The State of Vermont offers several housing options for Medicaid eligible nursing home (NH) residents; however, there are few opportunities to fully integrate into the community. Our aim was to create an option for NH residents to transition into an Adult Family Home (AFH) with financial help from Money Follows the Person. Our motivation for exploring AFHs was to provide NH residents with a better living experience. Individuals admitted into NHs showed decline at 6 months. Changes included: Somatization, Independent Sensitivity, Depression, Anxiety and Psychoticism. Residents transitioning out of NHs into Assisted Living Facilities showed improvements in the following areas: Physical Well Being, Psychological Well Being, Environmental Well Being, Social Well Being and Overall Quality of Life.

METHODS

Survey:

- A 10-question survey was distributed to 38 NHs throughout Vermont by email; 19 total respondents with 14 completed surveys.
- The survey evaluated the needs of the NH population, particularly the level of assistance required in various ADLs.
- Data was analyzed using Microsoft Excel.
 Focus Group:
- 5 current home and service providers from Addison County were interviewed by phone.
- Providers shared their perspective regarding: the rewards and challenges of being a home and services provider; the AFH model; quality assurance; and the benefit of residents transitioning out of NHs into the community.
 Model:

Model: ■ A mode

A model for an AFH was constructed from components of pre-existing models in other states to address qualification criteria, assessment and care planning, requirements and training for providers, resident agreements, and quality assurance strategies.

Total ADLs Resident 35 30 **5** 25 1-3 ADLs Figure 1. Average Number of ADL Deficits Across Vermont Nursing Home Residents (n = 14)**ADLs by Category** Figure 2. County influenced creation of VT specific Care plan reassessment Nursing home residents • The initial care plan is subject to change can transition into an Windham County 👤 over time based on the changing needs AFH and be integrated 4 Nursing Homes of the resident and provider. into a family setting More than 1700 Successful reintegration into community individuals living in "[the case worker] came to me and said 'I'd nursing homes are Bennington County eligible to transition like you to take a gentleman that's in a back into the 4 Nursing Homes nursing home'...I loved him...He was an community asset, he was fun...I miss him horribly and Our goal is to I will never regret taking this man; that was transition 115 my first patient." residents into AFHs

"If you can give a person a second chance to live in society you should do it. Who wants to grow old alone in a nursing home?"

"I loved seeing the little things that made them happy. They were realizing that there was another way to live."

CONCLUSIONS

- Research has shown that admittance to a NH is associated with a decline in several measures of well-being.
- Quality of life of NH residents improves after transition into the community.
- Money Follows the Person is necessary to help Medicaid-eligible NH residents make the transition.
- Our survey showed that a significant population of NH residents exists who are able to transition into the community.
- The focus group showed there are many families and individuals willing to accept and care for the needs of these residents.
- Our proposed Adult Family Home model for Vermont, based on models implemented in other states, as well as the perspective provided by our focus group, outlines how this transition can be made.
