INDIANA ADJUSTED GROSS INCOME BY COUNTY

1970 to 1979

J. Carl Isaacs*

Introduction

Per capita income is frequently used as an indicator of the level of economic development of a political or geographical area. Changes in per capita income may be used as a measure of the rate of change in economic development. This report includes total and per capita Indiana adjusted gross income data for the years 1970 to 1979. The data is arranged to show comparisons among the Indiana counties and the state during this ten year period.

Limitations of the Data

Although per capita income may be used as a measure of economic well-being, its limitations should be noted. First, when expressed as a county average, it gives no indication of the distribution or the skewness of the income among the populace. Also, people's economic well-being depends upon their past, present, and desired level of consumption, their store of wealth, and their flow of income. Finally, people's perception of their economic well-being often depends upon with whom they compare themselves.

Comparability of the Data

Per capita adjusted gross income (in addition to total AGI and AGI per return) is the datum used in this report to compare the counties with one another and with the overall state per capita AGI. These figures will differ somewhat from the per capita money income figures released by the Bureau of the Census of the U.S. Department of Commerce (the AGI per capita figure usually will be the lesser of the two).

Information on income received for the 1970 Census was requested from all persons age 14 years and over, in a 20 percent sample. Updated per capita income estimates are developed using the 1970 estimates as the base and rates of change are developed from various administrative record sets and compilations, mainly from the Internal Revenue Service (IRS) and the Bureau of Economic Analysis (BEA).

The per capita income estimates are based on a money income concept. The Bureau of Census defines total money income for statistical purposes as the sum of:

1. Wage and salary income
2. Net nonfarm self-employment income
3. Net farm self-employment income
4. Social Security and railroad retirement income
5. Public assistance income
6. All other sources of money income, such as, interest, dividends, veteran's payments, pensions, unemployment insurance, alimony, etc.

The total represents the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.

The per capita money income figure is the estimated average amount per person of total money received during calendar years for all persons residing in a given political jurisdiction. Per capita income when computed, includes patients or inmates in institutional quarters.

By contrast, Indiana adjusted gross income by definition equals total personal income (taxpayers wages, salaries,

* Community Development Analyst in Agricultural Economics, Department of Agricultural Economics, Purdue University.

tips, etc.,; interest income; dividends reported on federal return - after dividend exclusion; other income or loss) minus allowable deductions and exclusions. Although the Indiana State Legislature periodically has changed the items taxpayers may use to adjust gross income, as of 1979 the following deductions and exclusions were allowed:

1. Disability income exclusion
2. Moving expenses
3. Employee business expenses
4. Payments to individual retirement plans
5. Payments to self-employed retirement plans
6. Forfeited interest penalty for premature withdrawal
7. Alimony paid
8. Interest on U.S. Government obligations
9. Active or reserve military pay (\$2,000 maximum adjustment)
10. Military retirement or survivor's benefits (\$2,000 maximum adjustment)
11. Civil service annuity adjustment
12. Renter's deduction (\$1,500 maximum)
13. Insulation deduction (\$1,000 maximum)
14. Non-Indiana locality earnings deduction (\$2,000 maximum adjustment)
15. Other allowable adjustments

Description of State and County Data

In the following pages, the total AGI and the AGI per return for the state and for each county were derived from personal income tax returns compiled by the Indiana Department of Revenue. All other columns have been calculated. The per capita AGI figures were computed using the 1970 Census of Population and for the subsequent years, Bureau of Census population estimates (Current Population Reports, Series P-26). The AGI data is currently available only through 1979. For the year 1979,* 1979 AGI figures are used in conjunction with the released 1980 Final Population Count (PHC80-V-16). This was done because the 1980 population figures may more accurately reflect actual per capita AGI for 1979, then when the 1979 population estimates are used.

The columns labeled "nominal" represent the actual dollar figures from the Indiana Department of Revenue. The columns labeled "real" are the nominal dollar values adjusted for inflation. These dollar amounts were adjusted using the Consumer Price Indexes (CPI) from the U.S. Bureau of Labor Statistics. The CPI is a measure of the average change in prices over time in a fixed market basket of goods and services purchased by urban wage earners and clerical workers and by all urban consumers.

The total AGI, AGI per capita, and average AGI per return are all followed by columns showing the percent change in each from the preceding year for both the "nominal" and "real" dollar amounts. Because the total AGI and average AGI per return figures for 1979 and 1980 are the same, the percent change in each is expressed as zero. The value shown for the change in per capita AGI for 1980 represents the percent change from 1978 rather than 1979, i.e. total AGI data for 1979 and 1980 are the same, only the population figures are different.

Description of Summary Tables and Figures

Tables 1 and 2 show each county's rank by Indiana AGI per capita and per return for 1970 and 1980. This same information is also displayed on state maps in Figures 1 and 2. Table 3 shows the percent increase in AGI per capita and AGI per return in both nominal and real dollars from 1970 to 1979. Figures 3, 4, and 5 show those counties that have per capita AGI greater than, equal to, or less than the state average AGI per capita for the years 1970, 1975, and 1979.
