From January 29th to 31st, Al-Aquitaine Exploration, Limited completed a magnetic and electromagnetic survey on Claims 4657, 4658, 4659 and 4660 covering Barker Pond in Bowman Township, Oxford County, Maine (Figure 1).

Grid lines were oriented N60°W approximately perpendicular to the regional trend of formations in this area. Spacing of lines was at 400 feet and about 6500 lineal feet were surveyed. The grid layout is shown on Figure 2. Open water at the outlet of Barker Pond prevented completion of line 6N to the southeast.

MAGNETIC SURVEY (Figure 2)

The magnetic survey was carried out with a Scintrex MF-1 Fluxgate Magnetometer. Readings were taken at 100-foot intervals with some readings at intermediate stations in areas of steep magnetic gradients. Diurnal drift was negligible.

Total magnetic relief over the pond is 800 gammas. The results show no clear-cut consistency from line to line, but suggest a series of lensoid formations trending a few degrees east of north and hence indicating a local departure from the predominant northeast strike in the area as a whole.

ELECTROMAGNETIC SURVEY (Figures 3 and 4)

The electromagnetic survey was completed in the horizontal mode using an Apex Parametrics MaxMin II multi-frequency unit with a 400-foot cable. Stations were read at 100-foot intervals at frequencies of 1777 Hz and 222 Hz.

No anomalies were detected.

Dear Mr. Doyle:

On December 5, 1975, I wrote to you requesting an "ice-out" extension for certain claims in Bowmantown. A copy is attached. This letter was sent by registered mail with return receipt requested which was duly returned to us from your office on December 12th.

I am somewhat dismayed that our petition has not been acknowledged as of this date. I would appreciate receiving an answer from you so that we may proceed with our work.
