## Table of contents

1	General introduction
2	Engineering a cyanobacterial cell factory for production of lactic acid31
3	On the use of metabolic control analysis in the optimization of cyanobacterial biosolar
	cell factories
4	Exploring metabolic engineering design principles for the photosynthetic production of
	lactic acid by <i>Synechocystis</i> sp. PCC 6803
5	Carbon sink removal: Increased photosynthetic production of lactic acid by
	Synechocystis sp. PCC 6803 in a glycogen storage mutant
6	Chirality matters: Synthesis and consumption of the D-enantiomer of lactic acid with
	Synechocystis sp. PCC 6803
7	Intermezzo: The variety of excreted products and synthetic biology targets in the
	intracellular metabolism of metabolically engineered cyanobacteria101
8	Synthesis of 2,3-butanediol by <i>Synechocystis</i> sp. PCC 6803 via heterologous expression
	of a catabolic pathway from lactic acid- and enterobacteria
9	Microdroplet-based assay and sorting of lactate secreting cyanobacteria
10	Dynamics of the physiology, metabolome and proteome during the circadian cycle of
	Synechocystis sp. PCC 6803 under culturing conditions relevant for mass culturing 143
11	General discussion 163
Ref	Perences 177
