Based on a systematic review, combined with a retrospective cohort study including in total 55 pediatric patients, our study (<https://doi.org/10.1245/s10434-021-10>

[035-9](https://doi.org/10.1245/s10434-021-10)) shows that the sentinel node procedure is a recommendable procedure for the nodal classification of pediatric patients with extremity rhabdomyosarcoma.
