

METEOROLOGICAL DATA AT MIZUHO STATION, ANTARCTICA
IN 1978

Sadao KAWAGUCHI

(National Institute of Polar Research, Itabashi-ku, Tokyo)

1. Introduction

Mizuho Station (formerly Mizuho Camp; officially renamed as Mizuho Station in March 1978) was established in July 1970 at 70°41'53"S and 44°19'54"E at an elevation of 2230m. The international index number 89544 was given in October 1977.

Surface meteorological observations have been taken intermittently since the establishment in July 1970 to March 1976 and continuously after April 1976.

The data were published in the JARE Date Reports (Meteorology) No.25 (1971 - 1973), No.30 (1974 - 1975), No.40 (1976 - 1977) and No.47 (1977 - 1978).

The present report contains the surface synoptic data taken by the 19th Japanese Antarctic Research Expedition from February 1, 1978 to January 16, 1979. Observers are: Tadashi Okuda (February 1 - May 31), Shigehiko Tsuzurahara (June 1 - October 20) and Susumu Kaneto (October 21, 1978 - January 16, 1979).

From November 15, 1977, surface synoptic reports (FM11-C-SYNOP) at 12 GMT (1500LT), and monthly summaries (FM71-CLIMAT) have been sent to Melbourne (World Meteorological Center) through Syowa Station (89532).

2. Instruments and Methods

The long-term meteorograph (Ono et al., 1971) provided continuous records of wind direction and speed (5-minute mean), atmospheric pressure and air temperature. Clouds, visibility and weather phenomena were observed visually at 1500LT (45°E LMT, GMT+3h) everyday.

1) Wind direction and wind speed

A windmill type anemometer with a wind vane was installed on a meteorological tower at a height of 4.0 metres above the snow surface. The wind speed was obtained as a 5-minute mean. The calibration of anemometer was made in January and October 1977 by the use of a 3-cup anemometer and a magnetic compass. Its accuracy was $\pm 0.5\text{m/s}$ in wind speed and ± 5 degrees in wind direction.

2) Atmospheric pressure

An aneroid barometer was set in the observatory. The calibration was made by comparing with the Thomen 3B4 altimeter which was calibrated with a mercury barometer in a decompression chamber at Syowa Station. The correction equation for the reading value, P' , was $0.956 \times P' + 35.5$.

3) Air temperature

An electric-resistance thermometer (Agari type) was mounted in a solar radiation-shielded ventilated cylinder on the meteorological tower at a height of 2.1 metres above the snow surface. The maximum and minimum temperatures were read from the continuous temperature record. The reading was made at 0900LT each day. Comparing with the standard thermometer

which had been checked by the Japan Meteorological Agency in Tokyo, the corrections to be added to the readings were: +1.2°C for the readings below -25.7°C, ±0°C for -20°C, -2°C for -10°C and -4°C for 0°C.

3. Notations in Tables

1) Tables 1 and 2

\bar{P}_{st}	Monthly mean pressure at station level
P_{st}	Daily mean pressure at station level (Average of 3-hourly values)
\bar{T}	Monthly mean temperature
T_m	Daily mean temperature (Average of 3-hourly values)
T_x	Daily maximum temperature
T_n	Daily minimum temperature
\bar{T}_x	Monthly mean of T_x
\bar{T}_n	Monthly mean of T_n
T_{xx}	Extreme value of T_x
T_{nn}	Extreme value of T_n
\bar{V}	Monthly mean wind speed
V_m	Daily mean wind speed (Average of 3-hourly values)
V_x	Daily maximum wind speed
V_{xx}	Monthly maximum wind speed
d_1	Most frequent wind direction of V_x

d₂ Sub-frequent wind direction of Vx

* Symbols of phenomena

✖ Snow
↗ Drifting snow
↖ Blowing snow
✖↗ Snow storm

* In parentheses in Table 2 is the estimated value from incomplete data.

* Suffix in Table 2 is the number of observations which failed to get complete data.

2) Table 3

LT Local standard time (45°E LMT, GMT+3h)
PPP(PST) Pressure at station level
TT Air temperature
DD Wind in 16 directions (i.e., north; 00 or 16, east; 04, south; 08, west; 12 and so on)
VV Wind speed (5-minute mean)
V Visibility (When the horizon is clearly seen, the visibility is 20 km)
N Amount of cloud (1/10)
CL,CM,CH Genus of cloud (WMO code)
WW Present weather (WMO code)
PP Amount of pressure tendency (WMO code)

* In parentheses is the estimated value from incomplete data.
