STARS COMPUTINGCORPS.ORG

About Software Metrics

- Computed from one or more measured values
- A critical tool that provides continuous insight to products and processes
- Helps build reliable software in mission-critical environments.
- types of metrics relevant to our work are • The two Complexity metrics, intrinsic code properties like code complexity. In-process metrics, information that can provide insight into the underlying software development process.

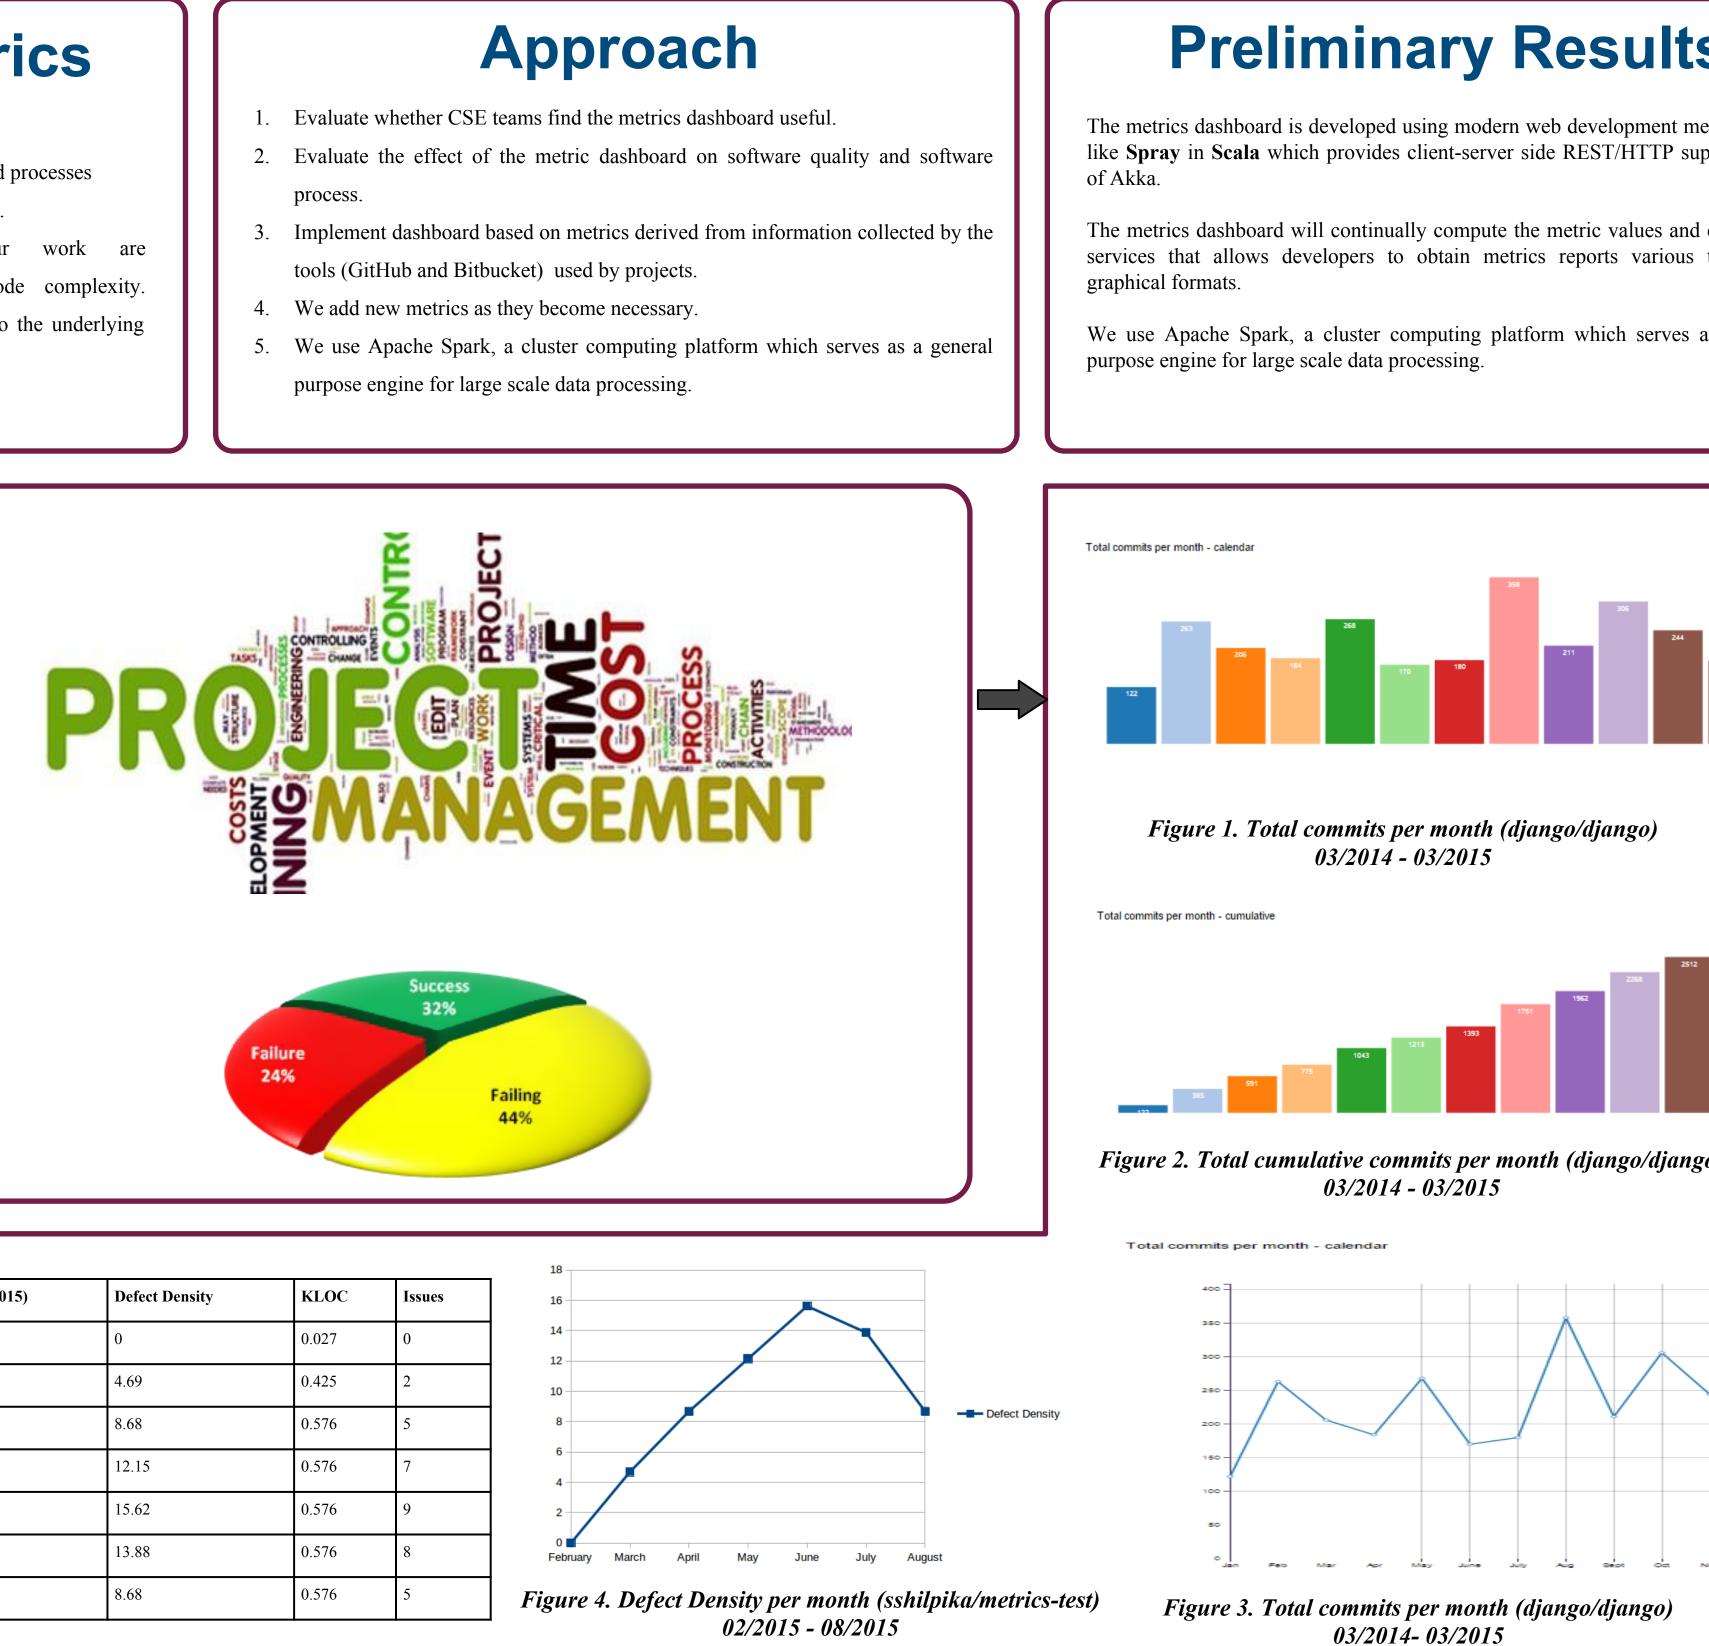

Work Plan

The task requires us to perform the following activities:

- 1. Assess how metrics are used and which general classes/types of metrics will be useful in CSE (Computational Science and Engineering) projects.
- 2. Develop a *metrics dashboard* that will work for teams using sites like Github, Bitbucket etc.
- Assess the effectiveness of the dashboard in terms of project success and developer attitude towards metrics and process.

Code Base

- https://github.com/LoyolaChicagoMetrics/loyolachicagometrics. github.i
- https://github.com/sshilpika/metrics-dashboard-commit-density
- https://github.com/sshilpika/metrics-dashboard-storage-service

Defect Density = Number of Defects / Module Size

Defect density for a given project in a Github repository is calculated as \sum Issues / \sum KLOC

 \sum **KLOC** = $\sum_{f(i) \forall i=(1-n)} \sum$ **KLOC**_{(f(i),m(j))} = $\sum_{f(i) \forall i=(1-N)} (KLOC_{(f(i),m1)} + KLOC_{(f(i),m2)} +$ $\text{KLOC}_{(f(i),m3)} + \ldots + \text{KLOC}_{(f(i),m(\text{curr}))})$

Month (2015)	Defect Density	KLOC	Issues
February	0	0.027	0
March	4.69	0.425	2
April	8.68	0.576	5
May	12.15	0.576	7
June	15.62	0.576	9
July	13.88	0.576	8
August	8.68	0.576	5

	Conclusions
ologies on top	Building appropriate sets of metrics, presented in a useful way, can prove beneficial to CSE software teams, large, small and solo.
e web al and	Facilitating the production of quality software would be a key component for developing and sustaining CSE software, especially as other mission-critical projects grow to depend on it.
eneral	In this project, we take steps to introduce a pragmatic set of metrics into CSE software projects by conducting surveys, building a metrics dashboard, and performing analysis and post-surveys on selected projects.
	For interactive exploration of Metrics information and reduction in computation overhead the datasets are partitioned into clusters in a distributed environment which introduces concurrency and independent failures/recovery of partitioned tasks.
	Future Work
	We will ensure the metrics dashboard is properly instrumented to allow actual usage of the tools to be determined as projects collectively take advantage of them.
	We plan to identify a set of metrics that are helpful to our own project (and for dissemination beyond scientific software teams in the future).
	We will work toward a plugin framework, so teams can extend the dashboard with additional metrics we have not implemented yet.
	Year 2 will end with a formal release of the metrics dashboard and online user manual.
