

Supplementary material: an empirical evaluation of two-stage
species tree inference strategies using a multilocus dataset from
North American pines

Michael DeGiorgio¹, John Syring³, Andrew J. Eckert⁴, Aaron I. Liston⁵, Richard Cronn⁶,
David B. Neale⁷, and Noah A. Rosenberg⁸

November 25, 2013

Table S1: Phylogenetic inference strategies

Index	Species tree inference method	Gene tree inference method	Outgroup species	Concatenation or consensus	Strictly topology-based
1	Concatenation	ML	<i>P. gerardiana</i>	Concatenation	No
2	Concatenation	ML	<i>P. bungeana</i>	Concatenation	No
3	Concatenation	ML	<i>P. squamata</i>	Concatenation	No
4	Concatenation	MP	<i>P. gerardiana</i>	Concatenation	No
5	Concatenation	MP	<i>P. bungeana</i>	Concatenation	No
6	Concatenation	MP	<i>P. squamata</i>	Concatenation	No
7	Concatenation	NJ	<i>P. gerardiana</i>	Concatenation	No
8	Concatenation	NJ	<i>P. bungeana</i>	Concatenation	No
9	Concatenation	NJ	<i>P. squamata</i>	Concatenation	No
10	Concatenation	M	<i>P. gerardiana</i>	Concatenation	No
11	Concatenation	M	<i>P. bungeana</i>	Concatenation	No
12	Concatenation	M	<i>P. squamata</i>	Concatenation	No
13	SMRT	ML	<i>P. gerardiana</i>	Concatenation	No
14	SMRT	ML	<i>P. bungeana</i>	Concatenation	No
15	SMRT	ML	<i>P. squamata</i>	Concatenation	No
16	SMRT	MP	<i>P. gerardiana</i>	Concatenation	No
17	SMRT	MP	<i>P. bungeana</i>	Concatenation	No
18	SMRT	MP	<i>P. squamata</i>	Concatenation	No
19	SMRT	NJ	<i>P. gerardiana</i>	Concatenation	No
20	SMRT	NJ	<i>P. bungeana</i>	Concatenation	No
21	SMRT	NJ	<i>P. squamata</i>	Concatenation	No
22	SMRT	M	<i>P. gerardiana</i>	Concatenation	No
23	SMRT	M	<i>P. bungeana</i>	Concatenation	No
24	SMRT	M	<i>P. squamata</i>	Concatenation	No
25	STEAC	ML	<i>P. gerardiana</i>	Consensus	No
26	STEAC	ML	<i>P. bungeana</i>	Consensus	No
27	STEAC	ML	<i>P. squamata</i>	Consensus	No

Figure S1: Procrustes analysis of the influence of specific features of phylogenetic strategies on principal component plots. Principal components analysis of phylogenetic inference strategies was performed as in Figure 4 with the exception that it was applied to each of 13 subsets $\mathcal{F}_1, \mathcal{F}_2, \dots, \mathcal{F}_{13}$ of phylogenetic inference strategies for which one feature of a strategy was removed. $\mathcal{F}_1, \mathcal{F}_2, \dots, \mathcal{F}_6$ are subsets containing 60 strategies, in which one of the six species tree construction methods is not included, $\mathcal{F}_7, \mathcal{F}_8, \dots, \mathcal{F}_{10}$ are subsets containing 54 strategies, in which one of the four gene tree inference methods is not included, and $\mathcal{F}_{11}, \mathcal{F}_{12}, \mathcal{F}_{13}$ are subsets containing 48 strategies, in which one of the three outgroup species is not included. In other words, we performed principal components analysis on 13 different datasets: six in which a species tree construction method was removed (Concatenation, SMRT, STEAC, STAR, RTC, and MDC), four in which a gene tree inference method was removed (ML, MP, NJ, and M), and three in which an outgroup was removed (*P. gerardiana*, *P. bungeana*, and *P. squamata*). The results of each principal components analysis were projected into the two-dimensional plane spanned by their first and second principal components. The points in each two-dimensional plane were compared to the points in Figure 4A through Procrustes analysis. Each comparison gives a dissimilarity score computed using eq. 3.
