ONE HEALTH CONCEPT ON THE IN-VIVO ANTIPARASITIC ACTIVITY AND TOXICITY EVALUATION OF *Elettaria cardamomum* AGAINST THE GROWTH AND SURVIVAL OF ZOONOTIC HAEMOFAGELLATE, *Trypanosoma evansi*

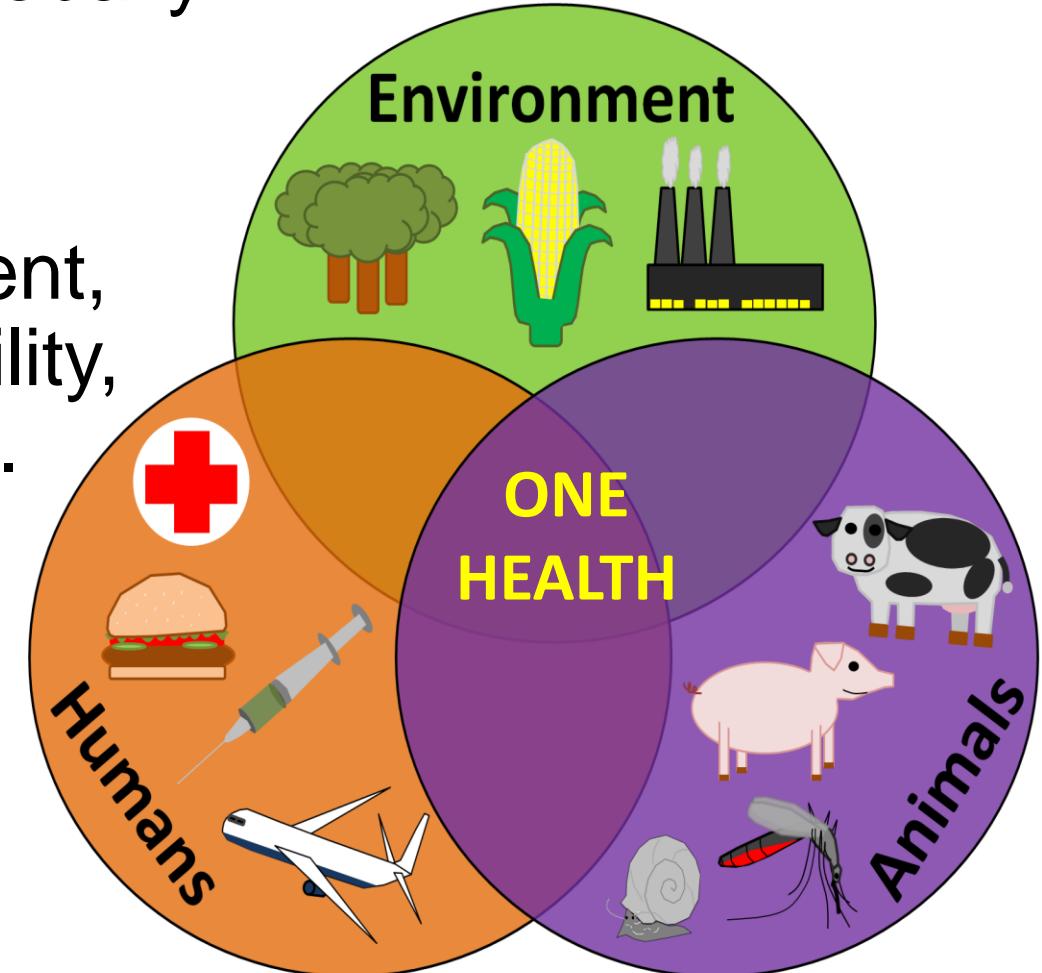

MOHD SHUKRI BIN BABA
International Islamic University Malaysia

INTRODUCTION

One Health (OH) Concept

- Recognizes interrelationship between animal, human and environmental health, locally and globally.
- Holistically embraces a very broad scope: biodiversity, rural development, food security, ecosystem sustainability, policy issues, wildlife diseases, etc..
- Initiate worldwide strategies for interdisciplinary collaboration & communication in all aspect of healthcare and services

Trypanosoma evansi

- First discovered by Sir Griffith Evans in Punjab India (1880)
- Haemoflagellated protozoa in both human and animals → zoonotic vector-borne disease
- Caused atypical human trypanosomiasis (AHT) in human and Surra disease in livestock
- Wide variety of distributed vectors → easily spread worldwide
- Drug resistant in some regions → suramin, pentamidine, berenil

Vectors of *Trypanosoma evansi*

Horsefly / *Tabanus striatus*

Tsetse fly / *Glossina morsitans*

Horn fly / *Haematobia* spp.

Muscidae fly / *Stomoxys* spp.

Another Possible Vectors of *Trypanosoma evansi*

Triatominae bug / *Triatoma* spp.

Argasidae tick / *Ornithodoros* spp.

Buffalo leech / *Hiruninaria manillensis*

Vampire bat / *Desmodus rotundus*

Documented AHT (Philippe et al. 2013)

No	Location	Species / Subspecies	Date	Identification Method	Fever	Treatment	Outcomes
1	Ghana	<i>T. vivax</i>	1917	Morphology	ND	ND	ND
2	Pasteur Inst.	<i>T. b. brucei</i>	1930	Morphology	ND	ND	ND

Elettaria cardamomum

- “Queen of Spice” → South Asia, SEA, Middle East, Africa and Europe (Ravindran 2010)
- In 100gm → 300kcal, 68g CHO, 15g protein, 28g fibers & no cholesterol
- Vitamin A & C, Na, K, Ca, Fe, Mn, P, Cu, Mg & Zn (Cox et al. 2000)
- Cardamom powder → therapeutic effects & significant biological activities (Gao et al. 2008)

E. cardamomum: The Testimonies

In-vitro inhibits 87% - 95% of *Leishmania amazonensis* & *L. braziliensis* promatigotes growth (Denise et al. 2010)

Inhibits the synthesis of peptidoglycan molecules in bilayer lipid structure of organism plasma membrane (Ogunlana et al. 2013)

Cardamom powder → good therapeutic preventive effect and significant biological activities (Gao et al. 2008)

Cardamom oil exhibits anti-gonorrhea and anti-nephritis property in male rabbit's urethra (Turi et al. 2011)

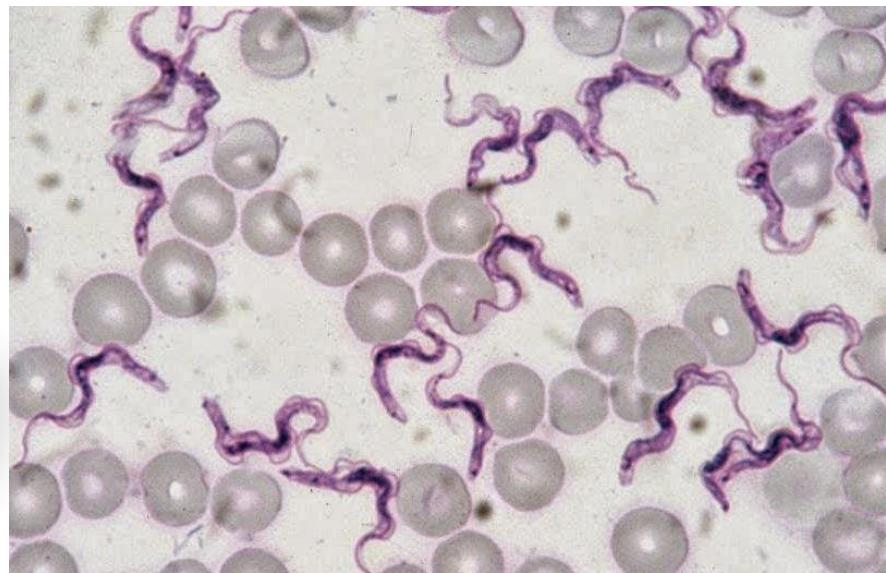

Curing asthma and bronchitis symptoms by increasing blood circulation to the lungs (Berhe et al. 2009)

Anti-colorectal tumour with 68% inhibition rate on human colon adenocarcinoma cells HCA-2 and HCA-7 (Gayathri et al. 2010)

MATERIALS & METHODS

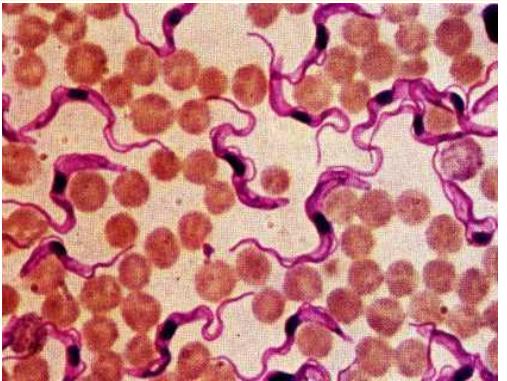

Experimental Materials

Flow Chart

T. evansi stock

T. evansi administered i.p.
(5×10^3 *T. evansi* / mice)

Oral administered of 0.1 mL/mouse of
10 µg/mL of *E. cardamomum-dH₂O* extract

Giemsa blood slide for inhibition rate evaluation

Blood slide for electron microscopic observation

Physical observation of symptoms and mice survival

Blood biochemistry and renal function tests

Vital organ histology for toxicity assessment

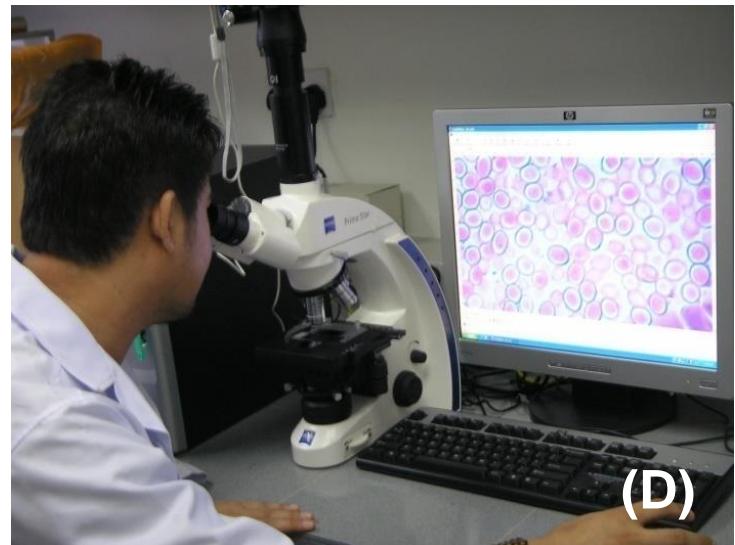

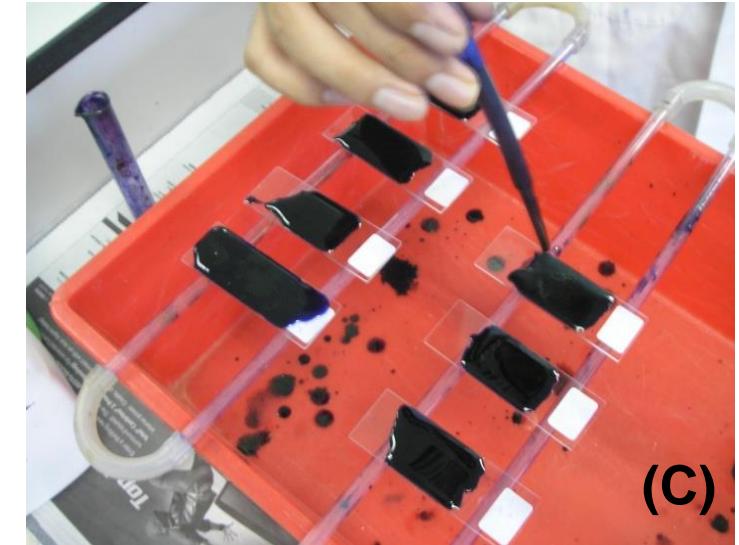

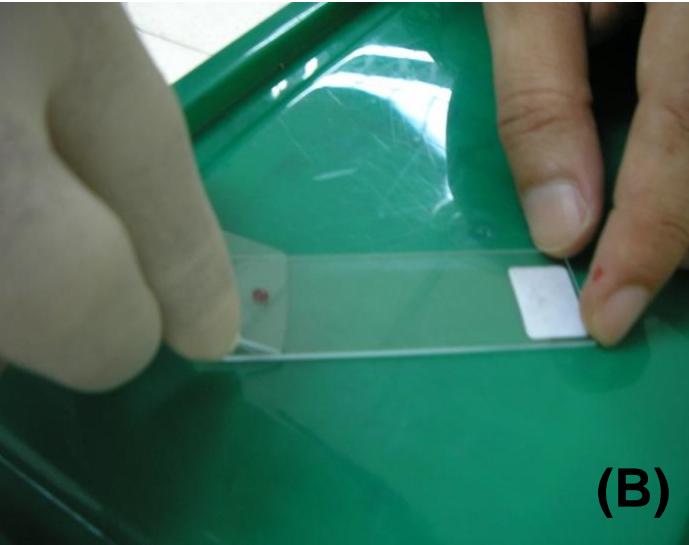

Experimental Design

GROUP	REGIME	DESCRIPTION	<i>E. cardamomum</i> DOSAGE
TREATMENT	PREVENTIVE	PRE14 : 14 days pre-infection	0.1 mL of 10 µg/mL of dH ₂ O-extract
		PRE07 : 7 days pre-infection	0.1 mL of 10 µg/mL of dH ₂ O-extract
		PRE03 : 3 days pre-infection	0.1 mL of 10 µg/mL of dH ₂ O-extract
	CURATIVE	CUR03 : 3 days post-infection	0.1 mL of 10 µg/mL of dH ₂ O-extract
		CUR05 : 5 days post-infection	0.1 mL of 10 µg/mL of dH ₂ O-extract
		CUR07 : 7 days post-infection	0.1 mL of 10 µg/mL of dH ₂ O-extract
GROUP	REGIME	DESCRIPTION	CONTROL DOSAGE
CONTROL	POSITIVE	POS : Berenil (Sigma-Aldrich KL)	0.01 mL 3.5 mg/kg bw
	NEGATIVE	NEG : 0.9 % Normal Saline	0.1 mL 0.9 normal saline
	LETHAL	LTN : Infection without treatment	5×10^3 <i>T. evansi</i> /mice (i.p.)

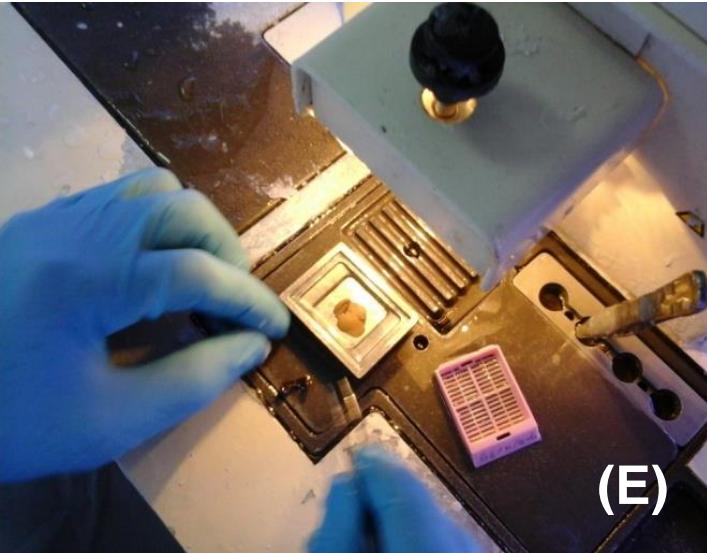

Parasite Administration And Animal Tagging

Giems Staining And Microscopic Observation

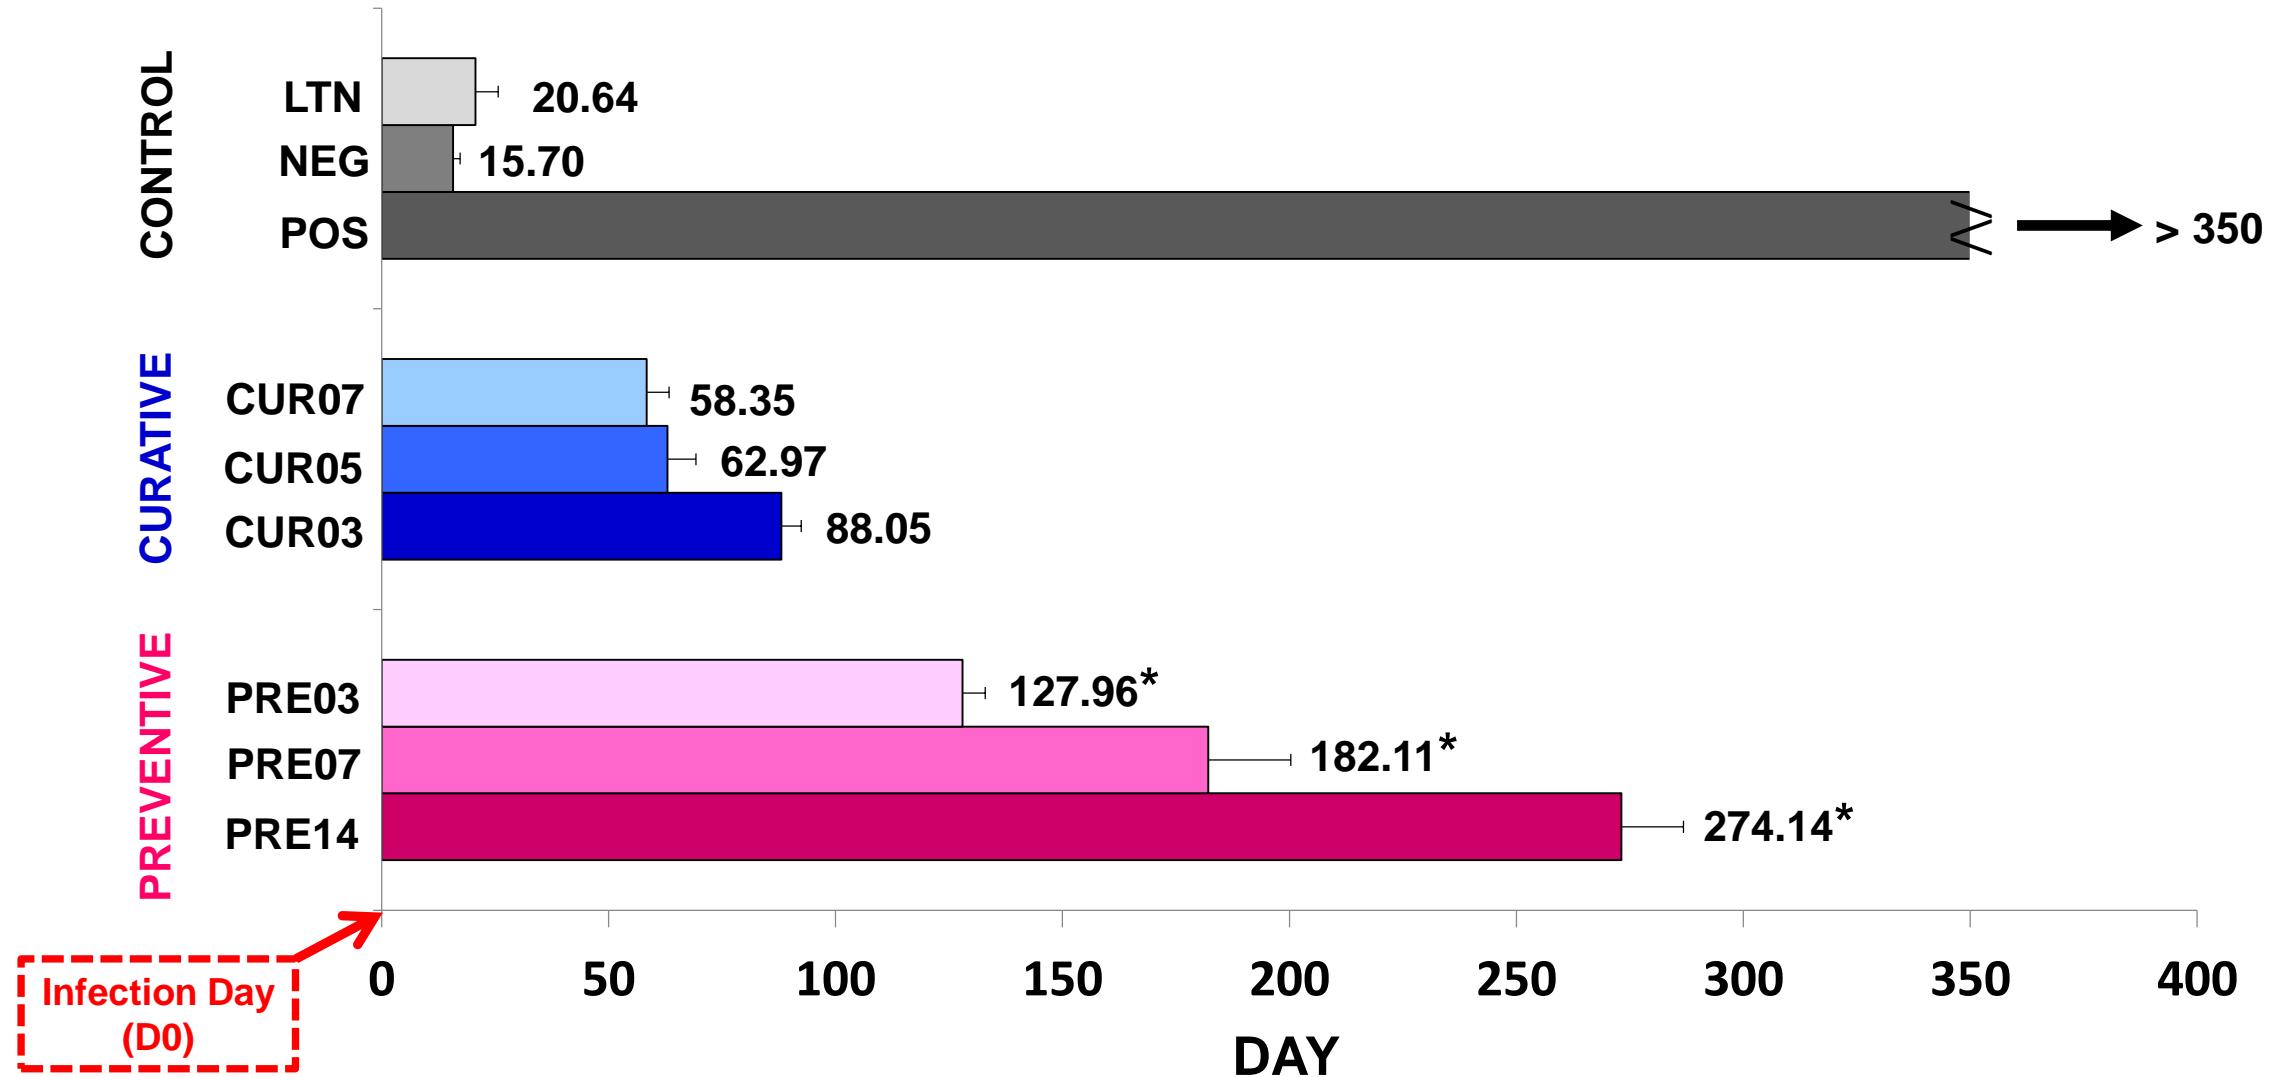

Biochemical Test And Histology Of Liver & Kidney

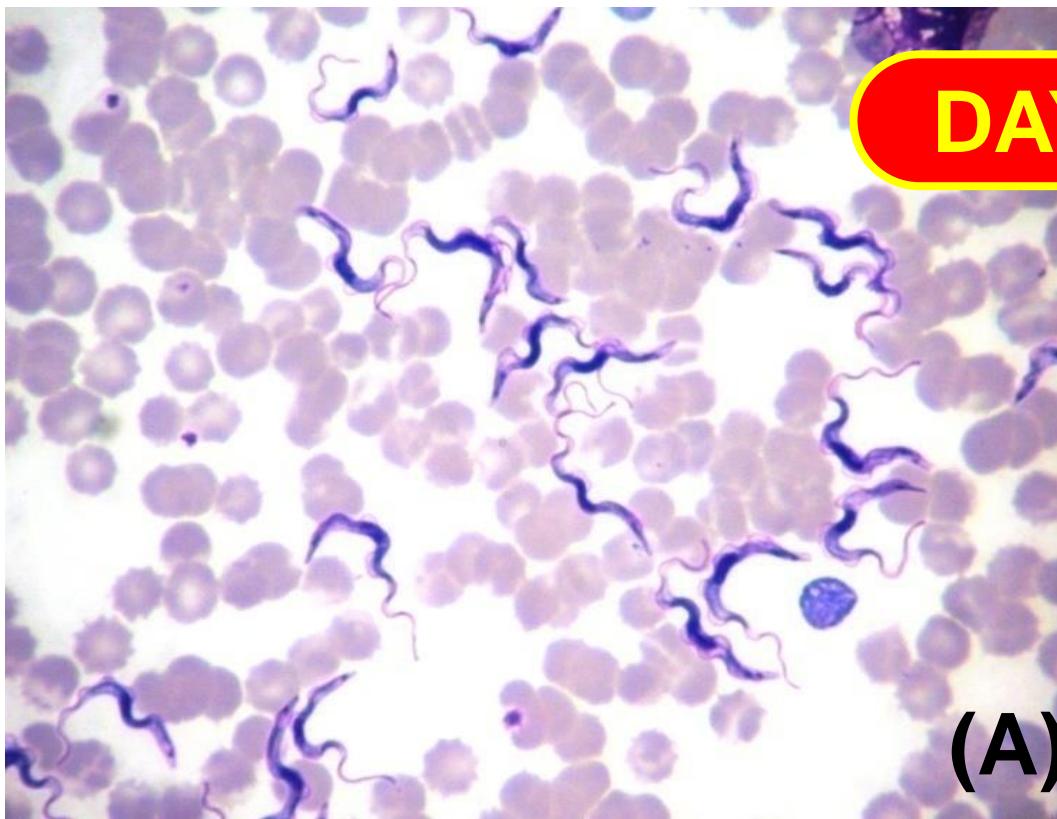

RESULTS & DISCUSSIONS

Mice Survival Time (Day)

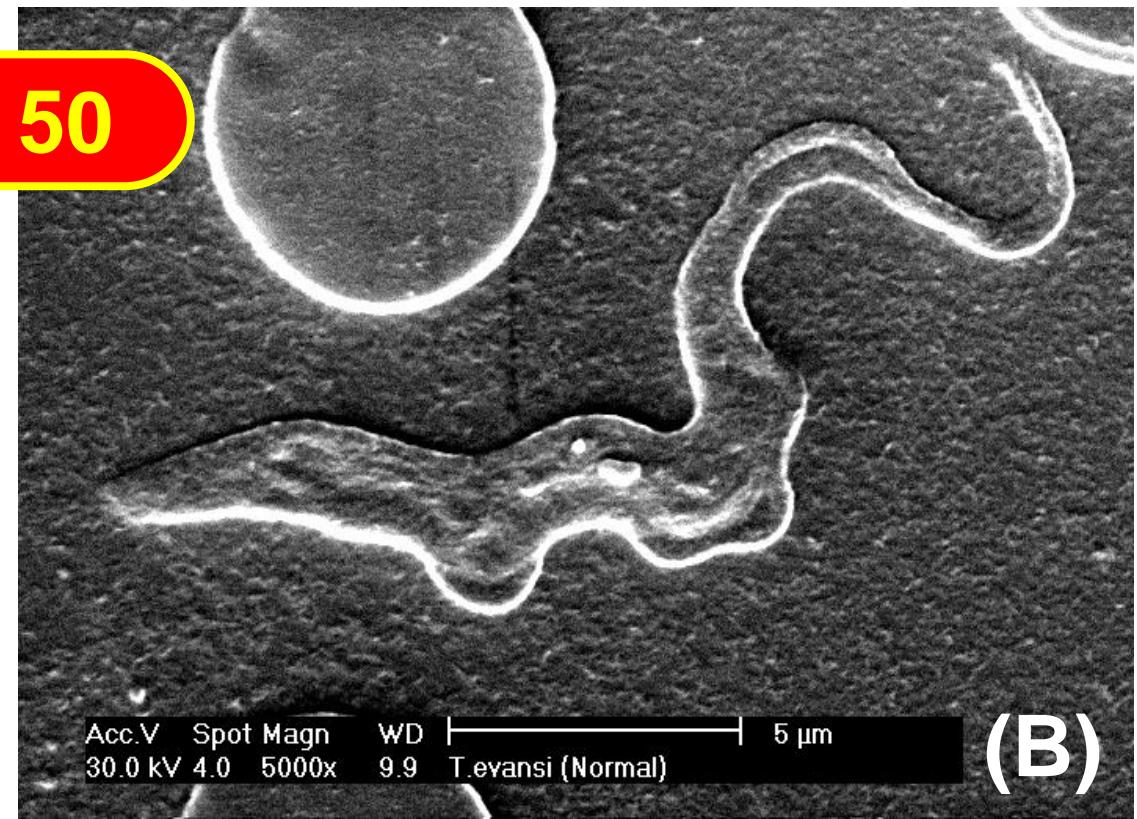

Parasite Survival In PRE14 Mice Group : 50th Day

DAY 50

(A)

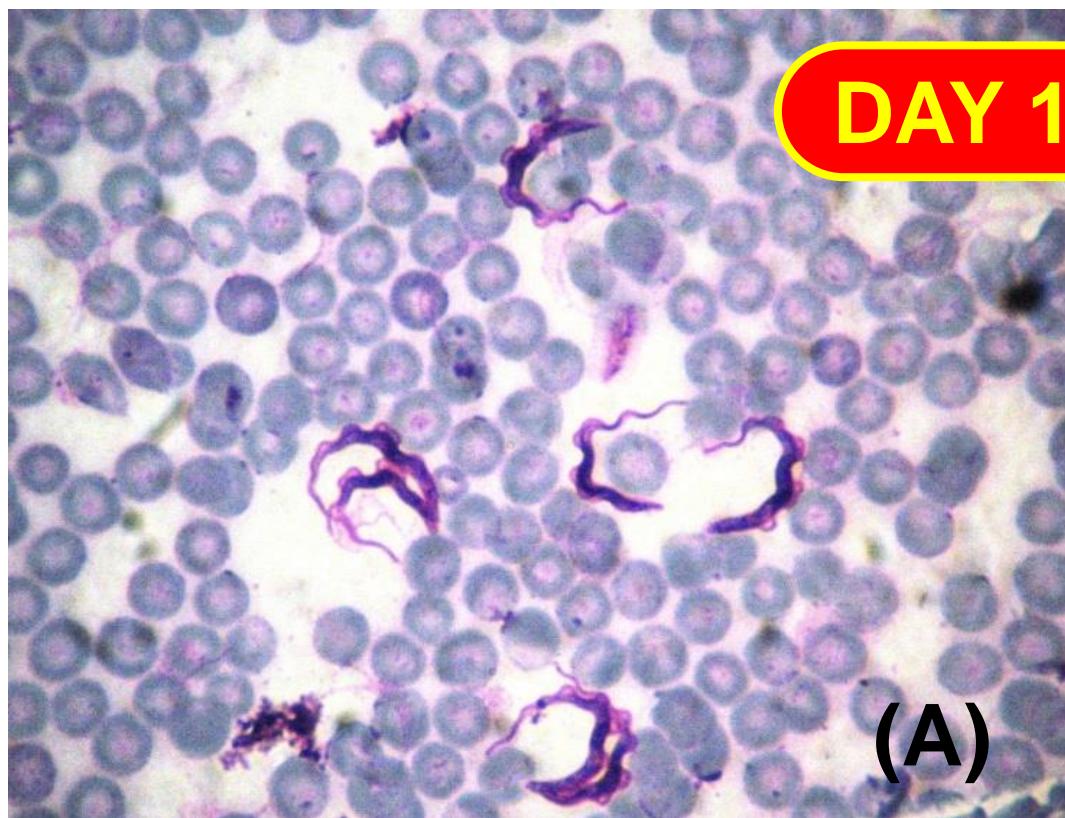

Acc.V Spot Magn WD 5 μm
30.0 kV 4.0 5000x 9.9 T.evansi (Normal)

(B)

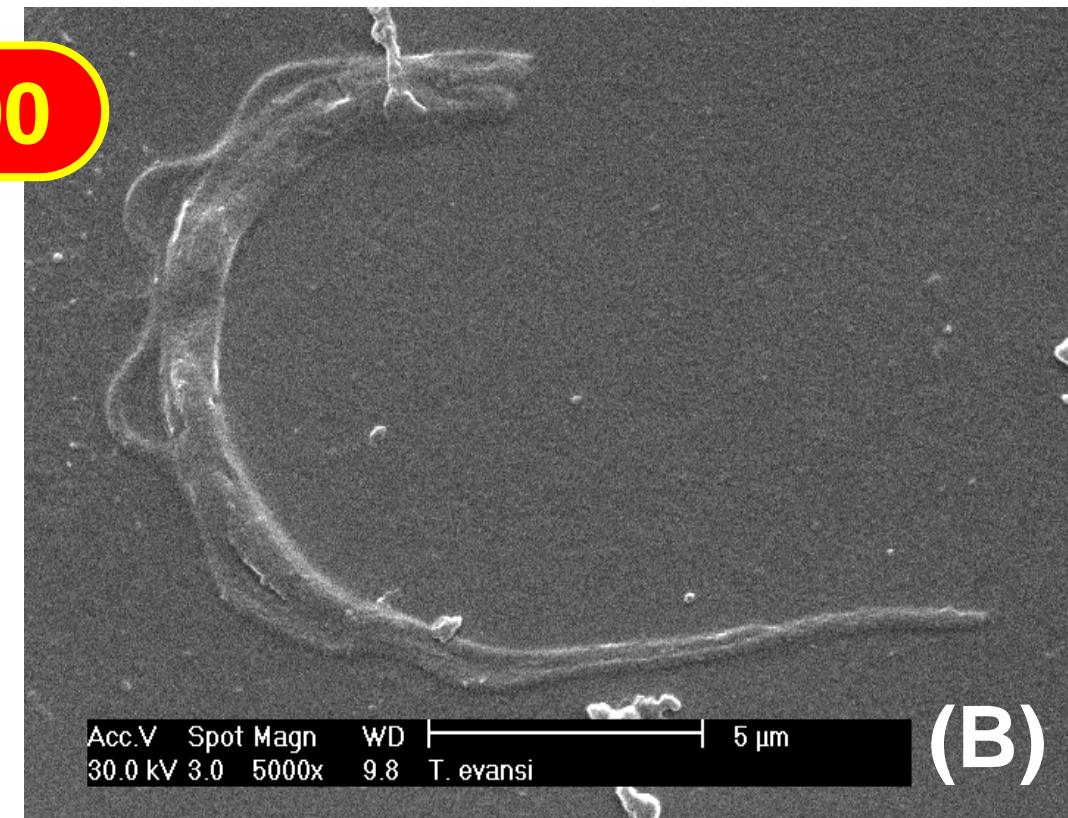

Giemsa thin blood smear of the mice from PRE14 mice group taken on day 50 post-infection as observed under x100 magnification of light microscope (A) and x5000 magnification of SEM (Phillips XL30, UK) (B)

Parasite Survival In PRE14 Mice Group : 100th Day

DAY 100

***T. cucumerina* VS Berenil**

Scanning electron micrograph showed the morphological changes of *T. evansi* in PRE14 mice (0.2 mL 100 mg/kg bw *T. cucumerina* aqueous-extract) on 270th day post infection (A) and in POS mice at 6th hours post treatment (0.01mL 3.5 mg/kg bw Berenil) (B) as observed under x5000 magnification of SEM

Biochemical Test For Toxicity Assessment

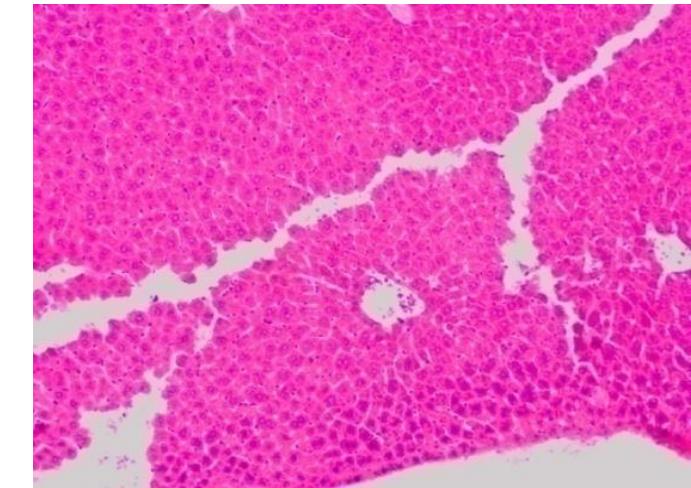

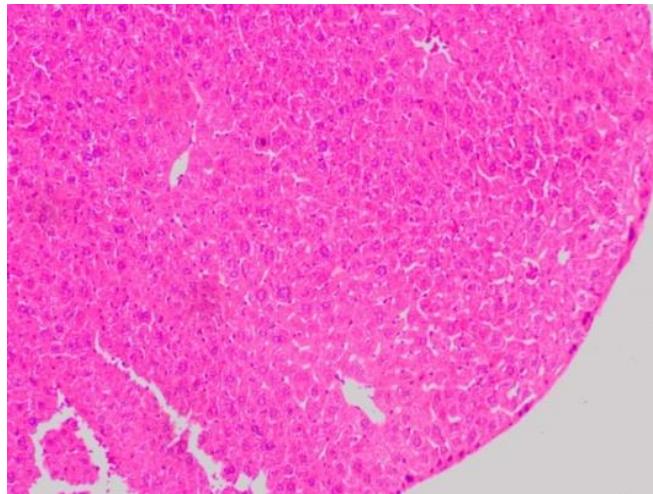

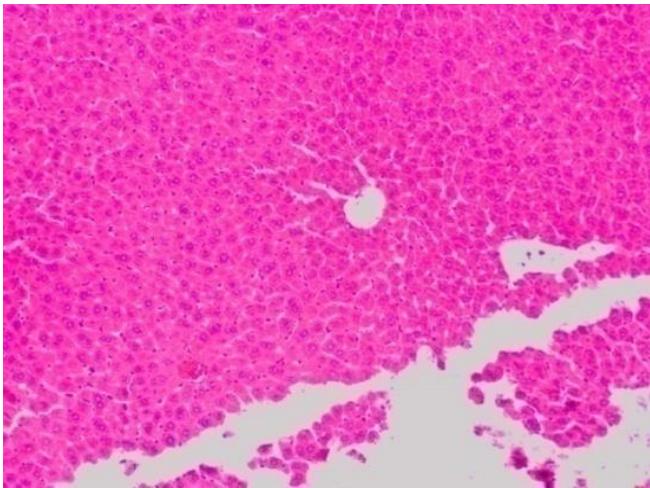

Test	TA	TB	TC	TD	CN	CI	NR	Unit
ALT (*)	41.81 ± 2.14	45.20 ± 1.13	67.57 ± 2.91	90.03 ± 2.02	41.03 ± 3.91	44.83 ± 1.11	40 – 93	IU/L
AST (*)	133.13 ± 2.04	125.93 ± 2.12	167.76 ± 2.27	187.01 ± 2.09	111.62 ± 1.19	134.43 ± 4.01	92 – 206	IU/L
ALP (*)	62.76 ± 2.33	59.4 ± 2.97	69.2 ± 2.90	68.03 ± 2.10	61.46 ± 2.46	58.32 ± 2.97	54 – 115	IU/L
STP (*)	6.12 ± 2.32	7.21 ± 3.81	7.93 ± 2.01	8.83 ± 3.90	6.40 ± 1.01	6.80 ± 3.06	5.8 – 9.5	g/dL

- TA : Sub-acute regime – Daily treatment (28 days)
 TB : Sub-acute regime – Daily treatment (28 days) 2 hours post-infection
 TC : Sub-chronic regime – Daily treatment (90 days)
 TD : Sub-chronic regime – Daily treatment (90 days) 2 hours post-infection
 CN : Control regime – Normal mice without infection and treatment
 CI : Control regime – Infected mice on D0
 ALT : Alanine aminotransferase
 AST : Aspartate transaminase
 ALP : Alkaline phosphatase
 STP : Serum total protein

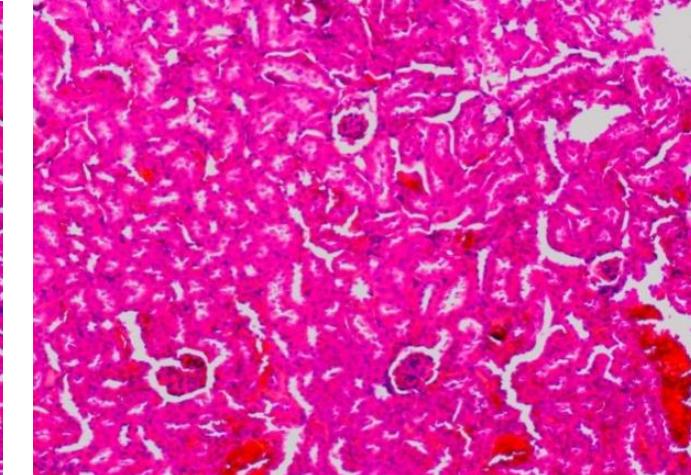

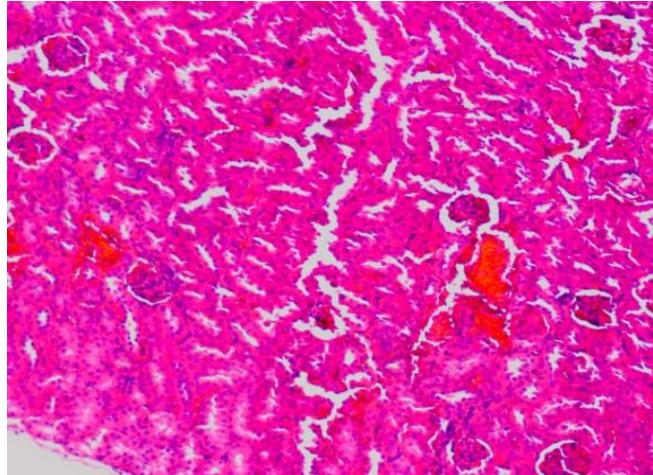

(* All values were expressed as mean ± standard deviation (sd)

Organ Histology For Toxicity Assessment

Liver

Kidney

Treatment (Acute)

Treatment (Sub-acute)

Control

CONCLUSIONS

Hypothesis

- New wave of infection → mice is susceptible to infection (Kurup and Rajamohan 2011)
- Curative regime are less effective than other treatment regimens.
- Longer prophylactic duration → longer survival period of the host.
- A bioactive compound, nerolidol in *E. cardamomum* able to prolong the survival rate of the *Leishmania*-infected mice although the parasitemia density is high (Romão et al. 2006)
- OH approaches within multidisciplinary collaboration is required to combat AHT & Surra disease.

Suggestions

Various solvents
of *T. cucumerina*
extract

Mechanism
of action

In-vitro
anti-trypanosomal
screening

Concentration- &
time-dependant
alteration

Clinical &
molecular
approaches

Screening
against *T. cruzi*
and *T. brucei*

Absolute Hypothesis

CONSUME CARDAMOM..!

Absolute Hypothesis
