Department of Civil Engineering,
Symbiosis Institute of Technology
A Constituent of Symbiosis International (Deemed University)

[04/05/2021]

To,

The Editor

I wish to submit an original research article entitled “A Bibliometric Analysis of Global Research on Green Building Rating Tools” for consideration by Library Philosophy and Practice.

I confirm that this work is original and has not been published elsewhere, nor is it currently under consideration for publication elsewhere.

In this paper, I explained the Bibliometric Analysis of Green building Rating Tools. This is significant because this is very important information to the authors working on the same field to get the current knowledge of what is happening in the field.

We believe that this manuscript is appropriate for publication by Library Philosophy and Practice because it accepts extensive overviews of a development in science, engineering, and constructions that bears watching by their profession.

This Paper addresses the bibliometric analysis on globally available research on green building rating tools, which is helpful to the researchers to find out the most relevant articles or authors or Publishing Journals of this particular field. This paper also stated the major research gap in this field that will help the researchers. It will provide the direction of which type of work is done in the field and what is required for a sustainable environment.

We have no conflicts of interest to disclose.

Please address all correspondence concerning this manuscript to me at janhavi.mahale.phd2020@sitpune.edu.in

Thank you for your consideration of this manuscript.

Sincerely,

Ms. Janhavi Kailas Mahale
