RE: Butte Priority Soils Operable Unit (BPSOU) Draft 2021 Site-Wide Surface Water Monitoring Data Summary Report. Consent Decree- Civil Action No. CV 89-039-BU-SHE.

Agency Representatives:

I am writing to you on behalf of Atlantic Richfield Company to submit the BPSOU Silver Bow Creek/Butte Area NPL Site Draft 2021 Site-Wide Surface Water Data Summary Report for your review and approval. The report summarizes interim site-wide surface water, sediment, habitat, and benthic macroinvertebrate monitoring conducted in 2021. The report and appendices may be downloaded at the following link:

BPSOU Draft 2021 Site-Wide Surface Water Monitoring Data Summary Report

If you have any questions or comments, please call me at (406) 723-1834.

Sincerely,

Josh Bryson, PE, PMP
Liability Manager & Global Risk Champion
Remediation Management Services Company

1.0 INTRODUCTION

This Data Summary Report (DSR) presents surface water, sediment, habitat, and benthic macroinvertebrate (BMI) data collected on behalf of Atlantic Richfield between January 1, 2021 and December 31, 2021 in general compliance with the Silver Bow Creek/Butte Area NPL Site Final Butte Priority Soils Operable Unit Interim Site-Wide Surface Water Monitoring Quality Assurance Project Plan 2020 and 2021 Monitoring Period (QAPP) (Atlantic Richfield, 2020). Surface water monitoring occurred during normal flow and wet weather conditions. Normal flow exists in the absence of snowpack or precipitation runoff. The Record of Decision, Butte Priority Soils Operable Unit, Silver Bow Creek/Butte Area NPL Site (2006 ROD) (USEPA, 2006) defined wet weather conditions as flow greater than 50 cfs at SS-07 and greater than 35 cfs at SS-04. These criteria continue to be loosely applied, but adjustments were made to account for inputs from the Butte Mine Flooding Operable Unit (BMFOU) Pilot Project discharge, periods of prolonged high flows, and periods of sustained low flows. Wet weather monitoring did not occur during winter months due to freezing conditions and the low potential for wet weather flows.

Sediment, habitat, and BMI monitoring occurred in August 2021 during stable flow conditions.

The following information is included in this report:

- Description of field methods;
- Locations of sampling sites and methods of sampling;
- Results of laboratory analyses of surface water, sediment, and BMI samples;
- Hydrographs of continuous flow and stage measurements;
- Manual flow measurements and field parameter measurements;
- Discussion of quality assessments of water chemistry and flow data;
- Data validation checklists and Level A/B checklists; and
- Raw laboratory analytical data and raw field data.

Original field notebooks and data sheets for 2021 monitoring discussed in this DSR are located at TREC Inc.'s (TREC) field office in Butte, MT.

1.1 Objectives

The U.S. Environmental Protection Agency's (USEPA) 2006 ROD and the 2020 Record of Decision Amendment (RODA) (USEPA, 2020) set forth applicable surface water quality standards, and these are presented in Table 1.

The remedial action objectives (RAOs) for surface water, as defined in the ROD, are:

- *Prevent ingestion or direct contact with contaminated surface water that would result in an unacceptable risk to human health.*
- *Return surface water to a quality that supports beneficial use.*
- *Prevent source areas from releasing contaminants to surface water that would cause the receiving water to violate surface water ARARs and RGs for the OU and prevent degradation of downstream surface water sources, including during storm events.*

- *Ensure that point source discharges from any water treatment facility (e.g., water treatment plant, wetland, etc.) meet ARARs.*
- *Prevent further degradation of surface water.*
- *Meet the more restrictive of chronic aquatic life or human health standards for surface water identified in Circular DEQ-7 (Table 8-2) through the application of B-1 class standards.*

The third and sixth objectives listed above were modified in the 2020 RODA. Performance standards for cadmium were revised to reflect the chronic and acute aquatic life standards in the May 2017 version of Circular DEQ-7, which applies to both normal and wet weather flow situations. The copper and zinc acute aquatic life wet weather performance standards were modified to be based on the federal criteria, which relies on the dissolved concentration, rather than the total recoverable concentration.

Table 1 – BPSOU Creek Monitoring Performance Criteria

Analyte	Normal Flow Standard (ug/L)[1]	WW Flow Standard (ug/L)[2,3]
Dissolved Aluminum	87	750
Total Arsenic	10	340
Total Cadmium	0.26	0.49
Total Copper	2.85	3.6
Total Iron	1000	NA
Total Lead	0.545	13.98
Total Mercury	0.05	1.7
Total Silver	NA	0.374
Total Zinc	37	37

[1] Normal Flow Standard based on more conservative of either DEQ7 Chronic Aquatic Life Standard (using hardness of 25 mg/L) or Human Health Standard

[2] WW Flow Standard based on DEQ 7 Acute Aquatic Life Standard (using hardness of 25 mg/L)

[3] Per 2020 RODA, WW Flow Copper and Zinc Standard based on dissolved concentration

The objectives of surface water monitoring collected under the QAPP prior to the BPSOU Consent Decree (CD) (U.S.A and State of Montana, 2020) defined Compliance Standard Determination Period is to establish interim monitoring period conditions for creek and sub-drainage concentrations and flows. Thus, the goals of 2021 surface water monitoring were to collect data necessary to:

1. Evaluate compliance with Performance Standards at compliance monitoring stations SS-06G and SS-07;
2. Evaluate performance of the remedy, in its various stages of implementation; and
3. Evaluate any necessary diagnostic data collected to identify currently implemented remedial system component optimization or maintenance, and necessary to inform Further Remedial Elements (FRE) design.

The intent of 2021 sediment, BMI, and habitat monitoring was to establish interim monitoring period conditions for sediment probable effects concentrations (PEC), the BMI community

structure, and habitat conditions for stream reaches upgradient and within the BPSOU. These data will assist in:

1. Evaluating if sediment sample concentrations exceed the PECs in Table 2 for specific sampling locations and depths in Blacktail Creek (BTC) and Silver Bow Creek (SBC) within the BPSOU and in background/reference reaches in BTC upgradient of BPSOU;
2. Evaluating trends in streambed sediment sample concentrations at sampling locations and routine depths in BTC and SBC within BPSOU and in background/reference reaches in BTC upgradient of BPSOU;
3. Evaluating BMI community structure and habitat conditions within BPSOU and in background/reference reaches upgradient of BPSOU; and
4. Evaluating BMI community structure and habitat condition trends in relation to the abiotic media collected in background/reference reaches upgradient of BPSOU and SBC reaches within BPSOU.

Table 2 – Sediment Probable Effects Concentrations (Ingersoll et al. 2000, MacDonald et al. 2000)

Analyte	Probable Effect Concentration (mg/kg, dry weight, bulk sample)
Arsenic	33
Cadmium	4.98
Copper	149
Lead	128
Mercury	1.06
Zinc	459

2.0 MONITORING SUMMARY

Surface water monitoring conducted under the QAPP included monitoring conducted under normal flow and wet weather conditions in SBC and BTC; diagnostic wet weather surface water monitoring conducted in several SBC and BTC tributaries or subdrainages; and streambed sediment, BMI, and habitat monitoring conducted in SBC and BTC.

2.1 Normal Flow and Wet Weather Monitoring

Normal flow monitoring occurred monthly, with water quality samples collected and stream flow measurements made. Wet weather monitoring was conducted May through September, and this monitoring included water quality sampling, continual stage monitoring, and calculated continual flow measurements. Stations monitored for normal flow, wet weather, and continuous stage and flow are presented in Table 3.

The normal flow and wet weather monitoring stations are presented in Figure 1. A schematic of the hydraulic connectivity and flow pattern of BPSOU surface water is presented in Figure 2. Precipitation data were collected at seven climate stations within the SBC basin. Climate station locations are presented in Figure 3. Water quality results are presented in Appendix A.

The field sample identification (ID) scheme consisted of four letters identifying the sample type, four numbers identifying the sample number, and six numbers identifying the monitoring date. An example is provided below.

Field Sample ID:		**SWBF0025-051521**
SW	=	Surface Water Sample
BF	=	Normal Flow (WW= Wet Weather Sample)
0025	=	Sample Number 25
051521	=	Monitoring Date of 5/15/2021

2.2 Diagnostic SW Monitoring

Diagnostic monitoring consisted of water quality sampling, continuous level and velocity measurements, and calculated flow measurements at the stations presented in Table 4. Diagnostic monitoring stations are presented in Figure 4. Hydraulic connectivity and flow patterns are presented in Figure 5. Diagnostic monitoring water quality results are presented in Appendix F.

The field sample ID scheme consisted of four letters to identify the sample type, four numbers identifying the sample number, and six numbers identifying the monitoring date. An example is provided below.

Field sample ID:		**SWSD0005-051521**
SW	=	Surface Water Sample
SD	=	Storm Drain Sample
0005	=	Sample Number 5
051521	=	Monitoring Date of 5/15/2021

2.3 Sediment Monitoring

Streambed sediment was sampled in three stream reaches within BTC and SBC presented in Table 5 and Figure 6. Streambed sediment analytical results are presented in Appendix J.

The field sample ID scheme consisted of three letters identifying the sample type, three digits identifying the sample number, six digits identifying the monitoring date, and four digits identifying the depth interval. An example is provided below.

Field sample ID:		**SED001-092221-0002**
SED	=	Bed Sediment
001	=	Sample number of 1
092221	=	Monitoring date of 9/22/2021
0002	=	0-2 inch depth interval (0206 = 2-6 inch, 0612 = 6-12 inch)

2.4 BMI and Habitat Monitoring

Benthic macroinvertebrate (BMI) samples and habitat data were collected in the three stream reaches within BTC and SBC presented in Table 5 and Figure 6. Four replicate BMI samples were collected within each reach. Each replicate was submitted to the laboratory as a separate sample to undergo taxonomic analyses. BMI sample and habitat transect location coordinates are presented in Table 6. BMI analytical results are presented in Tables 15 through 19. Habitat data are presented in Appendix K.

The field sample ID scheme for BMI samples consisted of an alphanumeric identifying the stream and sample site, letters Rep A-D identifying the sample replicate, and a parenthetical identifying which bottle, of the total number of bottles for that replicate, was labeled. An example is provided below.

Field sample ID:		**SBC SS-06G Rep D (1 of 2)**
SBC	=	Silver Bow Creek
SS-06G	=	Sample Site
Rep D	=	Fourth replicate of SS-06G sample
(1 of 2)	=	Indicates bottle was one of two bottles for replicate D

2.5 Data Quality Objectives and Assessment

This section summarizes the Data Quality Objective (DQO) and Data Quality Assessment (DQA) methods and steps taken in the field and laboratory to ensure data quality.

2.5.1 Data Quality Objectives

The DQO process, defined in the QAPP, is used to establish performance or acceptance criteria, which serve as the basis for designing a plan for collecting data of sufficient quality and quantity to support the goals of the study. Each step of the DQO process defines criteria that will be used to establish the final data collection design following the Guidance on Systematic Planning Using the Data Quality Objectives Process (USEPA, 2006a).

The surface water data collected under the QAPP aid in developing stage-discharge ratings, modeling wet weather flow, identifying the effects of wet weather discharges on SBC, and determining the efficacy of existing BMPs for controlling contaminant of concern (COC) inputs during wet weather flow. Additionally, compliance with normal flow and wet weather performance standards for monitoring stations SS-06G and SS-07 can be evaluated with data collected under the QAPP. Sediment data collected under the QAPP assist in determining sediment COC concentrations in stream reaches upgradient and within the BPSOU and will provide interim monitoring period sediment COC concentrations that can be used in trend evaluation. BMI and habitat data collected under the QAPP provide interim monitoring period information on the BMI community structure and habitat conditions in stream reaches upgradient and within the BPSOU. These data can be used to assess BMI and habitat trends in relation to abiotic media for the monitored stream reaches.

2.5.2 Data Quality Assessment

DQA is performed to determine whether the DQOs identified in the QAPP were satisfied. The DQA process, as outlined in the Data Management/Data Validation Plan (DM/DVP) (ARCO, 1992c and 2000a), and DQA results are discussed in greater detail in Appendix A (normal flow and wet weather), Appendix E (diagnostic wet weather) and Appendix I (sediment). Data validation was completed by TREC and included data review, statistical testing, verifying assumptions, and assigning data to utilization categories.

The three data utilization categories described in the DM/DVP are enforcement quality data, screening quality data, and rejected data. Enforcement quality data meet all QA/QC and documentation requirements. Screening quality data do not meet all applicable QA/QC requirements and/or documentation requirements. Rejected data may result from inappropriate sampling, documentation, or analysis procedures. Only enforcement and screening quality data are used for evaluation of surface water quality.

2.6 General Monitoring Activities

2021 BPSOU site-wide surface water monitoring included normal flow and wet weather monitoring conducted in BTC and SBC, diagnostic monitoring conducted in select BTC and SBC sub-drainages, and sediment, BMI, and habitat monitoring conducted in BTC and SBC. These monitoring efforts were conducted in general compliance with the QAPP, with any deviations noted in Section 4.0.

2.6.1 Normal Flow and WW

Monitoring activities consisted of water quality sampling, field parameter measurements, stage and flow measurements, and precipitation and snow water equivalent (SWE) measurements. Monitoring activities were performed in accordance with Clark Fork River Superfund Site Investigation (CFRSSI) Standard Operating Procedures (SOPs) (ARCO, 1992c), as well as TREC's internal SOPs. These SOPs are provided in the QAPP and briefly summarized in the following sections of this document. Wet weather water quality samples were collected by mechanical and automated samplers. Wet weather stage data were primarily collected using continuous recorders, although field observations of staff gauges were collected opportunistically and used to adjust continuous recorders as necessary. Water quality samples, flow data, stage data, and field parameters were collected during normal flow sampling. Precipitation and SWE data were collected by private parties, governmental agencies, or Atlantic Richfield contractors. A

summary of the types of monitoring performed at each continuous monitoring station and a description of station locations are presented in Table 3. Stage and flow data are presented in Appendices B and C. Precipitation and SWE data are presented in Table 7a-c and Figure 7a-g.

2.6.1.1 Normal Flow Monitoring Activities

Normal flow monitoring was performed monthly throughout the year and consisted of water quality sampling, field parameter measurements, and stage and flow measurements. A summary of the types of monitoring performed at each station and a description of station locations are presented in Table 3. Normal flow monitoring is discussed in more detail in Section 3.1.1.

2.6.1.2 Wet Weather Monitoring Activities

Wet weather monitoring consisted of collecting water quality samples and recording stage during wet weather conditions. A summary of the types of monitoring performed at each station and a description of station locations are presented in Table 3.

Water quality samples were primarily collected by automated samplers manufactured by Teledyne ISCO (ISCO). These samplers, along with mechanical self-closing D-TEC samplers, were deployed for the season in March once freezing conditions abated. Samples obtained by D-TEC samplers were retained if ISCOs failed to collect during wet weather events.

ISCOs were set to collect at specific time increments after the stage height at which the sampler was set to trigger was reached. Once ISCOs were triggered, the samplers collected four discrete samples at one-hour intervals. The initial sample stage was set to collect the first sample on the rising limb of the wet weather hydrograph. The second and third samples were expected to be collected near the peak of storm flow. The fourth sample was expected to be collected on the falling limb of the hydrograph. Three surface water stations (SS-01, SS-06G, and SS-07) were equipped with a second ISCO for parallel sampling. These second samplers (SS-01-P, SS-06G-P, and SS-07-P) were triggered at the same time as the parent sampler but collected four time-composited samples. The time-composited samples are comprised of aliquots collected every ten minutes over an hour. It is assumed all ISCOs effectively sampled throughout the wet weather hydrograph; however, normal flow stages used to program ISCO actuator triggers, as well as the magnitude and duration of flow may have resulted in other points on the hydrograph being sampled. Wet weather monitoring is discussed in more detail in Section 3.1.2.

D-TECs were set to collect at the stage their corresponding ISCOs were set to trigger. D-TECs were assumed to collect samples on the rising limb of the hydrograph. Stages at which samplers were set to collect, and any changes made to the height throughout the season, are presented in Table 8.

2.6.1.3 Surface Water Stage and Flow

Surface water stage data were recorded on 15-minute intervals by continuous recording devices at 15 surface water stations, with three of those devices also recording flow. These stations are presented in Table 3. Stage data were recorded throughout the year and include both wet weather and normal flow conditions, with occasional data gaps due to equipment maintenance or operational problems. Note that three additional sites presented in Table 3 collect continuous data for projects outside of the scope of this DSR. Flow data at SS-MPTP, CT-EFS7 and SS-STP were recorded daily. A Supervisory Control and Data Acquisition (SCADA) system at SS-MPTP

controls a constant discharge. A SCADA system is also used at CT-EFS7, however, this system does not control a constant discharge. Stage and flow hydrographs are presented in Appendix B. Surface water stage and flow are discussed in more detail in Section 3.1.3.

Stage-discharge relationships were developed for stations SS-01, SS-05, SS-05A, SS-06A, SS-06G, and MSD-3A by TREC on behalf of Atlantic Richfield and at SS-01.35 and SS-07 by the United States Geological Survey (USGS). Stage-discharge relationships allow continuous stage records to be transformed to continuous discharge records. Stage-discharge rating tables and rating curve figures developed by TREC are presented in Appendix C. The USGS discontinued continuous stage monitoring at SS-04 on April 30, 2020 and ceased producing a stage-discharge relationship at this site on October 31, 2019. Backwater created by the Butte Mine Flooding Operable Unit (BMFOU) Pilot Project discharge prohibited development of a reliable stage-discharge relationship. The USGS established continual stage monitoring at SS-01.35 on April 30, 2020. Atlantic Richfield maintains a continual stage recorder at SS-04, but stage-discharge relationships are not developed for this site. An SS-04 stage hydrograph is presented in Appendix B.

Continuous stage and/or flow records are obtained by the controlling parties for stations SS-MPTP, CT-EFS7, SS-STP, SS-01.35, and SS-07.

2.6.1.4 Precipitation

Precipitation measurements were recorded at seven stations, as presented in Figure 3, by a mix of governmental agencies and private parties. Station BMMA is located at Bert Mooney Memorial Airport approximately one mile south of I-90 and Basin Creek SNOTEL site (Site ID 12d09s) is in the Basin Creek drainage to the south of Butte and includes a snow pillow to record SWE. Both are operated by the National Climactic Data Center. Blacktail Canyon weather station is located southeast of Butte in Blacktail Canyon and is operated by a private party. Station Kelley Mine is at the Atlantic Richfield office on Anaconda Road, just west of the Berkeley Pit. Station CB-1 is located on Empire Street, which is centrally located in the Missoula Gulch sub-drainage. Station BTL/LAO is located due west of the Chemical Addition System at the Butte Treatment Lagoons. Stations Kelley Mine, CB-1, and BTL/LAO are operated by Atlantic Richfield. Station BSB-Shop that was previously operated by Atlantic Richfield was removed at the beginning of April 2021 due to dismantling of the former BSB road maintenance shop. Therefore, the BSB-Shop data set terminates April 1, 2021. Data are reported daily at BMMA and Basin Creek and hourly at Blacktail Canyon and CB-1. BTL/LAO data are reported at variable intervals but are commonly reported every 15 minutes. Kelley Mine data are reported every five minutes. Precipitation and SWE data are presented in Table 7a - 7c and Figure 7a -7g.

2.6.1.5 pH Monitoring

Surface water pH was monitored by automated devices at stations SS-01, SS-06G, and SS-07. pH measurements were collected continuously at 15-minute intervals throughout the year and include both wet weather and normal flow conditions. Data gaps and suspect data were attributed to ice, equipment failure, and pH probe replacement. After pH probe calibration there is a period of equilibration that can last over an hour during which the pH readings may not be accurate. Continuous pH data are presented in Appendix B.

2.6.2 Diagnostic SW Monitoring

Diagnostic monitoring consisted of continuous flow monitoring and water quality sampling performed in accordance CFRSSI and TREC SOPs as outlined in the QAPP. Previously, in the *Butte Hill Diagnostic Surface Water Monitoring Plan* (DSWMP) (Atlantic Richfield, 2017), diagnostic stations were given a level rating depending on their location within the basin. Level 1 stations are located at the bottom of the basin, level 2 stations are located part way up the basin and level 3 stations are located at the top of the drainages. Diagnostic monitoring in 2021 only included level 1 and level 3 monitoring stations. Level 2 stations monitored in 2013 and 2014 have been discontinued.

2.6.2.1 Water Quality Monitoring

Diagnostic water quality sampling consisted of collecting water quality samples during runoff conditions, primarily by automated samplers. These samplers were installed in late March and early April. Diagnostic water quality stations are presented in Figure 4 and a hydraulic schematic is presented in Figure 5. Sampling locations, descriptions, and monitoring equipment are presented in Table 4.

ISCO automatic samplers collect following initiation by an actuator device which detects the presence of water at a manually set stage. Actuators are set to initiate sampling during the rising limb of the hydrograph. The magnitude and duration of flow and actuator position may have resulted in sampling at different points on the hydrograph.

2.6.2.2 Flow Monitoring

Diagnostic surface water flow was recorded by automated devices at surface water stations within the BPSOU monitoring network. Water depth and velocity data were collected by area-velocity (AV) Meters as presented in Table 4. Hydrographs are presented in Appendix F.

2.6.3 Sediment, Habitat, and BMI Monitoring

Sediment sampling was conducted August 12 and 13, 2021 at three stream reaches, each approximately 500 feet long. The reaches were located at surface water stations SS-01, SS-06A, and SS-06G. Table 5 and Figure 6 identify the sediment sampling reaches. Each sample consisted of a 5-point composite sampled along the entire reach. An effort was made to evenly space the sub-sample collection points along the reach, but exact sub-sample points were controlled by the location of available sediment. Three depth intervals were attempted at each reach, 0-2 inches, 2-6 inches, and 6-12 inches. An inadequate amount of sediment was obtained for the 6-12 inch interval at SS-06A, so pH, TOC, and particle size analyses were omitted. No sediment was obtained for the 6 to 12 inch interval at SS-06G.

Benthic macroinvertebrate (BMI) sample collection and habitat monitoring were conducted August 9 and 10, 2021 at three stream reaches collocated with the sediment sampling reaches. The reaches were located at surface water stations SS-01, SS-06A, and SS-06G. Table 5 and Figure 6 identify the BMI and habitat monitoring reaches. Four replicate BMI samples were collected within each reach. Each replicate was submitted to the laboratory as a separate sample to undergo taxonomic analyses. BMI sample and habitat transect location coordinates are presented in Table 6. BMI samples were collected in riffle habitats from the least embedded, most heterogenous cobble substrates found at each site, using a Hess sampler with 1,000-micron mesh netting. In-situ

measurements of pH, water temperature, dissolved oxygen, and specific conductance were made concurrently with BMI sample collection.

BMI sample collection was followed by habitat monitoring. Habitat monitoring was conducted using EPA's Rapid Bioassessment Protocols (RBP) (Barbour et al, 1999), as well as elements of EPA's Environmental Monitoring and Assessment Program (EMAP) (EPA, 1998). The characteristics sampled in 2021 included epifaunal substrate and available cover; embeddedness and pool substrate characterization; velocity, depth, and pool variability; sediment deposition; channel flow status; channel alteration; frequency of riffles and channel sinuosity; and bank stability. The next scheduled vegetation monitoring will occur in 2022. To employ the RBP and EMAP, sample reaches, established as 40 times the average wetted width, were divided into 11 channel cross-sections (transects) at equal intervals along the reach length. These transects were labeled A through K. Transect A represented the most downstream transect within the reach and transect K represented the most upstream transect within the reach. Transect coordinates are provided in Table 6.

3.0 DATA SUMMARY

3.1 Normal Flow and WW

Monitoring activities during 2021 consisted of water quality sampling, field parameter measurements, stage and flow measurements, and acquisition and review of precipitation and SWE data. These activities were performed in accordance with CFRSSI and TREC SOPs and are outlined in the QAPP. The following sections present analytes, field conditions, frequency of sampling events, and counts of natural samples. Appendix A presents the normal flow and wet weather data.

3.1.1 Normal Flow Monitoring

During the 2021 monitoring period, normal flow water quality was monitored 12 times at SS-01, SS-01.35, SS-04, SS-05, SS-05A, SS-06A, SS-06G, and SS-07. A total of 144 samples were collected during this monitoring, 120 of which were primary samples, 12 were duplicates, and 12 were blanks. All normal flow samples were analyzed for dissolved metals, total metals, alkalinity, nitrate/nitrite, sulfate, TDS, and TSS. Samples collected at SS-01, SS-01.35, SS-06G, and SS-07 were also analyzed for dissolved organic carbons (DOC), phosphorus (P), Total Kjeldahl Nitrogen (TKN), and ammonia (NH_3). Duplicate and blank sample analysis included the extra analyses. In 2021, normal flow monitoring produced 2,864 natural sample data points. Because the shipment of a cooler was delayed by the courier in February, ten samples arrived outside the TDS and TSS holding time; thus, analysis for these parameters was cancelled. Additionally, a sulfate result from September monitoring was rejected due to not meeting holding time requirements, and an alkalinity result from November monitoring was rejected due to not being comparable to historical data. Thus, analytical completeness for normal flow monitoring was 99%. Completeness for normal flow field parameter measurements was 100%.

Normal flow conditions were potentially affected by fluctuations in upland snowmelt, in groundwater inputs, and in changes to controlled inputs to the stream. Normal flow water quality analytical results are presented in Table 9a through Table 9c, as well as in Appendix A. These tables present analytical results, associated laboratory and validation qualifiers, and data utilization

category. Table 9d includes field parameter measurements and stage and flow data collected during normal flow monitoring. Normal flow data quality is discussed in detail in Appendix A. Tables A5a through A5d present field duplicate results, field blank results, sample holding times for each analytical parameter, and laboratory QC sample results. Deviations are listed in Section 4.1.

3.1.2 Wet Weather Monitoring

Given the difficulty in predicting wet weather events, the QAPP does not specify the frequency or number of samples to be collected for wet weather data.

During the 2021 monitoring period, eight wet weather events were sampled at eight stations between May 23 and August 21 as presented in Table 10. A total of 304 wet weather natural samples were analyzed for total metals, dissolved metals, alkalinity, nitrate/nitrite, sulfate, TDS, and TSS. Samples from SS-01, SS-01-P, SS-06G, SS-06G-P, SS-07, and SS-07-P collected in the first storm event of the month were also analyzed for DOC, phosphorus, TKN, and ammonia. A total of 320 samples were collected, 304 of which were primary ISCO samples, 14 were duplicate ISCO samples, and 14 were field blanks. In 2021, wet weather monitoring produced 8,896 natural sample data points. Seven AgTR results from May were rejected due to not meeting matrix spike recovery requirements. Thus, completeness for 2021 wet weather data was 99.9 %.

Wet weather sampling may include incomplete laboratory analysis due to insufficient volume. Although not a deviation, samplers may fail to collect or may collect incorrectly during a wet weather event because the initial sampler intake stage was set too high or too low; the sample intake or bubbler lines were damaged; the sampler lost power; or the flow meter failed. When ISCOs failed to collect and backup DTEC samples were available, the DTEC samples were submitted to the labs. Prior to the wet weather event on August 18, samplers at SS-01, SS-01-P, and SS-01.35 collected early on August 16 and 17 due to the initial sampler intake stage being set too low. Due to the early collection, these samplers were not triggered by the August 18 event.

Wet weather-associated field parameters are collected only when field grab (FG) samples are collected. There were neither DTEC nor FG wet weather samples collected in 2021. Wet weather water quality results are presented in Table 11a through Table 11c, as well as in Appendix A. These tables present analytical results and their associated laboratory and validation qualifiers and data utilization categories. Table 11d presents the stage and calculated flow associated with each wet weather sample. Wet weather data quality is discussed in detail in Appendix A. Tables A6a through A6d present field duplicate results, field blank results, sample holding times for each analytical parameter, and laboratory QC sample results. Deviations are listed in Section 4.1.

3.1.3 Stream Stage and Flow Monitoring

Locations of continuous stage recorders are presented in Table 3. Stage measurements at sites downstream of the BMFOU Berkeley Pit and Discharge Pilot Project (BMFOU Discharge Pilot Project) were affected by fluctuations of Pilot Project discharge throughout the year. Some continuous stage records were incomplete and contained data gaps or erroneous data. Data gaps and erroneous data were mainly attributed to freezing temperatures and equipment failure. Fifteen to thirty-minute data losses occurred at multiple sites throughout the year when maintenance was performed, such as battery and programming changes. Stage and discharge hydrographs are presented in Appendix B, and stage-discharge relationships are presented in Appendix C. Deviations are listed in Section 4.1.

3.1.4 Precipitation Data

Most of the 2021 calendar precipitation came between April and August, while the majority of high elevation snowmelt occurred in early May. February saw the greatest SWE gain of 2.3 inches. SWE peaked April 26 at 6.3 inches. The SWE at the Basin Creek SNOTEL site was first recorded as zero on May 14. Late May saw a short increase to 0.8 inches SWE, but quickly returned to 0 before snow accumulation resumed in October.

Of the precipitation stations monitored, Basin Creek had the greatest precipitation in 2021 (13.5 inches), followed by Blacktail Canyon (9.72 inches), CB-1 (8.61 inches), Kelley Mine (6.63 inches), and BMMA (6.48 inches). Station BTL/LAO recorded 4.95 inches of precipitation in 2021, but this station experienced a data loss from early August to mid-November. Station BSB-Shop was removed April 1, 2021 due to the BSB road maintenance shop being dismantled to allow for the Parrott Tailings removal project to proceed. In the three months prior to station removal, 1.02 inches of precipitation was recorded at BSB-Shop. Total 2021 SWE, at the Basin Creek SNOTEL site, was 9.6 inches gained and 9.6 inches lost for a net gain of 0.0 inches. Daily, monthly, and total precipitation data are presented in Table 7a and Table 7b. SWE data are presented in Table 7c. Daily precipitation results are presented in Figure 7a through Figure 7g.

The daily datasets for Blacktail Canyon, Basin Creek, CB-1, and BMMA were 100% complete, while the Kelly Mine was 88.49% complete (42 missing data points) and BTL/LAO was 69.31% complete (112 missing data points). Station BSB-Shop was operated through 1400 on April 1, 2021, and the data set was 100% complete for this period.

3.2 Diagnostic Monitoring

Monitoring activities during 2021 consisted of water quality sampling as well as stage and flow measurements. These activities were performed in accordance with CFRSSI and TREC SOPs and are outlined in the QAPP. The following sections present analytes, frequency of sampling events, and counts of natural samples.

3.2.1 Water Quality Monitoring

Given the difficulty in predicting wet weather events, the QAPP does not specify the frequency or number of samples to be collected for diagnostic wet weather data. During the 2021 monitoring period, twenty wet weather events were sampled at ten diagnostic stations between May 7 and October 8 as presented in Table 12. Diagnostic monitoring stations are presented in Table 4. A total of 295 wet weather diagnostic samples were collected, and of these 253 were natural samples, 21 were field duplicates, and 21 were field blanks. The intended analyses for each sample were total metals, dissolved metals, sulfate, and TSS. Due to inadequate sample volumes, numerous samples did not receive all analyses, with sulfate and TSS most often omitted, followed by dissolved metals. Of the intended 4,048 natural sample analyses, 3,841 were completed. Thus, analytical completeness for 2021 diagnostic wet weather was 95%. Diagnostic wet weather water quality results are presented in Table 13a through Table 13c, as well as in Appendix E. These tables present analytical results, associated laboratory and validation qualifiers, and data utilization category. Table 13d presents calculated flows associated with diagnostic wet weather sample times. Empty cells in Table 13d indicate that the level and velocity criteria to accurately calculate flow were not met, so flows were not calculated for those sample times. Level and velocity criteria are presented in Section 3.2.2. Diagnostic wet weather data quality is discussed in detail in

Appendix E. Tables E3a through E3d present field duplicate results, field blank results, sample holding times for each analytical parameter, and laboratory QC sample results.

3.2.2 Diagnostic Level and Flow Monitoring

AV meters were maintained at diagnostic stations as presented in Table 4. Diagnostic wet weather hydrographs are presented in Appendix F. Some flow records contain data gaps or suspect data that are mainly attributed to low water levels, standing water or backflow, and occasionally due to ice or equipment malfunction. At water levels less than 0.08 inches, velocity measurements are uncertain, and the level measurement is uncertain at levels below 0.033 inches. For levels between 0.033 inches and 0.08 inches where the velocity measurement is suspect, the stage measurement is used to calculate a discharge based on Manning's equation. Suspect data at specific continuous recorder stations are listed below. Deviations are listed in Section 4.2.

- MSD-CLV-3A: The sampling equipment in the culverts were removed on August 17 to accommodate the construction work required for the BTL stress test. The sampling equipment was re-installed August 27.
- BG-CLV-1: Suspect data points caused by standing water or backflow occurred in May through August.
- GG-CLV-I: Suspect data points occurred from April through June and in September.
- MG-CLV-0: Suspect data points occurred from April through the first week of May.
- TX-HD-OUT: Suspect data points occurred on March 31 and April 1.
- LC-CLV-1: Suspect data points caused by standing water or backflow occurred periodically from June 10 through October.

3.3 Sediment Monitoring

In 2021, sediment samples were collected August 12 and 13 along the three stream reaches presented in Table 5. Eight natural samples, 1 field duplicate, and 1 field blank were collected. The eight natural samples consisted of the 0-2 inch and 2-6 inch depth intervals at the SS-06G reach and the 0-2 inch, 2-6 inch, and 6-12 inch depth intervals at the SS-06A and SS-01 reaches. Each 0-2 inch and 6-12 inch sample consisted of a five-point composite sample, with the two depth intervals being collocated. At SS-01 and SS-06A, the 6-12 inch interval consisted of only two sub-samples (collocated with the 0-2 and 2-6 inch intervals). At SS-06G it was not possible to penetrate the armored streambed past six inches, thus, no 6-12 inch interval samples were collected. Each sub-sample point was field characterized for color, texture, grain size, and estimated sorting. Field characterization forms are provided in Appendix H. Each sample was to be analyzed for total arsenic, cadmium, copper, lead, mercury, zinc, pH, total organic carbon (TOC), and particle size; thus 108 natural sample analyses were anticipated. Note that particle size includes three size categories % clay, % silt, % sand. Based on the percentages of each category, texture is also reported. An inadequate amount of sediment was obtained for the 6-12 inch interval at SS-06A so pH, TOC, and particle size analyses were omitted. Of the anticipated 88 natural sample analyses, 83 were completed; thus, completeness was 94%.

Sediment data quality is discussed in detail in Appendix I and analytical results are presented in Table 14a through 14c. These tables include analytical results, associated laboratory and validation qualifiers, and data useability categories. Deviations are listed in Section 4.3.

3.4 BMI and Habitat Monitoring

In 2021, BMI samples were collected August 9 and 10 along the three stream reaches presented in Table 5. Four replicate BMI samples were collected at each stream reach; thus, 12 individual samples were submitted to the laboratory for taxonomic classification. The goal was to assess each sample for the metrics presented in Table 15. All of these assessments were completed. BMI sampling precision is related to variability and is assessed by comparing the replicate samples collected at each site. The goal was to have ≤ 20% relative standard deviation (RSD) in taxa richness and that was achieved. To measure laboratory enumeration precision, 10% of a sample set was counted by a second taxonomist, with a goal of having > 90% similarity. Laboratory identification precision is measured in a similar manner, with a goal of >85% agreement. Both enumeration and identification precision were achieved. Appendix L presents the BMI data.

BMI taxa, community metrics, and taxa tolerance levels for each of the three stream reaches monitored are presented in Table 16a through Table 16c, Table 17a through 17c, and Table 18a through 18c, respectively. Table 19 presents field parameter measurements collected at each monitoring reach.

Habitat monitoring was completed in tandem with BMI monitoring. Each site was first sampled for the BMI community, and habitat monitoring was then completed before moving on to the next site. Habitat monitoring field forms are presented in Appendix K. Deviations are listed in Section 4.4.

4.0 DEVIATIONS

4.1 Normal Flow and WW

Fifteen to thirty-minute data losses occurred at multiple sites throughout the year when maintenance was performed, such as battery or programming changes.

- Power failures at the SS-01 continuous data recorder resulted in a data loss from 07:00 to 16:15 on April 22 and from 07:30 on November 3 to 08:15 on November 4.
- A power failure at the SS-05A continuous data recorder resulted in a data loss from 13:45 on December 6 to 13:15 on December 23.
- An equipment failure at the SS-06A continuous data recorder resulted in a data loss from 08:00 to 10:00 on December 12.
- In-depth maintenance on the continuous stage data recorder at SS-06G resulted in a data loss from 10:30 to 12:15 on November 19.
- Due to off-specification flow at the BMFOU Pilot Project plant during the June 9 baseflow sampling event, water quality samples and flow measurements at SS-01 and SS-01.35 were collected first while waiting for Pilot Project discharge water to reach SS-07 after discharge resumed. It was agreed upon by field crews and the QAO that any sediments suspended in the water column caused by sampling these upstream sites would settle out before the water reached SS-07, where sampling was resumed in the usual downstream to upstream order.

4.2 Diagnostic

Fifteen to thirty-minute data losses occurred at multiple sites throughout the year when maintenance was performed, such as battery or programming changes. The sensors on AV meters are replaced as they near the end of their life expectancy.

- GG-CH-1: A data gap occurred from 14:55 on May 3 to 12:45 on May 7.
- MG-CLV-0: A data gap occurred from 15:30 on August 31 to 09:40 on September 16.
- LC-CLV-1: The AV meter was replaced on June 10. All data prior to June 10 are suspect.
- GG-CH-1: The AV meter was replaced on May 7. All data prior to May 7 are suspect.
- MSD-CLV-3A: The AV meters in both culverts were replaced on June 2. All data prior to June 2 are suspect.

4.3 Sediment

- An inadequate amount of sediment was obtained for the 6 to 12 inch interval at SS-06A, so pH, TOC, and particle size analyses were omitted.
- No photos were taken of sample cores.
- Inaccurate coordinates were obtained for SS-06G transect 1, and no coordinates were obtained for SS-06G transects 2 and 3.
- When completing the electronic field form, Site SS-06G was mistakenly chosen at SS-01 Transect 2. Thus the mapped sediment sample points for SS-01 in Appendix H name SS-01 Transect 2 as SS-06G Transect 2.

4.4 BMI and Habitat

- None

Table 3. BPSOU Surface Water Monitoring Stations 2008-2021

Station	Responsible Party	Description	Automated Stage/Flow													Notes
			2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	
Blacktail Creek (BTC)																	
GG-BTC	Atlantic Richfield	Grove Gulch sub-drainage monitoring station located upstream of SS-04 and below the Clark Tailings repository; located on BTC at outlet culvert from GG.						X	X	X	X	X	X	X			Stage/Flow monitoring conducted during storm water season. GG-BTC replaced GG-04 in 2009.
SS-01	Atlantic Richfield	Blacktail Creek (BTC) USGS Station at Harrison Ave, upstream of the BPSOU.		X				X	X	X	X	X	X	X	X	X	Stage/Flow and pH monitoring conducted continuously. NF and WW station 2020 QAPP.
SS-01P	Atlantic Richfield	Located at SS-01 sampling site. A point source sampling technique. Samples were collected from a single intake and were composited every ten minutes per hour per sample, comprising four samples total.													X	X	Monitoring effort to statistically evaluate current sampling collection results with the results of samples collected simultaneously utilizing modified intakes.
SS-01.35	USGS	Blacktail Creek station upstream of GG-BTC.													X	X	Stage only monitoring 2/21/20-4/30/20. USGS stage/flow monitoring beginning 4/30/20.
SS-01.6	Atlantic Richfield	Blacktail Creek station downstream of Lexington Ave bridge.											X	X			NF station. Continual stage monitoring April 2018 - May 2020. Station removed 2020 QAPP.
SS-04	Atlantic Richfield	Blacktail Creek station upstream of its confluence with the uSBC near George Street.	X	X	X	X	X	X	X	X	X	X	X	X	X	X	NF and WW station. USGS continual stage/flow monitoring through 10/31/19. Site impacted by backwater from BMFOU pilot project discharge, thus impacting usability and development of stage-discharge relationship. USGS continual stage only through 4/30/20. Atlantic Richfield 2020 continuous stage monitoring since 6/5/20.
Buffalo Gulch (BG)																	
BG-01	Atlantic Richfield	Buffalo Gulch sub-drainage monitoring station located upstream of SS-05 and below storm sewer outlet culvert.						X	X	X	X	X					NF monitoring sites reduced in 2010 under proposed IMP; immeasurable flow at NF conditions. Site removed from water quality sampling (2016 IMP). Replaced with diagnostic site BG-CLV-01.
Butte Metro Sewage Treatment Plant (STP)																	
SS-STP	BSB	Outfall of Metro Sewage Treatment Plant before it reaches SBC directly upstream of SS-07.	X	X	X	X	X	X	X	X	X	X	X	X	X	X	NF monitoring sites reduced in 2010 under proposed IMP. Daily flow is recorded by Butte Silver Bow.
Grove Gulch (GG)																	
GG-01	Atlantic Richfield	Grove Gulch monitoring location upstream of confluence with BTC. Located in channel on east side of Oregon Street.															Monitored when flowing 2008 and 2009. Station was replaced by GG-04 April 2009. Only monitored for NF from 2009 to 2012.
GG-04	Atlantic Richfield	Located within the Grove Gulch channel on the south side of I-90.															For WW monitoring, GG-04 was replaced by GG-BTC in April 2009.

FG = Field Grab
D-TEC = Automatic D-TEC Sampler

Table 3. BPSOU Surface Water Monitoring Stations 2008-2021

Station	Responsible Party	Description	Automated Stage/Flow													Notes
			2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	
Hydraulic Control Channel (HCC)																	
MSD-HCC/ HCC-07	Atlantic Richfield	Hydraulic Control Channel (HCC) endpoint monitoring station; monitored when wet weather flow overtops the berm and enters SBC.	X	X	X	X	X	X	X	X	X						Flow/Stage monitoring conducted through 2/2016. Site eliminated (2016 IMP).
Upper Silver Bow Creek																	
MSD-CLV-3A	Atlantic Richfield	Post reclamation uSBC station located upstream of confluence with BTC, just east of Kaw Ave, and upstream of the end of the sub-drain collection pipe.	X	X	X	X	X	X	X	X	X	X	X	X	X	X	Stage/Flow monitoring conducted continuously. Checked for flow under NF monitoring. Site removed from water quality sampling (2016 IMP).
MSD-CASEYSD	Atlantic Richfield	Located in the channel between Casey St. and uSBC.															Sampled opportunistically.
MSD-HAB	Atlantic Richfield	Post reclamation uSBC station located at the Anaconda Road/Butte Brewery outflow point (comparable to stations MSD-HA and MSD-2).						X	X	X	X						Stage/Flow monitoring conducted during storm water season, in pipe at diagnostic site AR-MH-1. Site removed from water quality sampling (2016 IMP).
MSD-OUT	Atlantic Richfield	Located at confluence of uSBC & BTC.															Monitored under NF conditions in 2008 and 2009 to monitor water leaving the MSD. Flows were immeasurable at NF conditions.
MSD-TXSD	Atlantic Richfield	Located within uSBC, on the north side of Civic Center Road.															Sampled opportunistically.
Missoula Gulch (MG)																	
MG-EFS5B	Atlantic Richfield	Missoula Gulch Catch Basin Overflow Channel discharge point to SBC. Monitored during periods of discharge.															Sampled in the event CB-9 discharge is flowing into the creek. Manual flow measurements conducted when grab sample obtained. Site removed from water quality sampling (2016 IMP).
SS-CB1	Atlantic Richfield	At Syndicate pit, Missoula Gulch station that monitors stage within Catch Basin 1.		X	X	X	X	X	X	X	X	X	X	X	X	X	Monitors stage at outlet of Catch Basin 1.
SS-CB8	Atlantic Richfield	Missoula Gulch station that monitors MG and WSD outfalls prior to entering Catch Basin 8.															Stage/Flow continuously monitored at the outlet structure of basin at site SS-CB8P.
SS-CB8P	BSB	Missoula Gulch station that monitors stage within Catch Basin 8.	X	X	X	X	X	X	X	X	X	X	X	X	X	X	Sampled by BSB if stage/turbidity dependent sampling criteria met. Removed from WQ sampling in 2015.
SS-CB9	Atlantic Richfield	Catch Basin 9, continual recorder site identification. Monitors CB-9 stage. This stage ID corresponds to sample site ID SS-CB9P.	X	X	X	X	X	X	X	X	X	X	X	X	X	X	Monitors stage at outlet of Catch Basin 9.
SS-CB9P	BSB	Missoula Gulch station that monitors stage within Catch Basin 9.															Sampled by BSB if stage/turbidity dependent sampling criteria met. Removed from WQ sampling in 2015.

Table 3. BPSOU Surface Water Monitoring Stations 2008-2021

Station	Responsible Party	Description	Automated Stage/Flow													Notes
			2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	
SS-06G	Atlantic Richfield	Station located at end of the SBC rebuilt floodplain at the west end of LAO, downstream of the Montana Pole Treatment Plant and Butte Treatment Lagoons discharge points and upstream of the historic HCC outlet and the Butte Metro Sewage Treatment Plant effluent.		X	X	X	X	X	X	X	X	X	X	X	X	X	NF and WW station. Continuously monitored pH/temperature data collected at SS-06G and applicable to SS-06G-P, SS-06G-H, SS-06G-V.
SS-06G-P	Atlantic Richfield	Located at SS-06G sampling site. A point source sampling technique. Samples were collected from a single intake and were composited every ten minutes per hour per sample, comprising four samples total.									X	X	X	X	X	X	Monitoring effort to statistically evaluate current sampling collection results with the results of samples collected simultaneously utilizing modified intakes.
SS-06G-H	Atlantic Richfield	Located at SS-06G sampling site. A horizontally integrated sampling technique. Samples were collected from an intake tube mounted horizontally in the stream, consisting of six intakes spaced 6" apart. Samples were composited every ten minutes per hour per sample comprising four samples total.									X	X	X	X			Monitoring effort to statistically evaluate current sampling collection results with the results of samples collected simultaneously utilizing modified intakes. Station discontinued 2020 QAPP.
SS-06G-V	Atlantic Richfield	Located at SS-06G sampling site. A vertically integrated sampling technique. Samples were collected from an intake tube mounted vertically in the stream, consisting of seven intakes spaced 3" apart. Samples were composited every ten minutes per hour per sample comprising four samples total.									X	X	X	X			Monitoring effort to statistically evaluate current sampling collection results with the results of samples collected simultaneously utilizing modified intakes. Station discontinued 2020 QAPP.
SS-06H	Atlantic Richfield	Station located downstream of SS-06G and historic HCC outlet and upstream of the Butte Metro Sewage Treatment Plant effluent.															Station added May 2010 to assess potential impacts from groundwater or HCC. Site removed from water quality sampling (2016 IMP).
SS-07	USGS	Station located downstream of all BPSOU drainage outfalls as SBC exits the OU near Interstate 90.	X	X	X	X	X	X	X	X	X	X	X	X	X	X	NF and WW station. Preliminary data from USGS used to prepare Stage/Flow hydrographs. pH/temperature monitored continuously.
SS-07P	USGS	Located at SS-07 sampling site. A point source sampling technique. Samples were collected from a single intake and were composited every ten minutes per hour per sample, comprising four samples total.													X	X	Monitoring effort to statistically evaluate current sampling collection results with the results of samples collected simultaneously utilizing modified intakes.
West Side (WS)																	
WSD	Atlantic Richfield	West side drainage (WSD) channel downstream of WS-1 culvert.															Eliminated from NF monitoring in 2009. Flow at WSD does not impact SBC water quality. Diagnostic site through 2019.

FG = Field Grab
D-TEC = Automatic D-TEC Sampler
ISCO = Automatic ISCO Sampler

Table 4. BPSOU 2021 Surface Water Diagnostic Monitoring Stations 2008-2021

Station ID	Description of Sample Location	2013	2014	2015	2016	2017	2018	2019	2020	2021	Flow Meter Type	Notes
Anaconda Road - Butte Brewery (AR)												
AR-CLV-1A	Provides diagnostic monitoring for the AR drainage where the drainage enters SBC upstream of the confluence with BTC and which primarily collects an industrial area.				ISCO							Monitoring conducted in 2016 for expanded analysis.
AR-CLV-2	Provides diagnostic monitoring for the upper portion of the AR drainage after a split in storm drain trunk line (monitoring east leg of trunk line). This location is just upstream of a detention pond just downstream of a rail yard.	ISCO	ISCO								Area Velocity Meter	
AR-CLV-2A	Provides diagnostic monitoring for the outfall to the detention pond for which AR-CLV-1 monitors the inlet.		DTEC									
AR-HD-IN	Lower portion of the Anaconda Road, south of Hebgen Park.	ISCO	ISCO									
AR-HD-OUT		ISCO	ISCO								Area Velocity Meter	
AR-MH-1	Provides diagnostic monitoring for the AR drainage just upstream of where the drainage enters SBC upstream of the confluence with BTC and which primarily collects an industrial area.	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO			Area Velocity Meter	Diagnostic monitoring site 2021 QAPP. Monitoring began in 2013 using long duration ISCO and for expanded analysis in 2015.
EX-AR-CLV-1A	Provides diagnostic monitoring for the AR drainage at the mouth of the culvert where the drainage enters SBC upstream of the confluence with BTC and which primarily collects an industrial area.				ISCO							Monitoring conducted in 2016 for expanded analysis using modified ISCO program designed to collect large quantity of water.
EX-AR-MH-1	Provides diagnostic monitoring for the AR drainage just upstream of where the drainage enters SBC upstream of the confluence with BTC and which primarily collects an industrial area.		ISCO	ISCO								Expanded sampling occurred 2014 and 2015. ISCO 24L composited sample.
Blacktail Creek (BTC)												
EX-SS-04	Blacktail Creek station upstream of its confluence with SBC upstream of the confluence with BTC near George Street.		ISCO	ISCO	ISCO							Monitoring conducted in 2014, 2015, and 2016 for expanded analysis using modified ISCO program designed to collect large quantity of water.
Buffalo Gulch (BG)												
BG-CLV-B3	Provides diagnostic monitoring downstream of rail yard.		ISCO	ISCO	ISCO	ISCO	ISCO	ISCO			Area Velocity Meter	
BG-CH-C1	Provides diagnostic monitoring for east BG just before the drainage enters SBC upstream of the confluence with BTC and which collects an urban area.	ISCO	ISCO	ISCO	ISCO						Area Velocity Meter	Monitoring occurred 2013-2016 using long duration ISCO and for expanded analysis.
BG-CH-C1A	Culvert outlet that monitors East Buffalo Gulch just before the drainage enters SBC above the confluence with BTC. Upstream of BG-CH-C1.				ISCO	ISCO	ISCO				Area Velocity Meter	
BG-CLV-C1A	Culvert outlet that monitors East Buffalo Gulch just before the drainage enters SBC above the confluence with BTC. Downstream of BG-CH-C1.							ISCO			Area Velocity Meter	
BG-CLV-1	Provides diagnostic monitoring for the entire BG drainage.	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	Area Velocity Meter	Monitoring began in 2013 using long-duration ISCO and for expanded analysis in 2015.
BG-CLV-0	Provides diagnostic monitoring to measure sediment fallout between BG-CLV-1 and BG-CLV-0.						ISCO				Area Velocity Meter	

Table 4. BPSOU 2021 Surface Water Diagnostic Monitoring Stations 2008-2021

Station ID	Description of Sample Location	2013	2014	2015	2016	2017	2018	2019	2020	2021	Flow Meter Type	Notes
BG-HD-IN	Located north of W. Front St between S. Montana St and Kaw Ave.	ISCO	ISCO									
BG-HD-OUT		ISCO	ISCO								Area Velocity Meter	
BG-MH-A1	Provides diagnostic monitoring for the upper portion of the urban area of BG above a major storm drain trunk line split and between.	ISCO	ISCO								Area Velocity Meter	
BG-MH-A3	Provides diagnostic monitoring for the urban area of BG between BG-A-1 and BG-A-3.	ISCO	ISCO								Area Velocity Meter	
BG-MH-A5	Provides diagnostic monitoring for the upper portion of BG below several BRES sites. This staion also provides a baseline for BG-A-3 with the difference in loading between the two stations indicating any contribution to loading from the lower BG urban area.	ISCO	ISCO								Area Velocity Meter	
BG-MH-A10	Provides diagnostic monitoring of the east trunk line of the main BG subdrainage and downstream of the Opher site.		ISCO								Area Velocity Meter	
BG-MH-B1	Provides diagnostic monitoring for the lower portion of a sub-drainage of BG which collects an urban area.	ISCO	ISCO								Area Velocity Meter	
BG-MH-B2	Provides diagnostic monitoring of a portion of the upper portion of the middle Buffalo Gulch-sub-drainage, particularly just downstream of Pioneer Concrete. This is a combination sample from the gutter flow into the inlet from E. 2nd St to the east of the inlet and Delware Ave to the north of the inlet.		FG									
BG-MH-B2E	Provides diagnostic monitoring of a portion of the upper portion of the middle Buffalo Gulch-sub-drainage, particularly just downstream of Pioneer Concrete. This sample is from the gutter flow into the inlet from E. 2nd St to the east of the inlet.		DTEC								Area Velocity Meter	
BG-MH-B2N	Provides diagnostic monitoring of a portion of the upper portion of the middle Buffalo Gulch-sub-drainage, particularly just downstream of Pioneer Concrete. This sample is from the gutter flow into the inlet from Delaware Ave to the north of the inlet.		DTEC								Area Velocity Meter	
BG-MH-B3A	Manual opportunistic monitoring station upstream and east of BG-B-3 and provides monitoring of storm drain which drains the rail yard. Located at southwest corner of Triple S lot, east side of Kaw.		DTEC									
BG-MH-B3B	Manual opportunistic monitoring station upstream and north of BG-B3 and provides monitoring of the storm drain which drains Front Street and the area north of Front street to the north of this location. Located at Front and Main, west of intersection.		DTEC									
BG-MH-C2	Provides diagnostic monitoring of the upper portion of the east Buffalo Gulch sub-drainage, north of E 3rd St.		ISCO								Area Velocity Meter	
EX-BG-CH-B3	Provides diagnostic monitoring downstream of rail yard.		ISCO									Monitoring conducted in 2014 for expanded analysis using modified ISCO program designed to collect large quantity of water.

Table 4. BPSOU 2021 Surface Water Diagnostic Monitoring Stations 2008-2021

Station ID	Description of Sample Location	2013	2014	2015	2016	2017	2018	2019	2020	2021	Flow Meter Type	Notes
EX-BG-CH-C1	Provides diagnostic monitoring for east BG just before the drainage enters SBC upstream of the confluence with BTC and which collects an urban area.		ISCO	ISCO	ISCO							Monitoring conducted in 2014, 2015 and 2016 for expanded analysis using modified ISCO program designed to collect large quanitiy of water.
EX-BG-CLV-1	Provides diagnostic monitoring for the entire BG drainage.		ISCO	ISCO	ISCO							Monitoring conducted in 2014, 2015, and 2016 for expanded analysis using modified ISCO program designed to collect large quanitiy of water.
Belmont Diversion Channel (BL)												
BL-MH-1	Located in a manhole on the Belmont diversion channel prior to discharge into the Berkeley Pit.			ISCO							Transducer/Bubbler	Monitored in 2015.
Grove Gulch (GG)												
GG-CH-1	Provides diagnostic monitoring of the GG drainage just before entering BTC. This drainage is primarily urban.		ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	Area Velocity Meter	
GG-CH-3	Provides diagnostic monitoring of a sub-drainage of the the Grove Gulch drainage at the upper reach of the Grove Gulch drainage. This drainage is primarily rural.			D-TEC								
GG-CLV-2	Provides diagnostic monitoring of the Grove Gulch drainage at the approximate 1/2 point of the urban portion of the Grove Gulch drainage. This drainage is primarily urban.			D-TEC							Area Velocity Meter	
GG-CLV-C	Located in inflow of culvert off Greenwood Avenue. Will provide diagnostic monitoring for uncaptured surface flow in Sub-drainage C							ISCO	ISCO	ISCO	Area Velocity Meter	
GG-CLV-D	Located in inflow of culvert off Greenwood Avenue. Will provide diagnostic monitoring for uncaptured surface flow in Sub-drainage D							ISCO	ISCO	ISCO	Area Velocity Meter	
GG-CLV-I	On MPTP property. Will provide diagnostic monitoring for uncaptured surface flow in Sub-drainage I							ISCO	ISCO	ISCO	Area Velocity Meter	
Idaho Street (ID)												
ID-CLV-1	Provides diagnostic monitoring of most of the IS drainage before entering CB9.		ISCO								Area Velocity Meter	
Locust Street (LC)												
EX-LC-CLV-1	Provides diagnostic monitoring of the urban Locust drainage, at the culvert entering SBC upstream of the confluence with BTC.			ISCO								Single occurance in 2015. Time composited samples used for expanded analysis.
LC-CLV-1	Located in a culvert at the termination of Locust Street, discharges into SBC upstream of the confluence with BTC. Provides diagnostic monitoring at the bottom of a large basin east of SBC upstream of the confluence with BTC.			ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	Area Velocity Meter	

Table 4. BPSOU 2021 Surface Water Diagnostic Monitoring Stations 2008-2021

Station ID	Description of Sample Location	2013	2014	2015	2016	2017	2018	2019	2020	2021	Flow Meter Type	Notes
Missoula Gulch (MG)												
MG-CH-10	Provides diagnostic monitoring of the upper portion of the MG drainage below several BRES sites and the inflow to CB1.	DTEC	DTEC									
MG-CLV-0	Provides diagnostic monitoring of Missoula Gulch discharge entering into Silver Bow Creek between SS-05A and SS-05B.					ISCO	ISCO	ISCO	ISCO	ISCO	Area Velocity Meter	
MG-CLV-1	Provides diagnostic monitoring of outlet for CB9 and thus the outflow for the MG and IS drainages and a portion of the WS drainage.	ISCO	ISCO	ISCO	ISCO						Area Velocity Meter	
MG-CLV-2	Provides diagnostic monitoring of the MG drainage before entering CB8.	ISCO	ISCO	FG							Area Velocity Meter	
MG-MH-9	Provides diagnostic monitoring of the upper portion of the MG and outflow from CB1. This station also provides a baseline for MG-2 with the difference in loading between the two stations indicating any contribution to loading from the lower MG urban area.	ISCO	DTEC									
SS-CB8	Missoula Gulch station that monitors MG and WSD outfalls prior to entering Catch Basin 8.					DTEC	DTEC	DTEC			None	
Montana Pole Treatment Plant (MPTP)												
MPTP-CLV-1	Provides diagnostic monitoring for the eastern portion of the pole treatment plant north of the interstate, in addition to property just east of MPTP that drains into the pole treatment plant. Located just outside the NE corner of the MPTP, across RR tracks.						ISCO	ISCO	ISCO	ISCO	Area Velocity Meter	
Upper Silver Bow Creek												
EX-MSD-CLV-3A	Post reclamation Metro Storm Drain station located upstream of its confluence with BTC, just east of Kaw Ave, and upstream of the end of the sub-drain collection pipe.		ISCO	ISCO	ISCO							Monitoring conducted in 2014, 2015, and 2016 for expanded analysis using modified Isco program designed to collect large quantity of water.
MSD-CH-CIVIC	Provides diagnostic monitoring of the Clearwater Ditch which drains to SBC upstream of the confluence with BTC at the northen end of SBC upstream of the confluence with BTC.		ISCO	D-TEC	D-TEC							
MSD-CLV-3A	Post reclamation Metro Storm Drain station located upstream of its confluence with BTC, just east of Kaw Ave, and upstream of the end of the sub-drain collection pipe.	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	Area Velocity Meter	Diagnostic monitoring site 2020 QAPP. Monitoring began in 2013 using long-duration ISCO. Expanded samples collected 2014-2016.
MSD-CLV-CASEY	Provides diagnostic monitoring for the section of SBC upstream of the confluence with BTC from Casey Ave. to Harrison Ave. (MSD-HAB). There are several small pipe inlets to SBC upstream of the confluence with BTC in this stretch.	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO			Area Velocity Meter	
MSD-CLV-HAB	Post reclamation MSD station located at the Anaconda Road/Butte Brewery outflow point.	ISCO	ISCO	ISCO	ISCO						Area Velocity Meter	

Table 4. BPSOU 2021 Surface Water Diagnostic Monitoring Stations 2008-2021

Station ID	Description of Sample Location	2013	2014	2015	2016	2017	2018	2019	2020	2021	Flow Meter Type	Notes
Silver Bow Creek (SBC)												
EX-SS-07	Station located downstream of all BPSOU drainage outfalls as SBC exits the OU near Interstate 90.		ISCO	ISCO	ISCO							Monitoring conducted in 2014, 2015, and 2016 for expanded analysis using modified Isco program designed to collect large quantity of water.
Texas Avenue (TX)												
EX-TX-HD-1	Provides diagnostic monitoring of the large urban area to the southeast of SBC upstream of the confluence with BTC as it enters the hydrodynamic device.		ISCO								Area Velocity Meter	Expanded sampling occurred 2014. Isco 24L composited sample.
EX-TX-HD-2	Located at the same site as EX-TX-HD-OUT.		ISCO								Area Velocity Meter	Expanded sampling occurred 2014. Isco 24L composited sample.
TX-HD-1	Provides diagnostic monitoring of the large urban area to the southeast of SBC upstream of the confluence with BTC just before this drainage enters SBC upstream of the confluence with BTC.	ISCO	ISCO								Area Velocity Meter	
TX-HD-IN	Located at the same site as TX-HD-1.			ISCO	ISCO							Monitoring occured 2015-2016 using long duration ISCO and for expanded analysis.
TX-HD-OUT	Provide diagnostic monitoring of the large urban area to the southeast of SBC upstream of the confluence with BTC just before the drainage enters SBC upstream of the confluence with BTC.			ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	ISCO	Area Velocity Meter	Station added in 2015 in place of TX-HD-1.
Warren Avenue (WA)												
EX-WA-HD-1	Located at the same site as WA-HD-1.		ISCO									Samples collected in 2014 using modified ISCO program designed to collect large quantity of water.
EX-WA-HD-2	Provides diagnostic monitoring of the WA drainage at the bottom of the basin after the HD device. Upstream of where the drainage enters SBC upstream of the confluence with BTC. The drainage area this station monitors is residential and industrial and includes several BRES sites.			ISCO	ISCO							Samples collected in 2014 using modified ISCO program designed to collect large quantity of water.
EX-WA-HD-IN	Located at the same site as WA-HD-1.		ISCO									Monitoring conducted in 2015 and 2016 for expanded analysis using modified Isco program designed to collect large quantity of water.
WA-CLV-1	Located at the bottom of the Washington Avenue basin at the culvert outlet to SBC upstream of the confluence with BTC.			ISCO	ISCO	ISCO	ISCO	ISCO			Area Velocity Meter	Station added in 2015 in place of WA-HD-1.
WA-HD-1	Provides diagnostic monitoring of the WA drainage at the bottom of the basin before the HD installed at the bottom of the drainage and upstream of where the drainage enters SBC upstream of the confluence with BTC. The drainage area this station monitors is residential and industrial and includes several BRES sites.	ISCO	ISCO								Area Velocity Meter	
WA-HD-IN	Located at the same site as WA-HD-1.			ISCO	ISCO							Monitoring occurred 2015-2016 using long-duration ISCO and for expanded analysis.
WA-MH-5	Provides diagnostic monitoring of the upper portion of the WA drainage.		ISCO								Area Velocity Meter	
West Side (WS)												
WS-CLV-1	Provides diagnostic monitoring of portaion of WS drainage (tributary to CB8).	ISCO	ISCO								Area Velocity Meter	
WSD	West side drainage (WSD) channel downstream of WS-1 culvert.					DTEC	DTEC	DTEC			None	Eliminated from BF monitoring in 2009. Flow at WSD does not impact SBC water quality.

Table 5. BPSOU 2021 Sediment and BMI Stream Reaches

Reach	Description	Associated Surface Water Station	SW Station Location with respect to Reach
1	BTC above BPSOU	SS-01	Endpoint, reach extends ~ 500 ft upstream
2	SBC within BPSOU, below the BTC and SBC confluence within LAO	SS-06A	Approximate midpoint, equal distances upstream and downstream
3	SBC near western boundary of BPSOU	SS-06G	Endpoint, reach extends upstream to just below BTL effluent

Table 8. BPSOU 2021 Surface Water Monitoring Sampler Stage Heights

Site	Date	Sampler Type	Change	Sampler Stage (ft)	Comment
SS-07	3/23/2021	D-TEC/ISCO	0.00	1.89	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-06G	3/23/2021	D-TEC/ISCO	0.00	0.7	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-06A	3/24/2021	D-TEC/ISCO	0.00	0.75	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-05	3/24/2021	D-TEC/ISCO	0.00	6.37	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-04	3/24/2021	D-TEC/ISCO	0.00	1.47	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-01.35	3/24/2021	D-TEC/ISCO	0.00	5.19	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-01	3/24/2021	D-TEC/ISCO	0.00	1.82	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-07	4/1//2021	ISCO	-0.02	1.87	Creek target 20 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07. Checked USGS again must have adjusted 1.89' now Is listed as 50 cfs.
SS-06A	4/1//2021	ISCO	0.05	0.8	Sampled March 29th too low
SS-05	4/1//2021	ISCO	0.20	6.57	USGS working on site - stage different than it was - adjusted criteria up, will check site again
SS-01.35	4/1/2021	ISCO	3.78	5.25	Creek target 25 cfs @ SS-01.35 and 40 cfs @ SS-05 and 45 cfs @ SS-07.
SS-01	4/1/2021	ISCO	0.03	1.85	Sampled March 29th too low
SS-07	4/5/2021	D-TEC/ISCO	0.23	2.1	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07.
SS-06G	4/5/2021	D-TEC/ISCO	0.18	0.88	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07.
SS-06A	4/5/2021	D-TEC/ISCO	0.28	1.08	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07.
SS-05	4/5/2021	D-TEC/ISCO	0.25	6.82	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07.
SS-04	4/5/2021	D-TEC/ISCO	0.14	1.61	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07.
SS-01.35	4/5/2021	D-TEC/ISCO	0.22	5.47	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07.
SS-01	4/5/2021	D-TEC/ISCO	0.36	2.21	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07.
SS-06G	4/5/2021	D-TEC/ISCO	0.02	0.9	Creek target 35cfs @ SS-01.35 and 50 cfs @ SS-05 and 60 cfs @ SS-07. Sampled too low raised criteria.

[1]Wet weather samples are collected in response to precipitation or snowmelt events and are therefore not necessarily collected every month.

[2]Wet weather samples were not collected at SS-05A in 2021.

[1]Sample collection dependent on precipitation event, not every storm generates sufficient run-off to trigger samplers at every location

[2]10/08/2021 Event resulted from CB-9 year end drainage by BSB.

Legend:

ISCO (#) = # samples prepped from ISCO sampler

AS = One sample prepped from T-TEC Automatic sampler

FG = One sample prepped , Field Grab

Table 15. BPSOU 2021 BMI Community Metrics Definitions

Metric	Definition
Taxa Richness	Number of BMI taxa per Hess sample, measures variety of assemblage. Historically the best measure of site conditions.
Shannon diversity	Influenced by taxa richness and distribution of individuals among taxa (evenness).
EPT/EPTC	Relative abundance of Ephemeroptera, Plecoptera, Trichoptera to Chironomidae ratio
Hydropsychinae/ Trichoptera	Hydropsychinae is relatively more tolerant of pollution than most other caddisflies.
Baetidae/ Ephemeroptera	Baetidae are most pollution-tolerant mayflies.
Density *+	Number of individuals per unit of area.
Biotic Index *	SUM (%RAi * ti), %RAi is the percent relative abundance of each taxon and ti is the tolerance value of the taxon.
Percent Filter Feeders *	Abundance of these functional feeding groups provides information on energy transfer, food resources, and organic loading.
EPT richness+	Richness of Ephemeroptera, Plecoptera, and Trichoptera
Metal Tolerance Index+	Quantifies changes in BMI community and based on Hilsenhoff's biotic index with tolerance values assigned to taxon.
Percent dominant	Percent of most dominant taxon in a sample.
Percent tolerant	Organisms (%) sensitive to perturbation.

(*) indicates metric is part of a subset used for indicating organic pollution and (+) indicates metric is part of a subset used for indicating metals pollution.

1.0 INTRODUCTION

The Butte Priority Soils Operable Unit (BPSOU) Interim Site-Wide Surface Water Monitoring Quality Assurance Project Plan 2020 and 2021 Monitoring Period (QAPP) (Atlantic Richfield, 2020) states that data must meet certain criteria to achieve the Data Quality Objectives (DQOs) for BPSOU surface water monitoring. The DQOs of the collection effort are that any data collected during the interim monitoring period before the Compliance Standard Determination Period must be of sufficient quality to:

- Evaluate compliance with Performance Standards at compliance monitoring stations SS-06G and SS-07; and
- Evaluate performance of the remedy, in its various stages of implementation.

Data collected will also be used to:

- Maintain and/or assist in determining the stage-discharge ratings from base flow sampling; and
- Identify sources of data gaps (e.g., sampling locations, techniques, and frequency) so future revisions of the QAPP will provide data of sufficient quality and quantity to meet the Environmental Protection Agency's (EPA) long-term remedial objectives.

Data quality assurance/quality control (QA/QC) is performed to ensure overall quality for the data to be used in decisions regarding identification of source areas and implementation of best management practices (BMPs).

To ensure data collected are of the quality required, surface water monitoring activities are performed in accordance with the following Clark Fork River Superfund Site Investigations (CFRSSI) regional control documents listed in the QAPP.

- CFRSSI Laboratory Analytical Protocol (LAP) (ARCO, 1992a);
- CFRSSI Data Management/Data Validation Plan (DM/DVP) Addendum (ARCO, 2000a);
- CFRSSI Standard Operating Procedures (SOP) (ARCO, 1992c); and
- CFRSSI Pilot Data Summary Report for Organic and Inorganic Data Addendum (ARCO, 2000b).

The regional control documents have been approved by EPA and are used to guide the collection, reduction, quality determination and reporting of data during BPSOU surface water monitoring. Data validation and reporting procedures for all data collected by TREC throughout 2021 are outlined in TREC's Data Validation Guidelines for Inorganic Chemistry (TREC, 2021). This is a dynamic document incorporating CFRSSI regional control documents (as listed above), and EPA's National Functional Guidelines for Inorganic Superfund Methods Data Review (EPA, 2020). Montana Department of Environmental Quality (MTDEQ) Data Validation Guidelines for Evaluating Analytical Data (MTDEQ, 2010) is used as a supplement to CFRSSI guidelines to aid the data reviewer in determining data usability.

Normal flow (NF) and wet weather (WW) surface water sample collection, including sample handling, preservation, custody, field quality control samples, documentation, and other associated activities were completed in compliance with the CFRSSI and TREC standard operating

procedures (SOPs) listed in Table A1 below. Many of the CFRSSI SOPs have been modified to reflect technological changes since they were adopted in 1992. Field instruments were calibrated in accordance with manufacturer instructions and in accordance with TREC SOPs.

Normal flow sample delivery groups (SDGs) received from the laboratory and dates on which the samples were collected are listed below:

- 10545858: 1/21/21
- 10550036: 2/22/21
- 10551370: 3/16/21
- 10555588: 4/13/21
- 10561813: 5/19/21
- 10564925: 6/9/21
- 10569157: 7/8/21
- 10573218: 8/4/21
- 10577494: 9/1/21
- 10584279: 10/18/21
- 10585797: 11/1/21
- 10590953: 12/8/21

Wet weather SDGs received from the laboratory and dates on which the samples were collected are listed below:

- 10562380: 5/23/21
- 10562853: 5/26/21
- 10565256: 6/10/21
- 10568665: 7/1/21
- 10572927: 8/1/21
- 10574117: 8/8/21
- 10575368: 8/18/21
- 10576060: 8/21/21

2.0 DATA QUALITY ASSURANCE/QUALITY CONTROL

QA/QC incorporates field and laboratory procedures which determine the error introduced into sampling and analyses procedures by personnel and equipment.

2.1 Field Quality Control

Field QC consisted of analysis of duplicate and field blank (FB) samples collected at a frequency of one duplicate and one blank for every 20 natural samples. Natural, duplicate, and blank samples were submitted in single SDGs to the laboratory. Analysis for duplicate and blank samples was identical to requested analysis for the associated natural samples. Inter-laboratory splits and standard reference materials (SRM) were not identified for collection under the QAPP.

2.2 Laboratory Quality Control

Pace Analytical Services (Minneapolis, Minnesota) was contracted to analyze surface water samples. To confirm that laboratory analyses and QA/QC procedures were performed per laboratory contract agreements, data validation was performed on each data package received. Data validation procedures used criteria outlined in the TREC DV Guidelines.

3.0 DATA QUALITY ASSESSMENT

Data quality assessment (DQA) was performed to determine if the DQOs identified in the QAPP were satisfied. The DQA process is outlined in EPA Guidance on Systemic Planning Using the Data Quality Objectives Process (EPA, 2006).

Laboratory analyses and QA/QC procedures were validated, and qualifiers were applied as appropriate. To review data for completeness and to assign Level A/B review status, field logbook documentation, field forms, and sample chain of custody forms were reviewed. The sampling team was also available for questioning when clarification was needed. Data precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS) were reviewed, and qualifiers were applied to data where necessary. Based on the DQA process, data were assigned to one of three data utilization categories: enforcement quality, screening quality, and rejected (unusable) data. Enforcement quality (unrestricted use) data result from, and were supported by, rigorous sampling and analysis protocols. Screening quality data did not meet applicable sampling or analytical QA/QC and/or documentation requirements. Unusable data may result from inadequate sampling, analysis, and/or documentation procedures. Data validation checklists are provided as Attachment A to this appendix.

Sample results for NF are presented in

Table **A2**, and sample results for WW are presented in Table A3. These tables present total recoverable metals results, dissolved metals results, and general chemistry results.

Data quality assessment results for NF are presented in Table A5, and data quality assessment results for WW are presented in Table A6. These tables present field duplicate results, hold times, field blank results, and laboratory quality control sample results.

Table A2a-Ac – BPSOU 2021 Normal Flow Water Quality Results (see Tables Section)

Table A3a-Ac – BPSOU 2021 Wet Weather Water Quality Results (see Tables Section)

Table A4 – Definitions of Data Flags, Data Qualifiers and Status Assessments (see Table Section)

Table A5a-Ad – BPSOU 2021 Normal Flow Data Quality Assessment (see Tables Section)

Table A6a-Ad – BPSOU 2021 Wet Weather Flow Data Quality Assessment (see Tables Section)

3.1 Level A/B

Level A/B review was applied to sample collection and documentation records, ensuring CFRSSI and TREC SOPs were followed. The data were assessed using the screening checklist provided in the CFRSSI Pilot Data Summary Report Addendum (ARCO, 2000b). Completed Level A/B screening checklists are provided as Attachment B to this appendix. Data utilization categories

were then assigned based on completed data validation reports and Level A/B assessment. 100% of NF and WW samples met Level B criteria.

3.2 Precision

Precision is the level of agreement among repeated measurements of the same characteristic. There are two general forms of uncertainty. The first is the random error component of the data collection process. The second is inherent stochastic variability, which cannot be eliminated but can be described.

Field precision is assessed by collecting and analyzing field duplicate samples, while laboratory precision is assessed by laboratory duplicate samples. Precision is evaluated by calculating variance between the samples. Variance for both laboratory and field duplicates was calculated as relative percent difference (RPD). For analytical results ≥5X the reporting limit (RL), precision is assessed by the RPD between the natural and duplicate sample results. Acceptable precision for field duplicates is RPDs ≤ 20%, while RPD criteria for laboratory precision varies for differing analyses. Table A5d and Table A6d include laboratory %RPD limits. For analytical results <5X the RL, acceptable precision is a difference between the natural and duplicate sample result (delta) ≤ the RL.

3.2.1 Laboratory and Field Duplicates

Laboratory analytical precision was evaluated by analyzing laboratory duplicate samples (LDS), laboratory control sample duplicates (LCSD), and matrix spike/matrix spike duplicate (MS/MSD) samples, and then calculating the RPD for corresponding results. In each case where acceptable laboratory precision was not met, associated sample results were qualified, assigned a validation code of "RPD" (see Appendix A tables), and natural samples were assigned screening status. Table A7 summarizes analyses qualified for laboratory precision. Note that Table A7, and all summary tables in this appendix, contain counts only for natural samples. Also note that several data points received more than one validation code; thus, these data points may be counted in several QC sample summary tables. Eight (0.3% of analyses) NF natural sample results (and 1 field duplicate result) were qualified for laboratory precision. Affected analyses were total Kjeldahl nitrogen (TKN) and total dissolved solids (TDS). 137 WW natural sample results (1.5%) and 6 QC sample results were qualified for laboratory precision. Affected analyses were total aluminum, total iron, TDS, and total suspended solids (TSS).

Normal flow field duplicate results as well as corresponding RPD values are presented in in Table A5a. Field duplicate RPD results were within the required acceptance criteria for 97% of normal flow duplicate sample sets. Thirteen NF field duplicate results did not meet precision criteria, resulting in 66 natural sample results (and 13 field duplicate results) being qualified as estimated, assessed as screening quality, and assigned an "FD" data validation code. Affected analyses were dissolved and total copper, total lead, total mercury, total phosphorous, TDS, TKN and TSS.

Wet weather field duplicate results as well as corresponding RPD values are presented in Table A6a-d. Field duplicate precision was within the required acceptance criteria for 96% of WW duplicate sample sets. Twenty WW field duplicate results did not meet the acceptable precision criteria; thus, 221 associated natural sample WW results (and 20 field duplicate results) were qualified as estimated, assessed as screening quality, and assigned an "FD" data validation code. Affected analyses were total aluminum, total arsenic, total copper, total iron, total phosphorous,

total lead, TDS, TKN, TSS, and total zinc. Table A7 summarizes qualifications based on laboratory and field precision.

Table A7 – Quantity of Individual Analyses Flagged for Laboratory and Field Precision

Monitoring Type	# RPD	# FD	Total	% RPD	%FD
Normal Flow	8	66	2864	0.3	2.3
Wet Weather	137	221	8896	1.5	2.5

It should be noted that NF sample results from SDG 10585797, QC batch 783578, MS 4172244 and MSD 4172245 spike levels differed, so a laboratory review was requested. The laboratory found no errors in preparation, analysis, or reporting of parent sample 10585797001 or MS/MSD samples 4172244/4172245 for total phosphorus. The MSD was prepared using only 40 mL of parent sample due to limited sample volume being available. This equated to a 1.25x dilution factor resulting in the higher spike concentration on the MSD than on the MS, which was prepared using 50 mL of parent sample. Since the MS and MSD had differing concentrations of parent sample, this was not a true laboratory duplicate and the RPD calculation is irrelevant. Thus, no qualifications were made based on the 23% RPD of these MS and MSD results.

3.3 Accuracy

Accuracy is the degree of difference between the measured or calculated value and the true value. It is a measure of the bias or systematic error of the entire data collection process. The QAPP does not require submittal of blind SRM samples, thus field accuracy was evaluated by use of FB samples only. Laboratory accuracy was based on analysis of method blanks (MB), matrix spike and matrix spike duplicate (MS/MSD) samples, and/or laboratory control samples and laboratory control sample duplicates (LCS/LCSD), as appropriate to the analytical method. Laboratory accuracy is also assessed on results of initial calibration verifications (ICV), continuing calibration verifications (CCV), and internal standards (IS), as applicable to the analytical method. Although ICV, CCV, and IS results are completed for all applicable analyses, their results are reported only in Limited Plus and Full data packages. All NF and WW surface water data packages were Limited data packages; however, the project narrative stated there were no problems with these laboratory calibration samples.

Proper sample handling, including correct preservation and analysis within method holding times, also affects accuracy.

3.3.1 Sample Preservation and Holding Time

Data validation included reviewing the laboratory deliverables to ensure all samples were properly preserved and analyzed within the method-specific technical holding time. Table A8 summarizes holding time qualifications for NF and WW natural sample analyses. Nearly all (99.9%) of NF analyses were completed within the method holding time, with 1 NF natural sample analyses exceeding holding time, resulting in that data point being rejected. The rejected data point was the sulfate result for SWBF0133-090121. The original sulfate analysis for this sample was on 9/16/21. The reported sulfate result for the 9/16/21 analysis was 29 mg/L, which is not comparable to

historical results or upstream samples. Re-analysis was requested on 11/29/21 when a data review caught the irregularity. Re-analysis yielded a result of 690 mg/L; thus, it is suspected that a dilution error was made during the original analysis. Although the original analysis was within holding time, it would have been rejected based on comparability. Ultimately, the re-analysis result was rejected for exceeding holding time by more than 2X the holding time. No WW natural sample analyses were qualified for holding time exceedances. Two QC sample alkalinity analyses exceeding holding time. Note that Table A6b indicates that samples in alkalinity batches 751940 and 751962 were analyzed outside of the 14-day holding time. These results were laboratory qualified H5, which indicates that re-analysis was performed beyond holding time, but the re-analysis confirmed the original within-hold analyses. Since the out-of-hold re-analyses confirmed the original in-hold analyses, a validation qualifier was not applied. Normal flow and wet weather holding times are presented in Table A5b and Table A6b, respectively (see Tables section).

Table A8 – Quantity of Individual Analyses Flagged for Holding Time Exceedances

Monitoring Type	# HT	Total	%HT
Normal Flow	1	2864	0.03
Wet Weather	0	8896	0

As Table A9 shows, 63 NF natural sample results (and 31 QC samples results) were qualified for improper preservation. No WW natural sample results (or QC sample results) were qualified for improper preservation. All of these qualifications resulted from samples arriving at the laboratory above 6 degrees Celsius (°C). For NF the affected analyses were; alkalinity, DOC, ammonia, nitrate + nitrite nitrogen, phosphorous, sulfate, TKN, TDS, and TSS. Associated results were qualified as estimated, assigned screening quality, and given a validation code of "IP".

Table A9 – Quantity of Individual Analyses Flagged for Improper Preservation

Monitoring Type	# IP	Total	%IP
Normal Flow	63	2864	2.2
Wet Weather	0	8896	0

3.3.2 Blanks

Laboratory MBs and FBs were analyzed to assess artifacts introduced during sampling, transport and/or analysis that may affect the accuracy of the data. In addition, initial calibration blanks (ICBs), and continuing calibration blanks (CCBs) are used by the lab to verify that sample concentrations are accurately measured by the analytical instrument throughout the analytical run. Although ICBs and CCBs are completed for all analyses, their results are reported only in Limited Plus and Full data packages. All NF and WW data packages were Limited, but the project narrative did not indicate any problems with laboratory calibration blank samples.

Laboratory and field blanks are assessed according to the rules in Table which is reproduced from the TREC DV Guidelines. Because MDLs are calculated statistically, results within one standard deviation of the MDL should be considered non-detects. Laboratory data packages do not include the standard deviations derived from MDL studies, thus an Agency approved alternative approach is to consider detections ≤ 1.5X MDL as being within acceptance criteria.

Table A10 – Blank Assessment Guidelines

Lab Blank Result	Sample Results	Action for Samples
≥ MDL, but ≤ 1.5x MDL	Non-detect (< MDL)	No action
	> MDL, but ≤ RL	No action
	> RL	No action
> 1.5x MDL	Non-detect (< MDL)	No action
	≥ MDL, but ≤ RL	Qualify results as estimated non-detect (UJ)
	> RL, but ≤ 10x blank	Qualify results as estimated high (J+)
	>10x blank value	No action
> RL	See action above for 1.5x MDL value. If any sample results are > MDL and < 10x the blank value, note in the Data Validation Summary that the laboratory failed to re-digest (if applicable) and reanalyze the affected samples. Reanalysis is not required for sample results < MDL or > 10X the blank detection.	
≤ (-RL)	Non-detect (< MDL)	Qualify results as estimated (UJ)
	Detect <10x RL	Qualify results as estimated low (J-)

Professional judgement was used in assigning data validation codes in cases that both the FB and MB had detections >1.5x the MDL. This judgement was based on the magnitude of the FB detection compared to the magnitude of the MB detection.

3.3.2.1 Field Blanks

Field blanks were analyzed to assess artifacts introduced during sampling and transport that may affect the accuracy of the data. Field blanks were analyzed for every 20 samples collected, or once per sampling event, whichever was more frequent.

Table A5c lists results for all NF FBs. Acceptable results (≤ 1.5X the MDL) were obtained for 98% of NF FB analyses. After assessing associated results according to the rules in Table A10, 118 natural sample results (and 19 field duplicate results) were qualified for FB detections. These results were qualified as estimated non-detect or estimated high, assigned an "FB" data validation code, and natural sample results were given screening quality. Affected analyses were dissolved aluminum, cadmium, and silver, dissolved and total copper, iron, and lead, and DOC. Table A11Table summarizes FB qualifications.

Table lists results for all WW FBs. Acceptable results (≤ 1.5X the MDL) were obtained for 92.5% of WW FB analyses. After assessing associated results according to the rules in Table A10, 118 natural sample results (and 5 field duplicate results) were qualified for FB detections. These results were qualified as estimated non-detect or estimated high, assigned an "FB" data validation code, and natural sample results were given screening quality. Affected results were dissolved copper, DOC, total phosphorous, dissolved and total lead, sulfate, and ammonia. Table A11 summarizes NF and WW FB qualifications.

Table A11 – Quantity of Individual Analyses Flagged for Field Blank Detections

Monitoring Type	# FB	Total	%FB
Normal Flow	118	2864	4.1
Wet Weather	118	8896	1.3

3.3.2.2 Method Blanks

Method blanks were analyzed for every analytical batch of 20 or fewer samples. The method blank is laboratory DI water which has gone through the applicable sample preparation and analysis procedure.

Acceptable MB results (≤ 1.5X the MDL) were obtained for 98% of NF and 99% of WW laboratory MB samples. NF MB results can be found in Table A5d, while WW MB results can be found in Table . After assessing MB detections in accordance with the rules in Table A10, MB detections accounted for 23 NF natural samples (6 QC sample results) qualifications Affected results were DOC, dissolved cadmium, dissolved lead, and dissolved silver. MB detections accounted for 5 WW natural samples (3 QC sample results). Affected results were all total cadmium. Results were qualified as estimated non-detect. These results were assigned an "MB" data validation code and given screening quality. Table A12 summarizes NF and WW MB qualifications.

Table A12 – Quantity of Individual Analyses Flagged for Method Blank Detections

Monitoring Type	# MB	Total	%MB
Normal Flow	23	2864	0.8
Wet Weather	5	8896	0.06

3.3.3 Matrix Spike and Matrix Spike Duplicate

Laboratory MS/MSD results and recoveries can be found in Table A5d (NF) and Table (WW). Fifty-nine NF natural sample results, along with 12 field duplicate results and one field blank result, were qualified as estimated for MS/MSD recoveries. In the case of the qualified FB result, the FB was used as the parent sample for the MS. Affected analyses were dissolved and total molybdenum, alkalinity, TKN, phosphate, nitrate + nitrite nitrogen, and sulfate. MS/MSD recoveries outside of acceptance criteria or an MS/MSD not being analyzed accounted for 213 WW natural sample (and 9 field duplicate sample) results being qualified as estimated. Affected analyses were total aluminum, arsenic, cadmium, copper, iron, lead, molybdenum, silver, and zinc, dissolved magnesium, DOC, nitrate + nitrite nitrogen, TKN, and sulfate. The qualified NF and WW results were coded "MS" and natural sample results were given screening quality. Seven WW

natural sample silver results were rejected for not meeting MS/MSD criteria. Table 3 summarizes qualification based on MS/MSD recoveries.

Table A13 – Quantity of Individual Analyses Flagged for MS/MSD Recovery

Monitoring Type	# MS	Total	%MS
Normal Flow	59	2864	2.1
Wet Weather	213	8896	2.4

3.3.4 Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples are required for all analyses. Laboratory control sample duplicates are required for sulfate analysis by ASTMD516-90 and alkalinity analysis by SM2540C. LCS/LCSD were analyzed for every batch of 20 or fewer samples as appropriate to the analysis. The LCS is DI water spiked with known concentrations of all target analytes. The LCSD is a duplicate sample of the LCS.

All NF LCSD results were within acceptance criteria; but one NF dissolved silver LCS recovery was high (QC batch 782363 in SDG 10585797). All associated silver results were non-detect; thus, no qualifications resulted based on LCS/LCSD recoveries. Two WW LCS recoveries did not meet acceptance criteria, and these were for alkalinity and dissolved silver. The silver LCS recovery for QC batch 4093350 in SDG 10576060 was high and all associated silver results were non-detect. Therefore, no qualification resulted based on the silver LCS recovery. Four WW natural sample alkalinity results (and 1 field duplicate result) were qualified as estimated for LCS recovery. Table 4 summarizes qualification based on LCS/LCSD recoveries.

Table A14 – Quantity of Individual Analyses Flagged for LCS/LCSD Recovery

Monitoring Type	# LCS	Total	%LCS
Normal Flow	0	2864	0
Wet Weather	4	8896	0.04

3.4 Representativeness

Data representativeness is defined as the degree to which data accurately and precisely represents a characteristic of a population, environmental conditions, or parameter variations at a sampling point. Representativeness is a qualitative parameter that is most concerned with the proper design of the sampling program. Representativeness of samples shall be achieved through the careful selection of sampling locations and methods. The QAPP incorporates a monitoring network designed to provide samples that are representative of the medium being sampled as well as sufficient samples to meet the project DQOs. Sample representativeness may also be evaluated

using the RPDs for field duplicate results. The collected data is believed to be representative of conditions within the BPSOU NF and WW monitoring networks.

3.5 Completeness

Completeness refers to the amount of usable data produced during a sampling and analysis program. The procedures established in this Data Quality Assessment are designed to ensure, to the extent possible, that data shall be valid and usable. To achieve this objective, every effort was made to collect each required sample and to avoid sample loss. The QAPP completeness goal is 95 percent for each matrix. Those data that are validated and need no qualification (enforcement quality data) or are qualified as estimated data (screening quality data), are considered usable. Rejected data are not considered usable.

Normal Flow analytical completeness is assessed by comparing the number of analyses completed to the number of analyses which should have been completed. During the 2021 monitoring period, normal flow water quality was monitored 12 times at SS-01, SS-01.35, SS-04, SS-05, SS-05A, SS-06A, SS-06G, and SS-07. All anticipated sites were sampled in 2021. A total of 144 samples were collected during this monitoring, 120 of which were primary samples, 12 were duplicates, and 12 were blanks. Target analyses for all normal flow samples included dissolved metals, total metals, alkalinity, nitrate/nitrite, sulfate, TDS, and TSS. Samples collected at SS-01, SS-01.35, SS-06G, and SS-07 were also analyzed for DOC, phosphorus, TKN, and ammonia. Duplicate and blank samples were collected from SS-01 or SS-06G throughout 2021 to ensure the four additional analyses were included in field QC samples. In 2021, NF monitoring produced 2,864 of the 2880 anticipated natural sample data points. Of these, 2,862 were useable. Because the shipment of a cooler was delayed by the courier in February, several samples arrived 12 days into the TDS and TSS 7-day holding time and notice of sample receipt was not received until three days later. These samples were then 8 days past the 7-day into holding time; thus, analysis for these parameters was cancelled. Additionally, a sulfate result from September monitoring was rejected due to not meeting holding time requirements, and an alkalinity result from November monitoring was rejected due to not being comparable to historical data. Thus, analytical completeness for normal flow monitoring was 99.4%. Completeness for normal flow field parameter measurements was 100%.

Given the difficulty in predicting wet weather events, the QAPP does not specify the frequency or number of samples to be collected for wet weather data. Wet Weather monitoring completeness is assessed by comparing the number of analyses that were completed and not rejected, to the number of analyses that should have been completed, based on those samples that were collected. During the 2021 monitoring period, eight wet weather events were sampled at eight stations between May 23 and August 21. A total of 304 wet weather natural samples were analyzed for total metals, dissolved metals, alkalinity, nitrate/nitrite, sulfate, TDS, and TSS. Samples from SS-01, SS-01-P, SS-06G, SS-06G-P, SS-07, and SS-07-P collected in the first storm event of the month were also analyzed for DOC, phosphorus, TKN, and ammonia. A total of 336 samples were collected, 304 of which were primary ISCO samples, 16 were duplicate ISCO samples, and 16 were field blanks. In 2021, wet weather monitoring produced 8,896 natural sample data points. Seven silver sample results from May were rejected due to not meeting matrix spike recovery requirements. Thus, completeness for 2021 wet weather data was 99.9 %.

3.6 Comparability

Consistency in the acquisition, handling, and analysis of samples is necessary for comparing results. Where appropriate, the results of analyses obtained were compared with the results obtained in previous studies. Sample locations and parameters consistent with previous studies and use of standard EPA approved analytical methods were used to ensure comparability of results with other analyses performed in a similar manner within the BPSOU.

One primary sample normal flow alkalinity result (SWBF0179-110121) and one primary sample sulfate result (SWBF0133-090121) were rejected because they were not comparable with historical results, nor results from stream reaches with similar water chemistry. Sample SWBF0133-090121 was re-analyzed for sulfate, and the re-analysis result aligned with historical data and sulfate results for upstream samples monitored on 09/01/21. Although the out-of-hold sulfate result was reported, it was rejected because re-analysis was performed more than 2X past the method holding time. Sample SWBF0179-110121 was re-analyzed for alkalinity and the re-analysis result of 61.8 mg/L (original result of 362 mg/L) aligned with historical data as well as alkalinity results for downstream sites monitored on 11/01/21. The laboratory suspects the original analysis was the incorrect sample. Since re-analysis occurred well past the method holding time, the decision was made not to report the re-analysis result.

3.7 Sensitivity

Sensitivity refers to the capability to quantify an analyte at a given concentration. This parameter is associated with the instrument detection limits, method detection limits, and the project reporting limits. The desired analytical sensitivities are MDLs less than the applicable water quality standards specified in Circular DEQ-7, Montana Numeric Water Quality Standards (May 2017). For analytes which do not have water quality standards, the desired sensitivity is a concentration which will enable the analytical data to be used for geochemical interpretation. All analyses met the desired level of sensitivity.

3.8 Data Usability

Three data utilization categories are applied to primary data points, they are enforcement quality data, screening quality data, and rejected data. Enforcement and screening quality data are considered usable. Rejected data is not usable. Enforcement quality data meet all QA/QC and documentation requirements. Screening quality data do not meet the applicable QA/QC requirements and/or documentation requirements. Rejected data may result from inappropriate sampling, analysis, or documentation procedures. Only enforcement and screening quality data are utilized for evaluation of surface water quality.

A total of 3,628 NF natural and QC sample results were analyzed, with 2,864 of these being natural sample results and 764 being QC sample results. Of these 2,864 natural sample results, 2,548 were enforcement quality, 314 were screening quality, and 2 were rejected.

A total of 9,856 WW natural and QC sample results were analyzed, with 8,896 of these being natural sample results and 960 being QC sample results. Of these 8,896 natural sample results, 8,237 were enforcement quality, 652 were screening quality, and 7 were rejected. Table summarizes NF and WW data useability.

Table A15 – Quality Status for NF and WW Analyses

Monitoring Type	Natural Samples	Enforcement Quality (E)	Screening Quality (S)	%E	%S
Normal Flow	2864	2548	314	89	11
Wet Weather	8896	8237	652	93	7

4.0 DATA ASSESSMENT SUMMARY

The quality of data was evaluated based on laboratory and field QC analyses. Data validation and data assessment were performed by TREC, Inc., located in Butte, Montana, in conformance with TREC's data validation guidelines which align with the CFRSSI DM/DV Plan and National Functional Guidelines for Inorganic Data Review.

Laboratory analyses and QA/QC procedures were validated, and qualifiers were applied as appropriate. To review data for completeness and assign Level A/B review status, field logbook documentation and sample chain of custody forms were reviewed. The sampling team was also available for questioning when clarification was needed. All NF and WW samples collected met Level B status. Precision, accuracy, representativeness, completeness, comparability, and sensitivity of data were reviewed, and qualifiers were applied to data as applicable. Data were also tabulated and identified as being either enforcement quality, screening quality, or rejected. NF and WW analytical results are provided in Table A2 (NF) and Table A3 (WW).

A total of 2,864 NF natural sample results were obtained. Of these, 2,548 were enforcement quality, 314 were screening quality, and 2 were rejected.

A total of 8,896 WW natural sample results were obtained. Of these 8,237 were enforcement quality, 652 were screening quality, and 7 were rejected.

1. The 2,548 (89%) NF and 8,237 (93%) WW natural sample results that meet enforcement quality standards can be categorized as definitive data with unrestricted use. They are supported by rigorous sampling and analyses protocols, as well as Level B documentation.
2. The 314 (11%) NF and 652 (7%) WW natural sample results that meet screening quality standards can be categorized as data whose associated numerical values are estimated or met only Level A requirements.
3. The 2 (0.07%) unusable NF natural samples and 7 (0.08%) unusable WW natural sample results do not meet enforcement or screening quality criteria and should not be used.

Copies of sample chain of custodies, field logs, field quality control checklists, laboratory validation checklists, and Level A/B screening checklists associated with validation of the data presented in this report are provided as attachments to this appendix. Original field logs are maintained at TREC's field office in Butte, Montana.

See Table A4 for Laboratory Validation qualifiers, DV codes, and Status definitions

Table A4. Definitions of Data Flags, Data Qualifiers and Status Assessments

	Laboratory Flags[a]
1M	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
AB	Analyte was detected in an associated instrument blank.
AD	Analyte was detected in the method blank at a concentration greater than 2.2 times the MDL.
AL	The lab does not hold A2LA accreditation for this parameter.
B	Analyte was detected in the associated method blank.
B0	Analyte was detected in an associated blank at a concentration greater than the MDL.
BC	The same analyte was detected in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit.
BH	Analyte was detected in an instrument blank. The result may be biased high.
BL	Analyte was detected in an instrument blank at a negative value. The result may be biased low.
C0	Result confirmed by second analysis.
C1	Result could not be confirmed by second analysis.
C7	Analyte is a possible laboratory contaminant (not present in method blank).
C8	Result may be biased high due to carryover from previously analyzed sample.
C9	Common Laboratory Contaminant.
CC	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The result may be biased.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
CL	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.
CR	The dissolved metal result was greater than the total metal result for this element. Results were confirmed by reanalysis.
CU	The continuing calibration for this analyte is above Pace Analytical acceptance limits. Analyte was not detected above the reporting limit in any of the associated samples.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
D4	Sample was diluted due to the presence of high levels of target analytes.
D6	The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.
D7	The sample and/or duplicate results for this parameter are less than the reporting limit, calculations are based on estimated values and may be statistically unreliable
D8	The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.
D9	Dissolved result is greater than the total. Data is within laboratory control limits.
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
F5	The recovery of the analyte in the CRDL standard (also known as the reporting limit verification) did not meet the acceptance criteria.
FS	The sample was filtered in the laboratory prior to analysis.
H1	Analysis conducted outside the recognized method holding time.
H2	Extraction or preparation was conducted outside of the recognized method holding time.
H3	Sample was received or analysis requested beyond the recognized method holding time.
H4	Sample re-extracted and analyzed outside of EPA method holding time.
H5	Reanalysis conducted in excess of EPA method holding time. Results confirm original analysis performed in hold time.
H7	Re-extraction or re-analysis could not be performed within method holding time.
IC	The initial calibration for this compound was outside of method control limits. The result is estimated.
IH	This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.
IL	This analyte exceeded secondary source verification criteria low for the initial calibration. The reported results should be considered an estimated value.
IO	The internal standard response was outside the laboratory acceptance limits confirmed by reanalysis. The results reported are from the most QC compliant analysis.
IR	The internal standard recovery associated with this result exceeds the upper control limit. The reported result should be considered an estimated value.
IS	The internal standard response is below criteria. Results may be biased high.
IU	The internal standard recoveries associated with this sample exceed the upper control limit. The reported results should be considered estimated values.
J	Analyte detected below reporting limit, therefore result is an estimate
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
L5	LCS recovery exceeded QC limits. Batch accepted based on matrix spike recovery within LCS limits.
LS	Analyte recovery in the laboratory control sample (LCS) was outside QC limits for one or more of the constituent analytes used in the calculated result.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M2	Matrix spike recovery was below QC limits due to sample dilution. Data acceptance based on laboratory control sample (LCS) recovery.
M3	Matrix spike recovery was outside laboratory control limits due to matrix interferences.
M5	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
M4	A matrix spike/matrix spike duplicate was not performed for this batch due to sample dilution.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
MA	Result determined by method of standard addition.
MD	The analyte was not detected at or above the Method Detection Limit.
MH	Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
MS	Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.
N	Tentatively identified compound (TIC) based on mass spectral library search
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply.
P4	Sample field preservation does not meet EPA or method recommendations for this analysis.
P5	The EPA or method required sample preservation degrades this compound, therefore acceptable recoveries may not be achieved in sample matrix spikes.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
P7	This spike was performed as a post digestion spike.
P8	Analyte was detected in the method blank. All associated samples had concentrations of at least ten times greater than the blank or were below the reporting limit.
PI	The precision between the sample and the duplicate sample exceeded laboratory control limits.
R1	RPD value was outside control limits.
R2	RPD value was outside control limits due to matrix interference
R3	RPD value was outside control limits due to uncertainty of values at or near the PRL.
RS	The RPD value in one of the constituent analytes was outside the control limits.

Table A4. Definitions of Data Flags, Data Qualifiers and Status Assessments

SD	The serial dilution and the original analysis did not agree within ±10%. The concentration is estimated due to a suspected chemical or physical interference.
TP	The samples were received outside of required temperature range. Analysis was completed upon client approval.
TV	Analysis conducted outside EPA method holding time. Results may be biased low.
TW	Dissolved result is greater than the total. Data is within laboratory control limits, however the RPD between the total and dissolved result is >20%.
W	Non-detect results are reported on a wet weight basis.
Z2	Analyte present in the associated method blank above the detection limit.
REV_X	Revision X - This report replaces the Month, DD, YYYY report. This project was revised on Month, DD, YYYY <REASON>. (Lab city, State)
SubCert	This report contains data that were produced by a subcontracted laboratory certified for the fields of testing performed.
TO	Samples requiring thermal preservation were received outside of recommended temperature limits of 0-6 degrees Celsius.
TP	Samples were received outside of required temperature range. Analysis was completed upon client approval.
TQ	Samples were received outside of required temperature range of 0-6 degrees Celsius. The samples were received from the field on ice.
C0	Results confirmed by second analysis.
IQ	The internal standard recoveries associated with this sample exceed the lower control limit. The reported results should be considered estimated values.
IU	The internal standard recoveries associated with this sample exceed the upper control limit. The reported results should be considered estimated values.
sb	Client sample ID on container did not match COC; client was notified.
sd	date - Added 3ml HNO3 to Metals bottle prior to analysis. pH <2.
se	Sample collection dates and times were not present on the sample containers.
sf	Sample collection dates and times were not listed on the COC.
sg	Sample collection time on containers does not match COC; client was notified.
sh	The sampler's name and signature were not listed on the COC.
sl	Sample was received outside the recognized method holding time; client notified and approved.
sm	A Chain of Custody was not received with samples; client was contacted.
	Data Validation Qualifiers[b]
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
	Data Validation Descriptors[c]
AB	Did not meet level A/B criteria
CC	Correlation coefficient less than 0.995 for instrument calibration
CCV	Continuing calibration verification outside limits
CCB	Continuing calibration blank contamination
COM	Not comparable to historical data
CQ	No calibration performed
CRQL	Contract required quantitation limit standard recovery outside quality control limits
DNR	Do not report. An alternate, acceptable result is available.
ECR	Reported concentration exceeds instrument calibration range
FB	Field blank contamination
FD	Field duplicate RPD outside limits
HT	Holding time exceeded
ICB	Initial calibration blank contamination
ICS	Interference check standard recovery outside limits
ICV	Initial calibration verification outside limits
IP	Incorrect sample preservation
IS	Internal standard recovery outside limits
LCS	Lab control spike recovery is outside quality control limits
MB	Method blank contamination
MI	Matrix interference with analyte quantitation
MDL	Non-detect at MDL value
MS	Matrix spike recovery is outside quality control limits
RB	Equipment rinse blank contamination
RL	Laboratory detected result below reporting limit
RPD	Duplicate sample relative percent difference exceeds QC limits
SD	ICP serial dilution percent difference outside QC limits
SIC	Sample integrity compromised
SUR	Surrogate recovery is outside QC limits
TB	Trip blank contamination
TIC	Compound was tentatively identified by GC/MS search
	CFRSSI Status[d]
E	Enforcement quality data are data with unrestricted use, meet Level A/B criteria, and are NOT qualified during the data validation process
S	Screening quality data are data whose associated values are estimated or meet only Level A criteria
R	Unusable data are data whose associated numerical values are so questionable it is recommended that they not be used
	Level A/B Screening Results[d]
A	Meets only Level A Screening criteria, but does not meet Level B Screening criteria, including proper techniques
B	Meets both Level A and Level B criteria, including field replicates and proper documentation
