Navigating the Pitfalls of Implicit Bias: A Cognitive Science Primer for Civil Litigators

Abstract. Cognitive science has revealed that past experiences and prior assumptions, even those of which we are not conscious, greatly influence how humans perceive the world. Emerging research has demonstrated that attorneys and judges, like everyone else, are the products of their gender, ethnicity, race, and socioeconomic status. As a consequence, legal decision-making is susceptible to the subtle influences of implicit bias. Effective and ethical client advocacy requires an attorney to understand how her own implicit biases will affect her interactions with clients. An attorney should also acknowledge that implicit biases may affect a judge's interpretation of her client's story and legal arguments. This Article explains how insights from cognitive science should inform an attorney's representation of clients in civil litigation.

Author. Nicole Negowetti is an Assistant Professor of Law at Valparaiso University Law School. She teaches Torts, Food Law & Policy, Pretrial Litigation Drafting, and Legal Writing. Professor Negowetti's research interests include judicial decision-making, law and cognitive science, legal ethics, and food law. Prior to joining the Valparaiso faculty, Professor Negowetti practiced commercial and employment litigation at Sheehan Phinney Bass & Green PA in Manchester, N.H. After graduating *magna cum laude* from the University of New Hampshire School of Law, Professor Negowetti clerked for the Honorable Carol Ann Conboy of the New Hampshire Supreme Court.

I. INTRODUCTION

Most lawyers mistakenly view reason and logic as both the primary motivator of their behavior and the primary tool to change the thinking and behavior of others. However, emerging cognitive science research has revealed that our seemingly neutral, logical, and reasoned judgments are actually influenced by unconscious frameworks of thinking about the world that are triggered by our autonomic nervous system.¹ It is now generally understood that the impact of past experiences and prior assumptions, even those of which we are not conscious, can have great power in directing all humans' present perceptions, judgments, feelings, and behaviors.² Underlying our thinking is a complex system of unconscious judgments of people, places, and situations, of which we are unaware.³

Humans create blueprints based on prior experiences to evaluate new situations, people, and themselves.⁴ We rely on mental shortcuts, which psychologists often refer to as "heuristics" or "schemas," to make complex decisions.⁵ As with other schemas, stereotypes can facilitate the rapid categorization of people and allow us to "save cognitive resources."⁶ However, reliance on these cognitive shortcuts can also lead to erroneous and biased judgments.⁷ While "explicit" biases are attitudes and

stereotypes that are consciously accessible through introspection, “implicit” biases are not consciously accessible.⁸ These biases are more likely to emerge during stressful situations or when someone must make a decision under time constraints.⁹ Regardless of conscious and explicit desires for unbiased decision-making, implicit biases “can produce behavior that diverges from a person’s avowed or endorsed beliefs or principles.”¹⁰ Furthermore, studies have shown that when a person believes himself to be objective, he is more susceptible to biases.¹¹

In light of this research, “[w]hat, if anything, should we do about implicit bias in the courtroom? In other words, how concerned should we be that judges, advocates, litigants, and jurors come to the table with implicit biases that influence how they interpret evidence, understand facts, parse legal principles, and make judgment calls?”¹² As lawyers, our ethical obligations to our clients and the justice system require us to be very concerned about implicit bias in our courtrooms. These issues have not only captured the attention of academics and scientists, but also the American Bar Association, the National Center for State Courts, and the Institute for the Advancement of the American Legal System have recognized that implicit biases present a serious problem for the administration of justice in the legal system, and they have thus implemented initiatives to address the issue.¹³ Our adversarial system

strives to be fair, predictable, and uniform.¹⁴ The rule of law would be compromised if case outcomes varied because of a judge's social status or because a litigant is from a minority group.¹⁵

Attorneys¹⁶ and judges¹⁷ are not immune from these influences, although most would consider themselves to be objective and fair-minded.¹⁸ A federal district court judge explained how his self-confidence in colorblindness was shaken after he received the results of the Implicit Association Test (IAT) that measures implicit racial bias:

I was eager to take the test. I knew I would “pass” with flying colors. I didn't.

. . . After much research, I ultimately realized that the problem of implicit bias is a little recognized and even less addressed flaw in our legal system I have discovered that we unconsciously act on implicit biases even though we abhor them when they come to our attention. Implicit biases cause subtle actions, . . . [b]ut they are also powerful and pervasive enough to affect decisions about whom we employ, whom we leave on juries, and whom we believe. Jurors, lawyers, and judges do not leave behind their implicit biases when they walk through the courthouse doors.¹⁹

Recent legal scholarship—applying cognitive science research to address the impact of implicit bias on decision-making²⁰—has focused on how judges can mitigate the effects of their own implicit biases.²¹ These solutions call for decisionmakers to understand that they are predisposed to making irrational, biased decisions.²² Less attention, however, has been given to the role of attorneys in recognizing their own predispositions to implicit bias and how cognitive science research should inform their advocacy.²³ The goal of this Article is to make a modest contribution to the implicit bias legal scholarship by identifying some pitfalls of implicit biases in client representation and outlining several strategies for effective advocacy in light of cognitive science research.

An attorney must first understand how implicit biases affect her own thinking and thus, her relationship with her client. In the following section, this Article presents a brief overview of some of the relevant cognitive science research to frame the discussion of how attorneys' decisions are influenced by implicit biases. It explains why attorneys must be vigilant about relying on their assumptions, and proposes some practical solutions for mitigating the effects of implicit biases in the representation of clients. Section III discusses how knowledge of implicit biases and their effect on judicial decision-making should inform an attorney's case strategies. In other words, how can attorneys present their cases in ways that will help judges avoid deferring to their implicit biases? Although attorneys may appeal to a judge's biases and predilections when it is favorable to their client's positions, this Article is concerned with the pejorative effects of implicit biases in the courtroom, and takes the position

REV. 1124, 1169 (2012) (offering strategies to mitigate the effects of implicit bias); Nicole Negowetti, *Judicial Decisionmaking, Empathy, and the Limits of Perception*, 47 AKRON L. REV. (forthcoming 2014), available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2164325 (arguing that judicial empathy is a prerequisite for moving judges "away from their own biased vantage point").

22. Cf. Jerry Kang et al., *Implicit Bias in the Courtroom*, 59 UCLA L. REV. 1124, 1172 (2012) (urging judges and jurors to doubt their own objectivity in order to reduce the effects of their implicit biases).

23. See Gary Blasi, *Advocacy Against the Stereotype: Lessons from Cognitive Social Psychology*, 49 UCLA L. REV. 1241, 1272 (2002) ("[T]he main purpose of this Article . . . is to inform advocacy practice with current science [regarding stereotypes and prejudice] and to encourage other legal scholars to attend to the many implications of current scientific research.").

that legal judgments tainted by implicit biases have detrimental effects on the administration of justice. “Because unconscious bias has the potential to undermine the fairness of legal proceedings, efforts to minimize the effects of unconscious bias within the participants to such proceedings is a desirable goal toward furthering fundamental fairness.”²⁴

II. IMPLICIT BIASES AND THEIR INFLUENCE ON ATTORNEYS’ DECISION-MAKING

A. *Brief Overview of Cognitive Science Research*

Although lawyers may consider reason and logic as the driving force behind their behavior, judgments are often based on implicit biases, which act “as a lens through which we view the world. . . . [They] automatically filter[] how we take in and act on information.”²⁵ Scientists who study human reasoning agree that it occurs via a “dual process” cognitive system.²⁶ “System I is rapid, intuitive, and error-prone; System II is more deliberative, calculative, slower, and is often more likely to be error-free.”²⁷ System I mental processes affect social judgments such as whom we favor,²⁸ but they operate without conscious awareness or intentional control.²⁹ Implicit biases are automatic, unconscious mental processes based on implicit attitudes or implicit stereotypes that are formed by one’s life experiences and lurk beneath the surface of the conscious.³⁰ System I processes elucidate our implicit biases.³¹ Implicit biases are rooted in the basic way in which humans understand the complex flood of information

from the world.³² Cognitive structures, called schemas,³³ are “mental blueprints” that allow an individual to understand new people, circumstances, objects, and their relationships to each other, by using an existing framework of stored knowledge based on prior experiences.³⁴

Schemas are cognitive shortcuts allowing us to comprehend “new situations and ideas without having to interpret and construct a diagram of inferences and relationships for the first time.”³⁵ When we see or think of a concept, the schema is activated unconsciously.³⁶ The schema brings to mind other information that we associate with the original concept.³⁷ Put another way, these mental blueprints sort “our experiences and acquired knowledge” and organize them into categories that function like containers.³⁸ “[S]chemas influence every feature of human cognition, affecting not only what information receives attention, but also how that information is categorized, what inferences are drawn from it, and what is or is not remembered.”³⁹ We automatically infer character from behavior, “experience affective reactions to a variety of objects,” and behave in

32. See *id.* (stating that implicit bias is “largely automatic” and that because it occurs so rapidly, often there is no time for consideration or correction).

33. Jerry Kang, *Trojan Horses of Race*, 118 HARV. L. REV. 1489, 1498 (2005) (defining a schema as a “cognitive structure that represents knowledge about a concept or type of stimulus, including its attributes and the relations among those attributes” (quoting SUSAN T. FISKE & SHELLEY E. TAYLOR, *SOCIAL COGNITION* 98 (2d ed. 1991))).

36. See ZIVA KUNDA, *SOCIAL COGNITION: MAKING SENSE OF PEOPLE* 303 (1999) (“[A] wide range of our thoughts, feelings, and behaviors can be triggered automatically by particular conflagrations of cues, without any intention or awareness on our part.”).

37. See Russell K. Robinson, *Perceptual Segregation*, 108 COLUM. L. REV. 1093, 1119 (2008) (providing an example of a schema that “fancy restaurants in suburbs are likely to be a site of discrimination against black customers,” which would be “informed by specific knowledge of the long history of anti[-]black discrimination in restaurants” (footnote omitted)); Richard K. Sherwin, *The Narrative Construction of Legal Reality*, 18 VT. L. REV. 681, 700 (1994) (“Consider, for example, the schema that applies to the following situation: *John went to a party. The next morning he woke up with a headache.* Now it is common knowledge that people drink too much at parties and wake up the next day feeling hungover. The situation described leaves out the explanation. But we have no trouble supplying it. There is a schema in our head that quickly comes to mind to provide that explanation.”).

38. Linda L. Berger, *How Embedded Knowledge Structures Affect Judicial Decision Making: A Rhetorical Analysis of Metaphor, Narrative, and Imagination in Child Custody Disputes*, 18 S. CAL. INTERDISC. L.J. 259, 265 (2009).

39. Ronald Chen & Jon Hanson, *Categorically Biased: The Influence of Knowledge Structures on Law and Legal Theory*, 77 S. CAL. L. REV. 1103, 1131 (2004).

accordance with traits prompted by recent experiences.⁴⁰ For example, if an individual is introduced as a professor, a “professor schema” may be activated and we might associate this person with wisdom, authority, or past experiences with a professor. In this way, we can understand how stereotypes are formed—they are developed from our experiences and the associations our minds make between concepts, such as social groups, and certain attributes.⁴¹

People create different event schemas, or scripts, which help them to understand how a process, or event, occurs.⁴² Because individual experiences create schemas, the way each person perceives a particular situation may be different.⁴³ When an individual’s cognitive mind unconsciously selects a script to interpret a situation, that individual’s judgments “will be based on the assumptions derived from” the social knowledge embedded in the script, rather than on the unique characteristics of the particular situation.⁴⁴ Scripts not only function as cognitive shortcuts that provide meaning to a set of events, but they also reinforce traditional cultural and societal values.⁴⁵ For example, in a study

REV. 997, 1006 (2006) (“In discrimination cases, as elsewhere, judges are constantly using ‘intuitive’ or ‘common sense’ psychological theories in the construction and justification of legal doctrines and in their application to specific legal disputes.”).

45. See, e.g., Ronald Chen & Jon Hanson, *Categorically Biased: The Influence of Knowledge Structures on Law and Legal Theory*, 77 S. CAL. L. REV. 1103, 1132 (2004) (“[O]ne of the key findings of social cognition literature is that the absence of clear concepts and categories increases the

conducted by the Heldrich Center for Workplace Development at Rutgers University, “[h]alf of the African-American respondents said that ‘African-Americans are treated unfairly in the workplace,’ while just 10% of white respondents agreed with that statement. Thirteen percent of nonblack people of color shared this perception.”⁴⁶ There is also evidence from polls, while mixed, suggesting that men and women perceive discrimination differently.⁴⁷ For example, in a recent Pew Research survey, 75% of Millennial women said that more changes are necessary to attain gender parity in the workplace; only 57% of Millennial men agreed.⁴⁸

Although relying on schemas, such as stereotypes, is cognitively efficient, “the price we pay for such efficiency is bias in our perceptions and judgments.”⁴⁹ It is extremely difficult for the individual to deviate from what the script has taught her about the world because the outcome suggested by the script will seem to be a natural result of precedent events.⁵⁰ Stereotypes are resistant to change because perceptions become impervious to new information.⁵¹ People give more consideration to information that is consonant with a stereotype and give less credence to information that is stereotype-inconsistent; they not only seek out information that is consistent with the stereotype, but also better

cognitive energies required to process information and thus deters individuals from learning new ideas or processing new information.”).

remember stereotype-consistent information.⁵² “[W]e see what we expect to see. Like well-accepted theories that guide our interpretation of data, schemas incline us to interpret data consistent with our biases.”⁵³

In the 1990s, Mahzarin Banaji, Anthony Greenwald, and their colleagues developed the Implicit Associations Test (IAT) and have since been using the test to conduct social cognition research on implicit racial bias.⁵⁴ The IAT pairs an attitude object (such as a racial group) with an evaluative dimension (good or bad) and tests how response accuracy and speed indicate implicit and automatic attitudes and stereotypes.⁵⁵ For example, in one task, participants are told to quickly pair together pictures of African-American faces with positive words from the evaluative dimension.⁵⁶ The strength of the attitude or stereotype is determined by the speed at which the participant pairs the words.⁵⁷ The results from hundreds of thousands of IATs taken on the IAT project’s website expose systematic implicit racial biases.⁵⁸

There is a trove of evidence suggesting that implicit biases, measured by the IAT, can affect interaction with others⁵⁹ and can predict discriminatory behavior in the real world.⁶⁰ For example, an experiment

featuring doctors making patient assessments provides an example of discriminatory behavior predicted by implicit bias measures.⁶¹ “Physicians with stronger implicit anti-black attitudes and stereotypes” were not as likely to prescribe a medical procedure for African-Americans compared to white Americans with the same medical profiles.⁶² In addition, implicit measures are relatively better predictors of “spontaneous behaviors such as eye contact, seating distance, and other such actions that communicate social warmth or discomfort.”⁶³ When interacting with a member of a stigmatized group, a person with a more resilient adverse attitude toward that particular group tends to display more negative behaviors, such as blinking, and fewer positive behaviors, like smiling.⁶⁴ Significantly, implicit biases cause a person to interpret identical actions by people of various racial and ethnic groups differently, depending on one’s own group membership.⁶⁵ For example, people with higher implicit bias towards

(2009), available at http://www.americanbar.org/content/dam/aba/migrated/sections/criminaljustice/PublicDocuments/unit_3_kang.authcheckdam.pdf (“There is increasing evidence that implicit biases, as measured by the IAT, do predict behavior in the real world—in ways that can have real effects on real lives.”); Kristin A. Rudman & Matthew R. Lee, *Implicit and Explicit Consequences of Exposure to Violent and Misogynous Rap Music*, 5 GROUP PROCESSES & INTERGROUP REL. 133, 134 (2002) (reviewing research that shows implicit bias predicts more negative evaluations of ambiguous actions by an African-American).

certain groups judged ambiguous actions and facial expressions by members of that group more negatively.⁶⁶ These manifestations of implicit bias, even among people who strive to be impartial, can significantly impact an attorney's ability to effectively represent clients.⁶⁷

B. *Reducing the Effects of Implicit Bias in Client Representation*

Cognitive science teaches us that our own experience is the unconscious starting point for decision-making and provides a lens through which we understand others.⁶⁸ Although reliance on ingrained schemas is difficult to overcome, implicit biases caused by categories and schemas may be mitigated, or even eliminated,⁶⁹ by first recognizing that race, gender, sexual orientation, and other social categories may be influencing decision-making; in doing so we rely “less mindlessly on a given schema and scrutinize[] more thoroughly the available data.”⁷⁰ Research shows that “[t]he path from implicit bias to negative behavior does not appear immutable.”⁷¹ Awareness of implicit biases and motivation to act in a non-prejudiced manner are critical to mitigating the effects of implicit bias on behavior.⁷²

“Current models of prejudice and stereotype reduction argue that prejudice-free responses require perceivers to be aware of their biases; to be motivated to change their responses because of personal values, feelings of guilt, compunction, or self-insight; and to possess cognitive resources necessary to develop and practice correction strategies.”⁷³ Experiments

73. Nilanjana Dasgupta & Anthony Greenwald, *On the Malleability of Automatic Attitudes:*

conducted by Irene Blair and Mahzarin Banaji revealed that, while stereotype activation is an automatic process, people can control or eliminate the effect of stereotypes on their judgments if they have the intention to do so and their cognitive resources are not over-constrained.⁷⁴ Reliance on implicit biases is thus mitigated through creative analysis,⁷⁵ which includes the “creation of new categories, openness to new information, and awareness of more than one perspective.”⁷⁶

A growing body of research provides evidence that perspective-taking, or imagining oneself in the shoes of someone from a different social or ethnic group, is a cognitive strategy that can reduce stereotyping.⁷⁷ To successfully perform this “particular feat of mental gymnastics,” a person must actively consider another person’s mental state and then try to experience or infer the other person’s perceptions.⁷⁸ Recent experiments using various interventions to make participants engage in more perspective-taking have demonstrated that actively contemplating others’ psychological experiences weakens the “automatic expression of racial biases.”⁷⁹ For example, in one experiment, before viewing a five-minute video of a black man being treated worse than an identically situated white man, participants were asked to imagine “what they might be thinking, feeling, and experiencing if they were Glen [the black man], looking at the

world through his eyes and walking in his shoes as he goes through the various activities depicted in the documentary.”⁸⁰ The control group was told to “remain objective and emotionally detached.”⁸¹ In other variations, requiring participants to write an essay imagining a day in the life of a young black male triggered perspective-taking.⁸² These perspective-taking activities substantially decreased implicit bias as measured by the IAT and behavioral changes.⁸³ For example, the researchers found that those in the perspective-taking condition chose to sit closer to a black interviewer,⁸⁴ and black experimenters rated their interaction with white participants put in the perspective-taking condition more positively.⁸⁵

As discussed below, understanding how judgments are susceptible to the influence of implicit bias and being motivated to control the effects of biases are critical to effective and ethical client representation.

C. *Advocacy and Decision-making: Understanding the Impact of Implicit Bias*

An attorney has ethical obligations as “a representative of clients, an officer of the legal system and a public citizen having special responsibility for the quality of justice.”⁸⁶ As one who is obligated to “seek improvement of the law, access to the legal system, the administration of justice and the quality of service rendered by the legal profession,”⁸⁷ an attorney should be concerned about the influence of implicit biases on her

own judgment and in legal decision-making.⁸⁸ As the ABA's Task Force on Implicit Bias has stated, "[U]nderstanding implicit bias and ways to debias one's approach to law-related issues and decisions is critical to a fair and representative perception and reality of access to justice and equity."⁸⁹ The Model Rules of Professional Conduct prohibit attorneys from exhibiting bias or prejudice "based upon race, sex, religion, national origin, disability, age, sexual orientation or socioeconomic status, . . . when such actions are prejudicial to the administration of justice."⁹⁰ Thus, understanding one's own implicit biases is also critical for ethical and effective client representation.⁹¹ To do so requires the attorney to explore and acknowledge her own implicit biases resulting from cultural and societal influences, which may manifest as unconscious racism, sexism, ageism, or homophobia.⁹²

These implicit biases can influence an attorney's interactions with a client from the first meeting and interview.⁹³ As experienced attorneys

REV. 755, 769 (2004) (noting the potential for implicit bias to negatively affect the attorney-client relationship, and urging lawyers to acknowledge those biases in order to work toward overcoming them); Paul R. Tremblay, *Interviewing and Counseling Across Cultures: Heuristics and Biases*, 9 CLINICAL L. REV. 373, 415–16 (2002) (calling for lawyers to "confront their own cultural identity, including the biases and prejudices that accompany that identity").

93. See Robert Dinerstein et al., *Connection, Capacity and Morality in Lawyer-Client Relationships: Dialogues and Commentary*, 10 CLINICAL L. REV. 755, 769 (2004) ("You may feel that you could never possibly understand your client because the two of you differ so much in terms of gender, race, class, culture, religion, sexual orientation, or citizenship status or other factors."); Paul R. Tremblay, *Interviewing and Counseling Across Cultures: Heuristics and Biases*, 9 CLINICAL L. REV. 373, 408 (2002) (describing how implicit biases can be detrimental to effective representation of

understand, establishing rapport and gaining trust are critical to effective client representation.⁹⁴ A lawyer must gain the client's trust and confidence to understand the client's goals and objectives.⁹⁵ Psychological research demonstrates that people usually remember and reveal more information when they feel at ease, and they may be more willing to accept professional advice when they trust their advisor.⁹⁶ Certain behaviors, such as leaning forward when speaking to a person, not crossing one's arms, smiling, and nodding have been shown to help establish rapport.⁹⁷ However, implicit biases can impede an attorney's ability to establish rapport because an attorney who harbors implicit biases about a particular group may exhibit negative behaviors, such as unevenness in eye contact, leaning back, or looking down while taking notes.⁹⁸ When interviewing a client who is a member of a stigmatized group, an attorney unaware of her implicit biases and their effects could unconsciously send signals of distrust or disinterest to the client with her tone of voice, demeanor, eye contact, facial expressions, and body language.⁹⁹

Attorneys can establish rapport during client interviews by allowing clients to describe their situation in their own words without interruptions, engaging in "active listening," and showing empathy by acknowledging the

clients); cf. Kristin A. Lane, Jerry Kang & Mahzarin R. Banaji, *Implicit Social Cognition and Law*, 3 ANN. REV. L. & SOC. SCI. 427, 442 (2007) (analyzing court opinions that recognize "implicit bias may affect the perceptions of participants in the legal system").

client's feelings.¹⁰⁰ Because a client's background and facts may be completely different from any situation an attorney has experienced personally, it is important for the attorney to listen attentively to absorb and appreciate the client's specific circumstances, feelings, and goals.¹⁰¹ As the research described in the previous section suggests, perspective-taking can mitigate the effects of implicit bias.¹⁰² Effective lawyers already understand the importance of perspective-taking when representing clients.¹⁰³ Professor Menkel-Meadow emphasizes that "lawyers need to learn to experience 'the other' from the values that the *other* holds, *not those of the lawyer*—this is the challenge of most lawyer–client relations and lawyer–opposing side relations."¹⁰⁴ Professor Grose has likewise stated, "Being a lawyer is about representing people: asking questions that elicit stories that we can hear and understand and retell. To be able to ask those questions and hear and retell those stories, we must learn to understand human motivation that is different from our own."¹⁰⁵ To understand the experiences, behaviors, and feelings of others as they experience them requires lawyers to put aside their own biases, prejudices, and points of view.¹⁰⁶

Attorneys have a duty to "act with reasonable diligence."¹⁰⁷ This means that a lawyer must "act with commitment and dedication to the interests of the client and with zeal in advocacy upon the client's behalf."¹⁰⁸ In order to represent a client's interest diligently, an attorney must first understand the client's goals and motives.¹⁰⁹ Implicit biases

may interfere with an attorney's ability to comprehend and represent a client's story.¹¹⁰ Attorneys may be implicitly biased by the appearance of their clients, their race, religion, or age, which could lead to incorrect presumptions and judgments.¹¹¹ For example, an attorney may assume that an untidy woman is an unfit parent, or that a disabled person should be identified as a victim.¹¹² Assumptions and implicit biases may prevent an attorney from learning all information potentially advantageous to understanding her client's goals and experiences.¹¹³ These biases will operate to categorize clients and their cases based on experiences with other clients or assumptions about them.¹¹⁴ When interviewing a client, an attorney may be inclined to ask narrowly tailored questions that confirm, rather than challenge, those assumptions.¹¹⁵ Recognizing the tendency for implicit biases to affect one's judgments about people can help an attorney make efforts to ask questions that will take him beyond these stereotypes.¹¹⁶

Ignoring the influence of implicit bias will lead an attorney to risk misunderstanding her clients.¹¹⁷ This misunderstanding may cause frustration ("My client just isn't making any sense!"),¹¹⁸ and perhaps more significantly, failure to achieve the client's objectives.¹¹⁹ Our assumptions and implicit biases about who people are, their behavior, and their needs, among other characteristics, can impair our ability to understand the actual

Insights for Interviewing and Counseling Clients, 23 OHIO ST. J. ON DISP. RESOL. 436, 497 (2008) ("They may feel a wide variety of emotions relating to their situation—including anger, guilt, embarrassment, or fear—and may be interested in pursuing a wide variety of goals.").

person before us.¹²⁰ Professor Grose has asserted that attorneys must “engage in critical reflection” to recognize the assumptions through which we filter all information, such as how we define and classify individuals who seek out our legal advice.¹²¹ Reflecting upon the influence of implicit biases will lead an attorney to question why connecting with or understanding the client is difficult.¹²² Understanding the role of implicit biases in coloring perceptions can help an attorney appreciate a client’s story that appears to make little sense or a client’s decision to pursue what appears to be an ill-conceived strategy, which “might be perfectly reasonable with another’s lens and another’s bundle of preferences and values.”¹²³ Additionally, recognizing the distorting effects of implicit biases on another person’s stories and experiences can help an attorney be less judgmental about her clients’ values and decisions.¹²⁴

Lawyering also requires the exercise of judgment regarding a client’s available choices.¹²⁵ According to Model Rule 2.1, “[i]n representing a client, a lawyer shall exercise independent professional judgment and render candid advice. In rendering advice, a lawyer may refer not only to law but also to other considerations such as moral, economic, social[,] and political factors that may be relevant to the client’s situation.”¹²⁶ An attorney’s implicit biases and other schemas will affect how she understands her client and may determine the advice she provides to the client.¹²⁷ For example, schemas may cause the attorney to make incorrect

assumptions about the clients' goals.¹²⁸ Although an attorney's primary objective in resolving a dispute may be to maximize his monetary recovery, his client may be more concerned with repairing a relationship, obtaining an apology, or dealing with the emotions, such as guilt, embarrassment, or fear, triggered by the situation.¹²⁹ Understanding how these initial schemas can influence perception may allow the attorney to realize that the client is concerned primarily with non-monetary issues, and that the client's dispute might be better resolved through courses of action other than litigation.¹³⁰ As Rule 2.1 indicates, an attorney should consider relevant moral, economic, and social considerations when advising a client.¹³¹ Determining whether these considerations are relevant may require an attorney to move beyond her schemas.¹³²

An attorney must not only comprehend her client's story, but must then "stand in the shoes" of the client when she communicates the client's experiences, goals, and aspirations to a legal audience.¹³³ As storytellers, lawyers weigh factors such as the law, the audience, and the client's goals to craft the story.¹³⁴ They must distill facts and decide which ones are

significant.¹³⁵ In writing the story for the court, the lawyer chooses each word and how to tell the story.¹³⁶ By “pick[ing] and choos[ing] from available facts to present a picture of what happened,”¹³⁷ a story told by a lawyer reflects what matters to her.¹³⁸ Each element of the story is the product of conscious and unconscious choices made by the storyteller.¹³⁹ Thus, an attorney’s own experiences, biases, and values can affect her ability to convey the client’s story.¹⁴⁰ Because a lawyer exercises her discretion when creating and conveying a compelling story, it is critical that she understands the influence of her own values or judgment.

Implicit biases play a role in the attorney’s interactions with a client, her ability to understand and appreciate the client’s situation and objectives, and her ability to accurately represent her client’s story to a legal audience.¹⁴¹ An attorney also must understand the impact of implicit biases on the listener of a client’s story (the judge for purposes of this Article).¹⁴² This discussion will follow a brief overview of judicial decision-making research.

III. INFLUENCE OF IMPLICIT BIAS ON JUDICIAL DECISION-MAKING

A. *Brief Overview of Judicial Decision-making Research*

“[J]udges’ early lives, their experiences both on and off the bench, and their professional careers instill in them certain ideas, beliefs and attitudes about issues and people”¹⁴³ Although most judges believe they are objective and able to avoid the influence of biases,¹⁴⁴ recent studies have demonstrated that even the most qualified judges may rely on intuitive

152. RICHARD POSNER, HOW JUDGES THINK 110 (2008).

procedures.”¹⁵³ The conditions under which judges must make decisions inevitably lead to reliance on intuitive thinking that can lead to “illusions of judgment.”¹⁵⁴ Given the severe time constraints at every stage of the decision-making process, “the judge’s reasoning process is primarily intuitive.”¹⁵⁵ Judgments based upon intuition, personal background, or previous experiences can be unreliable grounds for judicial decision-making¹⁵⁶ because of the likelihood that implicit biases will influence the decision.¹⁵⁷

As explained in the previous section, an attorney’s primary role is to effectively present a client’s story, so that it is heard and accepted by the decisionmaker.¹⁵⁸ When crafting a client’s story, an attorney must realize that it will be understood through the stories already existing in the mind of the judge.¹⁵⁹ These “background” or “stock” stories based on one’s past experiences are stereotypes about what it means to be an employee, a parent, etc.¹⁶⁰ “When a listener can identify a stock story sufficiently similar to his own, he makes a ‘likeness judgment.’”¹⁶¹ To process information rapidly and efficiently, the listener compares the facts of the

story with a stock story that he already knows, generally accepting the stock story without analyzing it independently.¹⁶² The result of this information processing in legal decision-making is that the story most familiar to the judge is usually the one that prevails.¹⁶³ Due to the need to clear increasingly expanding dockets,¹⁶⁴ judges may substitute their own stock stories for a litigant's unfamiliar story, rather than carefully process and analyze the new information.¹⁶⁵ For example, Professor Neitz recently argued that "[b]ecause judges are more economically privileged than the average individual litigant appearing before them, they may be unaware of the gaps between their own experiences and realities and those of poor people."¹⁶⁶ She explained that this class privilege may lead judges to assume that all people have comparable experiences.¹⁶⁷ "Treating all parties as though they were socioeconomically identical rises beyond privilege to the level of bias, precisely because judges have a duty to consider the unique facts of every case."¹⁶⁸ The experiences of indigent litigants may be foreign to judges, thus making judges susceptible to socioeconomic bias in their decision-making processes.¹⁶⁹

According to traditional lawyering wisdom, to win a case a lawyer must proffer the client's story so that it "resonates with the understanding and

167. *Id.*

168. *Id.*

169. *Id.* at 148.

expectations that the finder of fact has about a person in the client's situation."¹⁷⁰ However, this approach:

[L]imits possible stories a lawyer can tell on behalf of a disempowered client whose experiences, perspectives, and images are absent from the dominant legal narratives. . . .

. . . .

. . . . In order to win cases, . . . lawyers must fit their clients' stories into law's established terms by squeezing client identities, histories, and problems into universalized narratives. The reliance on precedent by both judges and lawyers blocks the recognition and understanding of stories told that do not fit with past authoritative accounts.¹⁷¹

Discussing the implications of these issues in detail is beyond the scope of this Article, but this narrative theory reveals the danger of implicit biases, which may hinder a judge's ability to understand and properly evaluate a litigant's story.¹⁷² Attorneys should understand that although a case theory based on the client's story may sound plausible to the attorney and client, a judge may be unable to understand or credit the story because it seems unrealistic or improbable from his particular vantage point.¹⁷³ Vetting a case theory with colleagues, particularly those of different backgrounds, can thus be a valuable tool.

Armed with this understanding of judicial decision-making, how can an attorney argue her clients' cases in ways that will prevent judges from deferring to their implicit biases? As discussed above, motivation to avoid the influence of biases has been shown to mitigate the effects of these biases.¹⁷⁴ If a judge is unaware of how implicit biases operate or has no motivation to avoid these influences, is there anything an advocate can do

REV. 457, 467–68 (2012) (discussing problems with stock stories in the context of child custody disputes involving Native American litigants). Jones points out, for example, that “[t]ribal member litigants, particularly those raised in or around the reservation community, understand that their stock stories are wholly unfamiliar to judges in the dominant culture.” *Id.* at 467.

174. See, e.g., Andrew R. Todd et al., *Perspective Taking Combats Automatic Expressions of Racial Bias*, 100 J. PERSONALITY & SOC. PSYCHOL. 1027, 1030 (2011) (finding that perspective-taking reduces the effects of implicit bias).

to prevent a judge's implicit biases from affecting his decision-making? Is she resigned to accept the influence of these biases and hope for an outcome not unjustly affected by them? Unfortunately, "[d]espite the threats to impartiality created by implicit bias on the part of judges, attorneys, and jurors, protections against it and its effects are few."¹⁷⁵ Although no studies have yet been conducted to directly answer this question, the following discussion identifies several procedural postures which are particularly susceptible to the influence of a judge's implicit biases and examines how awareness of these implicit bias pitfalls can inform an attorney's strategies.

B. *From Dispositive Motions to the Appeal: The Influence of Implicit Bias*

Analyzing the standards under which federal district court judges decide motions to dismiss and motions for summary judgment reveals the pitfalls of implicit bias in judicial decision-making.¹⁷⁶ In deciding whether to dismiss a complaint under Federal Rule of Civil Procedure 12(b)(6),¹⁷⁷ a district judge must decide whether the pleadings contain "enough facts to state a claim to relief that is plausible on its face."¹⁷⁸ Thus, a claim is facially "plausible" only when a "plaintiff pleads factual content that allows the court to draw the reasonable inference that the defendant is liable for the misconduct alleged."¹⁷⁹ In any civil case in federal court, "[t]hreadbare recitals of the elements of a cause of action, supported by mere conclusory statements, do not suffice."¹⁸⁰ Instead, the plaintiff must

176. See Hon. Mark W. Bennett, Essay, *From the "No Spittin', No Cussin' and No Summary Judgment" Days of Employment Discrimination Litigation to the "Defendant's Summary Judgment Affirmed Without Comment" Days: One Judge's Four-Decade Perspective*, 57 N.Y.L. SCH. L. REV. 685, 706-07 (2013) (arguing that implicit biases may contribute to the high number of employment discrimination cases that are disposed of via summary judgment).

177. FED. R. CIV. P. 12(b)(6).

178. *Bell Atlantic Corp. v. Twombly*, 550 U.S. 544, 570 (2007). Under Federal Rule of Civil Procedure 8(a)(2), a pleading must contain a "short and plain statement of the claim showing that the pleader is entitled to relief . . ." FED. R. CIV. P. 8(a)(2). In *Conley v. Gibson*, the Supreme Court interpreted this language as preventing the dismissal of a complaint under Rule 12(b)(6), "unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief." *Conley v. Gibson*, 355 U.S. 41, 45-46 (1957). In *Twombly*, the majority instead announced that pleadings must contain "enough facts to state a claim to relief that is plausible on its face." *Twombly*, 550 U.S. at 570. Two years later in *Ashcroft v. Iqbal*, the Court emphasized that the plausibility standard of *Twombly* governs the pleading standard "in all civil actions and proceedings in the United States district courts." *Ashcroft v. Iqbal*, 556 U.S. 662, 684 (2009) (quoting FED. R. CIV. P. 1) (internal quotation marks omitted).

179. *Iqbal*, 556 U.S. at 678.

180. *Id.*

support legal conclusions with “well-pleaded factual allegations,” which must be taken as true, if scrutinized, to see whether “they plausibly give rise to an entitlement to relief.”¹⁸¹ Whether such facts give rise to a plausible claim for relief is a “context-specific task that requires the reviewing court to draw on its judicial experience and common sense.”¹⁸² Judge Nancy Gertner explained the difficulty in applying this test: “What is plausible to me, what my common sense indicates, coming from where I come from, may not be what is plausible to other judges, what comports with their common sense.”¹⁸³ Stated another way, the differences among judges may lead one judge to dismiss a complaint, while another might determine that an indistinguishable claim survives, only because of the way “each judge applies his or her ‘judicial experience and common sense.’”¹⁸⁴ This standard:

[A]ppeals too much to judicial subjectivity, which inevitably depends (at least in part) on an individual judge’s background, values, preferences, education, and attitudes One does not have to be paranoid to be concerned that these highly individualistic considerations are at work and impacting a district judge’s thinking on a motion to dismiss¹⁸⁵

Requiring judges to use their judicial experience and common sense may be a license to invoke implicit biases, particularly in employment discrimination cases.¹⁸⁶ As Professor Kang and his co-authors explained, “When we lack sufficient individuating information—which is largely the state of affairs at the motion to dismiss stage—we have no choice but to

Brescia, *The Iqbal Effect: The Impact of New Pleading Standards in Employment and Housing Discrimination Litigation*, 100 KY. L.J. 235, 238 (2012) (examining the subjective standards promulgated by *Iqbal* and the resulting potential for implicit judicial bias).

rely more heavily on our schemas.”¹⁸⁷ Thus, deciding whether a claim is “plausible” based only on “minimal facts that can be alleged before discovery” may not be sufficient “to ground that judgment in much more than the judge’s schemas.”¹⁸⁸ A recent study of civil rights actions involving allegations of employment and housing discrimination supports this reason for concern.¹⁸⁹ In this study, Professor Brescia found that employment and housing discrimination cases are being dismissed at a higher rate since *Ashcroft v. Iqbal*¹⁹⁰ announced that the plausibility criterion governs pleading standards in all civil actions in the United States district courts.¹⁹¹ These findings “may suggest . . . that the subjective elements of the plausibility standard, . . . may be creeping into judicial decision-making.”¹⁹²

Similar arguments have been asserted against the increased granting of summary judgment motions.¹⁹³ Considerable scholarship has criticized the summary judgment standard for potentially permitting a judge to decide the motion based on his personal, subjective views of the evidence.¹⁹⁴ Rule 56 of the Federal Rules of Civil Procedure provides that

192. *Id.*

193. *See* Jerry Kang et al., *Implicit Bias in the Courtroom*, 59 UCLA L. Rev. 1124, 1163–64 (2012) (claiming that implicit biases at the summary judgment phase may not be as pervasive because “more individuating information” will be available to the judge through discovery, but cautioning that the judge must still make a judgment call that could be subject to implicit biases).

194. *See* Suja A. Thomas, *The Fallacy of Dispositive Procedure*, 50 B.C. L. Rev. 759, 760 (2009) (“[T]he terms ‘reasonable jury,’ ‘reasonable juror,’ ‘rational juror,’ ‘rational factfinder,’ and others are used interchangeably in decisions regarding dispositive motions, even though the terms are capable of significantly different meanings. This lack of definition makes it more likely that judges decide dispositive motions based on their own views of the evidence, as opposed to what a reasonable jury could find.” (footnote omitted)); *see also* Suja A. Thomas, *Why Summary Judgment Is Unconstitutional*, 93 VA. L. REV. 139, 143–48 (2007) (propounding that summary judgment is an

summary judgment can only be granted if there is “no genuine dispute as to any material fact and the movant is entitled to judgment as a matter of law.”¹⁹⁵ At summary judgment, judges determine whether a reasonable jury could find for the defendant.¹⁹⁶ In doing so, the judge ultimately sits as a juror, deciding if she can rule for the plaintiff.¹⁹⁷ In other words, “judges decide the motions based on their own individual views of the evidence,” and not necessarily on how a reasonable jury would decide.¹⁹⁸ Professor Schneider articulated the problems with the application of the reasonable juror standard: “But what if the judge does not realize the differences between those views—his or her perspective and those of a ‘reasonable juror’? What if a judge does not have the humility, self-awareness, or insight to recognize the limitations of his or her own perspective?”¹⁹⁹ Deciding a motion for summary judgment, therefore, creates the risk that implicit biases will seep into the judge’s determination of “reasonableness.”²⁰⁰

unconstitutional practice because the judge “decides whether the case should be dismissed before a jury hears the case”).

199. Elizabeth M. Schneider, *The Dangers of Summary Judgment: Gender and Federal Civil Litigation*, 59 RUTGERS L. REV. 705, 766–67 (2007). Authors Dan M. Kahan, David A. Hoffman, and Donald Braman make an argument similar to Professor Schneider’s, but they also suggest that judges “engage in a sort of mental double check” before making a summary judgment ruling:

Before concluding . . . that no reasonable juror could find such facts, the judge should try to imagine *who* those potential jurors might be. If, as will usually be true, she cannot identify them, or can conjure only the random faces of imaginary statistical outliers, she should proceed to decide the case summarily. But if instead she *can* form a concrete picture of the dissenting jurors, and they are people who bear recognizable identity-defining characteristics—demographic, cultural, political, or otherwise—she should stop and think hard. Due humility obliges her to consider whether privileging her own view of the facts risks conveying a denigrating and exclusionary message to members of such subcommunities. If it does, she should choose a different path.

Dan M. Kahan, David A. Hoffman & Donald Braman, *Whose Eyes Are You Going to Believe?* Scott v. Harris and the Perils of Cognitive Illiberalism, 122 HARV. L. REV. 837, 898–99 (2009).

REV. 749, 764 (2012). In an opinion denying summary judgment in an age discrimination case, Judge Getner wrote “[D]iscrimination is a complex phenomenon It is about concepts like bias and motivation, precisely the kinds of concepts least suited for resolution by a judge.” *Diaz v. Jiten Hotel Mgmt., Inc.*, 762 F. Supp. 2d 319, 322 (D. Mass. 2011) (footnote omitted). Judge Getner further explained that she was “troubled by recent

The “abuse and overuse” of summary judgment in employment-discrimination cases, as well as the potential for implicit biases to affect decision-making, has been well-documented.²⁰¹ For instance, results of a recent study suggest that a judge’s analysis of an employment-discrimination case varies based on her race and experiences.²⁰² The study revealed that white judges are much more likely to dispense with employment-discrimination cases during the summary judgment stage than are minority judges, and white judges discard cases that involve minority plaintiffs “at a much higher rate than cases involving white plaintiffs.”²⁰³ Although there are many ways to explain this trend,²⁰⁴ judges’ implicit biases are at least partly to blame.²⁰⁵ Judge Donald and her former law clerk recently wrote, “While judges strive to apply the law fairly and impartially, they are human and therefore must view things through their own cognitive lenses—judges, like all humans, are not free from biases. . . . [I]mplicit biases nevertheless ‘strongly influence how courts decide particular cases especially in the discrimination context.’”²⁰⁶ Judge Bennett predicts that those judges who would deny any implicit bias might in fact be more likely to be influenced by their inevitable biases.²⁰⁷

statistics that suggest that 70% of summary judgment motions in civil rights cases and 73% of summary judgment motions in employment discrimination cases are granted.” *Id.* at 322 n.3.

Research has confirmed, “when a person believes himself to be objective, such belief licenses him to act on his biases.”²⁰⁸ Judges’ implicit biases against employment discrimination plaintiffs may also be attributed to “a shift in society’s understanding of discrimination” in that perhaps many believe workplace discrimination “is no longer the problem that it was when Title VII was enacted.”²⁰⁹ As Judge Bennett framed the question, “So, is it any wonder that, with all these factors coming into play, judges have increased antipathy to employment discrimination cases, either on an overt, conscious level or, more likely, in an implicit, unconscious way?”²¹⁰

An appellate court’s decision is also subject to the influences of implicit bias.²¹¹ Judge Posner has described the process of reviewing cases on appeal, explaining that appellate judges read parties’ briefs, talk with their law clerks, listen to oral arguments, and immediately after, briefly discuss the case with their colleagues, taking a tentative vote that “usually turns out to be final.”²¹² Even though a judicial opinion can serve as a check on implicit bias by requiring the judge to explain how she arrived at her decision, it is an “imperfect check;” the vote deciding the legal issue is cast before the opinion is written and most judges do not see their vote as a

209. Hon. Bernice B. Donald & J. Eric Pardue, *Bringing Back Reasonable Inferences: A Short, Simple Suggestion for Addressing Some Problems at the Intersection of Employment Discrimination and Summary Judgment*, 57 N.Y.L. SCH. L. REV. 749, 761 (2012). Professor Trina Jones offers an additional explanation for plaintiffs’ lack of success in employment discrimination cases:

Because [employment discrimination] claims are premised on the continuing presence of racism, they are now counter to society’s normative beliefs. Thus, it is not surprising that they are met with suspicion and skepticism. If judges believe that discrimination is rare and aberrant, then they will perceive no need to probe deeply an employer’s justifications, even when those justifications are specious and proved false. Rather, a burden will be placed on plaintiffs to come forth with additional proof to counter the colorblind, post[-]racial presumption.

SCH. L. REV. 685, 707 (2013) (citing Elizabeth M. Schneider, *The Dangers of Summary Judgment: Gender and Federal Civil Litigation*, 59 RUTGERS L. REV. 705, 709–10 (2007)).

211. See Kevin M. Clermont & Theodore Eisenberg, *Anti-Plaintiff Bias in the Federal Appellate Courts*, 84 JUDICATURE 128, 129 (2000) (describing the appellate playing field as “uneven” because defendants succeed “significantly more often” on appeal than do plaintiffs). The authors attribute this statistic to the attitudes of appellate judges, who “exhibit a bias in favor of defendants” in order to counter a “perceived pro-plaintiff bias” in the trial court. *Id.*

212. RICHARD POSNER, *HOW JUDGES THINK* 110 (2008).

hypothesis that must be proven through further research.²¹³ Rather, the research is to find evidence to support the hypothesis.²¹⁴ The fact that appellate decisions are not unanimous suggests that judges evaluate the same facts and legal principles using distinct filters shaped by personal experience.²¹⁵

C. *Mitigating the Impact of Implicit Biases in Judicial Decision-making*

The most important lesson from this Article's discussion of implicit biases and their influence on judicial decision-making is that attorneys should not presume that judges are capable of evaluating information differently than the rest of humanity—they are not immune from the influence of implicit biases.²¹⁶ In light of the cognitive science research and an understanding of judicial decision-making standards that are susceptible to the influence of implicit bias, the following section makes some modest proposals for reducing the influence of these biases.

Although the psychological research regarding deactivation of stereotypes and implicit biases has not been empirically tested in a legal setting, some studies in other contexts have demonstrated several ways in which the activation of stereotypes may be temporarily inhibited.²¹⁷ For example, because multiple schemas may apply to one person, making people focus on only one of those categories “inhibits the activation of stereotypes associated with another category.”²¹⁸ To illustrate, “an Asian

213. *Id.*

214. *Id.* Searching for support for a pre-determined conclusion is evidence of confirmation bias, which is a tendency for a person to search for information that “confirms, rather than contradicts one’s initial judgment” *Id.* at 111; see also Hadar Aviram, *Legally Blind: Hyperadversarialism, Brady Violations, and the Prosecutorial Organizational Culture*, 87 ST. JOHN’S L. REV. 1, 32 (2013) (defining confirmation bias by explaining that because people are attached to their perceptions, they “seek information that confirms” those perspectives and “resist persuasion to the contrary”).

female mechanic,” would be associated with different schemas for Asian, female, and mechanic.²¹⁹ By emphasizing the mechanic schema, for instance, the stereotypes regarding Asians and females may be deactivated.²²⁰ There is also evidence that role schemas may supersede racial or gender schemas because people use their “role” schemas first.²²¹ Thus, when a person encounters an African-American police officer, for example, the “police officer” schema will ostensibly govern the interaction.²²² In telling a client’s story, effective attorneys understand that they should “humanize their clients.”²²³ Professor Blasi explains that doing so “means conveying the multidimensional complexity of human beings who may otherwise be understood by reference to one label or group.”²²⁴ In other words, to preclude a judge from activating racial or gender stereotypes, an attorney should highlight the individual and complex characteristics of the client.²²⁵ Psychological research also shows that avoiding the influences of stereotypes in decision-making requires a decisionmaker to put forth more effort and time to gathering individuating information about the litigant, rather than relying on her triggered stereotypes.²²⁶ Hence, to weaken the impact of gender stereotypes, providing personalized information about a particular woman may

226. Gregory C. Sisk & Michael Heise, *Muslims and Religious Liberty in the Era of 9/11: Empirical Evidence from the Federal Courts*, 98 IOWA L. REV. 231, 286 (2012); see also Gary Blasi, *Advocacy Against the Stereotype: Lessons from Cognitive Social Psychology*, 49 UCLA L. REV. 1241, 1253 (2002) (remarking that one can control the automatic activation of stereotypes by “devoting time and cognitive resources to focusing on individuating information”); Jerry Kang et al., *Implicit Bias in the Courtroom*, 59 UCLA L. REV. 1124, 1160 (2012) (forewarning that during the motion to dismiss phase, judges “lack sufficient individuating information,” which leaves them with no other option “but to rely more heavily” on their schemas).

suppress pervasive gender stereotypes.²²⁷ When the imparted information is “concrete, unambiguous, and explicitly relevant to the judgment at hand,” a judge’s reliance on stereotypes dwindles and more credence is given to the substantive facts about the individual.²²⁸ Applying the lessons from these studies, an attorney should recognize the significance of conveying to the court a client’s complete story, emphasizing specific and individuating facts.²²⁹

It may also be possible to control stereotypes by priming persons with ideals of fairness and equality.²³⁰ Results of several studies indicate that people can cultivate cognitive habits that subdue stereotyping.²³¹ For example, people primed using scrambled sentences that included words like “helpful” and “friendly”—words associated with cooperation—were more predisposed to “cooperate in potentially competitive games.”²³² The results of the study evince that priming people with “fairness or egalitarian goals” might prompt subconscious cognitions that could potentially abate the consequences of automatic stereotype activation.²³³ In light of these findings, to suppress the activation of stereotypes, an attorney should present a client’s story in a way that “appeal[s] to the judge’s spirit of justice.”²³⁴ Judge Fine’s observations also support this advice. Regardless of their personal philosophies and backgrounds,

232. *Id.* In contrast, subjects that were primed with words correlated with achievement—such as “win,” or “compete”—were more persistent in their attempts to solve the puzzles, “suggesting that the priming had altered their motivational level.” *Id.* (footnote omitted).

233. *Id.*

234. Laurie A. Lewis, *Winning the Game of Appellate Musical Shoes: When the Appeals Band Plays, Jump from the Client’s to the Judge’s Shoes to Write the Statement of Facts Ballad*, 46 WAKE FOREST L. REV. 983, 983 (2011). In the appellate context, Professor Lewis posits that appealing to the judge’s sense of justice will result in a favorable ruling for the client on appeal: “If the client suffered an injustice in the court below, the judge will seek to ‘do justice’ for the client.” *Id.*

appellate judges desire to do what they consider to be “right.”²³⁵ Although what is “right” is difficult to define without context, Judge Fine asserts that in reading an appellate brief, a judge must be “*made to see* that your client *deserves* to win.”²³⁶ A judge may be so persuaded through effective storytelling.²³⁷ For example, Professor Chestek recommends portraying a client as the protagonist of a story and the opposing party as an antagonist who is harmful to the client’s interests.²³⁸ A client’s story should be presented in a compelling and captivating way so as to make the court agree with the client’s position.²³⁹ Professor Lewis explains, “Once immersed in a human drama, the judge looks for the interplay between the captivating story and justice. For the appellate judge is keenly sensitive to the possibility that your client was the unwitting victim of an injustice.”²⁴⁰ Thus, in priming the judge to focus on goals of justice and fairness, an attorney may help suppress the judge’s implicit biases.

Although the above suggestions are merely theoretical as they apply to advocacy, recognition of implicit biases and motivation to control their influences has been shown to be successful in reducing the effects of these biases on decision-making.²⁴¹ When judges are aware of the necessity of monitoring their own reactions to check for the influence of implicit biases, coupled with a motivation to defeat those biases, they seem able to overcome them.²⁴² Thus, increasing awareness of the problems with

239. See, e.g., Brian L. Porto, *Improving Your Appellate Briefs: The Best Advice from Bench, Bar, and Academy*, VT. B.J., Winter 2011, at 36, 38 (advocating narratives to convey the “essence of the case”).

240. Laurie A. Lewis, *Winning the Game of Appellate Musical Shoes: When the Appeals Band Plays, Jump from the Client’s to the Judge’s Shoes to Write the Statement of Facts Ballad*, 46 WAKE FOREST L. REV. 983, 996 (2011).

241. See generally Jeffrey J. Rachlinski et al., *Does Unconscious Racial Bias Affect Trial Judges?*, 84 NOTRE DAME L. REV. 1195 (2009) (conducting a study on implicit biases harbored by judges and concluding that those biases can be suppressed with the proper motivation).

242. *Id.* at 1221.

implicit bias may be the best solution for reducing the impact of these biases in judicial decisions.²⁴³ From a practical perspective, attorneys can focus the judge's attention on the legal standards under which a motion or brief should be reviewed.²⁴⁴ For example, in arguing against the granting of summary judgment, Judge Donald and J. Eric Pardue suggest that "[r]eminding judges to liberally interpret the reasonableness of potential inferences provides a buffer, however slight, against the tendency to substitute their judgment for the jury's."²⁴⁵ Because the plausibility standard from *Iqbal* has been applied inconsistently by the lower courts,²⁴⁶ a plaintiff opposing a defendant's motion to dismiss may have the opportunity propose a standard for plausibility that allows a judge to recognize the dangers of implicit bias in making such a determination. A standard, such as one adopted by the Eastern District of Texas²⁴⁷, could help judges consider plausibility more liberally, to prevent a judge from grounding his decision in his schemas.²⁴⁸ As the magistrate concluded:

[T]he critical inquiry is whether a plaintiff's claim is "conceivable" (*not enough* for Rule 12) or "plausible" (*sufficient* for Rule 12). . . . The majority in *Swanson* put it this way: "As we understand it, . . . the plaintiff must give enough details about the subject matter of the case to present a story that holds together. In other words, the court will ask itself *could* these things

243. See *id.* (postulating that a judge's increased self-awareness of her own implicit biases may actually reduce their effects).

244. See Laurie A. Lewis, *Winning the Game of Appellate Musical Shoes: When the Appeals Band Plays, Jump from the Client's to the Judge's Shoes to Write the Statement of Facts Ballad*, 46 WAKE FOREST L. REV. 983, 997 (2011) (pointing out that the standard of review "implicates how you write your client's narrative").

245. Hon. Bernice B. Donald & J. Eric Pardue, *Bringing Back Reasonable Inferences: A Short, Simple Suggestion for Addressing Some Problems at the Intersection of Employment Discrimination and Summary Judgment*, 57 N.Y.L. SCH. L. REV. 749, 764 (2012).

246. See Alex Reinert, *The Impact of Ashcroft v. Iqbal on Pleading*, 43 URB. LAW 559, 577 (2011) (criticizing the *Iqbal* opinion for imprecisely articulating the new pleading standard which has led to its inconsistent application at the trial court level).

247. *Escuadra v. Geovera Specialty Ins. Co.*, 739 F. Supp. 2d 967, 980 (E.D. Tex. 2010). This standard was based on *Tellabs, Inc. v. Makor Issues & Rights*, a United States Supreme Court case decided in 2007 that involved the Private Securities Litigation Reform Act. See generally *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308 (2007) (interpreting the standard for pleadings in a Private Securities Litigation Reform Act case). Professor Reinert clarifies the Supreme Court opinion: "Specifically, the Court in *Tellabs* defined 'plausibility' for the purposes of the PSLRA [Private Securities Litigation Reform Act] as equipoise: that is, if the plaintiff's theory of relief was 'at least compelling' as the alternative explanations, the complaint would survive a motion to dismiss under the PSLRA." Alex Reinert, *The Impact of Ashcroft v. Iqbal on Pleading*, 43 URB. LAW 559, 583 (2011) (quoting *Tellabs*, 551 U.S. at 324).

248. See Alex Reinert, *The Impact of Ashcroft v. Iqbal on Pleading*, 43 URB. LAW 559, 583-84 (2011) (praising the Eastern District of Texas for conducting "an extensive analysis of the plausibility problem").

have happened, not *did* they happen.”²⁴⁹

Including information about how implicit bias can affect and taint decision-making in a complaint, motion, jury instructions, or brief can call attention to the problem.²⁵⁰ Exposure to the implicit bias research may help a judge minimize her implicit bias when deciding motions or appeals.²⁵¹ However, an attorney is likely to exercise restraint in doing so—naturally, people do not like being accused of hosting biases, even unconscious ones.²⁵² Although an attorney should make the judge aware of implicit biases, she may not want the judge to interpret the information as implying that the judge is biased.²⁵³ An effective lawyer challenges the judge to move beyond a common schema without accusing the judge of bias.²⁵⁴ For instance, when representing a father in a custody bench trial, counsel might open with: “Your Honor, although the ‘tender years’ doctrine of young children always being awarded to the mother has been overturned, it appears to be alive and well in a few cases. In this case, the father is seeking custody based on the following factors.”²⁵⁵ This particular method of arguing reminds the judge of a specific bias without accusing her of embracing the bias.²⁵⁶

IV. CONCLUSION

Justice Cardozo explained: “Deep below consciousness are other forces, the likes and the dislikes, the predilections and the prejudices, the complex

of instincts and emotions and habits and convictions, which make the man, whether he be litigant or judge”²⁵⁷ The implicit biases of attorneys and judges pervert the processes and results in both civil and criminal litigation, and innately impede equal justice for all.²⁵⁸ It therefore behooves attorneys to understand the emerging cognitive science research regarding implicit bias and decision-making. Because awareness and the motivation to correct one’s thinking is the “best cure thus far” for implicit bias,²⁵⁹ state bar associations and law firms should follow the ABA’s lead to educate attorneys about this pervasive problem.²⁶⁰ With greater awareness among the legal community of how implicit biases operate, it is this author’s hope that researchers will explore and empirically test proposals to address the problems of implicit bias in our legal system, motivating legal decisionmakers to correct their thinking.²⁶¹
