Subjects: Optical, Supernovae

We report new spectroscopic classifications by OzDES of supernovae discovered by the Dark Energy Survey (ATEL #4668). The spectra (370-885nm) were obtained with the AAOmega Spectrograph (Saunders et al. 2004, SPIE, 5492, 389) and the 2dF fibre positioner at the Anglo-Australian Telescope (AAT). Object classification was performed using SNID (Blondin & Tonry,

2007, ApJ, 666, 1024) and superfit (Howell and Wang, 2002, BAAS, 34, 1256), the details of which are reported in the table below.

Name	RA (J2000)	Dec (J2000)	Discovery	Discovery	Spectrum	Redshift
Type	Phase	Notes	Date (UT)	Mag (r)	Date (UT)	
DES16E1ciy	00:35:49.74	-43:23:36.8	2016 Oct 09	22.3	2016 Nov 01	0.174
