Contents

- Chapter 1** Introduction
- Chapter 2** Assessing cardiac preload by the Initial Systolic Time Interval obtained from impedance cardiography
- Chapter 3** Systolic time intervals vs invasive predictors of fluid responsiveness after coronary artery bypass surgery
- Chapter 4** A mini-fluid challenge of 150 mL predicts fluid responsiveness using Modelflow^R pulse contour cardiac output directly after cardiac surgery
- Chapter 5** Using the grey zone to predict fluid loading responsiveness with pulse pressure variation in intensive care
- Chapter 6** How to predict fluid loading responsiveness in your clinical setting; a meta-analysis
- Chapter 7** Dose and type of crystalloid fluid therapy in adult hospitalised patients
- Chapter 8** Diuretic response to colloid and crystalloid fluid loading in critically ill patients
- Chapter 9** Different effects of fluid loading with saline, gelatine, hydroxyethyl starch or albumin solutions on acid-base status in the critically ill
- Chapter 10** Summary
- Chapter 11** General discussion
- Chapter 12** Nederlandse samenvatting voor de niet medisch onderlegde lezer
