Picking Investments in Knowledge Management

Abstract

{Excerpt} What can be measured is not necessarily important and what is important cannot always be measured. When prioritizing investments in knowledge management, common traps lie waiting. They are delaying rewards for quick wins, using too many metrics, implementing metrics that are hard to control, and focusing on metrics that tear people away from business goals.

How can investments in knowledge management be picked? This is no easy matter. What can be measured is not necessarily important and what is important cannot always be measured. Not surprisingly, despite the wide implementation of knowledge management initiatives, a systematic and comprehensive assessment tool to prioritize investments in knowledge management in terms of return on investment is not available. This owes to the difficulty of demonstrating direct linkages between investments in knowledge management and organizational performance, most of which can only be inferred, and the fact that the miscellany of possible knowledge management initiatives calls for both quantitative and qualitative approaches. This is indeed the rationale behind the Balanced Scorecard introduced by Robert Kaplan and David Norton in 1992, whose qualities make it quite useful as a knowledge management metric.

Picking Investments in Knowledge Management

by Olivier Serrat

What can be measured is not necessarily important and what is important cannot always be measured. When prioritizing investments in knowledge management, common traps lie waiting. They are delaying rewards for quick wins, using too many metrics, implementing metrics that are hard to control, and focusing on metrics that tear people away from business goals.

The Limitations of Traditional Metrics

How can investments in knowledge management be picked? This is no easy matter. What can be measured is not necessarily important and what is important cannot always be measured. Not surprisingly, despite the wide implementation of knowledge management initiatives, a systematic and comprehensive assessment tool to prioritize investments in knowledge management in terms of return on investment is not available. This owes to the difficulty of demonstrating direct linkages between investments in knowledge management and organizational performance, most of which can only be inferred, and the fact that the miscellany of possible knowledge management initiatives calls for both quantitative and qualitative approaches. This is indeed the rationale behind the Balanced Scorecard introduced by Robert Kaplan and David Norton in 1992, whose qualities make it quite useful as a knowledge management metric.

Common Traps

When prioritizing investments in knowledge management, common traps lie waiting. They are

- delaying rewards for quick wins,
- using too many metrics,
- implementing metrics that are hard to control, and
- focusing on metrics that tear people away from business goals.

Until the state of the art is better developed, it is in the final analysis recommended to consider knowledge management initiatives as a portfolio of well-balanced investments.

A Purposeful Medley of Insights

Figures 1–8 present a purposeful medley of insights that can help pick investments in knowledge management. They cover in turn

- a time management approach to full agendas that focuses on importance and urgency;
- generic features of a portfolio of knowledge management initiatives;
- ways to map knowledge management initiatives by knowledge agent, form of knowledge, and core knowledge activity;
- four broad aspects that sustain an innovative organization;
- five areas of value creation in knowledge products and services;
- ways to locate knowledge management initiatives in an options space;

- a multi-staged review process to underpin knowledge product and service development; and
 - an approach to strategic management that balances the financial perspective.
- In the spirit of learning, readers are invited to ponder the usefulness of each depending on context.

Asian Development Bank

ADB, based in Manila, is dedicated to reducing poverty in the Asia and Pacific region through inclusive economic growth, environmentally sustainable growth, and regional integration. Established in 1966, it is owned by 67 members—48 from the region. In 2007, it approved \$10.1 billion of loans, \$673 million of grant projects, and technical assistance amounting to \$243 million.

Knowledge Solutions are handy, quick reference guides to tools, methods, and approaches that propel development forward and enhance its effects. They are offered as resources to ADB staff. They may also appeal to the development community and people having interest in knowledge and learning.
