NOTES: Lots of pine needles on surface

Dry Loose Sandy Soil w/ lots of roots

(10cm^{bs}) Piece of pottery, Lots of rocks and shell deposits (natural deposit)

(22cm^{bs}) fish vertebrae & piece of pottery, soil change (30cm^{bs}) but still has shell deposits and lots of rocks, also getting compacted.

(35cm^{bs}) soil change brown^{tan} w/ pottery shard, also sandy texture
lots of roots, damp ~~white~~ grey (50cm) coarse texture. Calcified white sand. (1m) soil change; very damp, dark, concretions possible bone found.

* previous
 flagging
 was found on
 the ground

NOTES:

T5 STP 2, ^{old/previous} flag identifies it as positive.
 Dirt ~~is~~^{ED} is very sandy + loose as we begin. Root inclusions + vegetation at the surface/ground level. We are coming across many shells (small ones like found in midden). Several larger natural shells or shell fragments have been found within the first 50cm. Hermit crab type shells were uncovered ~~is~~^{ED} within the first 20cm. Shells were found in high concentration at top of STP + diminished to few + far between. We stopped digging at 108cm. Hit hard packed dirt or resistance at 108cm.

NOTES: We are digging at what was originally STP 3, but it is STP 4 because we are re-doing and fixing the transect. A lot of organic debris and roots in the sandy topsoil. Dense root inclusions. No ~~the~~ color change, but as we dig, the soil is getting more dense and gritty. 55cmbs we found a pottery piece. Soil is a tanish brown color. Still grainy and dry. 72cmbs the soil is a brown/orange color now. 85cmbs The soil is now a orange and has started to clump just ~~a little with~~ a little damp. ~~At~~ At a meter there were concretions found.

NOTES: Many root inclusions near the surface. Adjusted hole 10 cm east to avoid a large root 14 cm down in initial pit. Charcoal within first 20 cm. Found an even thicker root in the new pit 25 cm down. Starting another new pit 3 m east shifting east once again due to another thick root. New pit completely sterile. Soil was soft + sandy, remained the same color all throughout. Completed STP at 100 cm. High concentration ~~of~~^{ED} of roots due to surrounding palm trees + a large oak tree about a meter or two to the southeast.

NOTES: STP 6 dug 20 m ^{south} ~~north~~ of STP 5.
STP 6 previously recorded as STP 5 in past field seasons; renamed due to redone survey.
Approx. 3 m ^{north} ~~south~~ of an elevated mound of earth. Surface covered by organic debris. Loose, fine, light grey sandy soil. Moderate root inclusions. Soil changes at 48 cm to a slightly more damp and dense orange soil. Scattered shell fragments. 80 cm soil changes to a finer greyish tan sand. Some concretions. Dug down to 1 m. Negative
