Employment in Europe 2003: Statistical Annex

Abstract

Statistical annex to accompany *Employment in Europe 2007*, including macro economic indicators, key employment indicators, and data sources and definitions.

Keywords

Europe, employment, European Commission, economic growth, youth employment, labour markets, trends, human capital development, vocational training, labour market share

Statistical annex

Short-term projections of key employment indicators

The projections of key employment indicators presented in this section are based on two main sources: first, the most recent Commission economic forecasts (Spring Forecasts) of GDP growth and employment growth, and second, annual key labour market indicators for the period 1991-2002 from the Eurostat Quarterly Labour Force Data (QLFD) series.

Activity rates and employment rates have been projected simultaneously on the basis of a dynamic panel data model of the changes in these rates, allowing to model the effect of overall economic growth on labour market participation and employment, while taking into account recent country-specific trends and ensuring consistency among the projections. The model component for changes in the employment rates takes the above employment growth projections as given and translates them into projections of employment rates. Further breakdowns

of the projections by gender and age group are based on separate models specific to the sub-population of interest, taking the overall evolution of GDP, participation and employment as given.

Since the projections are model-based they imply unchanged labour market policies throughout the projection period 2003-2004. If there were important changes in labour market policies over this period - bringing about structural breaks in the analysed relationships between economic growth, participation behaviour, and employment growth - the evolution of activity, employment and unemployment rates might well differ from that projected above. This could apply especially to the projected employment rates for older workers (55-64) the evolution of which could be more favourable than that projected above if in the coming years, labour market policies stimulating older workers' participation and reducing the incidence of early retirement were significantly different from those during the 1990s.

Source: Eurostat. Note: In the case of Austria, employment in agriculture - as derived from national accounts - includes a significant number of persons with occasional or small jobs. When calculated on the basis of the LFS and limited to the main job, the share of agriculture in employment is found to be significantly lower (5.7% in 2002) compared to 64.7% and 29.6% in services and industry, respectively. Due to these substantial differences in the estimates of sectoral employment shares, no data is provided.

Source: Eurostat

Note: In the case of Bulgaria, employment in agriculture - as derived from national accounts - includes a significant number of persons with occasional or small jobs. When calculated on the basis of the LFS and limited to the main job, the share of agriculture in employment is found to be significantly lower (10.7% in 2002) compared to 56.6% and 32.6% in services and industry, respectively. Due to these substantial differences in the estimates of sectoral employment shares, no data is provided.

Data sources

Most of the data used in this report originates from Eurostat, the Statistical Office of the European Communities. The main data sources used are:

- the European Community Labour Force Survey (LFS)
- the Eurostat Quarterly Labour Force Data (QLFD) series
- the European Community Household Panel (ECHP)
- the Eurostat Labour Cost Survey (LCS)
- the Eurostat Structure of Earnings Survey (SES)
- the Eurostat short-term earnings and labour cost indices
- the Eurostat harmonised series on unemployment
- the Annual Macroeconomic Database (AMECO)

The European Community Labour Force Survey (LFS) is the EU's harmonised survey on labour market developments. The survey has been carried out since 1983 in the EU Members States. Some Member States provide quarterly results from a continuous labour force survey, others conduct a single annual survey in the spring. If not mentioned otherwise, results based on the LFS refer to surveys conducted in the spring ("second quarter") of each year. It also provides data for all Acceding and Accession Countries.

The Quarterly Labour Force Data (QLFD) series is a harmonised, consistent series of quarterly employment statistics based on LFS, completed through estimates when quarterly data are not available. It covers all EU Member States (for the period of 1991 to present) and all Acceding and Accession Countries (since 1996 or later, depending on data availability). The QLFD consist of two series: 1) population, employment and unemployment, and 2) employment by economic activity and employment status. The first series is based mainly on the community LFS. Data cover the population living in private households only (collective households are excluded) and refer to the place of residence (national concept). They are broken down by gender and aggregate age group (15-24, 25-54, 55-64, 15-64). Unemployment data are also broken down by job search duration (less than 6 months, 6-11, 12-23, 24 or more). The second series is mainly based on the ESA-1995 national accounts employment data. Data cover all people employed in resident producer units (domestic concept), including persons living in collective households. They are broken down by sex, working time status (full-time/part-time) and contract status (permanent/temporary). All key employment indicators - with the exception of the full-time equivalent employment rate, the unemployment rates and the youth unemployment ratio - are based on the QLFD series. They represent yearly averages if not stated otherwise. Where the QLFD series does not provide the relevant breakdowns, the original LFS data were used in this report.

The European Community Household Panel (ECHP) is an annual longitudinal survey of a representative panel of households which was conducted for the period 1994-2001. The longitudinal structure of the survey makes it possible to follow up and interview the same households and individuals over several consecutive years. At the time of publication of this report, data were available for the first seven waves of the panel (1994-2000) for all EU Member States except Austria (1995-2000) and Finland (1996-2000). Sweden did not take part in the ECHP,

but provided some basic comparable micro data from the Swedish survey on living conditions in the ECHP user's database from 1997 onwards. There are important breaks in the data series for Germany, (1994/95), Luxembourg and the UK (1996/97), following variations in the sample definition. The survey covers a wide range of topics: income and living conditions, employment status, health, education, demographics and housing. It is based on a standardised questionnaire from Eurostat and subsequently adapted by national agencies. Data are accessible to the public by means of the ECHP user database. Results on wage determinants, quality in work and on transitions between labour market states or job characteristics are based on this database.

The Eurostat Labour Cost Survey (LCS) is a business survey which is conducted every four years, covering all economic activities in sections C-K of the NACE Rev.1 classification and all enterprises with 10 or more employees. Some countries, notably the Acceding and Accession Countries, additionally provide data for NACE sections L-O and for smaller enterprises. The survey contains detailed information on the level and structure of labour costs (hourly, monthly and annual), wages and salaries, working hours and employment at the national, regional and sectoral (NACE-2) level and by establishment size. Labour Cost surveys have been carried out by the EU Member States for the years 1975, 1978, 1981, 1984, 1988, 1992, 1996 and 2000. Latest structural data from the Labour Cost Survey (LCS) are available for the year 2000. For most Candidate Countries, the 2000 survey is the first survey they have undertaken that complies with the Regulations. In that survey, no data are provided for Belgium, Malta and Turkey. For Slovenia, data are only available for broad sectors (NACE-1).

The Eurostat Structure of Earnings Survey (SES) is an irregular business survey with detailed information on the level of remuneration (hourly, weekly, monthly, and annual), broken down by main individual characteristics of employees and employers, notably by gender, age, education, type of employment contract, working time, sector, occupation and tenure on the job. The survey covers all economic activities in sections C-K of the the NACE Rev.1 classification. On four occasions between 1966 and 1978, a Community survey of the structure and distribution of earnings in industry, trade, banking and insurance took place on the basis of Council Regulations. Following a break of almost twenty years, a new series of surveys was launched in 1995 (with the exception of France (1994) and Austria (1996)). Latest structural data from the Labour Cost Survey are available for the year 1995. The results of the latest survey which was conducted in 2002 will be released in 2004. Some EU Member States further provide, on a voluntary basis, time-series data with annual average earnings, broken down by gender, working time status as well as broad sector and occupation.

The Eurostat short-term earnings and labour cost indices cover both Labour Cost and Conventional Earnings indices, and are disseminated for the Euro-zone (EUR-11) and the European Union (EU-15) as a whole. The EU indices have fixed weights based on 1996 total employee compensation in current ECU and are a weighted average of the indices of the respective participating countries. The respective indices are national indices based on sample surveys, administrative records or a combination of both. The Labour Cost Index (LCI) covers hourly labour costs, broken down into wages (all employees' gross earnings) and non-wage labour costs (employers' indirect labour costs), in all sizes of

enterprises in the private economy. The Conventional Earnings Index (CEI) covers average gross monthly earnings of all employees in non-agricultural markets and separately gross hourly earnings of manual workers in industry. Conventional Earnings indices are not collected from Accessing, Accession and Candidate Countries.

For the unemployment related indicators, the main source is the Eurostat Harmonised series on unemployment. This is a data set on unemployment collected by Eurostat comprising of yearly averages, quarterly and monthly data. It is based on LFS and register data on unemployment from national sources. Monthly data from national surveys or from registers of the public employment services are used to extrapolate the LFS data and to compile monthly unemployment estimates. This data set does not cover skills and long term unemployment for the analysis of which the LFS was used instead.

Macroeconomic indicators are obtained from the Economic and Financial Affairs DG Annual Macroeconomic Database (AMECO) and are based on ESA 95 national accounts. The database comprises inter alia information on GDP, productivity, real unit labour costs and employment growth. The data is collected by Eurostat from the Member States' National Statistical Offices. Besides regular weekly updates this database is revised twice a year in the framework of the Commission's Spring and Autumn Economic Forecasts.

Definitions and Data Sources of Macroeconomic Indicators

Sources: AMECO and national accounts (ESA 95)

1. Real GDP: gross domestic product (GDP) at 1995 market prices, annual change
2. Occupied population: occupied population, total economy, annual change
3. Labour productivity: GDP at 1995 market prices per person employed, annual change
4. Annual average hours worked, annual change
5. Productivity per hours worked: gross domestic product per hours worked, annual change
6. Harmonised CPI: harmonised consumer price index, annual change
7. Price deflator GDP: price deflator gross domestic product at market prices, annual change
8. Nominal compensation per employee, total economy, annual change
9. Real compensation per employee: deflator gross domestic product, total economy, annual change
10. Real compensation per employee total economy (private consumption deflator), annual change
11. NULC: nominal unit labour costs, total economy, annual change.
12. RULC: real unit labour costs, total economy, annual change

Definitions and Data Sources of Key Employment Indicators

Sources: QLFD, LFS, Eurostat harmonised series on unemployment

1. Total population in 000s (source: Eurostat QLFD)
2. Total Population aged 15-64 in 000s (source: Eurostat QLFD)
3. Total Employment in 000s (source: Eurostat QLFD)
4. Population in employment aged 15-64 in 000s (source: Eurostat QLFD)
- 5-8. Employment rate, Employed divided by population in the corresponding age bracket (source: Eurostat QLFD)
9. Full-time equivalent employment rates.
The full-time equivalent employment rate is calculated by dividing the full-time equivalent employment by the total population in the 15-64 age-group. Full-time equivalent employment is defined as total hours worked on both, main and second job (LFS) divided by the average annual number of hours worked in full-time jobs within the economic territory (ESA 1995).
10. Self-employed in total employment, Number of self-employed as the share of total employment (source: Eurostat QLFD)
11. Part-time employment in total employment, Number of part-time employed as a share of total employment (source: Eurostat QLFD)
12. Fixed term contracts in total employment (total employees), Number of employees with contracts of limited duration as a share of total employees (source: Eurostat QLFD)
13. Employment in services, Employed in services as a share of total employment (source: Eurostat QLFD)
14. Employment in industry, Employed in industry as a share of total employment (source: Eurostat QLFD)
15. Employment in agriculture, Employed in agriculture as a share of total employment (source: Eurostat QLFD)
- 16-19. Activity rate, Labour force (employed and unemployed) as a share of total population in the corresponding age bracket (source: Eurostat QLFD)
20. Total Unemployment in 000s (source: Eurostat Harmonised series on unemployment)
- 21-22. Unemployment rates, Unemployed as a share of the labour force (employed and unemployed) in the corresponding age bracket (source: Eurostat harmonised series on unemployment)
23. Long-term unemployment rate, Those unemployed with a duration of 12 months or more as a share of the labour force (source: Eurostat harmonised series on unemployment)
24. Youth unemployment ratio, young unemployed (aged 15-24) as a share of total population in the same age bracket (source: Eurostat harmonised series on unemployment)

List of tables

1	International Comparison of Key Indicators (2002).....	15
2	Annual change in employment growth, by quarter	16
3	Average annual growth rates in employment related indicators (in % terms).....	22
4	Sectoral composition of layoff announcements in Western Europe, thousands (2002 & early 2003)	23
5	Progress towards the Lisbon and Stockholm targets.....	29
6	Employment Rate by Gender and Age Classes, 2002.....	31
7	Recent evolution in annual employment growth rates of the working age population for the EU15 between 2000 and 2002 according to form of employment.....	32
8a	Net employment creation 1997-2002 (full-time and part-time employment, for those aged 15-64, in 1000s).....	32
8b	Net employment creation 1997-2002 (permanent and fixed term employment, employees only, aged 15-64, 1000s)	33
9	Share (as %) of the working age population (15-64) by educational attainment levels in 2002.....	34
10	Employment, unemployment and activity rates by education levels in 2002 (age group 15-64)	35
11	Employment, unemployment and activity rates by education levels in 2002 (age group 15-64)	37
12	Net employment differences between 1997 and 2002 by Sector (employment 15-64, in 1000s).....	40
13	Changes in Employment 1997-2002, as a percentage of 1997 employment levels	42
14	The impact on key indicators of enlargement from EU15 to EU25, based on 2002 data	44
15	Population change in 2002 (first estimates)	45
