

The Open Access Israeli Journal of Aquaculture – Bamidgeh

As from **January 2010** The Israeli Journal of Aquaculture - Bamidgeh (IJA) will be published exclusively as **an on-line Open Access (OA)** quarterly accessible by all AquacultureHub (<http://www.aquaculturehub.org>) members and registered individuals and institutions. Please visit our website (<http://siamb.org.il>) for free registration form, further information and instructions.

This transformation from a subscription printed version to an on-line OA journal, aims at supporting the concept that scientific peer-reviewed publications should be made available to all, including those with limited resources. The OA IJA does not enforce author or subscription fees and will endeavor to obtain alternative sources of income to support this policy for as long as possible.

Key words: genome mapping, candidate genes, sex determination, tilapia, *Oreochromis* spp.

Abstract

Recent results show a striking similarity in the dynamics of expression of gonad differentiation regulators in zebrafish and mammals. Candidates for the role of master key regulators (MKRs) in tilapia were selected, based on three concepts established in the literature for non-mammal species. These three concepts are: (a) MKRs are DM-proteins or their close downstream/upstream partners in the sex determination pathway, (b) MKRs are genes working just upstream of aromatase in the sex determination pathway, or the aromatase itself, and (c) MKRs are homologs of mammal genes which are close partners of SRY ("missing" in non-mammal vertebrates), mostly belonging to the SOX family. Coding sequences of putative genes were searched in cichlid (TIGR) and general (NCBI) databases, and in the tilapia gonad EST library (RBEST). Primers in two adjacent exons were designed, based on predicted exon-intron boundaries for each of 11 selected genes. Amplified segments of the targeted genes in two purebred tilapia species were sequenced. Seven SSLP and four SNP-based markers were identified in the candidate genes for MKRs of sex determination and mapped to the tilapia genetic map using genotype data of 76-90 individuals of the F₂ mapping family. The mapping positions of the selected genes relative to previously reported QTL regions for sex determination are discussed.

* The full paper: *Amh* and *Dmrt2* Genes Map to Tilapia (*Oreochromis* spp.) Linkage Group 23 within QTL Regions for Sex Determination, by Andrey Shirak, Eyal Seroussi, Avner Cnaani, Aimee E. Howe, Raisa Domokhovskiy, Noam Zilberman, Thomas D. Kocher, Gideon Hulata and Micha Ron has been accepted for publication by *Genetics*.
