar, match, or any flaming or glowing substance." The statute carries a fine of $380 but could run as high as $1,000. In addition, you may spend eight hours picking up roadside trash, and because the violation goes on your driving record, your insurance premiums may increase (California Department of Motor Vehicles, 2007). Despite such vigorous preventive measures, the state of California spends $62 million a year of the taxpayers' money to clean up roadside litter (Green Eco Services, 2008).

Besides the cleanup cost, there's another reason why California law regarding motor vehicles and cigarette litter is so stiff: at certain times of the year and under certain conditions, much of the state is a tinderbox. In January 2001, for example, a cigarette tossed from a car onto a grassy highway median near San Diego sparked a brush fire that soon spread across eleven thousand acres of rural forestland. As columns of acrid, ash-filled smoked billowed some thirty thousand feet into the air, officials closed down a twelve-mile stretch of Interstate highway and evacuated 350 homes. Suffering from eye, nose, and lung irritation, hundreds of residents rushed to safety with no time to rescue

personal possessions, and before an army of two thousand federal, state, and local emergency workers had contained the blaze a week later, the firefighting effort had cost California taxpayers $10 million (10News.com, 2001; CNN.com, 2001; USAToday.com, 2001).

Statutory Responses to Littering

Clearly the problem of cigarette litter has attracted the attention of lawmakers at every level. All the laws that we mentioned in this section are current or proposed *statutory laws*—laws made by legislative bodies. Enacted by the Connecticut General Assembly, the Clean Indoor Air Act of 2004 and Littering Law (amended 2005) are *state statutes*, as is California's Vehicle Code, which was enacted by the California State Legislature. The antilittering law in Wallingford is a local law, or *municipal ordinance*, passed by the Town Council, whose authority derives from the state General Assembly. If Senator's Lieberman's proposed Cigarette Litter Prevention Act is passed by the U.S. Congress, it will become a *federal statute*. Note, by the way, that each of these laws is a *criminal* statute designed to prohibit and punish wrongful conduct (usually by fine).

Why Cigarettes Cost So Much

As any smoker will tell you, cigarette littering, and smoking itself, isn't cheap. The cost of a pack of cigarettes varies depending on where you live, but they're higher than they used to be everywhere in the United States. A pack of cigarettes today ranges from $11.90 in New York State (and $14.00 in New York City) to $4.74 in West Virginia (Hopper, 2011). If you're a pack-a-day smoker who lives in New York City, $5,000 of your money goes up in smoke each year. Even if you're lucky enough to be paying the lower West Virginia price, you're still laying out more than $1,700 a year (roughly a nice house payment). Prices vary in large part because of taxes. On top of state taxes, the federal government levies a tax of $1.01 and some municipalities add on their own taxes. New York City, for example, charges $1.50 per pack in addition to the New York State levy of $4.35 (the nation's highest) for a total tax rate of $6.86 per pack (in contrast to a tax rate of $1.56 in West Virginia) (Campaign for Tobacco-Free Kids, 2011; Koch, 2009).

Excises and Externalities

These taxes are *excise taxes*, a rather vague term that refers to taxes placed on "goods" produced within a country. Traditionally, excise taxes have been levied on a wide variety of products, and today they're often placed on items and activities with which people may harm themselves (such as cigarettes), those around them (alcohol when overused), or the general environment (activities that pollute the air we all breathe).

In talking about taxes, we're talking about one means of covering the *costs* of these items and activities, and economists have a word for such costs: ==externalities== are costs that don't show up as part of the market price for a product (Pindyck & Rubinfeld, 2009). Actually, externalities can be either bad (i.e., costs) or good (i.e., benefits), but in detailing the negative effects of cigarette littering, we're obviously focusing on *negative externalities*. Think of externalities as spillover effects: they're costs or benefits that result from marketplace transactions—payments of certain prices for certain products—but that aren't borne by the sellers or buyers of the products exchanged in those transactions. The price of a pack of cigarettes, for example, doesn't include the cost of cigarette-litter cleanup or the cost of extinguishing wildfires. These costs are borne by *other people*—people who are outside or *external to* the basic transactions (Cole & Grossman, 2005).

Because these costs don't affect the seller's total cost in making the product available, they don't affect the price that the seller charges the buyer. And because the smoker doesn't pay these costs when he or she pays the price of a pack of cigarettes, the product is, in effect, cheaper than it would be otherwise. How much cheaper? As we've just seen, the answer to that question depends on the total cost of externalities. We can't pretend to trace every penny required to cover the total cost of having cigarettes for sale in the United States, but we can draw some conclusions from a few well-researched estimates. It's estimated, for example, that the total cost of public and private cigarette-related health care in the United States is approximately $96 billion annually; it's also estimated that the total cost to U.S. businesses in cigarette-related lost productivity is *another* $97 billion per year (Compaign for Tobacco-Free Kids, 2011). According to the U.S. Centers for Disease Control and Prevention, the combined cost of cigarette-related health care and lost productivity comes to $10.47 per pack (Centers for Disease Control and Prevention, 2011).

If you're a smoker, in other words, it could be (and from an economic standpoint, should be) worse. Why isn't it worse? Because the taxes attached to cigarette prices are, as we've explained, excise taxes, and excise taxes cover only a part of external costs.

Government and the Economic Environment of Business

These costs aren't simply figments of the economist's imagination: if you suspect that nobody actually pays them, ask the taxpayers of Connecticut and California. Or consider your own tax bill: even if you're a nonsmoker in an average American household, you pay $630 a year in smoking-related federal and state taxes (Smith, 2008). Taxation is obviously one means by which governments collect money to defray the costs to the taxpayers of an undesirable activity. In many instances, the tax bill is shared by sellers and buyers, but in the cigarette market, sellers merely pass along the added cost to the price paid by buyers. Thus, most of the money raised by the excise tax on cigarettes is paid by smokers.

Government Intervention in the Marketplace

This brings us to a crucial question among political theorists, economists, policymakers, business owners, and consumers—just about every member of society who has social and economic activities to pursue: Why does government intervene in marketplace transactions? Or, perhaps more accurately, Why have most of us come to expect and accept government intervention in our economic activities?

Market Failure: Theory versus Reality

There is, of course, no single answer to this question, but our discussion of the negative externalities of smoking leads us to one of the more important explanations: government may intervene in economic activity to "correct" *market failure*. Recall, for example, our discussion of economic competition in [Chapter 1 "The Foundations of Business"](#), where we explained that, under conditions of *perfect competition*, all prices would be determined by the rules of supply and demand. If the market for cigarettes were perfectly competitive, cigarettes would cost $10.47 per pack, not $3.11—the average cost of a pack of cigarettes if we subtract the federal tax of $1.01 and the average state tax of $1.46 from the average cost per pack of $5.58 (Campaign for Tobacco-Free Kids, 2011). Clearly the market for cigarettes isn't as *efficient* as it might be. We can tell, for example, that it doesn't operate at minimal cost because some of its costs—its negative externalities—spill outside the market and have to be borne by people who don't buy or sell cigarettes (Cole & Grossman, 2005).

Here's another way of looking at the issue (Pindyck & Rubinfield, 2009). *In theory*—that is, according to the principle of supply and demand—the demand for cigarettes will go down as added taxes drive up the price. *In reality*, however, it takes a fairly large increase in price to reduce demand by even a small amount. Moreover, because cigarettes are addictive, demand for the product pays relatively less attention to price than does demand for most products—smokers continue to buy cigarettes regardless of the price. Thus it takes a 10 percent hike in prices to cut cigarette consumption by 4 percent, while the same increase will cut consumption by young people—who presumably aren't yet addicted—by 7 percent (Campaign for Tobacco-Free Kids, 2008).

Law and Economic Decision Making

In the United States, the principle that government intervention is the best means of correcting market failure supported most government regulation of economic activity during the twentieth century (Cole & Grossman, 2005). As the response to the subprime crisis makes clear, it continues to support government economic intervention into the twenty-first century.

Perhaps this fact should come as no surprise. In a very real sense, economics is the basic business of law and the legal system. How so? Arguably, we establish laws and legal systems because all resources are not equally available to everybody. If they were, we wouldn't need rules for allocating them—rules for determining who possesses them and how they should be transferred. In using taxation, for example, to allocate economic resources in order to pay for the negative externalities of smoking, the legal system—the set of institutions that enforce our rules of efficient resource allocation—is basically performing a modern version of one of its oldest functions.

Efficiency and the Law

Efficiency, therefore, is one foundation of law: the rule of law encourages "efficiency" in the sense that it requires us to act within certain well-defined limits. It prohibits activities that take place outside those limits—such as stealing resources—because they make the process of allocating resources more wasteful and expensive.

Let's say, for example, that you (hereinafter "Party A") enter into a contract with Party B (Cole & Grossman, 2005). The grid in Figure 15.8: Contract Game shows all the possible outcomes of this agreement. If you both perform as contracted, you both benefit from the bargain, each realizing a profit of $X. This is the result in the upper-left–hand box of the grid. Let's say, however, that Party B takes your money but fails to live up to her end of the bargain. In that case, we get the outcome in the upper-right–hand box: because you've lost your money, you end up with -$X, and because Party B got your money without spending hers, she ends up with $2X. Understandably, you don't intend for this to happen and so stipulate that Party B must perform her end of the bargain before you hand over your money. Fearing that you might not pay after she's lived up to her part of the contract, Party B demands payment before she performs her part. The inevitable result of the contract is now displayed in both lower boxes of the grid: no one does anything and no one earns any profit. In completely wasting the value of every resource committed to the agreement by Party A and Party B, the business process has reached the ultimate level of inefficiency; it's actually ground to a halt.
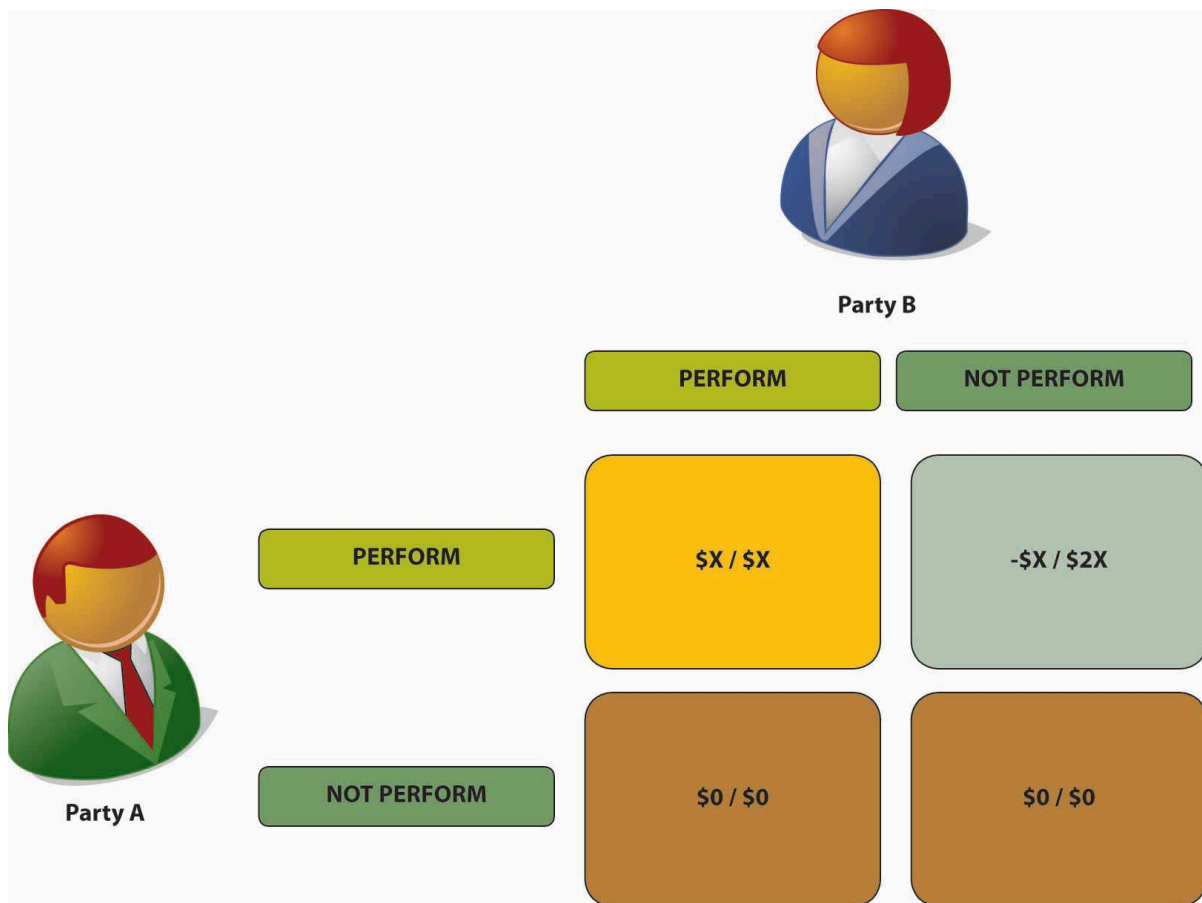

Figure 15.8: Contract Game

The only thing that prevents this scenario from playing out in any (or every) contractual situation is the existence of a legal system that can enforce contractual agreements. When such a system is in place, nonperformance makes very little sense. Had Party B taken your money and then failed to perform, the legal system would have required her either to pay back your $X or to live up to the contract, whereby you would earn your expected $X in profit. As a matter of fact, because she would also have been required to pay court costs, she'd end up with less than her original $X—in which case, she'd be worse off than had she performed her part of the bargain in the first place.

Contracting and the Law

As this illustration suggests, contractual relationships are the building blocks of a modern economy. Just about every activity that we pursue in the business environment is based on a contract, and as we've seen throughout this chapter, producers of goods and services make contracts with consumers, other producers, and the government. Moreover, there's often only a very fine line between the business environment and one's private life: you enter into a contract when you take a job, rent an apartment, get a bank loan, use a credit card, and even when you get married.

All these relationships are possible because our legal system provides for the reliable enforcement of contracts. There are countries where the legal system fails to provide reliable contract enforcement, and it should come as no surprise that economic growth in these countries has been severely hampered.

Ethics and the Law

"Efficiency," of course, isn't the only foundation of law. We don't punish murder because it wastes human resources. Law has an essentially *ethical* underpinning as well. We regard some activities, such as killing another human being, as *mala per se* (inherently bad). Other activities, such as filling the air with secondary cigarette smoke, we regard as *mala prohibita* (bad because we declare them to be bad) (Cheesman, 2006).

Naturally, the distinction between what's inherently bad and what's bad because we declare it bad isn't always clear. We may, for example, punish failure to remove certain chemical compounds (including those in secondhand smoke) from workplace air because they're hazardous to human health and life: according to the American Lung Association, people exposed to smoke in the workplace are 17 percent more likely to develop lung cancer than people who aren't. We may also punish the same failure because we regard certain consequences to be bad—economically inefficient, for example: research shows that secondhand-smoke exposure in the United Sates costs $10 billion a year, $5 billion in direct medical costs (American Lung Association, 2008).

Why Businesses Ban Smoking in the Workplace

A closer look at the ways in which the U.S. legal system approaches the problem of secondhand smoke in the workplace will allow us to focus on some important aspects of that system that we haven't yet encountered. In particular, we'll learn something about the difference between federal *statutory law* and *administrative law*, and we'll see how the *judiciary branch* of the legal system—the courts—may affect the enforcement of law.

Federal Statutory Law: OSHAct

As most of us learned if we studied American government in high school, Article I, Section 1 of the U.S. Constitution gives "all legislative powers granted herein"—that is, all lawmaking powers set aside for the federal government—to Congress (Moran, 2008; Encyclopedia of Small Business, 2002). So that's where we'll start—with a specific law enacted by Congress under its constitutional powers. Congress passed the *Occupational Safety and Health Act (OSHAct)* in 1970 to establish standards of safety and health for American workers. In particular, the statute requires employers to keep workplaces free from occupational hazards.

Federal Administrative Law: OSHA

The OSHAct created three ==administrative agencies==—bodies created by legislative act to carry out specific duties. The most important agency established by the OSHAct is the ==Occupational Health and Safety Administration (OSHA)==, which is empowered to set workplace safety and health standards and to ensure that employers take appropriate steps to meet them. OSHA was among a number of agencies created during the so-called rights revolution of 1960–1980, in which government acted to protect workplace, consumer, and environmental rights in addition to rights against discrimination based on race, sex, age, and national origin.

Responsibility for implementing the OSHAct is delegated to the Department of Labor, making OSHA one of more than fifty agencies managed by the executive branch of the federal government. Figure 16.9 "Administrative Agencies" shows the growth of federal administrative agencies from the end of the nineteenth century to the present. As you can

see, periods of significant increase in the creation of such agencies tend to correspond to eras of perceived market failure—that is, the failure of unregulated market activity to maintain certain levels of fairness or social responsibility (Warren, 2011).

Figure 15.9: Administrative Agencies

Administrative Rulemaking: OSHA's General Duty Clause

In passing the OSHAct, Congress didn't determine appropriate standards of safety and health, nor did it designate specific occupational hazards. It stipulated only a so-called General Duty Clause requiring an employer to provide "employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees" (OSHA, 2008). In setting more specific standards for satisfying this "general duty," OSHA may choose to adopt those of recognized industry groups or it may set its own standards, usually relying on research conducted by a sister agency, the National Institute of Occupational Safety and Health (NIOSH). In either case, proposed regulations must go through the five-step process summarized in Figure 16.10 "Administrative Rulemaking Procedure". When a regulation has passed through this process, it becomes administrative law, which, as we've seen, refers generally to statutes and regulations related to the activities of such agencies as OSHA.
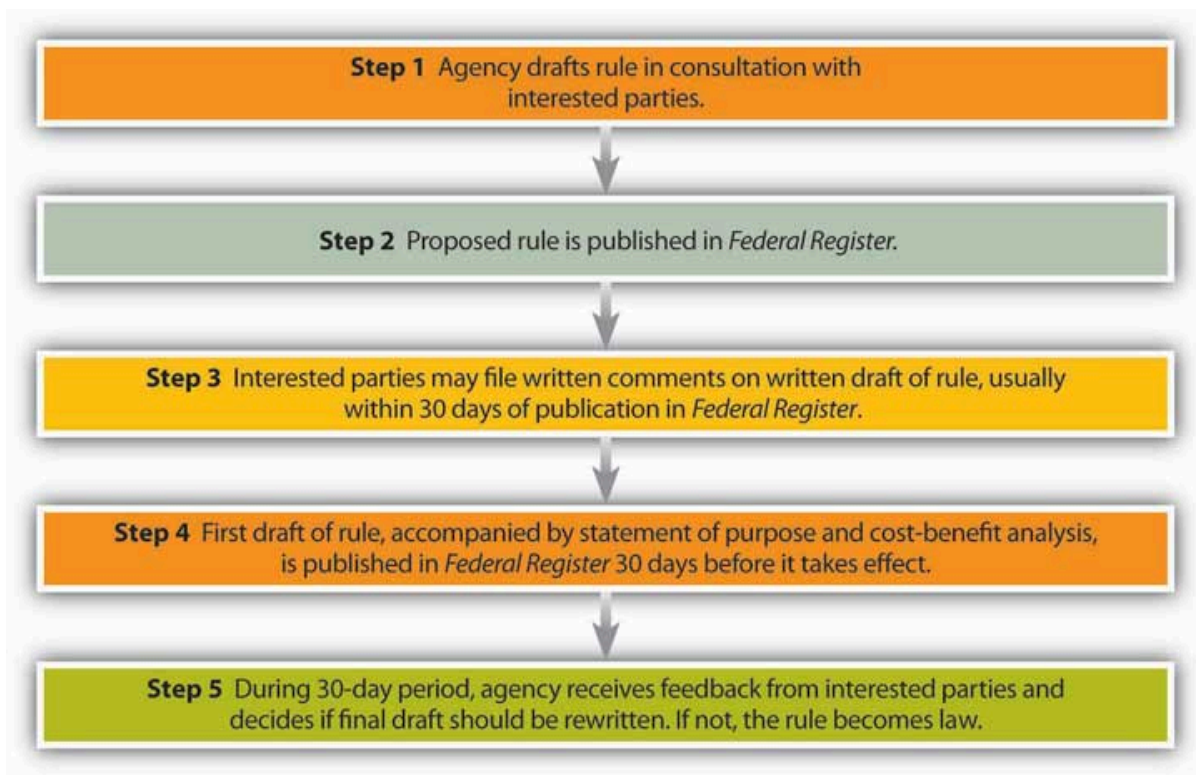

Figure 15.10: *Administrative Rulemaking Procedure*

Administrative Law and Judicial Review

OSHA Regulation 29 CFR 1910.1000 deals with air contaminants but doesn't address cigarette smoke itself. Rather, it limits exposure to some of the forty-seven thousand chemical compounds contained in *environmental tobacco smoke*. Based in part on NIOSH studies, OSHA has set *permissible exposure limits* for such compounds and stipulated that employee exposure to them shall not exceed designated permissible exposure limits (OSHA, 2008). OSHA continues to use permissible exposure limits to assess levels of specific contaminants, and up until the early 1990s, it also relied on the General Duty Clause to deal with cases involving the hundreds of substances not covered by specific permissible exposure limits. Since then, however, the agency has been forced to restrict its use of both the General Duty Clause and permissible exposure limits in enforcing air-contaminant standards (OSHA, 2003). What's responsible for this change in policy? What could possibly prevent a federal executive agency from enforcing authority explicitly granted to it by Congress?

Case Law

To answer this question, we must understand an extremely important source of law known as **case law**—law resulting from judicial interpretations of statutory and other forms of law. The business of the courts is resolving disputes, and when a dispute involves an interpretation of law, the court's decision in the case may establish a **precedent**—a rule of law that must be used by lower courts in deciding future cases. The principle behind case law is known as *judicial review*, and it permits the judicial branch of government to "check and balance" the actions both of the legislative branch in making laws and of the executive branch in enforcing them.

At what point may judicial review affect the process of enforcing administrative law? After an agency rule has passed through the rulemaking process outlined in Figure 15.10, it usually becomes law. Typically, the courts accept these rules as law by upholding actions taken by agencies to enforce them. But not automatically. In a 1973 case involving a fine based on OSHA's General Duty Clause, a federal court carefully translated the terms of the clause into three "necessary elements of a violation" and ruled that OSHA could win such cases only if it showed that a violation met all three requirements. A fourth requirement was later added, and OSHA now cites these four requirements in its official interpretation the General Duty Clause, issuing violations only "when the four components of this provision are present" (National Realty and Construction v. OSHRC, 1973; OSHA, 2003).

In another case, the U.S. Supreme Court confirmed the opinion of a lower court that the OSHAct did not give OSHA "the unbridled discretion to adopt standards designed to create absolutely risk-free workplaces regardless of costs." In this 1980 case involving workplace exposure to a cancer-causing substance, the Court set down much stricter requirements for the validity of OSHA-issued *permissible exposure limits* and other standards (Industrial Union v. American Petroleum Institute, 1980; Rabinowitze, 2004).

Today, therefore, because it's difficult to meet the stringent requirements set by judicial precedent, OSHA rarely resorts either to the General Duty Clause or to permissible exposure limits established later than the 1970s (OSHA, 2003). In the case of cigarette smoke, OSHA rules are applied only in rare and extreme cases, usually when cigarette smoke combines with some other contaminant produced by a manufacturing process (Nolo's Encyclopedia of Everyday Law, 2007).

Beyond OSHA: Public Law, Public Policy, and Environmental Tobacco Smoke

And yet, if you've spent much time recently around American workplaces, you've no doubt observed that a lot of employers have instituted complete or partial restrictions on smoking. In 1985, for example, 27 percent of U.S. worksites with fifty or more employees either were smoke free or limited smoking to separately ventilated areas. According to recent data, the number had risen to nearly 90 percent by 2000 (Gottlieb, 2002; Jenney, 2002). If OSHA standards aren't responsible for this trend toward smoke-free worksites, to what can we attribute it?

For one thing, of course, national attitudes toward smoking have undergone significant changes in the last three or four decades. Few people would be surprised to find that the percentage of U.S. adults who smoke declined from just over 42 percent in 1965 to 22 percent in 2009 (Campaign for Tobacco-Free Kids, 2011). In addition, more and more American workers are aware of the effects of secondhand smoke. In one study, 76.5 percent of respondents said they believed that secondhand smoke causes heart damage, and 84.5 percent said they believed that it causes lung cancer (Information Please Database, 2011; Striebel, 2005). (Interestingly, the conviction that secondhand smoke harms nonsmokers doubles the likelihood that a smoker will succeed in quitting (Glantz & Jamieson, 2000).)

Naturally, public attitudes show up in public policy. In the legal environment of business, we can identify at least two areas that reflect public policy toward smoke-free workplaces:

- *Other federal statutes*. In particular, two federal laws support civil suits against employers that fail to take action against environmental tobacco smoke or secondhand smoke:
    - The *Americans with Disabilities Act* protects people with impairments that affect "major life activities." The law requires employers to provide "reasonable accommodation" that allows impaired employees to perform their jobs. An employee with a respiratory impairment that prevents him or her from working in the presence of cigarette smoke may sue an employer that fails to provide appropriate working conditions.
    - The *Rehabilitation Act of 1973* bars employment discrimination on the basis of disability. A worker with a respiratory disability can sue an employer that fails to limit workplace smoke for unlawful discrimination.

- *State laws*. Currently, twenty-four states have laws governing smoke-free workplaces (up from just two states in

2002), and these and related laws in many states have become more stringent in the past few years. According to the Centers for Disease Control, between 2004 and 2007, the following statistics were true:

- Eighteen states strengthened restrictions for private-sector worksites, eighteen strengthened restrictions for restaurants, and twelve strengthened restrictions for bars.
- The number of states requiring all three settings to be smoke free climbed from three to twelve.
- The number of states with no restrictions on any of the three settings decreased from sixteen to eight (Centers for Disease Control and Prevention, 2008; Centers for Disease Control and Prevention, 2008)).

Connecticut law, for example, restricts smoking in most workplaces with at least five employees to specially ventilated smoking rooms (Spigel, 2011).

In addition, we shouldn't underestimate the role played by business itself in the campaign to curb workplace smoking. In Connecticut, for example, the workplace smoking ban applies only to indoor areas, but many companies in the state take advantage of a provision allowing them to ban smoking anywhere on their properties. Businesses, of course, aren't motivated strictly by civic responsibility. Workplace smoking increases employer costs in numerous ways. Smokers are absent from work 50 percent more often than nonsmokers, and they have twice as many accidents. Smoke-free firms often pay 25 percent to 35 percent less for health and fire insurance, and one government report calculates that U.S. businesses could save from $4 billion to $8 billion annually in building operations and maintenance costs if workplace smoking bans were enforced nationwide (Action on Smoking and Health, 2005; American Lung Association, 2011).

And last but not least, both for-profit and nonprofit organizations must always contend with lawsuits (Sweda, Jr., 2004):

- A man suffering from asthma repeatedly asked Olympic Airways flight attendants to change his seat because of persistent secondhand smoke. They refused, he died, and his widow sued the airline for negligence. A U.S. District Court awarded the plaintiff damages of $1.4 million.
- After sharing an office with a chain smoker for twenty-six years, a nonsmoking New Jersey teacher contracted tonsilar cancer and sought workers' compensation benefits for a temporary disability caused by secondhand smoke. A workers' compensation judge and a state appeals panel ordered the Middletown Board of Education to pay the plaintiff $45,000 in disability benefits, $53,000 in medical costs, and $20,000 in legal fees and to provide for any future treatment that he might require.
- When her employer refused to provide reasonable accommodation to protect her from secondhand smoke, a woman suffering from severe respiratory allergies sued under the Americans with Disabilities Act. A U.S. Appeals Court agreed with her contention that her disability interfered with a "major life activity"—namely, breathing. The case is still under consideration.

Law and the "Public Interest"

It's probably tempting to see the current status of public policy and law on both environmental tobacco smoke and secondhand smoke as a logical convergence of private and public interest (Baron, 2006). Many political scientists and economists, however, argue that the idea of "the public interest" is difficult to pin down. Is there really a set of underlying principles reflecting what society regards as good or right? Can a society actually come to any general agreement about what these principles are? And who speaks for these principles? We hear lawmakers talk about "the public interest" all the time, but we suspect that they're often motivated by private interests and cite "the public interest" for rhetorical purposes.

Now, we're not necessarily criticizing politicians, whose job description includes an ability to balance a bewildering array of private interests. According to many people who are skeptical of the term "public interest," public policy and

law reflect not an imaginary consensus about what's good or right but rather a very real interplay among *competing* interests. Public policy and law on environmental tobacco smoke and secondhand smoke, for example, reflect the long-term interaction of interest groups as diverse as the American Lung Association and the Tobacco Institute. Likewise, the record of OSHA's shifting policy on how to address environmental tobacco smoke as a workplace hazard reflects an interplay of competing interests within the U.S. political and legal systems.

As for businesses, they must, of course, negotiate the resulting shifts in the political and legal environment. In addition, a firm's response to such a problem as air contamination in the workplace will reflect an interplay of competing fiscal demands. On the one hand, a company must consider the losses in productivity that result from smoking and secondhand smoke in its workplace; on the other hand, it must consider the cost of controlling air contaminants and other hazards in its workplace. Every company, therefore, must participate more or less actively in the interplay of competing interests that shape public policy and law. After all, its own interests are inherently bound up with the diverse, often conflicting interests of groups that have a stake in its performance: namely, its *stakeholders*—employees, shareholders, customers, suppliers, and the communities in which they do business.

Key Takeaways

- **Private law** deals with private relationships among individuals and organizations. **Public law**, which concerns the relationship of government to private individuals and other private entities, including businesses, falls into three general categories:

  1. *Criminal law* prohibits and punishes wrongful conduct.
  2. *Constitutional law* concerns the laws and basic legal principles set forth by the U.S. Constitution.
  3. *Administrative law* refers to statutes and regulations related to the activities of certain legal bodies known as administrative agencies.

- **Statutory laws** are laws made by legislative bodies.
- **Externalities** are costs that don't show up as part of the market price for a product. Negative externalities result from marketplace transactions—payments of certain prices for certain products—but aren't borne by the sellers or buyers of the products exchanged in those transactions; rather, they're borne by people who are outside or *external to* them.
- Government may intervene in economic activity in order to "correct" *market failure*, which is perceived to occur when markets aren't as efficient as they should be in theory. Efficiency is thus one foundation of law: the rule of law encourages "efficiency" in the sense that it requires us to act within certain well-defined limits, and it prohibits activities that take place outside those limits—such as stealing resources—because they make the process of allocating resources more wasteful and expensive.
- Law also has an ethical underpinning. We regard some activities as inherently bad and others as bad because society declares them to be bad.
- Contractual relationships, which are the building blocks of a modern economy, are possible when a legal system provides for the reliable enforcement of contracts.
- In passing the Occupational Safety and Health Act (OSHAct) to establish standards of safety and health for American workers, Congress created **administrative agencies**—bodies established by legislative act to carry out specific duties. The **Occupational Health and Safety Administration (OSHA)** is empowered to set workplace safety and health standards and to ensure that employers take appropriate steps to meet them. Once they've passed through a five-step rulemaking process, administrative regulations become **administrative law**, which refers generally to statutes and regulations related to the activities of

administrative agencies.

- **Case law** is law resulting from judicial interpretations of statutory and other forms of law. When the decision of a court involves an interpretation of law, it may establish a **precedent**—a rule of law that must be used by lower courts in deciding future cases. The principle behind case law is known as *judicial review*, which permits the judicial branch of government to "check and balance" the actions of the legislative branch in making laws and of the executive branch in enforcing them.

Exercise

If you were able to set the price of a pack of cigarettes, how much would you charge? Would your price include excise taxes? What other costs would your price cover?

Do you think it's right to ban smoking in the workplace? Why, or why not?

15.6 Cases and Problems

Would You Like to Be a Lawyer?

Are you interested in a career in law? To learn what lawyers do, read the article on About.com, "Lawyer" by Sally Kane, http://legalcareers.about.com/od/careerprofiles/p/Lawyer.htm

As a follow-up (and because getting a job is a good thing), read a second article on About.com, "Who Hires Lawyers?" by Tara Kuther, http://gradschool.about.com/od/lawschool/f/lawjobs.htm. Then, answer the following questions, being sure to provide an explanation for each of your answers:

- What about being a lawyer interests you?
- What might discourage you from pursuing a career in law?
- Overall, does a career in law appeal to you? Why, or why not?

Ethics Angle (AACSB)

The Product Liability Debate

The article "Who Should Pay? The Product Liability Debate," by Claire Andre and Manuel Velasquez, provides the pros and cons of the current product liability legal environment. Read the article, which can be found at https://www.scu.edu/ethics/focus-areas/business-ethics/resources/who-should-pay-the-product-liability-debate/ and answer these questions:

1. Should consumers bear more responsibility for product injuries?
2. Should drug manufacturers bear more responsibility?
3. Is the current product-liability legal system broken? Why, or why not? If you believe it is broken, how would you fix it?

Get together as a team and debate these two related issues: "How much should a pack of cigarettes cost?" and "Should businesses ban smoking the workplace?" Write a "position" paper explaining your group's opinion. If the group doesn't reach an agreement on the issues, include a "minority report"—the opinion of a minority of the group.

What issues would you encounter as a businessperson negotiating a sales contract with a company in China? How would you overcome these issues?

PROFESSIONALISM

16.1 Resume

BRYAN ROSE

Resumes are like snowflakes, they are all the same general idea, but each one is different depending on a variety of factors. Some students have participated in clubs & organizations while others have worked part-time or full-time jobs. What they all have in common that they should be well formatted, easy to read, and contain a few key sections.

Before watching the video below, pull up the Business Foundations Resume Template in Handshake. This is the general format that we suggest all of our business students to use. From advertising jobs in NYC to accounting jobs for one of the "Big Four" accounting firms, this format provides students with results. Resumes aren't a space for creativity, they provide easy to ready information that is concise, thoughtful, and as relevant as possible.

This video provides insights on how to build your resume from the ground up. It discusses how to decide what goes on your resume and how to describe your experiences in a way that provides value to the reader. You'll learn the overall do's & don'ts with formatting and also get an introduction to the automated resume critiquing software, VMock.
A YouTube element has been excluded from this version of the text. You can view it online here:
https://pressbooks.rampages.us/businessfoundation/?p=1613

16.2 Email Etiquette

BRYAN ROSE

Email has been and will continue to be a cornerstone of business communication. Understanding the etiquette strategies for email will not only help you communicate more effectively, it will also help you build better relationships with those you're communicating with.

In this video, you'll learn about rich & lean forms and rich & lean mediums of communication. Not everything you want to communicate is meant for email. Many times you first need to speak to someone over the phone, video, or in person in order to discuss something that is too dense or complicated for email. Then, you would likely send an email as a follow up to make sure you both remember what you discussed and are on the same page going forward.

The video discusses how important the specific audience is to the interpretation of your message and how you can be sure that your content, tone, and intent all align. Be sure to listen to and implement the strategies that are discussed, because if you do, you will immediately see improvement with how your communication is interpreted & received.

16.3 Making Conversation

BRYAN ROSE

Networking is the act or process of interacting with others to exchange information and develop professional or social contacts. Notice that doesn't say, networking is a Career Fair, Conference or LinkedIn profile. All of those are networking mediums, but the act of networking is all just simple conversation. We have to practice & understand conversation techniques in order to actually improve our networking skills.

Research networking strategies and you'll find that most presentations & articles center around one concept…the best networkers aren't the people with the most to say, they're the best at asking questions & driving conversation. So what is our strategy around driving conversation and asking questions? The Basic Listening Sequence.

Developed & utilized by counselors, therapists, and psychologists, The Basic Listening Sequence is more of a set of conversation techniques than a sequence. The techniques focus on driving conversation & connection through subtle prompting & asking questions (questioning, encouraging, paraphrasing, reflecting, and summarizing).

Networking events & organizations are fantastic. Many people will attain jobs and great professional contacts because of them. But what about developing relationships with your classmates, faculty, team members, peers at work, etc.? Most people will attain referrals and progress their career because of their ability to facilitate meaningful conversations in their day-to-day work & involvement. Focus on understanding conversation techniques and then you can implement them at networking events, and more importantly, in your day to day life.

https://pressbooks.rampages.us/businessfoundation/?p=1620

16.4 Elevator Pitch & Career Fair (In-Person & Virtual) Prep

BRYAN ROSE

Your Elevator Pitch is a 60-90 second description of your experiences & skills that relate to a specific industry, job, or company you're speaking with. This presentation centers on preparing you for In-Person & Digital Career Fairs and helps you develop your elevator pitch. It also helps you understand that the pitch is just one portion of your conversation with a recruiter. We all need to understand how to facilitate a conversation, not just how to deliver a speech to a recruiter.

As you're making your pitch and preparing for a Career Fair or any other networking event, it's important to realize why these events exist in the first place. Recruiters attend these events so they can meet students face-to-face (in-person or virtually) and assess their skills & interpersonal abilities in the hopes of interviewing students for roles they have open. In an ideal world:

1. You attend the Career Fair, impress the recruiter, and the recruiter asks you to apply,
2. You apply after the fair & send the recruiter an email letting them know you applied and thanking them for their time at the fair
3. You get an interview and absolutely crush it
4. You get the job/internship

Not every Career Fair results in an interview or a job/internship offer, but regardless, all of them are fantastic relationship development opportunities. It's important to understand that most of the recruiters attend the Career Fair every semester. As you go throughout your college career adding experiences & skills, you add to the likelihood that these events will result in interviews & jobs/internships.

https://pressbooks.rampages.us/businessfoundation/?p=1622

16.5 LinkedIn & Handshake

BRYAN ROSE

Some of you may know that 70% of all jobs & internships are attained through a referral. If they're so important, what is a referral? It's when someone you know already or someone you intentionally develop a relationship with speaks well on your behalf for a job or internship opportunity. That referral heavily increases the likelihood you get an interview, and that interview gets you the job.

So what do we do in order to get referrals? Develop relationships with faculty, staff, peers, and supervisors and join clubs & organizations that relate to our field of interest? Yes! Network with VCU alumni on LinkedIn? Yes!

There are 130,000+ VCU alumni on LinkedIn. Want to move to Seattle and get into the marketing field there? Send a LinkedIn message to a few alumni that live in Seattle and learn about their background and how they broke into the marketing industry in that city. Facilitate what is called an "informational interview" to learn from their background. Ultimately, in the hopes that they will be inspired to refer you to open opportunities and/or connect you with their network & friends that could help too!

Throw out the phrase, "It's not about what you know, it's about who you know." That makes it sound like your ceiling & opportunities are limited to the circle you currently have. Understand that the real phrase is, "It's not about what you know, **it's about who knows you**." You have power & agency in this digital age to utilize LinkedIn, BizConnect, and Handshake to develop a professional presence and create professional allies.

https://pressbooks.rampages.us/businessfoundation/?p=1626

16.6 Interviewing 101

BRYAN ROSE

Interviewing well is all about intentional preparation. Preparation doesn't make perfect, intentional preparation makes perfect. Googling, "Top 5 interview questions", and practicing them a few times in the mirror isn't enough.

So how do we intentionally prepare? This video discusses how you utilize the job description to develop answers for skill sets & experiences the interviewers will be looking for. The job description is the answer to the test! It's also important to know how to research companies to specifically & uniquely describe why that opportunity & company is interesting to you.

You'll learn about the STAR Method (Situation, Task, Action, Result) as a way to stay on track and provide thorough detail when telling stories. Also, you'll get to hear about some common question types and what employers are looking for when they ask them.

Overall, employers want to know that you have the skills to do the job you're interviewing for and that your approach to work matches their company culture. The only way you successfully do that time after time is through intentional & strategic preparation.

Glossary

360-degree feedback

get feedback from all directions–from supervisors, reporting subordinates, coworkers, and even customers

Accountants

measure, summarize, and communicate financial and managerial information and advise other managers on financial matters

Accounting

process of collecting, recording, classifying, summarizing, reporting, and analyzing financial activities

accounting cycle

process of generating financial statements, beginning with a business transaction and ending with the preparation of the report

Accounts payable

Amounts the firm owes for credit purchases due within a year

Accounts receivable

Amounts owed to the firm by customers who bought goods or services on credit

Accrued expenses

Expenses, typically for wages and taxes, that have accumulated and must be paid at a specified future date within the year although the firm has not received a bill

acid-test (quick) ratio

used to measure the firm's ability to pay its current liabilities without selling inventory

Activity ratios

reflect the speed with which resources are converted to cash or sales

adjustable-rate mortgage (ARM)

one that's pegged to the increase or decrease of certain interest rates that your lender has to pay

administrative agencies

bodies created by legislative act to carry out specific duties

Advertising

paid, nonpersonal communication designed to create an awareness of a product or company

advertising agency

a marketing consulting firm that develops and executes promotional campaigns for clients

agency

legal relationship between two parties in which one party acts on behalf of, and under the control of, another

alternative work arrangements

programs and benefits designed to help employees meet family and home obligations while maintaining busy careers

annual report

a yearly document that describes a firm's financial status.

anti-harassment

prohibited conduct, asserting its objections to the behavior, and detailing penalties for violating the policy

applications software

performs particular tasks, including word processing, creating and managing spreadsheets, designing graphical presentations, and producing high-quality printed documents (desktop publishing)

appraisals

An opportunity for managers and employees to discuss an employee's performance and to set future goals and performance expectations

arbitration

the third party studies the situation and arrives at a binding agreement

Artificial intelligence

is the science of developing computer systems that can mimic human behavior

audit

financial statement review

authority

the power to make the necessary decisions

autocratic leadership style

tend to make decisions without soliciting input from subordinates

Baby Boomers

Born between 1946-1964

balance sheet

summarizes a firm's financial position at a specific point in time

behavioral segmentation

Dividing consumers by such variables as attitude toward the product, user status, or usage rate

benchmarking

compare their performance on a number of dimensions with the performance of other companies that excel in particular areas

benefits

compensation other than salaries, hourly wages, or financial incentives

bonuses

annual income given in addition to salary—are based on company-wide performance

Bookkeeping

the system used to record a firm's financial transactions, is a routine, clerical process

boycotting

union workers refuse to buy a company's products and try to get other people to follow suit

brand

some word, letter, sound, or symbol that would differentiate their product from similar products on the market

brand equity

any added value generated by favorable consumer experiences

brand loyalty

When you have a positive experience with a product—say, a laptop or a printer—you come away with a positive opinion of the entire product line and will probably buy more products

breached

a promise made under the contract hasn't been kept or an act hasn't been performed

breakeven analysis

(have no profit or loss), total sales revenue must exactly equal all your expenses (both variable and fixed)

browsers

software, such as Microsoft's Internet Explorer and Netscape Navigator, that locates and displays Web pages—opened up the Internet to a vast range of users

budget

a document that itemizes the sources of his income and expenditures for the coming year, along with the relevant money amounts for each

budget deficit

the government spends more than it takes in

budget surplus

in any given year, the government takes in more money (through taxes) than it spends on goods and services (for things such as defense, transportation, and social services)

Bureau of Labor Statistics

tracks total non-farm payroll employment from which the number of net new jobs created can be determined

business cycle

The economic ups and downs resulting from expansion and contraction

business ethics

is the application of ethical behavior in a business context

business plan

a document that identifies the goals of your proposed business and explains how these goals will be achieved

capacity

the maximum number of goods that it can produce over a given time under normal working conditions

capitalism

The economic system in which most businesses are owned and operated by individuals

case law

law resulting from judicial interpretations of statutory and other forms of law

Cash

the speed with which they can be converted to cash

cash-flow or income statement

which shows where your money has come from and where it's slated to go

cellular layout

small teams of workers handle all aspects of building a component, a "family" of components, or even a finished product

centralization

most decision making is concentrated at the top

certified management accountant (CMA)

Whereas some private accountants hold the CPA designation, managerial accountants also have a professional certification program including passing an exam

certified public accountant (CPA)

an accountant must complete an approved bachelor's degree program and pass a test prepared by the American Institute of CPAs (AICPA)

chain of command

the authority relationships among people working at different levels of the organization

chief information officer (CIO)

who oversees information and telecommunications systems

chief technology officer

who reports to the CIO and oversees IT planning and implementation

Civil

principle that the public is best served through collective action.

civil law

law governing disputes between private parties (again, individuals or organizations)

client-server systems

which include a number of client machines (the ones used by employees for data input and retrieval) and a server (which stores the database and the programs used to process the data)

cloud computing

means performing computer tasks using services provided over the Internet

code of conduct

a document describing the principles and guidelines that all employees must follow in the course of all job-related activities

collective bargaining

The process of settling differences and establishing mutually agreeable conditions under which employees will work

commission

getting paid for quantity of sales

compensatory damages

are monetary awards intended to meet the primary goal of legal action in tort cases

Compliant

companies adopt policies that acknowledge the wishes of the public

compound interest

the effect of earning interest on your interest

Compressed work week

Rather than work eight hours a day for five days a week, you might elect to earn a three-day weekend by working ten hours a day for four days a week

computer-aided design (CAD)

software package to design not only the engine but also the board itself and many of its components

computer-aided manufacturing (CAM)

software system determines the steps needed to produce the component and instructs the machines that do the work

computer-integrated manufacturing (CIM)

systems have taken the integration of computer-aided design and manufacturing to a higher level—and are in fact revolutionizing the production process.

conceptual skills

the ability to reason abstractly and analyze complex situations

consumer behavior

the decision process that individuals go through when purchasing or using products

consumer market

buyers who want the product for personal use

Consumer Price Index(CPI)

measures the rate of inflation by determining price changes of a hypothetical basket of goods, such as food, housing, clothing, medical care, appliances, automobiles, and so forth, bought by a typical household

contingency planning

managers identify those aspects of the business that are most likely to be adversely affected by change

contingent workers

hired to supplement a company's permanent workforce. Most of them are independent contractors, consultants, or freelancers who are paid by the firms that hire them

continuous improvement

the commitment to making constant improvements in the design, production, and delivery of goods and services

contract

an exchange of promises or an exchange of a promise for an act, and because it involves an exchange, it obviously involves at least two parties

controlling

process of comparing actual to planned performance and taking necessary corrective action

Core Values

What principles should guide our actions as we build and operate the business

Corporate Citizen

presents a model of corporate responsibility based on a company's relationships with its stakeholders

Corporate social responsibility

deals with actions that affect a variety of parties in a company's environment

cost of goods sold

total expense of buying or producing the firm's goods or services

cost-based pricing

how much it costs to make a product and then set a price by adding a profit to the cost

cover letter

a document accompanying your résumé that explains why you're sending your résumé and highlights your qualifications

crimes

violations of statutes for which the law imposes punishment)

Criminal law

prohibits and punishes wrongful conduct, such as assault and battery, murder, robbery, extortion, and fraud

cultures

ways of doing things that evolve through shared values and beliefs

Current liabilities

Liabilities due within a year of the date of the balance sheet

current ratio

ratio of total current assets to total current liabilities

customer division

structure because it enables them to better serve their various categories of customers. Thus, Johnson & Johnson's two hundred or so operating companies are grouped into three customer-based business segments: consumer business (personal-care and hygiene products sold to the general public), pharmaceuticals (prescription drugs sold to pharmacists), and professional business (medical devices and diagnostics products used by physicians, optometrists, hospitals, laboratories, and clinics)

customer value triad

determine value by considering the three factors that many marketers call the customer value triad: quality, service, and price

customer-relationship management

a marketing strategy that focuses on using information about current customers to nurture and maintain strong relationships with them

data communication networks

which transmit digital data (numeric data, text, graphics, photos, video, and voice) from one computer to another using a variety of wired and wireless communication channels

data mining

the process of searching and analyzing large amounts of data to reveal patterns and trends that can be used to predict future behavior

data warehouse

a centralized database in which data from several databases are consolidated and organized so that they can be easily analyzed

databases

electronic collections of related data that can be accessed by various members of the organization

debit card

which pulls money out of your checking account whenever you use the card to buy something or get cash from an ATM

Debt ratios

measure the degree and effect of the firm's use of borrowed funds (debt) to finance its operations

debt-to-equity ratio

measures the relationship between the amount of debt financing (borrowing) and the amount of equity financing (owners' funds)

decentralization

which spreads decision making throughout the organization

decision support system

is an interactive system that collects, displays, and integrates data from multiple sources to help managers make nonroutine decisions

decision-making skills

process in which you must define a problem, analyze possible solutions, and select the best outcome

defendant

the party charged in the complaint–may be an individual (such as your roommate) or an organization (such as a business)

Defensive

They reject allegations of wrongdoing and refuse to take responsibility, arguing that fixing the problem or addressing the issue isn't their job

defined benefit retirement plan

provides a set amount of money each month to retirees based on the number of years they worked and the income they earned

defined contribution retirement plan

The employee contributes money each pay period to his or her retirement account, and the employer matches a portion of the contribution

deflation

When the price level goes down (which rarely happens)

delegation

the process of entrusting work to subordinates

Demand

is the quantity of a product that buyers are willing to purchase at various prices

demand-based pricing

how much people are willing to pay

democratic leadership style

generally seek input from subordinates while retaining the authority to make the final decisions

Demographic segmentation

divides the market into groups based on such variables as age, marital status, gender, ethnic background, income, occupation, and education

departmentalization

grouping specialized jobs into meaningful units

Depreciation

allocation of the asset's original cost to the years in which it is expected to produce revenues

depression

a recession lasts a long time (perhaps a decade or so), while unemployment remains very high and production is severely curtailed

differentiated products

products that differ somewhat, or are perceived to differ, even though they serve a similar purpose

directing

providing focus and direction to others and motivating them to achieve organizational goals

Disability insurance

pays an income to an insured person when he or she is unable to work for an extended period

Discrimination

occurs when a person is treated unfairly on the basis of a characteristic unrelated to ability

distribution center

products held temporarily while they're en route to their final destinations

divisional organizations

made up of several smaller, self-contained units, or divisions, which are accountable for their own performance

double-entry bookkeeping

To keep the accounting equation in balance, every transaction must be recorded as two entries.

downsizing

cutting costs by eliminating jobs

Duty of care

refers simply to the basic obligation that one person owes another—the duty not to cause harm or an unreasonable risk of harm

e-commerce

conducting business over the Internet

Earnings per share (EPS)

ratio of net profit to the number of shares of common stock outstanding

economic indicator

is a statistic that provides valuable information about the economy

economic system

The means by which a society (households, businesses, and government) makes decisions about allocating resources to produce products and about distributing those products

Economics

is the study of the production, distribution, and consumption of goods and services

electronic data interchange

process transactions and transmit purchasing documents directly from one IS to another

employed at will

which means that both you and your employer have the right to terminate the employment relationship at any time

entrepreneur

someone who identifies a business opportunity and assumes the risk of creating and running a business to take advantage of it

entrepreneurs

those who take the risks and reap the rewards associated with starting a new business enterprise

Equal Employment Opportunity Commission (EEOC)

enforces a number of federal employment laws

equilibrium price

The point at which the two curves intersect

equity theory

which focuses on our perceptions of how fairly we're treated relative to others

ethical

to know right from wrong and to know when you're practicing one instead of the other

ethical decision

right-versus-wrong" decision—one in which there is a right (ethical) choice and a wrong (unethical or illegal) choice

ethical dilemma

is a morally problematic situation: You have to pick between two or more acceptable but often opposing alternatives that are important to different groups

ethical lapse

When you make a decision that's unmistakably unethical or illegal

evaluations

that rate employee performance according to the predetermined criteria

executive information system

which provides ready access to strategic information that's customized to their needs and presented in a convenient format

executive summary

is a one- to three-page overview of the business plan

expectancy theory

which proposes that employees will work hard to earn rewards that they value and that they consider obtainable

Expense variance

When the actual amount of an expenditure is more than he had budgeted for, he records it as an "unfavorable" variance

Expenses

costs of generating revenues.

Expert systems

are programs that mimic the judgment of experts by following sets of rules that experts would follow

express warranty

is created when a seller affirms that a product meets certain standards of quality, description, performance, or condition

external marketing environment

forces over which marketers have much less control

externalities

costs that don't show up as part of the market price for a product

extranet

is an intranet that's partially available to certain parties outside the organization

factors of production

A business uses resources to produce things, we also call these resources factors of production

fair market value

the price he could get by selling them at present, not the price he paid for them or the price that he could get at some future time

felony

a serious or "inherently evil" crime punishable by imprisonment

fiduciary responsibility

They're responsible for safeguarding the company's assets and handling its funds in a trustworthy manner

Finance

involves planning for, obtaining, and managing a company's funds

Financial Accountant

prepare financial statements to help users, both inside and outside the organization, assess the financial strength of the company

Financial accounting

focuses on preparing external financial reports that are used by outsiders; that is, people who have an interest in the business but are not part of the company's management

Financial Accounting Standards Board

is a private organization that is responsible for establishing financial accounting standards used in the United States

Financial Accounting Standards Board (FASB

To ensure accuracy and consistency in the way financial information is reported, accountants in the United States follow

financial planning

The ongoing process of managing your personal finances in order to meet goals that you've set for yourself or your family.

financial ratio

states the relationship between financial data on a percentage basis

financial transactions

sales, payments, purchases,

firewall

Internet technologies that is controlled by this software program

First-line managers

supervise employees and coordinate their activities to make sure that the work performed throughout the company is consistent with the plans of both top and middle management

Fiscal policy

relies on the government's powers of spending and taxation. Both taxation and government spending can be used to reduce or increase the total supply of money in the economy

Fixed assets

long-term assets used by the firm for more than a year

fixed costs

the total cost doesn't change as the quantity of goods sold changes

fixed-position layout

product stays in one place and the workers (and equipment) go to the product

fixed-rate mortgage

one on which the interest rate remains the same regardless of changes in market interest rates–than with an ARM

flexible manufacturing system

which makes it possible to change equipment setups by reprogramming computer-controlled machines that can be adapted to produce a variety of goods. Such flexibility is particularly valuable to makers of customized products

flexible manufacturing systems (FMS)

computer-controlled equipment can easily be adapted to produce a variety of goods

flexible spending account

allows a specified amount of pretax dollars to be used to pay for qualified expenses, including health care and child care

flextime

set guidelines that allow employees to designate starting and ending times

Form utility

The value to consumers from changing the composition of a product

franchisee

the buyer–you

franchiser

the company that sells the franchise

free market system

The economic system in which most businesses are owned and operated by individuals

full employment

everyone who wants to work has a job

functional organization

groups together people who have comparable skills and perform similar tasks

Gantt chart

named after the designer, Henry Gantt, is an easy-to-use graphical tool that helps operations managers determine the status of projects

General and administrative expenses

salaries of top managers and office support staff; utilities; office supplies; interest expense; fees for accounting, consulting, and legal services; insurance; and rent

Generally Accepted Accounting Principle

To ensure accuracy and consistency in the way financial information is reported

generally accepted accounting principles (GAAP)

To ensure accuracy and consistency in the way financial information is reported, accountants in the United States follow GAAP

Generally accepted accounting principles (GAAP)

Generation X

born between the mid-1960s and the early-1980s

Generation Y

Born between 1976 and 2001

generic branding

a company makes a product and sells it to a retailer who in turn resells it under its own name

Geographic segmentation

dividing a market according to such variables as climate, region, and population density (urban, suburban, small-town, or rural

Geographical division

enables companies that operate in several locations to be responsive to customers at a local level

Goals

are major accomplishments that the company wants to achieve over a long period (say, five years)

goods and services

your local car dealership sells goods (cars) and also provides services (automobile repairs)

goods-producing sector

includes all businesses that produce tangible goods

grievances

the third party studies the situation and arrives at a binding agreement

gross domestic product

the market value of all goods and services produced by the economy in a given year

gross profit

The amount a company earns after paying to produce or buy its products but before deducting operating expenses

gross sales

the total dollar amount of a company's sales

hierarchy-of-needs theory

that we are motivated by the five unmet needs, arranged in the hierarchical order

human resource management (HRM)

which consists of all actions that an organization takes to attract, develop, and retain quality employees

Hygiene factors

Those factors that are not strong contributors to satisfaction but that must be present to meet a worker's expectations and prevent job dissatisfaction

implied warranties

warranties that arise automatically out of transactions

incentive programs

programs designed to reward employees for good performance

income statement

summarizes the firm's revenues and expenses and shows its total profit or loss over a period of time

Income taxes payable

Taxes owed for the current operating period but not yet paid

Income variance

When actual income turns out to be higher than expected or budgeted income

industrial market

buyers who want the product for use in making other product

industry

is a group of related businesses: they do similar things and they compete with each other

inflation

When the overall price level goes up

inflation rate

the percentage change in a price index

infrastructure as a service (IaaS)

Instead of providing users with software, a technology firm offering infrastructure as a service provides hardware, including servers, central processing units, network equipment, and disk space

intangible

patent or trademarked name

Intangible assets

long-term assets with no physical existence

intentional tort

an intentional act that poses harm to the plaintiff

intermediary

a wholesaler or retailer who helps move products from their original source to the end user

intermediate product

Might require further processing before it can be sold to a final consumer

Internet service providers

enable us to use the Internet to communicate with others through e-mail, texting, instant messaging, online conferencing, and so on

interpersonal skills

the ability to get along with and motivate other people

interruption marketing

If you advertise on TV, you're hoping that people will listen, even though you're interrupting them

intranet

is a private network using Internet technologies that's available only to employees

Inventory

Stock of goods being held for production or for sale to customers

inventory control

This task requires that they strike a balance between two threats to productivity: losing production time because they've run out of materials, and wasting money because they're carrying too much inventory

inventory turnover ratio

measures the speed with which inventory moves through the firm and is turned into sales

ISO 14000

family of international standards for environmental management

ISO 9000

family of international standards for quality management

job analysis

identify the tasks, responsibilities, and skills that it entails, as well as the knowledge and abilities needed to perform it

job description

lists the duties and responsibilities of a position

job enlargement

the policy of enhancing a job by adding tasks at similar skill levels

Job enrichment

is the practice of adding tasks that increase both responsibility and opportunity for growth

job redesign

Many companies practice a policy of job redesign to make jobs more interesting and challenging

job rotation

allows employees to rotate from one job to another on a systematic basis, eventually cycling back to their original tasks

job sharing

two people share one full-time position, splitting the salary and benefits of the position as each handles half the job

job specification

which lists the qualifications–skills, knowledge, and abilities–needed to perform the job

journal

a listing of financial transactions in chronological order

just-in-time (JIT) production

the manufacturer arranges for materials to arrive at production facilities just in time to enter the manufacturing process

just-in-time production

companies require suppliers to deliver materials to their facilities just in time for them to go into the production process

Labeling

what you say about the product on your packaging–not only identifies the product but also provides information on the package contents: who made it and where or what risks are associated with it

labor union

an organized group of workers that bargains with employers to improve its members' pay, job security, and working conditions

labor-union density

union membership as a percentage of payrolls

lagging economic indicators

Statistics that report the status of the economy a few months in the past

laissez-faire

policy of minimum governmental interference

laissez-faire leadership style

"hands-off" approach and provide relatively little direction to subordinates

law

which is basically a body of enforceable rules and principles of conduct

layout

how equipment, machinery, and people will be arranged to make the production process as efficient as possible

leader

who can motivate your people to do well

leading economic indicators

ndicators that predict the status of the economy three to twelve months into the future

ledgers

show increases and decreases in specific asset, liability, and owners' equity accounts

legal environment of business

violations of statutes for which the law imposes punishment)

legal monopoly

when a company receives a patent giving it exclusive use of an invented product or process

legal system

the institutions and processes that actually enforce our rules and principles

legally enforceable

if one party fails to do what he or she has promised to do, the other can ask the courts to enforce the agreement or award damages for injury sustained because the contract has been breached

Liabilities

amounts a firm owes to creditors

liquidity

the speed with which assets can be converted to cash

Liquidity ratios

measure the firm's ability to pay its short-term debts as they come due

local area network (LAN)

links computers that are in close proximity—in the same building or office complex

lockout

closing the workplace to workers

Long-term liabilities

due more than one year after the date of the balance sheet

macro environment

the big picture world external to a company over which the business exerts very little if any control

make-to-order strategy

produce low-volume, high-variety goods according to customer specifications

Management

involves planning for, organizing, leading, and controlling a company's resources so that it can achieve its goals

management information system

extracts data from a database to compile reports, such as sales analyses, inventory-level reports, and financial statements, to help managers make routine decisions

manager

making a group of people more effective and efficient with you than they would be without you.

Managerial

companies admit that they need to take responsibility and action, so they look for practical long-term solutions.

Managerial Accountant

prepare information, such as reports on the cost of materials used in the production process, for internal use only

managerial accounting

manufacturer branding

a company sells one or more products under its own brand names

manufacturing resource planning (MRP II)

that goes beyond material planning to help monitor resources in all areas of the company

market

Within this industry, there are several groups of customers, each of which is a market

market segments

groups of potential customers with common characteristics that influence their buying decisions

market share

your portion of total sales

Marketable securities

Temporary investments of excess cash that can readily be converted to cash

Marketing

is the activity, set of institutions, and processes for creating, communicating, delivering, and exchanging offerings that have value for customers, clients, partners, and society at large"

marketing concept

This basic philosophy—satisfying customer needs while meeting organizational goals

marketing mix

implementing strategies for creating, pricing, promoting, and distributing products that satisfy customers

marketing research

the process of collecting and analyzing the data that are relevant to a specific marketing situation

Marketing researchers

gather and analyze relevant data, write reports, and present their findings and recommendations

marketing strategy

Selecting a target market and
Developing your marketing mix—implementing strategies for creating, pricing, promoting, and distributing products that satisfy customers

mass customization

combines the advantages of customized products with those of mass production

mass marketing

the practice of sending out messages to a vast audience of anonymous people

mass production (or make-to-stock strategy)

practice of producing high volumes of identical goods at a cost low enough to price them for large numbers of customers

master production schedule (MPS)

the control process when operations managers decide not only which goods and how many will be produced, but when

material requirements planning (MRP)

relies on a computerized program both to calculate the quantity of materials needed for production and to determine when they should be ordered or made

materials handling

the process of physically moving or carrying goods during production, warehousing, and distribution

matrix structure

employees from various functional areas (product design, manufacturing, finance, marketing, human resources, etc.) form teams to combine their skills in working on a specific project or product

mediation

an impartial third party assesses the situation and makes recommendations for reaching an agreement

middle managers

They report to top management and oversee the activities of first-line managers. They're responsible for developing and implementing activities and allocating the resources needed to achieve the objectives set by top management

misdemeanor

a crime that's not "inherently evil" but that is nevertheless prohibited by society

mission statement

describes the purpose of your organization—the reason for its existence

mixed market economy

with a leaning towards either free market or socialistic principles, rather than being purely one or the other

Monetary policy

is exercised by the Federal Reserve System ("the Fed"), which is empowered to take various actions that decrease or increase the money supply and raise or lower short-term interest rates, making it harder or easier to borrow money

money is "easy"

With lower interest rates, it's cheaper to borrow money, and banks are more willing to lend it

money is "tighter"

more expensive to borrow—demand for goods and services will go down, and so will prices

monopolistic competition

sell differentiated products—products that differ somewhat, or are perceived to differ, even though they serve a similar purpose

monopoly

there's only one seller in the market

Motivation factors

Those factors that are strong contributors to job satisfaction

national unions

that assist with local contract negotiations, organize new locals, negotiate contracts for entire industries, and lobby government bodies on issues of importance to organized labor

Natural monopolies

include public utilities, such as electricity and gas suppliers

net loss

expenses exceed revenues

net profit (or net income)

revenues are more than expenses

net profit margin

called return on sales. It measures the percentage of each sales dollar remaining after all expenses, including taxes, have been deducted

Net sales

amount left after deducting sales discounts and returns and allowances from gross sales

Net working capital

measure a firm's overall liquidity and is calculated by subtracting total current liabilities from total current assets

net worth

(accounting term for your wealth) is the difference between your assets and your liabilities

niche

Within this market segment, you might want to subdivide further

Notes payable

Short-term loans from banks, suppliers, or others that must be repaid within a year

Notes receivable

Amounts owed to the firm by customers or others to whom it lent money

Objectives

are shorter-term performance targets that direct the activities of the organization toward the attainment of a goal

Occupational Health and Safety Administration (OSHA)

which is empowered to set workplace safety and health standards and to ensure that employers take appropriate steps to meet them

odd-even pricing

pricing products a few cents (or dollars) under an even number

off-the-job training

This approach allows them to focus on learning without the distractions that would occur in the office

Oligopoly

Means few sellers

operating expenses

expenses of running the business that are not related directly to producing or buying its products

operational plans

provide detailed action steps to be taken by individuals or groups to implement the tactical plan and, consequently, the strategic plan

operations management (OM)

consists of all the activities involved in transforming a product idea into a finished product, as well as those involved in planning and controlling the systems that produce goods and services

operations manager

The person who designs and oversees the transformation of resources into goods or services

Operations support system

are generally used by managers at lower levels of the organization—those who run day-to-day business operations and make fairly routine decisions

organization chart

a diagram delineating the interrelationships of positions within the organization

organizational structure

an arrangement of positions that's most appropriate for your company at a specific point in time

organizing

allocates resources (people, equipment, and money) to achieve a company's plans

orientation

the way it introduces new employees to the organization and their jobs

outsourcing

having outside vendors

owners

invest money in companies

Owners' equity

Assets – Liabilities

Ownership utility

Value created by transferring a product's ownership

Packaging

the container that holds your product—can influence a consumer's decision to buy a product or pass it up

patent

which grants you "the right to exclude others from making, using, offering for sale, or selling" the invention in the United States for twenty years

penetration pricing

initially charge a low price, both to discourage competition and to grab a sizable share of the market

Perfect competition

when there are many consumers buying a standardized product from numerous small businesses

performance appraisals

discuss and evaluate employees' work performance

permission marketing

Companies that ask for customers' cooperation

Personal selling

one-on-one communication with customers or potential customers

PERT charts

(which stands for Program Evaluation and Review Technique) is designed to diagram the activities required to produce a good, specify the time required to perform each activity in the process, and organize activities in the most efficient sequence

PESTEL

an acronym, with each of the letters representing an aspect of the macro-environment that a business needs to consider in its planning

physical distribution

The responsibility for getting its products to customers

picketing

workers parading with signs outside a factory or an office building (or even a school)

piecework

to pay workers according to the quantity of product that they produce or sell

Place utility

The value to a consumer of having a product available in a convenient location

plaintiff

the party filing the complaint—is usually a government body acting as a representative of society

plan

enables you to take your business concept beyond the idea stage

planned system

the government exerts control over the allocation and distribution of all or some goods and services

planning

managers set goals and determine the best way to achieve them

platform as a service (PaaS)

services that enable users to develop customized web applications

precedent

law resulting from judicial interpretations of statutory and other forms of law

prestige-pricing

setting prices artificially high to foster the impression that they're offering a high-quality product

primary data

information already collected, whether by the company or by others, that pertains to the target market

private accountants

Accountants employed to serve one particular organization

private branding

a company makes a product and sells it to a retailer who in turn resells it under its own name

private law

which deals with private relationships among individuals and organizations. In addition, of course, there are numerous types of law that deal with the relationship of government to private individuals and other private entities, including businesses

private property rights

An aspect of free market system where business owners can expect to own their land, buildings, machines, etc., and keep the majority of their profits, except for taxes

privatization

When businesses previously owned by the government move to private ownership

Process control

refers to the application of technology to monitor and control physical processes

process division

If goods move through several steps during production, a company might opt for a process division structure

process layout

groups together workers or departments that perform similar tasks

product

is something that can be marketed to customers because it provides them with a benefit and satisfies a need

product concept

describes what the product might look like and how it might work

product development process

series of activities by which a product idea is transformed into a final product

Product division

means that a company is structured according to its product lines. General Motors, for example, has four product-based divisions: Buick, Cadillac, Chevrolet, and GMC

product layout

high-volume goods are produced efficiently by people, equipment, or departments arranged in an assembly line—that is, a series of workstations at which already-made parts are assembled

product liability

a claim of injury suffered because of a defective product

product life cycle

a new product is introduced to the market. With any success at all, it begins to grow, attracting more buyers. At some point, the market stabilizes, and the product becomes mature. Eventually, however, its appeal diminishes, and it's overtaken by competing brands or substitute products. Sales decline, and it's ultimately taken off the market

Profit

represents the funds an enterprise receives in exchange for its goods or services

profit margin

the amount you earn on each product

profit-sharing plan

which relies on a predetermined formula to distribute a share of the company's profits to eligible employees

Profitability ratios

measure how well the firm is using its resources to generate profit and how efficiently it is being managed

project team

when companies assign representatives from various functional areas who work together

promotion mix

the means by which you communicate with customers—may include advertising, personal selling, sales promotion, and publicity

prototype

is a physical model of the product

Psychographic segmentation

classifies consumers on the basis of individual lifestyles as they're reflected in people's interests, activities, attitudes, and values

public accountants

Independent accountants who serve organizations and individuals on a fee basis

public law

Criminal law, which we've already introduced, prohibits and punishes wrongful conduct.
Constitutional law concerns the laws and basic legal principles set forth by the U.S. Constitution.
Administrative law refers to statutes and regulations related to the activities of certain legal bodies known as administrative agencies. We'll have more to say about administrative agencies and administrative law later in the chap

public relations

effort to garner favorable publicity for the company and their products

publicity

getting your company or your product mentioned in a newspaper or on TV

punitive damages

intended to deter similar injurious conduct in the future

purchasing

The process of acquiring the materials and services to be used in production

quality

the characteristics of a product or service that bear on its ability to satisfy stated or implied needs

quality circles

employees who perform similar jobs work as teams, to identify quality, efficiency, and other work-related problems, to propose solutions, and to work with management in implementing their recommendations.

ramp-up stage

Products turned out during this phase are carefully inspected for residual flaws

Ratio analysis

calculating and interpreting financial ratios using data taken from the firm's financial statements in order to assess its condition and performance

recession

slowdown in economic activity

recovery

the economy starts growing again

Recruiting

is the process of identifying suitable candidates and encouraging them to apply for openings in the organization

reporting relationships

patterns of formal communication

Resources

inputs used to produce outputs

responsibility

the duty to perform a task

restructuring

altering existing organizational structures to become more competitive under conditions that have changed

résumé

a document that provides a summary of educational achievements and relevant job experience

Retailers

buy goods from producers and sell them to consumers, whether in stores, by phone, through direct mailings, or over the Internet

Retained earnings

amounts left over from profitable operations since the firm's beginning

return on equity (ROE)

It measures the return that owners receive on their investment in the firm, a major reason for investing in a company's stock

Revenue

represents the funds an enterprise receives in exchange for its goods or services

Revenues

dollar amount of sales plus any other income received from sources such as interest, dividends, and rents

risk

means that the outcome of the entrepreneurial venture can't be know

rule of law

the principle by which government legitimately exercises its authority only in accordance with publicly declared laws that are adopted and enforced according to established procedure

salary

you're earning a salary regardless of the number of hours required to do it

Sales discounts

price reductions given to customers that pay their bills early

sales promotion

a company provides an incentive for a potential customer to buy something

Sarbanes-Oxley Act

was designed to address the investing public's lack of trust in corporate America. It redefines the public corporation–auditor relationship and restricts the types of services auditors can provide to clients

scope of employment

an employee's actions fall within the scope of his employment under two conditions: (1) if they are performed in order to fulfill contractual duties owed to his employer and (2) if the employer is (or could be) in some control, directly or indirectly, over the employee's actions

search engine

is a software program that scans Web pages containing specified keywords and provides a list of documents containing them

secondary data

information already collected, whether by the company or by others, that pertains to the target market

sectors of the economy

labor, manufacturing, and housing

selection

process entails gathering information on candidates, evaluating their qualifications, and choosing the right one

Selling expenses

nclude salaries and commissions paid to salespeople and the costs of advertising, sales supplies, delivery, and other items that can be linked to sales activity, such as insurance, telephone and other utilities, and postage

Service Corps of Retired Executives (SCORE)

Under the SCORE program, a businessperson needing advice is matched with someone on a team of retired executives who work as volunteers

service-producing sector

includes all businesses that provide services but don't make tangible goods

sexual harassment

occurs when an employee makes "unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature" to another employee who doesn't welcome the advances

shop stewards

to serve as go-betweens in disputes between workers and supervisors

shortage

When producers do not produce enough to satisfy demand

skimming pricing

start off with the highest price that keenly interested customers would pay

small business

is one that is independently owned and operated, exerts little influence in its industry, and (with a few exceptions) has fewer than five hundred employees

Small Business Administration (SBA)

a government agency that provides assistance to small businesses

Small Business Development Center (SBDC)

assists current and prospective small business owners with business problems and provides free training and technical information on all aspects of small business management

social media marketing

practice of including social media as part of a company's marketing program

socialism

industries that provide essential services, such as utilities, banking, and health care, may be government owned

software as a service (SaaS)

This type of service gives companies access to a large assortment of software packages without having to invest in hardware or install and maintain software on its own computers

span of control

which measures the number of people reporting to a particular manager

specialization

This twofold process of organizing activities into clusters of related tasks that can be handled by certain individuals or groups

stakeholders

anyone who, like owners, employees, customers, and the communities in which it does business, has a "stake" or interest in it

statement of cash flows

summary of the money flowing into and out of a firm, is the financial statement used to assess the sources and uses of cash during a certain period, typically one year

statistical process control

This technique monitors production quality by testing a sample of output to see whether goods in process are being made according to predetermined specifications

stock-option plans

gives employees the right to buy a specific number of shares of company stock at a set price on a specified date

storage warehouse

keep unsold products

Strategic

acting responsibly

strategic human resource planning

the process of developing a plan for satisfying an organization's human resources (HR) needs

strategic planning

which is the process of establishing an overall course of action

strict liability torts

involve actions that are inherently dangerous and for which a party may be liable no matter how carefully he or she (or it) performs them

strikebreakers

nonunion workers who are willing to cross picket lines to replace strikers

subprime mortgage loan

are made to borrowers who don't qualify for market-set interest rates because of one or more risk factors—income level, employment status, credit history, ability to make only a very low down payment

Supply

quantity of a product that sellers are willing to sell at various prices

supply chain

the flow that begins with the purchase of raw materials and culminates in the sale of the product to end users

supply chain management (SCM)

The process of integrating all the activities in the supply chain

surplus

When sellers would likely supply more of a product than buyers need

sustainability

the principle of providing products today that don't compromise the ability of future generations to meet their needs

SWOT analysis

analyzing an organization's Strengths, Weaknesses, Opportunities, and Threats

tactical plans

The overall plan is broken down into more manageable, shorter-term components

tangible

cash, equipment, and buildings

target costing

how much consumers are willing to pay for a product. You then subtract the retailer's profit. From this price—the selling price to the retailer—you subtract an amount to cover your profit

target market

consumers who should be particularly interested in your product, who would have access to it, and who have the means to buy it

technical skills

the ones you need to perform specific tasks

Telecommuting

means that you regularly work from home (or from some other nonwork location)

termination

getting fired

The Buying Process

need recognition, information search, evaluation, purchase, and postpurchase evaluation

The Demand Curve

represents the daily price and quantity of apples sold by farmers at a local market

The Supply Curve

graphic representation of the correlation between the cost of a good or service and the quantity supplied for a given period

Time utility

The value to a consumer of having a good or a service available at a convenient time

time value of money

the principle whereby a dollar received in the present is worth more than a dollar received in the future

time-management skills

process of organizing and planning how to divide your time between specific activities

Top managers

responsible for the health and performance of the organization. They set the objectives, or performance targets, designed to direct all the activities that must be performed if the company is going to fulfill its mission

tort

is a civil wrong–an injury done to someone's person or property

Total quality management (TQM)

quality assurance, includes all the steps that a company takes to ensure that its goods or services are of sufficiently high quality to meet customers' needs

trademark

registering the name with the U.S. Patent and Trademark Office

Trademarks

registered names that can be sold or licensed to others

transaction processing system

which receives input data and converts them into output–information–intended for various users

transactional leaders

exercise authority based on their rank in the organization

transactions

events that affect a business

transformational leaders

mentor and develop subordinates, providing them with challenging opportunities, working one-on-one to help them meet their professional and personal needs, and encouraging people to approach problems from new perspectives

trial balance

The ledger totals for each account are summarized in a trial balance, which is used to confirm the accuracy of the figures

turnover

the permanent separation of an employee from a company

U3

the most commonly used measurement of unemployment

U6

provides a broader picture of unemployment in the United States

unemployment rate

the percentage of the labor force that's unemployed and actively seeking work

Uniform Commercial Code (UCC)

a system of statutes designed to make commercial transactions consistent in all fifty states

upward feedback

requires only the manager's subordinates to provide feedback

value chain

the entire range of activities involved in delivering value to customers

variable costs

These are costs that vary, in total, as the quantity of goods sold changes

virtual company

a Web site for marketing the books, software, and supplies provided by its partners, without taking physical possession of them

wages

you're paid according to the number of hours you work

warranty

is a guarantee that a product meets certain standards of performance

Web server

A computer that retrieves Web pages

wholesalers

(sometimes called distributors): intermediaries who buy goods from suppliers and sell them to businesses that will either resell or use them

wide area network (WAN)

covers a relatively large geographical area, its computers are connected by telephone lines, wireless technology, or even satellite

World Wide Web

The Web is a subsystem of computers that can be accessed on the Internet using a special protocol, or language, known as hypertext transfer protocol (HTTP)
