ECOLABEL - LEGAL CONFIRMATION OF CLEANER PRODUCTION AND SERVICES

Abstract

This work primarily deals with legal regulation of ecolabel, an important tool for informing This work primarily done the products, processes and services on the natural environment. The the public on the impact of products, processes and services on the natural environment. The authors first analyze the related regulation in the law of the European Union, followed by the Serbian regulation what is basically in line with the former. In Serbia ecolabel has been Serbian regulation that the European model, thus, it is relatively unknown for the wider introduced in 2009 based on the European model, thus, it is relatively unknown for the wider introduced in 2007 and of the aims of the authors with this work is to popularize ecolabel. As part public. Therefore, one of the aims of the authors with this work is to popularize ecolabel. As part public. Therefore, one conducted a modest survey on how familiar are people with of this work, the ecolabel in Serbia and how willing they are to buy products with such label. On the other hand, the authors want to make more familiar the Serbian legal community with the regulation related to this institution.

Key words: ecolabel, labeling of products, Serbia, EU.

INTRODUCTION

Constant care for the preservation and furtherance of our environment implies series of different and complex measures. Among these measures the information of the public on the state of the environment has an ever growing importance. For the successful implementation of this aim it is necessary to have a well build up system of access to data on products of producers whose activity significantly affects the state of natural cruis of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or products of producers whose activity significantly affects the state of natural cruis or producers whose activity significantly affects are produced by the natural cruis of natural cruis or producers whose activity significantly affects are produced by the natural cruis or producers whose activity significantly affects are produced by the natural cruis or natural environment. With the aim to promote the publication of such information,

Besides, the authorized with this transfer of the service of of this work and of this work and the control of this work and in Serbia. Besides, the authors in this field. Thus, first the term and the curvey to see how well are people acquainted with this label in Serbia. normative regulation in the European on normative regulation in the European conducted a survey to see how well are people acquainted with this label in Serbia conducted a survey to see how with ecolabel to other products without such label. conducted a survey to see he in if they prefer products with ecolabel to other products without such label.

TERM, FUNCTION AND FORMATION OF THE ECO LABEL

The term of ecolabel covers a system under which information regarding the impact of a product (and the related production process or a service) on the environment is clearly presented on the product (Stec, Casey-Lefkowic, 2000). The basic idea that led to the introduction of ecolabel was the wish to inform potential consumers that the product was produced in accordance with the standards of the environmental protection policy, and also that it has less harm to the environment than other similar products. Thus, through a special kind of information offered to potential consumers and users of some product or service, they are able to compare and choose a product they wish to buy and consume, directly and simply, comparing their ecological characteristics.

First ecolabels were introduced on national levels in member states of the European Communities. In Germany it was introduced already in 1977, under the name "blue angel" ("Blau Engel"). Following this, other Western countries has also introduced their ecolabels, like France (,,NF Environment", in 1992), Great Britain and Italy ("Ecolabel"). The ecolabel of the European Union has been created in 1992 and symbolizes a flower ("flower logo") (see infra: Figure 1). From 1993 the same standards are applied to all the products marketed under ecolabel in the European Union member states. Union member states and Norway, Island and Lichtenstein (Hunter, Muylle, 1999) The number and range of products and services granted ecolabel is constantly growing in member states of the D in member states of the European Union, thus, one can find cleaning supplies, paper products, textiles, domestic and services granted ecolabel is constantly as services. products, textiles, domestic products, products for the garden, lubes, as well as services and activities related to tourisms. and activities related to tourism under this label. According to a research, the flower logo in 2006 was present only as a from which 36 logo in 2006 was present only on few hundred products and services, from which is the last few were accommodation facilities in the touristic branch. However, during the last few translation of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with could be accommodated by the sale of products with a sale years the sale of products with ecolabel grew for incredible 200 percent, primarily in instrumental protection. Italy, the Netherlands, France and Spain ("EU voluntary environmental protection to product "MEMO 06/6, Bruscale 200" ("EU voluntary environmental protection and spain ("EU voluntary environmental protection to product "Memo 06/6, Bruscale 200"). instruments", MEMO 06/6, Brussels, 2006). Thus, today ecolabel is awarded mostly accommodations to products of the textile and paint industry, as well as for tourist accommodations

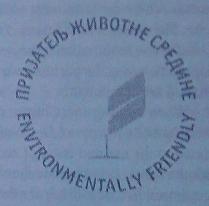

els, hostels, BB).

The Serbian ecolabel has been introduced in 2009, and it consists of two stylized attee and a cube in three nuances of green with the following alcoholders. (hotels, Serbian econater has been introduced in 2009, and it consists of two stylized rates and a cube in three nuances of green with the following slogan written elements a tree and a cube in English: "Environmentally friendly" in official and in English: "Environmentally friendly" in official and in English: "It are supported by the consists of two stylized elements" with Cyrillic and in English: "Environmentally friendly" in official and in English (Environmentally friendly"). elements—a tree and a cube in the following slogan written with Cyrillic and in English: "Environmentally friendly" in "officina" font, in Serbian with Cyrillic Services origination from the services or services origination from the services or services or services origination from the services or service elementally friendly" in "officina" font, in Serbian with Cyrime and the Lagrance serbian with Cyrime and Cyrime serbian with Cyrime and Cyrime serbian with Cyrime and Cyrime serbian with Cyrime serbian with Cyrime and Cyrime serbian with Cyrime serbian in Service (vig. LEGAL REGULATION OF AWARDING AND USING ECOLABEL IN THE EUROPEAN UNION AND SERBIA

The first legal act on the level of the European Union regulating ecolabel was enacted in 1992, the Eco-Labeling Regulation 880/92/EEC, OJ L99/1 of 11 April 1992, amended with Regulation 1980/2000/EC, OJ L 237 of 21 September 2000. Based on these legal acts was adopted the Decision of the Commission on a standard contract covering the terms of use of the Community Eco-label 2000/729/EC of 10 November 2000, OJL 237, 21.9.2000, p.1 (hereafter: Decision), based on which was adopted the So-called Standard contract (hereafter: Contract) that regulates the conditions of the usage of the flower logo. These conditions aim to protect the interests both of producers and consumers by introducing in advance defined conditions for the usage of ecolabel.

As it is

As it is stated in the *Decision*, the above mentioned *Contract* is concluded between the national body competent for awarding the label and the applicant, with the consent of the Furance of the Furance of the surgice of the su of the European Union Ecolabeling Board (EUEB) in a form regulated in the Annex

of the Decision. Besides, the Decision regulates all the rights and obligations of the Decision. Besides, the Decision regulates all the rights and obligations of the Decision. Besides, the Label and of the users of the label. It is emphasis of the Label can be used only on products defined in the label in the label can be used only on products. of the Decision. Besides, the Decision regulated and of the users of the label. It is emphasized competent bodies awarding the label and of the users of the label. When signing the Contract, it is necessary to submit the copy of Regulation When signing the Constant of Megulation 1980/2000/EC, copy of Decision EU 2000/728/ES, which prescribe fees and costs related to the use and issue of ecolabel, furthermore, the specification of the product with the name and reference number of the producer, the production place and factory the relevant license number for the use of the ecolabel, as well as its precise description and how will it be printed on the product (in color: in blue and green color, or black on white background or white on black background).

The criteria for acquiring of Serbian ecolabel are very similar to those of flower logo (Crnobrnja, et.al. 2009), with the difference that the products, processes or services originate from Serbia. The legal ground for awarding the Serbian ecolabelis the Law on the Protection of Environment from 2004 (in Serbian: Zakon o zaštiti životne sredine ("Službeni glasnik Republike Srbije", br. 135/2004, 36/2009 i 36/2009 - dr. Zakon)), and the Rule based on this Law, i.e., Rule on the Conditions and procedure for acquiring the right to use eco label, elements, appearance and the way of use of ecolabel for products, processes and services (in Serbian: Pravilnik o blim uslovima i postupku za dobijanje prava na korišćenje ekološkog znaka, elementima izgledu i načinu upotrebe ekološkog znaka za proizvode, procese i usluge ("Službeni glasnik Republike Srbije", br. 3/2009.)) (hereafter: Rule).

In Serbia, similarly to the regulation of the European Union, the use of the ecolabel used on the principles of is based on the principle of voluntariness. The right to use the label can be awarded to conducted on the conditions products produced on the territory of Serbia if it fulfils at least one of the conditions prescribed by the Rule: it described by the Rule: it descr prescribed by the Rule: it decreases the use of energy resources, or emission of noise, or vibration, or radiation and or vibration, or radiation, or decreases the use of energy resources, or emission of into the environment, radiation of harmful and dangerous materials into the environment, reduces the emission of harmful and dangerous harmful and dangerou facilitates the use of secondary raw materials, recycled or partly recycled materials (See: art. 4, s. 1, i. 1-12 of the Rule).

on the fulfillment of the conditions for awarding the Serbian ecolabel decides the on the fulfillment of the conditions for awarding the Serbian ecolabel decides the on the fulfillment of the Serbia a five member committee erected by the Minister competent body, which is in Serbia a five member committee erected by the Minister of the Ministry competent for standardization, responsible for the environmental protection (hereafter: the Minister). It is constituted of one representative of the Serbian Chamber of Commerce responsible for the branch of of the representative of the consumers and one expert. The competent body first industry, one representative of the consumers and ecision with majority vote. After industry, one request, and following that brings a decision with majority vote. After industry, one request, and following that brings a decision, draws up a report within discusses the request, and following that brings a decision, draws up a report within discusses the request of the request. (See: art. 8 and art. 9. of the Rule) The decision wavarding ecolabel, for the period of three years, is issued by the Ministry within 10 awarding ecolabel, for the period of the competent body. The competent body is also days from the receipt of the report of the competent body. The competent body is also days from the receipt of the report of the competent body. The competent body is also days from the receipt of the report of the ecolabel.

In line with European regulation, the ecolabel can be taken away in a prescribed procedure when the product, process or service ceases to fulfill the requirements of awarding, or if during the use of the ecolabel there was an ecological accident during any phase of the life-cycle of the product. (See: art. 9, s. 1, i. 1-2 of the *Rule*)

The Serbian ecolabel, like the European, is used as a logo on the product, packing and document related to the product, and it always has to be visible, legible and indelible. (See: art. 12, s. 1-2 of the Rule). The Rule allows using the label for indelible. (See: art. 12, s. 1-2 of the Rule). The Rule allows using the label for indelible. (See: art. 12, s. 1-2 of the Rule). The Rule allows using the label for indelible. (See: art. 12, s. 1-2 of the Rule). The Rule allows using the label for indelible. (See: art. 12, s. 1-2 of the Rule). The Rule allows using the label for indelible. (See: art. 12, s. 1-2 of the Rule). The Rule allows using the label for indelible, in our opinion, the Ministry and care for our natural environment. At the same time, in our opinion, the Ministry and the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the ecolabel itself, by the media have to take larger stake in the popularization of the

Teopholate withing to give money for ecologically friendly awareness of our citizens. award even in the current economic situation. Such support is very products even long term it encourages the producers to comply with the requirements important, as in long term it encourages the products. important, as in tong ecolabel for their products.

CONCLUSION

At the time when on global level there is more and more concern about our natural At the time when one grant and more concern about our natural environment, different forms of environmentally friendly productions are encouraged. environment, unforced development is stimulated. Thus, we can say that ecolabei as well as sustainable and more popular and demanded label for products, processes gradually becomes more and more popular and demanded label for products, processes gradually occomes increased with the European This also present in Serbia, where and services on the Services with the European. This new regulation created conditions the regulation is flat to the regulation of environmentally friendly products and services to acquire for a large number of environmentally friendly products. ecolabel, thus, in the near future the expansion of its use is expected.

This label nowadays represents an undoubted confirmation of quality and fulfillment of high ecological standards for products, processes and services it is granted for, despite the fact that its simplicity, the scarce information it provides, and its use primarily in marketing purposes mitigates its importance as form of information of the public (Kostić, 2009). This stems from the fact that the criteria for awarding eco label are not established based on one or short term factor, but based on studies in which the impact of the product or service on the environment is analyzed on long term, that is to say, during its lifetime – beginning with the extraction of the raw materials in the phase of preparation, over the production and distribution phase to the phase of disposal. Therefore, merely acquiring ecolabel helps in the affirmation of production in which natural resources are spared, natural raw materials are used or those which can be recycled, that is to say, harmful impact on the natural environment can be minimized.

Numerous positive effects of the ecolabel were quickly recognized both by producers and consumers. However, if producers and offerors of services want to use it to attract learn it to attract larger number of customers, and to distinguish their products from others, they will improve they will improve the several steps to they will improve their attitude towards the environment and take several steps to protect the anxion protect the environment. In any case, this is desirable outcome and can considerably

contribute to the improvement of our natural environment. On the other have done the customers relying on the presence of ecolabel can be sure that they have done the customers relying on the preservation and protection of our natural environment choice and contributed to the preservation and protection of our natural environment.

The relatively strict conditions for awarding ecolabel, and the precisely regulated to the preservation of experts and representatives of consumers.

The relatively strict conditions for any to the relative of consumers, both procedure with the participation of experts and representatives of consumers, both procedure with the participation of experts and representatives of consumers, both serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation, make more reliable products with serbian and the European Union regulation. Attention of the ecolable labels and the European Union regulation of the ecolable labels. However, it is necessary to invest more distributed by the European Union regulation of the ecolable labels. However, it is necessary to invest more f
