It is my pleasure to welcome you to the first issue of the *International Journal of Applied Research in Mechanical Engineering* (IJARME), which is coming out in May 2011. Recent developments in technology, an engineer has to realize that a branch of engineering is not only limited to an independent domain, but also delve into other branch of engineering. The mechanical engineering research has become very sophisticated with the introduction of computers and electronics and paved the way for the emergence of new technologies. Globalized competitiveness and increased awareness of the environment have made the mechanical engineering research significantly different with more emphasis on competitive technologies and management approaches.

The objective of *IJARME* is to establish an effective channel of communication between technocrats, academics and research institutions, and developers. It also aims to promote and coordinate developments in the entire field of mechanical engineering. The International Journal of Applied Research in Mechanical Engineering (IJARME) is a refereed, interdisciplinary journal that publishes theoretical and experimental research, their applications and future trends relevant to various streams of mechanical engineering. The IJARME publishes original research work with special emphasis on research and development in mechanical engineering that contributes significantly to further the knowledge in mechanical engineering and technology. IJARME also provides discussion and the exchange of information on all important aspects of classical and modern mechanical engineering. In addition IJARME covers all sustainable development aspects related with mechanical engineering. The objective of this journal is to reflect the changes in various disciplines in mechanical engineering scenario and provide a platform for future growth. IJARME also invites special issues and guest edited volumes from professors and researchers on various topics of Mechanical Engineering.

(DR. CH R. VIKRAM KUMAR)
