---

International Symposium on Sustainable Fruit Production was held in March, 21-24, 2016 in Donja Stubica, Croatia as one of the LIFE SU.SA.FRUIT (LIFE 13/ENV/HR000580) project outcomes. Project focuses on sustainable fruit production and environmentally friendly fruit postharvest technologies in order to significantly decrease the use of pesticides and preserve environment, contributing to more profitable fruit production in same time. More than 80 respectful scientists and experts from 14 countries (Bosnia and Herzegovina, Croatia, India, Israel, Italy, Kazakhstan, Macedonia, Moldova, Nigeria, Pakistan, Portugal, Serbia, Slovenia and Spain) participated in the Symposium. They held 52 oral and poster presentations contributing to all fields of sustainable horticulture (pre-harvest and postharvest technologies as well as integrated pest management). The aim of Symposium was to present results of LIFE SU.SA.FRUIT project and to serve as platform for the exchange of views, experiences and results in field of sustainable production and postharvest practices in order to steer future actions on project. In the Special issue of *Agriculturae Conspectus Scientificus* ten selected papers covering all abovementioned fields of horticulture are published.

I wish to express my cordial gratitude to the authors for their valuable contribution and to reviewers whose effort and expertise significantly contributed in achieving scientific quality of papers.

Goran FRUK  
Guest editor
