Int J Nutrol 2019;12:1.

Dear authors and readers,

The **Brazilian Journal of Nutrology** is facing changes on the editorial board to accomplish the international demands for higher indexations of the journal. This is a challenge for the new editorial board that will follow the new trends in science publications preserving the peer review process and keeping up with the high quality of the published manuscripts. It was undoubtedly a great challenge to contribute to the most important scientific journal of Nutrology in South America.

Several actions have been planned to speed up the article review process of our journal and make it more attractive to authors. With the constant progress of science and of its outreach channels, the **Brazilian Journal of Nutrology** needs to be prepared to keep up with these changes and innovations.

In this editorial, we would like to thank our peers and colleagues, who have manifested sincere and total support to our work. We are pleased to present Professor Moacir Fernandes de Godoy, who will assume the role of Editor-in-Chief of the Brazilian Journal of Nutrology. In his professional activities, Godoy interacted with over 300 employees in the coauthorship of scientific papers. He also works in medicine as cardiologist and hemodynamicist, received his medical training at the Universidade Federal de São Paulo (Unifesp), state of São Paulo, Brazil, and is lecturer-professor at the Faculdade de

Medicina de São José do Rio Preto (FAMERP, in the Portuguese acronym) in São José do Rio Preto, state of São Paulo, Brazil, in the Department of Cardiology and Cardiovascular Surgery. Afterwards, he occupied a prominent position of Deputy Head and Former Deputy Director of Education at FAMERP. He has been serving the scientific community as a professional since 1971. He has experience in medicine, focusing on cardiology, acting on the following subjects: heart rate variability, nonlinear dynamics, cardiovascular surgery, atherosclerosis, oxidative stress, myocardial revascularization, heart failure, and congenital heart disease.

We are sure that the future of our **Brazilian Journal of Nutrology** is brilliant and will continue to merge with the history of Brazilian Nutrology. However, some things never change, and the “good science” and the relevance of the articles continue to depend on traditional scientific aspects, such as the changes in the clinical practice and the generation of new knowledge on the scientific mechanisms, efficacy, and safety of dietary interventions in the context of disease prevention and health benefits.

It was a great honor and privilege to have served as the Editor-in-chief of this publication.

Finally, but most important, we would like to thank the herculean job done by the previous editors with the editorial board, who worked very hard to keep our journal running well and smoothly up to date.

 Moacir Fernandes de Godoy's ORCID is <https://orcid.org/0000-0001-8390-0933>.
