Education & Psychology
Librarian
University of Iowa

What is evidence synthesis?

- Aim is to identify and synthesize all of the scholarly research on a particular topic, including both published and unpublished studies
- Methodical and comprehensive literature search guided by careful study design
- Based on well-formulated research question
- Unbiased, transparent, and reproducible

Examples of evidence synthesis

What makes climate change adaptation effective? A systematic review of the literature

Chiou Chieh
School of Urban and Environmental Design, Princeton University
chiouc@princeton.edu

Amir Jodeli Yousofi¹, **Andrew P. McCoy**², **Todd Siskin**³
¹Department of Environmental Studies, Princeton University
²Department of Urban Studies and Planning, Princeton University
³Department of Landscape Architecture, Princeton University

Abstract
Recent understanding of global warming and documentation of its observable impacts have led to the development of climate change adaptation strategies. However, the evidence base for such strategies is still limited. This systematic review synthesizes the evidence base for climate change adaptation strategies. The review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies. The review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies.

Introduction
The impact of climate change is expected to increase over the next few decades. The world's population is projected to increase from 7.6 billion in 2019 to 9.6 billion in 2050. This increase in population, coupled with the impacts of climate change, is expected to have significant implications for global food security, water resources, and coastal systems. This review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies.

Methods
This review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies. The review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies.

Results
This review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies. The review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies.

Conclusions
This review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies. The review identifies the evidence base for climate change adaptation strategies and synthesizes the evidence base for climate change adaptation strategies.

Determinants of climate change policy adoption: A meta-analysis

Amin Jodeli Yousofi¹, **Andrew P. McCoy**², **Todd Siskin**³
¹Department of Environmental Studies, Princeton University
²Department of Urban Studies and Planning, Princeton University
³Department of Landscape Architecture, Princeton University

Abstract
Climate change has led to different approaches to explain how climate change policies are adopted by different actors. This meta-analysis synthesizes the evidence base for climate change policy adoption. The review identifies the evidence base for climate change policy adoption and synthesizes the evidence base for climate change policy adoption.

Introduction
Climate change adaptation is a critical component of climate change policy. This review identifies the evidence base for climate change adaptation and synthesizes the evidence base for climate change adaptation.

Methods
This review identifies the evidence base for climate change adaptation and synthesizes the evidence base for climate change adaptation. The review identifies the evidence base for climate change adaptation and synthesizes the evidence base for climate change adaptation.

Results
This review identifies the evidence base for climate change adaptation and synthesizes the evidence base for climate change adaptation. The review identifies the evidence base for climate change adaptation and synthesizes the evidence base for climate change adaptation.

Conclusions
This review identifies the evidence base for climate change adaptation and synthesizes the evidence base for climate change adaptation. The review identifies the evidence base for climate change adaptation and synthesizes the evidence base for climate change adaptation.

Climate Change and Mental Health: A Scoping Review

Fiona Charlton^{1,2,3,4,5}, **Sahabji A.S. Turk**^{6,7,8,9,10,11}, **Adamson Munoz**⁵, **Jess Aguirreanaga**¹², and **James G. Scott**^{1,3,4}

Abstract
Climate change is recognized as a significant threat to mental health. This scoping review synthesizes the evidence base for climate change and mental health. The review identifies the evidence base for climate change and mental health and synthesizes the evidence base for climate change and mental health.

Introduction
Climate change is recognized as a significant threat to mental health. This scoping review synthesizes the evidence base for climate change and mental health. The review identifies the evidence base for climate change and mental health and synthesizes the evidence base for climate change and mental health.

Methods
This scoping review synthesizes the evidence base for climate change and mental health. The review identifies the evidence base for climate change and mental health and synthesizes the evidence base for climate change and mental health.

Results
This scoping review synthesizes the evidence base for climate change and mental health. The review identifies the evidence base for climate change and mental health and synthesizes the evidence base for climate change and mental health.

Conclusions
This scoping review synthesizes the evidence base for climate change and mental health. The review identifies the evidence base for climate change and mental health and synthesizes the evidence base for climate change and mental health.

Systemic Review of Environmental Sustainability Scholarship and the Efforts of the Sport Sector: A Rapid Review of Literature

Stacy Tinsler^{1,2} and **Steph P. McLaughlin**³

Abstract
The sport sector has witnessed a shift where organizations of all levels have begun to place considerable importance on becoming more environmentally conscious. This systemic review synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector. The review identifies the evidence base for environmental sustainability scholarship and the efforts of the sport sector and synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector.

Introduction
The sport sector has witnessed a shift where organizations of all levels have begun to place considerable importance on becoming more environmentally conscious. This systemic review synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector. The review identifies the evidence base for environmental sustainability scholarship and the efforts of the sport sector and synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector.

Methods
This systemic review synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector. The review identifies the evidence base for environmental sustainability scholarship and the efforts of the sport sector and synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector.

Results
This systemic review synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector. The review identifies the evidence base for environmental sustainability scholarship and the efforts of the sport sector and synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector.

Conclusions
This systemic review synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector. The review identifies the evidence base for environmental sustainability scholarship and the efforts of the sport sector and synthesizes the evidence base for environmental sustainability scholarship and the efforts of the sport sector.

An Umbrella Review of Systematic Reviews on Food Choice and Nutrition Pledges and Designated 2017 and 2019

Reiner J. A. Freese^{1,2}

Abstract
The objective of this umbrella review was to provide an update on the latest knowledge in the field of food choice and nutrition. This umbrella review synthesizes the evidence base for food choice and nutrition pledges and designates. The review identifies the evidence base for food choice and nutrition pledges and designates and synthesizes the evidence base for food choice and nutrition pledges and designates.

Introduction
The objective of this umbrella review was to provide an update on the latest knowledge in the field of food choice and nutrition. This umbrella review synthesizes the evidence base for food choice and nutrition pledges and designates. The review identifies the evidence base for food choice and nutrition pledges and designates and synthesizes the evidence base for food choice and nutrition pledges and designates.

Methods
This umbrella review synthesizes the evidence base for food choice and nutrition pledges and designates. The review identifies the evidence base for food choice and nutrition pledges and designates and synthesizes the evidence base for food choice and nutrition pledges and designates.

Results
This umbrella review synthesizes the evidence base for food choice and nutrition pledges and designates. The review identifies the evidence base for food choice and nutrition pledges and designates and synthesizes the evidence base for food choice and nutrition pledges and designates.

Conclusions
This umbrella review synthesizes the evidence base for food choice and nutrition pledges and designates. The review identifies the evidence base for food choice and nutrition pledges and designates and synthesizes the evidence base for food choice and nutrition pledges and designates.

Systematic Review

Meta-analysis

Scoping Review

Rapid Review

Umbrella Review

and more...

Evidence Synthesis Institute (ESI)

- Funded by IMLS grant
- Partnership between Cornell, Carnegie Mellon, and University of Minnesota
- 6 total institutes beginning Spring 2021
- [About the Institute & Application process](#)
- Lots of great information and videos in their [PressBooks](#)

**Carnegie
Mellon
University**

Where do we go from here?

University of Iowa

- Large public R1 institution
- Liaison areas
 - College of Education
 - Psychological & Brain Sciences
 - Linguistics

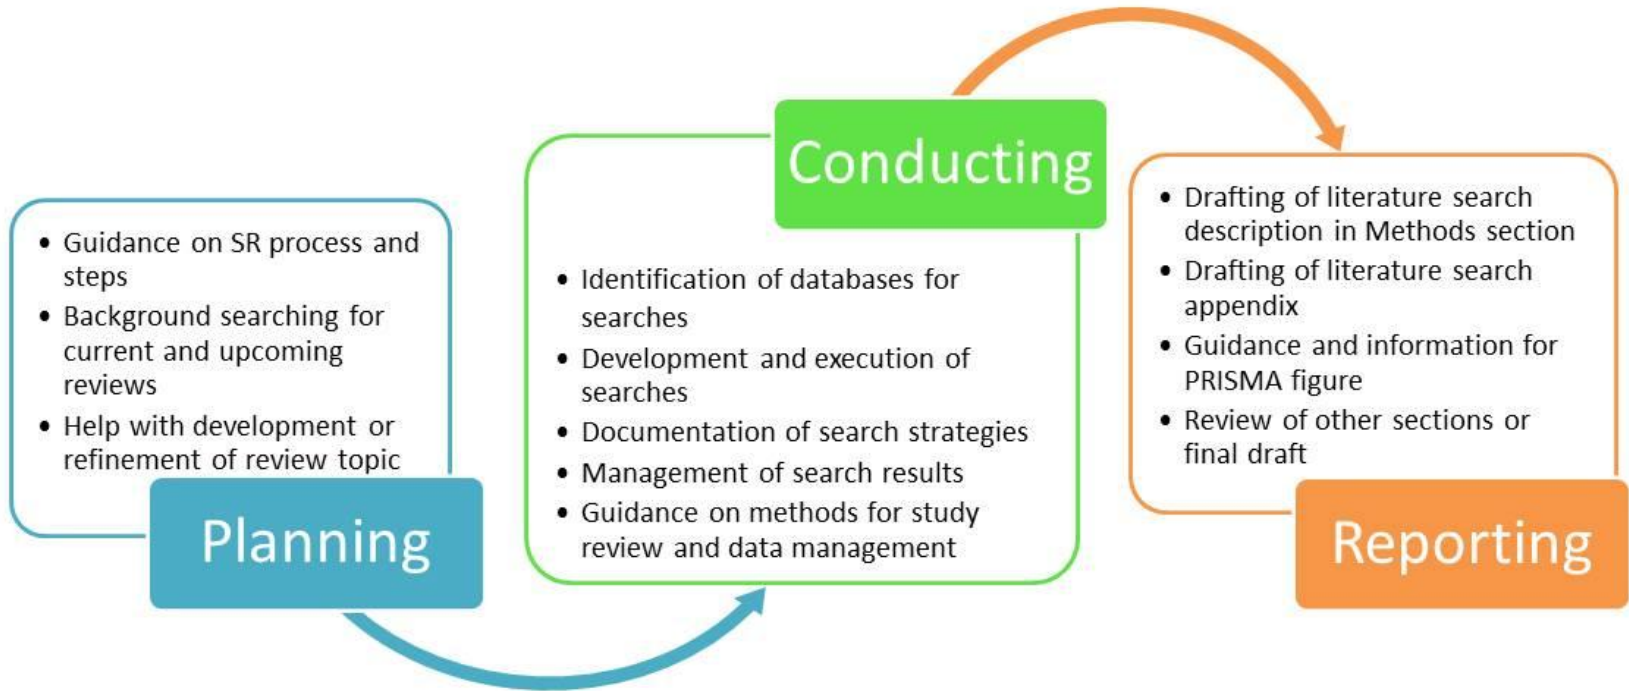

University of Iowa Special Collections

My experience with ES support

- Relatively new to ES
- Learn from Health Sciences Librarians
- EndNote
- Evidence Synthesis Institute (Aug 2021)
- Health Sciences Library already receiving requests from my liaison areas
- No advertising - just word of mouth (esp. among graduate students)
- Graduate students
 - Some are doing systematic review for a class
 - Some are conducting ES for comps

The Role of the Librarian Throughout the Systematic Review Process

Levels of Service

1

Training on conducting effective database searching, identifying sources, and/or using EndNote for citation management

2

Review of already completed search strategies for accuracy and

3

Collaboration to build effective search strategies*

4

Extensive assistance with development of protocol, design of search strategies, assistance with removing duplicates, managing citations, documenting process- including contribution to methods section write-up **

***= for this level of service, an acknowledgement is expected. **= Co-authorship is sometimes appropriate**

The search strategy

- Find balance between *sensitivity* (comprehensiveness) and *specificity* (precision) of search results
- The search strategy is shown to be of higher quality with the assistance of a librarian (Rethlefsen et al., 2015)
- Necessary to have in-depth understanding of Boolean operators, proximity searching, truncation, & subject terms
- Understand the nuances between databases

The initial meeting

- No intake form
- Explain my consultative role
- Go over resources from UI Hardin Library
 - [Systematic Review LibGuide](#)
 - Protocols, protocol registration, PRISMA guidelines, timeline
- Learn about their research topic (normal reference interview)
- Do some preliminary searching
- Set action items for next meeting
 - Complete [protocol worksheet](#)
 - Find research articles that meet criteria (5-10)

Preliminary searching

- ES search strategies are complex
 - Encourage student to keep research log
- Identify library databases
 - Discipline-specific databases
 - PsycINFO
 - CINAHL
 - ERIC & Education Source
 - Large citation databases
 - PubMed
 - Web of Science
 - Scopus
 - Embase
- Discuss Google Scholar
 - Not transparent and reproducible
 - Use Google Scholar to search for similar ES papers (“*systematic review*” topic)
- Explain grey literature (dissertations, conference proceedings, reports, etc.)
- Clarify subject terms v. keywords

Time commitment

- 5 hour-long Zoom meetings over the course of a semester
 - Refining search query
 - Translating search query across databases
 - Identifying Subject Terms
- 10 substantive emails
 - Refining search query
 - Screening software (Covidence, Rayaan)
 - Accessing articles (during screening phase)
- Running final search and deduping with EndNote (about 2 hours)
 - I offer to do this for students – why?
 - Other approaches

Levels of Service

1

Training on conducting effective database searching, identifying sources, and/or using EndNote for citation management

2

Review of already completed search strategies for accuracy and

3

Collaboration to build effective search strategies*

4

Extensive assistance with development of protocol, design of search strategies, assistance with removing duplicates, managing citations, documenting process- including contribution to methods section write-up **

***= for this level of service, an acknowledgement is expected. **= Co-authorship is sometimes appropriate**

Levels of Service

1

Training on conducting effective database searching, identifying sources, and/or using EndNote for citation management

2

Review of already completed search strategies for accuracy and

3

Collaboration to build effective search strategies*

4

Extensive assistance with development of protocol, design of search strategies, assistance with removing duplicates, managing citations, documenting process- including contribution to methods section write-up **

*= for this level of service, an acknowledgement is expected. **= Co-authorship is sometimes appropriate

Final considerations

- You might be asked to “update the search” for publication. This can be more complicated than anticipated.
- This is what works for me. I enjoy assisting graduate students with their ES work and have not found it to be a burden or too overwhelming. By no means is this what will work for everyone

University of Arizona

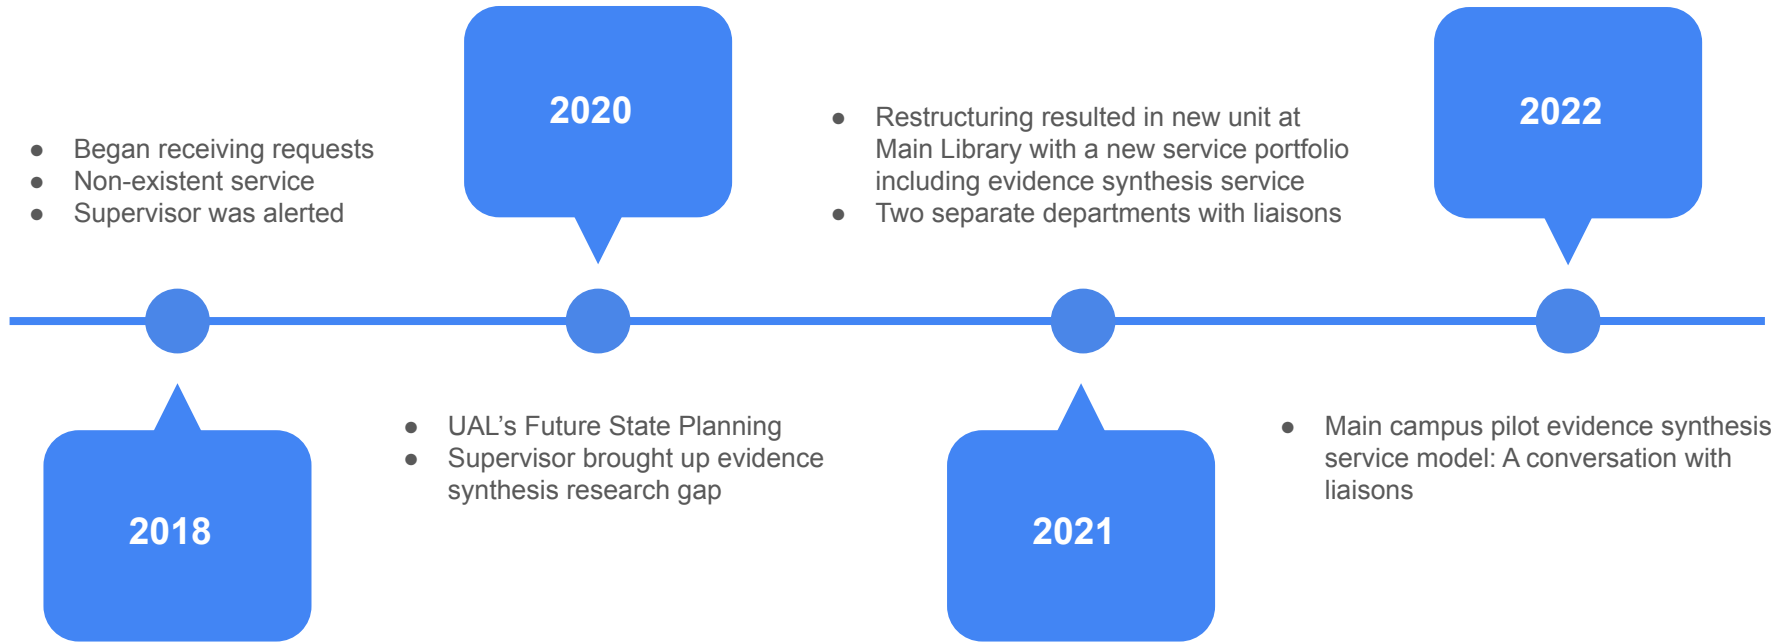

- Large public R1, HSI institution
- HSL librarians providing ES service since ~2008
- Graduate student enrollment 2021: 10,943
- 130+ colleges, departments, and programs offering graduate programs in more than 150 areas of study

Timeline & evolution of evidence synthesis at UA

Main Library to-date

UAL's unpublished solo person model

- Since July 2021 my efforts have gone towards designing a first-of-a-kind initiative service model to main campus users (non-health sciences fields) engaging in evidence synthesis research
- Institutional-driven support
- Single librarian providing consultative support by helping researchers navigate the systematic review process from protocol to publication*
 - **Preparation / Searching / Retrieval / Screening / Synthesizing / Write-up**
- Also, the solo librarian provides oversight, coordination, and ongoing development of the service

**I was given full freedom to design the service. This model is rooted in my philosophy of librarianship.*

What training did I receive?

- Circa ~2018-2020: I would just observe, digest, and analyze when HSL colleague assisted me with requests
- March-June 2020: HSL colleague guided me through hands-on training for a meta-analysis request received from a researcher right at the onset of COVID-19 pandemic
 - Resource: Institute of Medicine. 2011. *Finding What Works in Health Care: Standards for Systematic Reviews*. Washington, DC: The National Academies Press. <https://doi.org/10.17226/13059>
- August 3-5 2020: Attended Systematic Reviews and Evidence Synthesis Beyond the Health Sciences: A Training for Librarians (virtual training funded by IMLS)

User status

Non-health sciences requests

Phase of project

Most common request types from users

- Systematic reviews and scoping reviews are the most requested evidence synthesis requests
- Two meta-analysis requests from undergraduates doing semester term projects

How do researchers hear about the service if it is unpublished?

- Through liaison librarians
- Word of mouth
- AskUs service
- They just do!

**How do I
spend the
majority of
my time?**

Consulting

- Discussing the process, the required resources, and the available library support
- The heaviest time is spent in conversations centered around learning about their topic, study design, and protocol development
- Teaching and guiding researchers through the search phase (helping to identify resources, discussing indexing, MeSH or controlled vocabulary, strategizing the search, advising about database syntaxes, etc)
- Following each consultation, I find, compile, and share useful resources with researchers

Learning

- Reviewing notes and a variety of other resources (external library LibGuides, IOM ebook, etc)
- Learning more about registries, frameworks, guiding principles, etc
- Analyzing published protocols or templates
- Reading articles about evidence synthesis research
- Learning more about different review types
- Monitoring the expert searching listserv

- Additional time is spent anticipating activities downstream in the process
- As well as on observations shaping the ongoing development of the service

Observations part 1

- High number of requests originating from graduate students. Liaisons need to be in tune with *trending changes* in graduation requirements in their programs
- The amount and accuracy of knowledge graduate students have about evidence synthesis research is split evenly
 - Some know enough and I help expand their understanding better
 - Others do not have any idea what it involves or what it will take
- Graduate student mentors don't realize the extent of work, skills, and resources (team project <2+ members required)
- Useful to have the mentor in discussions during consultations with graduate student

Observations part 2

- I lack the subject disciplinary expertise to assist researchers during the search phase in areas outside of my disciplines
- Similarly, I am not equipped with the expertise to help researchers identify appropriate information resources to search in areas outside of my disciplines
- Communicating effectively with researchers in different areas requires knowledge of disciplinary discourse practices

Successes

- The absolute most generous and helpful colleagues (UA HSL and ACRL)
- Researchers are comfortable and patient with my ongoing development
- Learning is happening in two-ways: researchers and myself
- My comfort and confidence is increasing and I can communicate effectively with researchers
- I have strong project management skills that are valuable when helping researchers navigate the process
- I can work with a diverse group of individuals
- I'm not afraid to ask for help
- This is in perfect alignment with my research interest in helping graduate students move through their training more easily

Challenges

- Infrastructure is needed in order for this service to be up and running officially
- The more I learn the less I know. Still a lot more things remaining to learn
- The volume and intensity of the required learning plus the turn around rate is overwhelming my mental capacity
- As requests increase will need to look at full workload and liaison duties

Stay tuned, TBD

- Don't offer service until more resources are available
- Taper down consultative service where my only focus is to provide an overview of the process, subsequent questions from researchers will be fielded by liaisons
- Continue as-is and bring in liaisons to support with search phase in alignment with liaison duties
- Other

What is the balance?

- What is the appropriate level of service for graduate students?
- How to prioritize ES support for graduate students v. faculty?
- When organizing a service, how do you get liaisons on board?
- What kind of training can librarians provide faculty on ES?
- How can coordinators manage concerns around scope creep?

Thank you for your time!
