Balancing theory and practice: a review of the state of PLS-SEM research by the community of Italian management scholars

FRANCESCA MAGNO^{*} FABIO CASSIA[•]

Objectives. Management researchers have traditionally perceived the need to balance between rigor and relevance, thus simultaneously advancing theory and offering managerial insights. The selection of proper research methods plays a fundamental role. Among them, structural equation modeling (a second-generation technique for multivariate analysis) has witnessed remarkable popularity in the last decades to assess relationships among constructs. There are two main approaches to structural equation modeling: the covariance-based approach (CB-SEM) and the variancebased approach (PLS-SEM). However, until recently, the PLS-SEM has been to a large extent ignored and many scholars have considered structural equation modeling as synonymous with CB-SEM. In the last decade, PLS-SEM has gained a huge interest from social sciences researchers from all over the world and many management journals (such as Journal of Business Research, European Journal of Management, and many others) have published special issues on this method. The renewed interest in PLS-SEM has been largely driven by the extensive work of management and marketing scholars such as Joseph F. Hair, Jr., Tomas M. Hult, Christian M. Ringle and Marko Sarstedt (Hair et al., 2017; Hair et al., 2018). Their well-known book about this method ["A primer on partial least squares structural equation modeling (PLS-SEM)"] has received more than 20,000 citations in Google Scholar since the publication of its first edition in 2014. Given that the use of this method could support the Italian management scholars to further increase their participation to the international debate on management issues, we recently co-edited the Italian version of this book (Hair et al., 2020). The purpose of this extended abstract is to provide a comprehensive review of the state of PLS-SEM research by the community of Italian management scholars.

Before presenting the research methods and the results, it must be emphasized that CB-SEM and PLS-SEM are appropriate for different research contexts and aims. CB-SEM is a good alternative when the focus of the research is on confirmation (theory confirmation or comparison among theories), while PLS-SEM is particularly useful when the focus is on prediction, such as predicting the key drivers of firm performance or of consumer behaviors. Therefore, the choice between CB-SEM and PLS-SEM must be driven by the specific purpose and approach of the research. As regards the technical aspects, a key difference between CB-SEM and PLS-SEM regards distributional assumptions: CB-SEM requires normally distributed data, while PLS-SEM makes no distributional assumptions. PLS-SEM can also work with small samples and can easily handle both formative and reflective constructs and complex models (with many constructs and relationships).

Based on these premises, in this extended abstract we present a review of the journal articles using PLS-SEM published by Italian management scholars. In particular, we are interested in assessing for what reasons and research purposes PLS-SEM had been selected and preferred over alternative methods.

Methodology. We conducted a systematic search in the database Scopus using the search terms "partial least squares", "PLS", and "PLS-SEM" within article title, abstract or keywords (only articles were considered while other types of documents, such as book chapters were excluded from the search). In addition, as this review focuses on the community of Italian management scholars, we set the following additional search criteria: "Business, Management and Accounting" as subject area and "Italy" as country/territory. This search provided 112 entries, which are all the journal articles matching the selected keywords, published by at least one co-author affiliated to Italian universities within the disciplines of Business, Management and Accounting. We then manually inspected each of the 112 documents and excluded those published by scholars of other fields, retaining only those published by scholars of the Italian scientific disciplinary sector 13/B2 – management. We also excluded one article because it applied PLS-regression and not PLS-SEM: while the two methods are similar, they are not equivalent (Hair et al., 2017). Finally, we searched for additional articles in the archive of Sinergie Italian Journal of Management (using the same keywords indicated above) and we found one article (Magnani and Zucchella, 2020). Overall, at the end of this process 37 papers were retained and analyzed.

Findings. The small number of retrieved papers indicates that PLS-SEM is not yet a well-established research method among the community of Italian management scholars. However, a remarkable growth has been registered in

Sinergie-SIMA 2021 Conference Leveraging intersections in management theory and practice 10-11 June 2021 - University of Palermo (Italy) - Online Conference Electronic Conference Proceedings ISBN 97888943937-9-8 DOI 10.7433/SRECP.EA.2021.01

We then examined whether and how the papers motivated the choice of PLS-SEM instead of other methods (Table 2). While all the studies provided at least a short description of the PLS-SEM method, 15 of them did not report explicit reasons to motivate the choice of PLS-SEM over other methods (such as, for example. CB-SEM). The remaining studies included multiple motivations. Among them "focus on prediction" and "exploratory research" were the most popular

BALANCING THEORY AND PRACTICE: A REVIEW OF THE STATE OF PLS-SEM RESEARCH BY THE COMMUNITY OF ITALIAN MANAGEMENT SCHOLARS

ones, which indicates a good awareness of the strengths of PLS-SEM. The small sample size was also cited quite frequently. However, it should be remarked that the small sample size per se could not be a sufficient motivation to select PLS-SEM. On this point, it should be additionally noted that some other misunderstandings were found in the application of PLS-SEM, for example the use of some model fit indexes which are appropriate for CB-SEM but not for PLS-SEM.

Tab. 2: Reasons for using PLS-SEM

Reasons for using PLS-SEM	Number of studies
Focus on prediction	9
Exploratory research	8
Small sample size	7
Use of formative constructs	6
Model complexity	5
Distributional issues	4
Provides no reasons for using PLS-SEM	15

Source: our elaboration

Overall, the analysis of the research questions shows that PLS-SEM has been mostly applied to identify the drivers of firm's choices, strategies and performance, while in a few studies it was used to understand customer decisions to adopt products and technologies. As the analysis of the keywords highlights, the topics and the research contexts are highly fragmented but capabilities and innovation emerge as themes that are more frequently explored through PLS-SEM.

Research limits. While using a systematic approach to the literature review, the choice to rely only on one database (Scopus) and on the archive of Sinergie Italian Journal of Management may have caused the exclusion of a few journal articles. Moreover, the inclusion of conference papers may enrich the analysis.

Practical implications. One of the main strengths of PLS-SEM is its ability to balance rigor and relevance, by focusing on prediction. This analysis reveals that the community of Italian management scholars has not yet adopted PLS-SEM on a large scale. This extended abstract encourages scholars to apply PLS-SEM to research questions that can have both theoretical and practical relevance, such as studies that predict firm performance.

Originality of the study. This is the first study to analyze the use of PLS-SEM by the community of Italian management scholars. PLS-SEM is quickly gaining large popularity among worldwide management scholars and may further support the participation of Italian management scholars to the international debate.

Key words: *PLS-SEM*; *methods*; *management*; *structural equation modeling*
