## Dear Kentuckians:

Being transparent is a top priority for my administration, and one way to be transparent is to share available data. The 2020 Kentucky Traffic Collision Facts report includes a lot of vital information and statistics regarding auto collisions that occurred on our commonwealth's roadways. This report should serve as a reminder to all of us that it is our individual responsibility every time we get behind the wheel to demonstrate the skill and knowledge of safe driving in order to keep ourselves and our fellow Kentuckians safe from harm while operating a vehicle.

Unfortunately, I am sad to report our commonwealth lost 780 Kentuckians in 2020 to auto collisions; of which 335 were under the influence of drugs and 174 were under the influence of alcohol. They are people who are truly missed by their family and their friends.

These lives lost should reinforce our resolve to do our best every day to protect those around us on the roadways. I want to remind all motorists whether they are new to the road or a seasoned driver to follow these safe practices:

- Never text and drive
- Don't operate a vehicle under the influence of any substance
- Always buckle up
- Observe speed limits

By holding ourselves accountable and working together, we will save lives and make our roadways safer for all Kentuckians and visitors to our great Commonwealth. Let's commit to decreasing the number of auto collisions and fatalities in 2021.

Sincerely,

## Dear Governor Beshear:

Kentucky Revised Statutes, Chapter 189.635, mandates that Kentucky State Police collect and tabulate the traffic collision reports submitted by all law enforcement agencies across the Commonwealth.

In adherence to this statute, the Kentucky State Police proudly presents the 2020 Kentucky Traffic Collision Facts report. This report provides a collection of statistical data, based on comprehensive evaluation and analysis of collisions that resulted in fatalities, injuries, and property damage.

The Kentucky State Police would like to take this opportunity to thank all law enforcement agencies that contribute data. In addition, gratitude is also extended to the Kentucky Transportation Center, College of Engineering, at the University of Kentucky, for their efforts in the successful completion of this report. This mutually beneficial joint-effort has produced an accurate account of traffic collision data, while also offering a broader analytical insight into several special interest areas.

We sincerely hope the information contained herein provides beneficial information to law enforcement agencies, as well as various other national, state, and local organizations. Most importantly, we hope this data will inspire all citizens to work with officials to create a more heightened sense of highway safety across our great Commonwealth.

Respectfully submitted,

Colonel Phillip Burnett, Jr.
Commissioner

An Equal Opportunity Employer M/F/D

All citizens of the Commonwealth of Kentucky share the sorrow brought about by senseless tragedies on our streets and highways.

## This Collision Facts Report would like to remember the

## 780

who were victims of fatal traffic collisions on Kentucky's public roads.

## INTRODUCTION

KENTUCKY'S TRAFFIC COLLISION FACTS report is based on collision reports submitted to the Kentucky State Police Records Branch. As required by Kentucky Revised Statutes 189.635:
"Every law enforcement agency whose officers investigate a vehicle accident of which a report must be made...shall file a report of the accident...within ten days after investigation of the accident upon forms supplied by the bureau."

The stated purpose of this requirement is to utilize data on traffic collisions for such purposes as will improve the traffic safety program in the Commonwealth.

Unless otherwise noted, the data in this publication are for public roads only. Data contained in this report are based solely on the observations and judgements of the state and local police officers who investigated each collision. The collision data is contained in an automatic system (Collision Report Analysis for Safer Highways) (CRASH). This system has edit checks for accuracy which may include manual adjustments based on the Fatal Accident Reporting System (FARS).

Computer tabulations and summaries are again checked for accuracy before information is released or disseminated. It is hoped that the detailed information presented in this report will, in fact, "improve the traffic safety program within the Commonwealth."

The NHTSA Manual on Classification of Motor Vehicle Traffic Crashes (1) is used to ensure uniformity and compliance with federal requirements.

## Standard definitions and terms used in this booklet include the following:

Motor Vehicle Traffic Collision: any motor vehicle collision that occurs on a trafficway or that occurs after the motor vehicle runs off roadway but before events are stabilized.

Collision: an unintended event that produces death, injury or damage. The word "injury" includes "fatal injury."

Trafficway: the entire width between property lines or other boundary lines, of every way or place, of which any part is open to the public for purposes of vehicular travel as matter of right or custom.

Fatal Collision: is any motor vehicle collision that results in fatal injuries to one or more persons.
Fatality: a person or persons killed in a fatal collision (also referred to as "persons killed").
Nonfatal Injury Collision: any motor vehicle collision that results in injury, other than fatal, to one or more persons (also referred to as Personal Injury Collision).

Injured: a person or persons injured in a collision (also referred to as "persons injured").

Property Damage Collision: any motor vehicle collision in which there is no injury to any person, but only damage to a motor vehicle or other property, including injury to domestic animals.

Alcohol-Related Collision: any collision in which an operator was observed to have been drinking by the officer investigating the collision.

NOTE: Data processing methods have been updated in the 2019 (FY2020) publication. This may result in slight changes, but should improve the overall quality and accuracy.

## HIT-AND-RUN COLLISIONS

Hit-and-run collisions are those collisions in which the driver leaves the collision scene with the intent of evading responsibility. Hit-and-run is a serious violation of the law. There were 10,631 hit-and-run collisions, of which 28 were fatal collisions and 967 were injury collisions.

As depicted below, most of Kentucky's hit-and-run collisions were property damage collisions (90.6\%). 30 persons were killed and 1,251 were injured.

HIT-AND-RUN VICTIMS
As shown in the chart below, 7 persons killed in hit-and-run collisions were pedestrians and 0 were pedalcyclists. 105 pedestrians and 25 pedalcyclists were injured.

## LAND USE

## COLLISION LOCATIONS

For the purpose of tabulating collision locations, an urban area is an area including and adjacent to a municipality or other place of 5,000 or more population. Rural areas are those places that do not meet this specification. As shown in the chart below, most collisions ( $60 \%$ ) occurred in urban areas.

Also, $61 \%$ of injury crashes occurred in urban areas. However, the majority of fatal collisions (50\%) took place in rural areas of Kentucky during 2018. A much higher percentage of property damage collisions were reported in urban areas.

## LOCATION OF COLLISIONS

The chart at right shows the number of collisions by type of roadway, with percentages of all collisions.
$36 \%$ of all collisions occurred on Kentucky's "State Numbered" roads, with $47 \%$ of all fatal collisions reported occurring on this type of roadway.

Although $21 \%$ of all collisions occurred on city streets, only $5 \%$ of the fatal collisions occurred on city streets.

# COLLISIONS <br> BY ROADWAY CONDITIONS AND ROADWAY CHARACTER 

The charts below depict percentages and numbers of all collisions and fatal collisions according to the conditions and character of the roadway on which the collision occurred.

The road conditions chart compares fatal collisions with all collisions for different road conditions identified by the police officer who completed the collision investigation report.

As depicted in the bottom chart, $82 \%$ of all collisions occurred on straight roads and $18 \%$ on curved roads. $36 \%$ of the fatal collisions occurred on curved roads.

## TWO-VEHICLE COLLISIONS

The above chart depicts the vehicular action for these collisions, where known.

- 56,837 traffic collisions (including 217 fatal collisions) reported this year involved "two-vehicle" collisions. These collisions represent $56 \%$ of all collisions and $31 \%$ of fatal collisions reported.
- Head-on collisions accounted for ~3\% of all collisions involving two vehicles but ~38\% of fatal collisions.
- Rear-end collisions reflect $\sim 17 \%$ of all two-vehicle collisions, but only ~9\% of fatal collisions.
- Sideswipe collisions (both meeting and passing) reflect $\sim 20 \%$ of all collisions and $\sim 6 \%$ of the fatal collisions.
- Angle collisions, account for $\sim 32 \%$ of all two-vehicle collisions, but represent the highest percentage of fatal collisions at nearly $40 \%$.

## COLLISIONS BY DAY AND MONTH

$23 \%$ of all collisions and $31 \%$ of fatal collisions occurred on weekends (Saturday and Sunday combined).

Most collisions happened in January, but most fatal collisions occured in August.

The graphs below shows all collisions and fatal collisions by day of occurrence (excluding unknown).

## TRUCK COLLISIONS

Contributing vehicular factors, as noted by the investigating officer on the collision report, are shown below for collisions involving trucks. A truck is defined as a vehicle with a registered weight of 10,000 pounds or more. Up to two factors may be noted for each vehicle in the collision. The number represents the number of trucks with the given factor, and the percentage is the percent of all trucks with that factor.

8,703 truck related factors were involved in collisions, 106 in fatal collisions, and 1,315 in non-fatal injury collisions.

## DRIVER INVOLVEMENT

## RESIDENCE OF DRIVER

There were 161,190 drivers involved in collisions. Of these, 1,047 drivers were involved in fatal collisions. The chart below tabulates driver involvement by residence and shows that most drivers ( $\sim 57 \%$ of those in which residence is known) were local residents (reside in the county where the collision occurred).

Many drivers in the Unknown/Not Stated category are the result of hit-and-run collisions where the drivers' identities remain unknown. There may be fewer drivers than vehicles because of collisions with unoccupied vehicles (generally a parked vehicle).

## AGE OF DRIVERS <br> (ALL COLLISIONS)

The chart below groups the ages of drivers involved in traffic collisions this year in Kentucky (for which age information was available).

For each age category, the following information is shown: the percentage of drivers involved in all collisions, the number of drivers involved in these collisions is shown in parentheses, the percentage of all licensed drivers, and the number of licensed drivers is shown in parentheses (includes learner permits). This allows a comparison to be made between the percentage of a given age category of the driving population and the corresponding percentage this age category is involved in collisions.

This data does not differentiate drivers "at-fault" versus drivers "not-at-fault."

NOTE: PERCENTAGE OF LICENSED DRIVERS IN EACH AGE CATEGORY ARE BASED ON 3,326,097 DRIVERS LICENSED IN KENTUCKYTHIS YEAR. (Includes learner permits.)

## AGE OF DRIVERS <br> (FATAL COLLISIONS)

The chart below groups the ages of 1,047 drivers involved in fatal collisions this year (for which age information was available). It should be noted that the drivers were not necessarily killed in the fatal collision.

The number of drivers involved in fatal collisions may exceed the total number of fatal collisions.

The percentage of the driving population within a given age category can be compared to the corresponding percentage of involvement in fatal collisions within this same age category.

NOTE: PERCENTAGE OF LICENSED DRIVERS IN EACH AGE CATEGORY ARE BASED ON 3,202,620 DRIVERS LICENSED IN KENTUCKYTHIS YEAR. (Includes learner permits.)

## COLLISIONS INVOLVING TEENAGE DRIVERS

The charts below show the percentages of teenage drivers involved in collisions (16 to 19 years of age) compared with all other age groups. Licensed teenage drivers represent 7\% of Kentucky Drivers (including learner's permits).

The number of teenage drivers involved in collisions, together with alcohol-related collisions, are shown below. It should be noted that tabulations for alcohol-related collisions were derived from the total number of drinking drivers as reported by the officer at the scene. FARS would likely report higher numbers. As shown, 64 teenage drivers were involved in alcoholrelated collisions this year.

There were 64 fatalities in collisions involving a teenage driver ( 27 of these fatalities being the teenage driver). There were 11 fatalities in alcohol-related collisions involving teenage drivers ( 1 of these fatalities being the teenage driver).

## ALCOHOL-RELATED COLLISIONS

An alcohol-related collision is any collision where a driver was determined to have been drinking. For injury and property damage collisions, the following information gives the determination made at the scene by the investigating officer and given on the collision report. However, more detailed information regarding drinking drivers in fatal collisions is obtained from FARS, which follows up on blood alcohol content (BAC) results.

Alcohol-related collisions are listed by county beginning on page 40. The following information has been adjusted to agree with FARS statistics involving fatal collisions; therefore, these numbers may not agree with previously listed state totals.

| ALL COLLISIONS | FATAL COLLISIONS (as reported) | 152 |
| :---: | :---: | :---: |
|  | FATAL COLLISIONS (adjusted by FARS) | 153 |
|  | INJURY COLLISIONS | 1,645 |

|  | (C) POSSIBLE INJURIES | 921 |
|  | TOTAL INJURIES <br> (with data adjusted by FARS) | 2,662 |

The total number of alcohol involved collisions is depicted in the upper left chart. The number of persons killed and injured in alcohol involved collisions is depicted in the right-hand chart.
$3 \%$ of the alcohol-related collisions were fatal, $33 \%$ were injury collisions, and $64 \%$ were property damage only.

## Comparison with previous years

Alcohol-related collisions increased when compared the previous year.
There were 181 persons killed, $38 \%$ more than the previous year.
There were 2,662 persons injured in alcohol-related collisions, an increase of $\sim 9 \%$ from the previous year.
Fatal collision data in the chart below have been adjusted by FARS to reflect follow-up studies of alcohol test results using FARS data. As a result, this table may differ from data collected at the time of the crash displayed above.

## SAFETY RESTRAINTS

The chart below compares safety belt usage for the past 5 years.

The data were obtained as part of an annual observational survey conducted at sites across Kentucky.

| YEAR | ALL USING SAFETY BELT | YEAR | PICKUPS USING SAFETY BELT | YEAR | MOTORCYCLE USING HELMET |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 2016 | 87.0\% | 2016 | 79.0\% | 2016 | 59.0\% |

The chart below shows vehicle occupants by their injury status, and separates the occupants into categories of restraint used and restraint not used.

Overall, $10.3 \%$ of all vehicle occupants were killed or injured. A breakdown into restraint usage shows only $11.2 \%$ of those restrained were killed or injured, compared to $51.6 \%$ of those not restrained.

Comparing the percentages killed or injured in the "Restraint Used" and "Restraint Not Used" categories shows the benefit of wearing a safety belt. The "NOT APPLICABLE" category includes occupants in vehicles that normally do not contain safety restraints, occupants where safety restraints usage was not indicated, occupants not in an appropriate position, or pedestrians and pedalcyclist.

Only $\sim 33 \%$ of people killed were wearing a safety restraint.

# CONTRIBUTING FACTORS 

## CONTRIBUTING FACTORS

A variety of factors and conditions can contribute to a collision. Police officers may indicate up to three driver factors for each driver, two vehicular factors for each vehicle, and up to two environmental factors for each collision.

This table gives the number of collisions in which a given factor was listed at least once.

# FATALITY ANALYSIS REPORTING SYSTEM (FARS) 

## FATALITY ANALYSIS REPORTING SYSTEM (FARS)

The Fatality Analysis Reporting System (FARS) is a computerized file containing data on all fatal motor vehicle traffic collisions occurring each year in the fifty states, the District of Columbia, and Puerto Rico. The system is operated by the National Highway Traffic Safety Administration for the purpose of identifying safety problems, suggesting solutions, and helping to provide an objective basis to evaluate the effectiveness of motor vehicle safety standards and highway safety countermeasures.

FARS has a contract with a government agency in each state for the purpose of fatal collision data acquisition. In Kentucky, this contract is with the Kentucky State Police Records Section.

For reasons of timeliness in reporting and continuity among the states, FARS counts only those fatalities that occur within 30 days of the collision date. FARS does not include fatalities occurring in parking lots or on private property. FARS differs from Kentucky data in that it collects data not only from the collision reports submitted from across the state, but contacts many other sources to obtain additional data pertinent to the collision, vehicles, drivers, etc. Examples of additional sources contacted by FARS are vehicle registration files, Driver Licensing, Vital Statistics, EMS reports, labs, coroners, and medical examiners. THE FARS DATA CANNOT BE COMPARED DIRECTLY WITH THE PREVIOUSLY LISTED STATISTICS BECAUSE OF A DIFFERENCE IN THE REPORTING CRITERIA.

## DRIVERS INVOLVED IN FATAL COLLISIONS - AGE AND ALCOHOL INVOLVEMENT

The chart below depicts the ages of all drivers in fatal collisions vs. alcohol involved drivers in fatal collisions during the same time period and the percentages of involvement for various ages and age groups. The alcohol involved teenage driver (ages 13 through 19) represents $2 \%$ of the total number of drinking drivers involved in fatal collisions.

NOTE: Data is derived from the Fatality Analysis Reporting System (FARS) . The number of alcohol related drivers differs from those reported through the Kentucky Collision Reporting System because FARS follows up on alcohol test results.
*Alcohol involved drivers refers to a driver suspected by the police to be drinking and who tested positive for alcohol in a subsequent test. (. 01 or higher)

# ALCOHOL INVOLVEMENT <br> BY AGE AND TEST RESULTS FOR DRIVERS INVOLVED IN FATAL COLLISIONS 

THIS YEAR THERE WERE 181 PERSONS KILLED IN FATAL COLLISIONS INVOLVING A DRINKING DRIVER. THIS REPRESENTS ~23\% OF ALL PERSONS KILLED IN TRAFFIC COLLISIONS IN KENTUCKY.

The chart below shows drinking drivers by age and alcohol test result. 78\% of the drinking drivers tested were found to have a blood alcohol content (BAC) of $0.10 \%$ or above at the time of the collision.

24\% OF THE FATALLY INJURED PEDESTRIANS OVER THE AGE OF 15 WERE DRINKING.

THEIR AVERAGE ALCOHOL TEST WAS 21\%.

Another traffic hazard is the drinking pedestrian. The chart on the right shows the number of fatally injured pedestrians by age and alcohol involvement.

FARS total number of pedestrians differs from the number reported through the Kentucky Collision Reporting System because FARS does not include pedestrians killed in parking lots.

## SAFETY RESTRAINTS AND EJECTION IN FATAL COLLISIONS

The chart below plots overall results in fatal collisions when motorcycle helmets and other restraints (safety belts, harnesses, child restraints, etc.) are used. A comparison of "used" versus "not used" for 2018 FARS data strongly confirms both the lifesaving advantage as well as the reduction of serious injury when restraints are in place.

55\% OF THE VEHICLE OCCUPANTS KILLED WERE NOT RESTRAINED.
$25 \%$ OF THE VEHICLE OCCUPANTS SUFFERING A SUSPECTED/POSSIBLE INJURY WERE NOT RESTRAINED.

NON-MOTORISTS ARE NOT INCLUDED IN THE CHARTS BELOW.

| RESULT | MOTORCYCLE HELMET |  |  | RESTRAINT |  |  | TOTAL |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Used | Not <br> Used | Unknown | Used | Not <br> Used | Unknown |  |

Of the 1,399 vehicle occupants involved in fatal collisions, only 943 were using safety restraints - an overall usage rate of $67 \%$ in fatal collisions. (Motorcycle occupants are not included)

## EJECTION

| RESULTS | Total <br> Ejection | Partial <br> Ejection | No <br> Ejection | Unknown | TOTAL |
| :--- | :---: | :---: | :---: | :---: | :---: |
| (K) Killed | 86 | 42 | 444 | 0 | $\mathbf{5 7 2}$ |
| (A) Suspected Serious Injury | 12 | 0 | 138 | 0 | $\mathbf{1 5 0}$ |
| (B) Suspected Minor Injury | 9 | 0 | 165 | 0 | $\mathbf{1 7 4}$ |
| (C) Possible Injury | 0 | 0 | 131 | 0 | $\mathbf{1 3 1}$ |
| (O) No Injury | 0 | 0 | 372 | 0 | $\mathbf{3 7 2}$ |
| Unknown If Injured | 0 | 0 | 25 | 0 | $\mathbf{2 5}$ |
| Injured, Severity Unknown | 0 | 0 | 1 | 0 | $\mathbf{1}$ |
| TOTAL | $\mathbf{1 0 7}$ | $\mathbf{4 2}$ | $\mathbf{1 , 2 7 6}$ | $\mathbf{0}$ | $\mathbf{1 , 4 2 5}$ |

The above chart shows overall injuries in fatal collisions according to whether the vehicle occupant was ejected from the vehicle, partially ejected, or not ejected.

86\% OF VEHICLE OCCUPANTS WHO WERE EITHER TOTALLY OR PARTIALLY EJECTED WERE KILLED. This data also reaffirms the lifesaving advantage of using an active restraint, since the possibility of being ejected upon impact is significantly reduced.

## CHILD RESTRAINTS IN FATAL COLLISIONS

Kentucky's "child restraint law" (KRS 189.125) requires that "Any driver of a motor vehicle, when transporting a child of forty (40) inches in height or less in a motor vehicle operated on the roadways, streets, and highways of this state, shall have the child properly secured in a child restraint system of a type meeting federal motor vehicle safety standards."

In order to qualify, the child restraint system must be certified as having been federally approved. (Federal approval of a child restraint system is based on its having withstood dynamic crash tests -- 30 mph collision into a fixed barrier.)

The data on child restraints depicted in the chart below reflects age (four years and under) rather than the height of the child. Other states with child restraint laws have adopted the "four years and under" standard in their statutes.

| RESULT |  <br> UNDER <br> TOTAL | CHILD <br> RESTRAINT <br> USED | LAP BELT \&/OR <br> HARNESS USED | NONE <br> USED | UNKNOWN |

## COST OF KENTUCKY TRAFFIC COLLISIONS

## \$3.3 BILLION to \$22.0 BILLION <br> (Estimated Economic Cost vs Estimated Comprehensive Cost)

The calculable costs (Economic Costs) of motor vehicle collisions on public roads include wage loss, medical expense, administration costs, property damage, and employer costs. Comprehensive Costs include not only the Economic Cost components but also a measure of the value of lost quality of life associated with deaths and injuries.
Estimated Costs provided by the National Safety Council (Injury Facts ${ }^{\circledR}$ ) considering both Economic and Comprehensive Costs, were used to arrive at a cost range for traffic collisions in Kentucky occurring on public roads.

Costs for 2018 were used as this is the most recent available at the time of this publication.

## HEATSTROKE PREVENTION TIPS FOR PARENTS AND CAREGIVERS

Leaving a child alone in a vehicle can lead to tragedy. These deaths, while accidental, are always preventable. Here are some helpful tips to make sure it doesn't happen to your family.

## REMEMBER:

- Never leave a child alone in a parked car, even with the windows rolled down or the air conditioning on. A child's body temperature can rise 3 to 5 times faster than an adult's. A core body temperature of 107 degrees is lethal.
- Always look in both the front and back of the vehicle before locking the door and walking away.
- Heatstroke can occur in temperatures as low as 57 degrees. On an 80 -degree day, temperatures inside a vehicle can reach deadly levels in just 10 minutes.
- Never let children play in an unattended vehicle. Teach them a vehicle is not a play area.
- Always lock your vehicle doors and trunk, and keep the keys out of a child's reach. If a child is missing, quickly check all vehicles, including the trunk.

Come up with ways to remind yourself that a child is in your vehicle. Here are some suggestions:

- Place a briefcase, purse or cell phone next to the child's car seat so that you'll always check the back seat before leaving the car.
- Put a teddy bear in the passenger seat as reminder to check the back seat before you exit the vehicle.
- Have your childcare provider call you if your child doesn't arrive.
- Write a note and place it on the dashboard of your car, or set a reminder on your cell phone or calendar.
- It taking your child to day care is not part of your usual routine, call your spouse or another caregiver to confirm you've dropped off your child.

## REMEMBER:

Kids and hot cars are a deadly combination. Don't take the chance. Look before you lock.
