J/PASP/127/143 WASP-39b and WASP-43b light curves (Ricci+, 2015)

Multifilter transit observations of WASP-39b and WASP-43b with Three San Pedro Martir Telescopes.

Abstract:

We present photometric light-curves of the transiting extrasolar planets WASP-39b and WASP-43b obtained with three San Pedro Martir telescopes by using the defocused photometry technique.

Description:

The instrument comes with a set of standard UBVRI Johnson filters among others. We present observations carried out using the VRI filters.

Light curves of WASP-39b were obtained with the 0.84m telescope in R and I bands and with the 2.12m telescope in the U band.

Light curves of WASP-43b were obtained with the 0.84m telescope in VRI bands and with the 1.50m telescope in the Gunn-i band.

Objects:

```
-----
      RA   (2000)  DE      Designation(s)
-----
14 29 18.43 -03 26 40.20 WASP-39b = WASP-39b
10 19 38.01 -09 48 21.90 WASP-43b = WASP-43b
-----
```
