

Oceanographic Data of the 40th Japanese Antarctic Research Expedition from November 1998 to March 1999

Akihiro Masuyama and Junko Shimizu

*Hydrographic and Oceanographic Department, Japan Coast Guard
3-1, Tsukiji 5-chome, Chuo-ku, Tokyo 104-0045*

The results of oceanographic observations on board the icebreaker "Shirase" and tidal observations at Syowa Station, Antarctica are presented in this report. The oceanographic observations were carried out by the summer party of the 40th Japanese Antarctic Research Expedition (JARE-40) during the austral summer of 1998/1999. The tidal observations were carried out by the winter party of JARE-39 from February 1998 to January 1999.

1. Oceanographic observations

The track of the icebreaker "Shirase" and the sites of oceanographic stations are shown in Fig. 1. Surface water was sampled during the cruise using a plastic bucket of 10 liter capacity. XBT (expendable bathythermograph), XCTD (expendable CTD) and serial observations were taken in the Southern Ocean. Three surface drifting buoys were deployed and four XCP (expendable current profiler) observations were taken in the Antarctic Circumpolar Current.

(1) Surface water sampling

Surface water was sampled one or two times a day at 42 stations for chemical analysis. The results are given in Table 1.

(2) Monitoring of marine pollution

Surface water was sampled at 11 stations in the Southern Ocean for monitoring of marine pollution. Items and methods of analyses are given in the following section of (6).

(3) XBT observations

XBT observations were carried out at 47 stations in the Southern Ocean from Fremantle to Antarctica and back to Sydney. The results are listed in Table 2.

(4) XCTD observations

XCTD observations were carried out at 65 stations along the same route as XBT observations. The results are listed in Table 3. Salinity is not calibrated.

Vertical sections of water temperature with XBT and XCTD observations are shown in Figs. 2 and 3.

(5) Serial observations

Serial observations with Rosette sampler, equipped with twenty-three Niskin bottles of 2.5 liter capacity, and CTD (Conductivity, Temperature and Depth profiling system: Falmouth Scientific FSI TRITON ICTD) were carried out at 11 stations. The results of the observations and meteorological data are given in Table 4.

(6) Chemical analysis of sampled water

Chemical analysis of seawater collected with the bucket or the Niskin bottle was done by the following methods. Item (a) was calculated from conductivity using the 1978 practical salinity scale (UNESCO, 1981). Item (b), (d) and (h) were carried out with the method described by Strickland and Parsons (1972). Item (c) was analyzed by the Winkler method as modified by Carpenter (1965) for more precision. Item (e) was analysed with the method in Motomizu and Korechika (1988). Item (f) and (g) were analyzed with the method in Bergamin et al. (1978), Andersson (1979) and Gine et al. (1980). Item (i), (j) and (k) were analyzed with the method in Hydrographic Department (1995).

- (a) Practical salinity: Conductive salinometer (Guildline Autosal salinometer model 8400B).
- (b) pH: Glass electrode method (Horiba digital pH meter F-16).
- (c) Dissolved oxygen: Carpenter method (Hirama model ART-3 DO-1).
- (d) Phosphate-P: Molybdenum blue method (BRAN+LUEBBE model Traacs 800 auto analyzer).
- (e) Silicate-Si: Molybdenum yellow method (BRAN+LUEBBE model Traacs 800 auto analyzer).
- (f) Nitrite-N: Naphthylethylenediamine method (BRAN+LUEBBE model Traacs 800 auto analyzer).
- (g) Nitrate-N: Cadmium (Cd) - copper (Cu) reduction column,
Naphthylethylenediamine method
(BRAN+LUEBBE model Traacs 800 auto analyzer).
- (h) Ammonium-N: Indophenol blue method (Shimadzu model UV-1600 spectrophotometer).
- (i) Petroleum oil: n-hexane extraction - fluorophotometric analysis.
- (j) Cadmium (Cd): Solvent extraction - atomic absorption spectrophotometry.
- (k) Mercury (Hg): Cold vapor atomic absorption spectrophotometry.

The results of analytical items (a) to (h) are given in Tables 1 and 4. The results of monitoring of marine pollution items (i) to (k) are given in Table 5.

(7) Current observation with surface drifting buoys

Each surface drifting buoy is a spherical buoy of 35 cm diameter, from which hangs a drogue of 1 m diameter, 8 m length (C-2340, TOYOCOM Co.). Buoy data from each

drift buoy were transmitted to the data processing center through the NOAA satellite, and the Argos system offered buoy position and surface water temperature to each user.

The first surface drifting buoy was deployed at 59°59' S, 104°06' E on December 9, 1998. It was operated until January 20, 1999. The second was deployed at 60°47' S, 150°01' E on March 13, 1999. It was operated until March 21, 1999. The third was deployed at 57°34' S, 150°47' E on March 15, 1999. It was operated until September 22, 1999. The trajectories are shown in Fig. 4.

(8) Vertical current observations with XCP

XCP (Sippican Inc. U.S.A.) observations were carried out at the following 4 stations.

December 5, 1998	11:24 (UT)	43° 32' S, 110° 00' E (St. 1)
December 7, 1998	07:35 (UT)	52° 53' S, 110° 06' E (St. 3)
December 9, 1998	02:27 (UT)	59° 59' S, 103° 56' E (St. 5)
March 13, 1999	05:41 (UT)	60° 48' S, 149° 59' E

The results are given in Fig. 5. The XCP data for March 15, 1999 (St. 7) are not shown in this report because they are not available.

(9) Ocean current observations

We entrusted ocean current observations to the JARE-40 biological winter party because the sea ice condition was bad during the austral summer. The observation was carried out for 92 days (from August 11 to November 10) at 69°15.0' S, 39°39.0' E in the coastal fast ice off Langhovde, with an electromagnetic current meter (ACM8M, ALEC ELECTRONICS Co.), 15 m below the sea surface. The results are given in Fig.6.

2. Tidal observations

(1) Tidal observations at Syowa Station

Tidal observations at Syowa Station have been carried out since 1965. The tide gauge (QWP-8-303D, Meisei Denki Co.) was set on the sea bottom about 15 m below the sea surface at Nisi-no-ura Cove, East Ongul Island by JARE-36 members on February 2, 1995. The results obtained from February 1998 to January 1999 are described in this report. The methodology of tidal observations is described by Odamaki et al. (1991). In this system, the relative water pressure compensated for atmospheric pressure is measured with a quartz oscillator. The range of the sensor is 0-50 m and its precision is 0.01 % to the full scale, *i.e.* 0.005 m. The data sampled 5 times per second are averaged over one minute and record on solid IC memory every 10 min. The gauge was maintained by Miss Y. Tono, a member of the JARE-39 winter party, through the year. Hourly sea level was recorded on the hour. Daily and monthly mean sea levels were calculated from the hourly data. The results are given in Table 6.

(2) Tidal observations at Tonagh Island

Tidal observations at Tonagh Island were carried out for 24 days (from December 23 to January 15) with a pressure gauge (WLR-7, AANDERAA INSTRUMENTS). The sensor was placed at the sea bottom about 2 m below the sea surface. In this system total pressure is measured with a quartz oscillator. The range of the sensor is 0-60 m and its precision is 0.01% to the full scale, *i.e.* 0.006 m. The pressure averaged over 40 seconds is recorded in an EEPROM memory every 10 min. The data were corrected for atmospheric pressure. Hourly sea level was recorded on the hour. Daily mean sea levels were calculated from the hourly data. The results are given in Fig. 7 and Table 7. The tidal harmonic constants are given in Table 8.

Acknowledgments

The authors would like to express their sincere thanks to Prof. K. Shiraishi, the leader of JARE-40, Prof. K. Shibuya, the leader of JARE-39, Asst. Prof. S. Miyaoka, the winter party leader of JARE-40, Asst. Prof. K. Moriwaki, the summer party leader of JARE-39, and to all the members of JARE-39 and JARE-40 for their helpful support and valuable advice. The authors also express their sincere thanks to Miss Y. Tono, the member of the JARE-39 winter party who maintained the tide gauge throughout the whole year.

The authors also express their thanks to Captain T. Shigehara, the officers and crew of the icebreaker "Shirase".

Table 6. Hourly tidal observation at Syowa Station from February 1998 to January 1999 (time is LMT (UT+3 hours)).

Station : SYOWA STATION
Latitude : 69° 00' 28" S
Longitude : 39° 34' 13" E
Duration : Feb. 1-Febr. 28 1998
Unit : CENTIMETER

The zero of the tide gauge
relative to the bench mark No. 1040:
-4.638m Jan. 25 1998
-4.686m Jan. 3 1999
