Available online 30 April 2019

Abstract: This is the first volume of year 2019 which contained of three main engineering fields such as Mechanical and Manufacturing, Civil and Environmental and Electrical and Electronic Engineering. The total of 30 number of papers is covered from international and local authors dealing with various fundamental and applied aspects of engineering topics. As the papers are successfully published in this volume, it is a great challenge to complete the reviewing process without a super effort and support from the reviewers and editorial board of IJIE. A very high appreciation goes to them.

This volume provides deep research results on the power generation, simulation work of fluid, signal and image processing, sensor application, sustainable of materials, algorithms analysis, and others engineering focus. IJIE is now increase its ability to be a good platform for the researcher to disseminate their work results and findings. We hope that the knowledge brought by this volume give benefits to all readers including researchers and academicians.
