*. Outcomes for pre-exposure period were ascertained until day 30 before the initial positive COVID-19 test result. Outcomes for post-exposure period were ascertained from day 30 after the initial positive COVID-19 test result until end of follow up.

†. Based on care received within the first 30 days after a positive COVID-19 test result.

‡. Adjustment through weighting using predefined and algorithmically selected high-dimensional variables during pre-exposure period.

§. Incidence rate ratio in pre-exposure period served as the referent.

CI, confidence interval; TIA, transient ischemic attack; MACE, major adverse cardiac events.
