U.S. Army...

Tomorrow's Technology Today

In case you hadn't noticed, the Army's gone modern. Applied new discoveries in science and technology have transformed the Army into the best equipped, most technologically advanced land-based fighting force in the world.

But the equipment of today's Army—no matter how advanced—is only as useful and effective as the soldiers who operate, service, and maintain it. That's why so much of the success of today's high-tech Army belongs to the high-quality people who make up the Army.

It is these bright and highly motivated Army volunteers who constantly stand ready to defend our country's freedom. Now. And in the future.
