# New shows, events to make debuts at Parkland

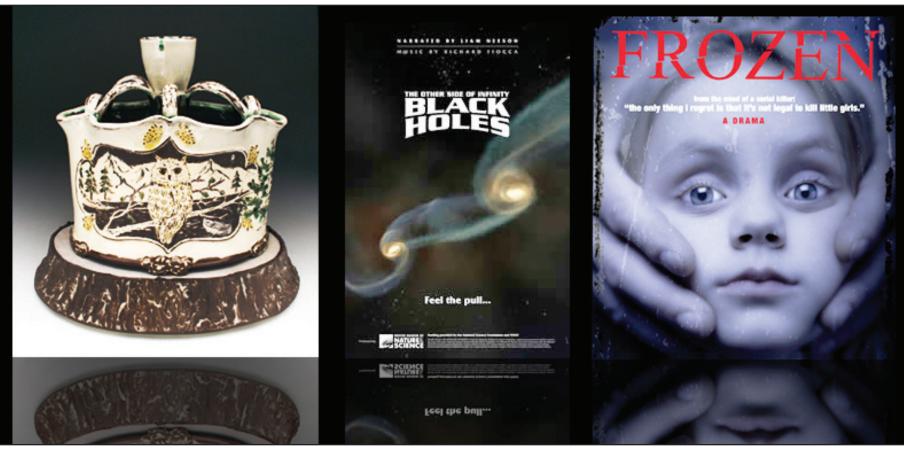

Photo Illustration by Alisha Kirkley/Prospectus News

As seen above, a Kathryn Finnerty ceramic piece, and flyers for both the new Planetarium and Theatre shows, all of which can be seen at Parkland.

Jacob Kuppler Staff Writer

This spring, Parkland will host a number of new activities and events which cater to both the student body and the public at large. Among them are new planetarium shows, theater productions, and art exhibits.

The William M. Staerkel Planetarium is proud to unveil its new, all ages show, "Black Holes: The Other Side of Infinity," to Parkland. "The show has national acclaim," planetarium director, Dave Leake said. "When it first came out, many planetariums around the country put it out. We are very happy to bring it to Central Illinois.'

Originally produced in Denver, Colorado, "Black Holes" features amazing visualizations that were actually created by the National Center for Supercomputing Applications at the University of Illinois. Narrated by Academy-Award nominated actor Liam Neeson, the full-dome show uses data from computer simulations to deliver stunning visualizations that mimic the science behind black hole phenomena. Among the sights to be seen in this cutting-edge show, are the birth of the universe, the birth and death of stars, a simulated flight to a

huge black hole located at the center of the Milky Way Galaxy and more. While the show is open to the public, Leake cautions that younger audiences may not be able to fully appreciate it.

Similarly, Parkland's theater production "Frozen," by Bryony Lavery, is not for young children. In fact, Parkland's website suggests that only mature audiences attend, due to adult subject matter and language. "It's a psychological drama, a Broadway play that won national awards," the show's director, Randi Jennifer Collins Hard said. "People who enjoy mysteries and a good story will really like it."

In "Frozen," ten-year-old Rhona goes missing, which together Rhona's mother, a serial killer, and a criminal psychologist. According to Parkland's website, the cast embarks "on a thriller of a journey about grief, revenge, forgiveness and bearing the unbearable." This moving play dares to ask the questions, 'What value do we place on life itself? What are the limits of forgiveness? Are there naturally "evil" people and should they be punished for their acts?" Starring Brad Mehrtens, Diane Pritcherd, Jenette Kozak Jurezyk and Zach Brenner, "Frozen" promises to

take audiences for quite a ride.

The "State of the Art 2011-National Biennial 2012: Ceramics Invitational," which opened at the Parkland Art Gallery in late 2011, is part of a tradition of ceramics showings that occur every two years. According to a press release issued by the Art Gallery, this time around the show was curated by Suze Lindsey, a professional potter with over twenty years of experience. She selected the work of a series of artists, whom she became acquainted with during her formative period. These include colleagues from Penland School of Arts and

## Parkland expands science course offerings

**Photo Courtesy of Rose Dalton** Parkland Professor Rose Dalton poses with her Human Biology class which was offered for the first time in the fall of 2011.

Alisha Kirkley Staff Writer

Last semester, Parkland began offering new classes for students interested in the field of science. Human Biology (BIO 105) is one example of those classes, as well as Environmental Biology (BIO 104) and Physics: How Things Work (PHY 120-001/129-001H), a hybrid class containing BIO 104 and PHY 120/129 in one.

Professor Rose ton teaches BIO 105, which focuses on the incorporation of human anatomy and physiology with a global perspective. Simply put, the class looks at a system of the body and applies that to a global level.

"The global perspective is something you don't typically get in a pure anatomy and physiology class," Dalton explained. "So what we will do is we will take, for example, a topic in human biology like your immune system, and we'll talk about how your immune system functions."

She also mentioned one of the topics the class studied last semester, the HIV virus - a virus that directly attacks the immune system, which is usually what finds and kills viruses themselves. Viruses reproduce by infecting the cells of a living organism; they cannot produce offspring on

their own. "(The virus) specifically infects upper T-cells, which are a part of your immune function," said Dalton, who then explained the remaining structure of the class. "We then talked about how wide spread this virus is. Then, we expanded on the HIV virus and started talking about pandemic situations in general and how likely is a pandemic situation. Then, we looked at examples of those pandemics occurring, HIV virus being one of those."

BIO 105 is a four credit-hour class that can be taken to fulfill a Physical/Life Sciences requirement for students pursuing Associates degrees in Applied Science, General Education, and certain certificates. Students pursuing Associates degrees in Arts, Science, Engineering Science and Fine Arts may take the course to fulfill a Life Sciences requirement, pending Illinois Articulation Initiative approval. This semester, the class was dropped due to low registration, but will continue being offered in the future.

### National Defense **Authorization Act sparks** debate among students

**Morgan Bernier** Assistant Editor

The National Defense Authorization Act has been a part of the White House budget for the past 49 years and was once again signed into law by Pres-

ident Obama on Dec. 31, 2011. The National Defense Authorization Act for the 2012 fiscal year, however, contains new provisions that could lead to the indefinite detention of any covered persons. The act defines a covered person as "a person who planned, authorized, committed, or aided the terrorist attacks that occurred on Sept. 11, 2001, or harbored those responsible for those attacks" and as "a person who was a part of or substantially supported al-Qaeda, the Taliban, or associated forces

that are engaged in hostilities against the United States or its coalition partners, including any person who has committed a belligerent act or has directly supported such hostilities in aid of such enemy forces."

The White House had previously threatened to not sign the act because of these provisions, but these claims were proven false when the President signed the act into law on New Year's Eve. The signing, however, was met with reservations on President Obama's

"The fact that I support this bill as a whole does not mean I agree with everything in it," said Obama through a statement on the White House web-

## Wikipedia, Google to protest SOPA

Morgan Bernier Assistant Editor

Today, some of the most visited websites in the US will be "blacked out" to raise awareness of the Stop Online Piracy

Act and the Protect IP Act. Senate Majority Leader Harry Reid plans to bring the Stop Online Piracy Act to a vote on Jan. 24, 2012. In anticipation of this vote, many websites, including Wikipedia will be taking their content offline for the entire day of January 18. Sites such as Google will also participate in protests by posting a link on the Google homepage to let users know about the company's opposi-

tion to the Act. The intent of the Stop Online Piracy Act is to prevent illegal downloading and copyright infringements through websites such as The Pirate Bay and other downloading sites. However, due to the vague wording in the bill, many search engines and websites that host user content could be crippled by guidelines contained in the bill.

One good way to summarize the danger of the Stop Online Piracy Act is found on Reddit.com's administrative blog. "SOPA and PROTECT IP contain no provisions to actually remove copyrighted content, but rather focus on the censorship of links to entire domains," according to the blog.

This is by no means a full summary of the Stop Online Piracy Act, but it hopefully will raise awareness. For a full summary of the bill, check out our article in the Dec. 7, 2011 issue of Prospectus News written by Buster Bytes, which can be found online at http://goo.gl/ iy6Ee. It is always important

## **Q&A** with the **Student Government President**

Tyler Cravens Student Government President

I want to personally thank all of those who responded to our survey sent out to all the student email accounts. I also want to thank the hundreds of you that signed our petition supporting FIRST - increased funding for clubs, activities, Student Government, intermurals, etc. We took that that proposal before the Parkland Board of Trustees at their December meeting. I hope you all did well on your finals and had a great winter break.

Dear Mr. President: What do you do as Student Government President?

Dear Carolina: As student president it is my responsibility to lead the Student Government. That includes in our frequent meetings, events, and advocacy efforts. It is my duty to set the agenda for us and delegate responsibilities. I appoint students to committees and personally serve on campus committees. You can typically find me in my office every day of the week in the afternoon. I am usually working on reports, proposals, and other things to benefit students. Since November I have been working on FIRST, which I wrote about previously. I also meet with campus administrators and officials often to discuss student issues. Stop by and see me with your concerns and ideas in room X159 or email me.

Dear Mr. President: How can I get information on what Student Government is doing?

Dear Sam: Student Gov-

ernment has recently ramped up its efforts to communicate with the student body. We launched a new Facebook page in December. Please ignore the old page that we no longer have access too, the picture for it is a black polo. This article you are reading is another brand new effort to keep students informed. Over a month ago we also launched a Student Government tab on my.parkland. This year we have also made sure to have someone in the office every day. We also have been spending numerous hours in the college center lately amongst our fellow students to hear their concerns. I hope some of you enjoyed the "Cookies & Concerns" event the week before finals. I know we did. Stop by from 11am-1pm and you will very likely find someone. Other times of the day it is also likely we are around, but that is the most likely time. We also have a twitter account @Pland-Stugo for those of you who prefer that method. Email us using the email provided. Call us at 351-2227 and leave a message if we do not answer. We are here to serve the student body and hope to hear from you soon.

I encourage students to send questions to me at stugo@parkland.edu. I will pick 2-3 questions to respond to for each article.

# Meet the coffee professor

Terry Evans/Fort Worth Star-Telegram/MCT

Tom Vincent pours a cup of espresso at his Arlington, Texas-based Texas Coffee School.

Patrick M. Wolker McClatchy Newspapers

out of bed.

FORT WORTH, Texas -Some days, the thought of that first cup of coffee is the only thing that gets Tom Vincent

In that way, of course, he's no different from plenty of other people who like a morning caffeine jolt.

What sets him apart? For the rest of the day, he never stops thinking about coffee. How to

brew the perfect cup. How to teach pros and amateurs alike to do the same. How to create the kind of coffee culture in North Texas that one can find in Austin or Vancouver.

This month, Vincent's Arlington-based business, Texas Coffee School, turned 1 year old. At his training center in an office suite at South Cooper Street near Harris Road, he conducts workshops for everybody from experienced baristas looking for new ideas owners to home coffee enthusiasts.

When he's not doing that, he travels the country speaking at industry seminars, serves as a consultant for restaurants and "geeks out" in his training center lab, searching for things like the optimal water filtration and temperature for the high-end beans he buys from artisanal producers.

"My whole goal is to take elitism out of specialty cof-

to prospective coffeehouse fee and make it more easily approachable for everyday people," he says. "Coffee is the most affordable luxury item in the world. Think about the most you've paid for a glass of wine or a piece of chocolate. I've never seen a cup of coffee no matter how rare cost more than \$7 a cup."

> Vincent set off down his path in 2006 almost by chance. He was working in marketing and

# Ask Buster: Questions from the readers

**Buster Bytes** 

Adam thinking about replacing upgrading my older desktop computer. I bought it almost ten years ago and it's still running Windows XP.

I'll be using the computer mostly for things like checking

my e-mail, using Microsoft Word, making Excel spreadsheets, watching some YouTube videos, and checking my Facebook. I probably won't be using Photoshop, but I will be viewing and downloading some photos. I've been looking at computers with 4G hard drives and am seriously considering buying one built at Computer Deli. I've also looked at HP Pavilion and Novel (IBM) laptops, all of which come with 4G, although their speeds vary.

What's best? Should I get a laptop, a desktop or a tablet? What do you recommend?

**Buster**: "What's best?" is a pretty broad question. There are a few factors in determining which system is best for you: Is cost a big factor? A bigger monitor, faster processor, better video card, more memory and more storage are better but they come at a price. Will you be using the system away from home a lot? Desktops are generally cheaper and faster. They're also a lot easier to upgrade. The larger keyboard and mouse are easier to use, and monitors can be much larger. Desktops can even be connected to most new flat screen televisions! Laptops are good for those who frequently use their computer away from home, but are not as fast and are more expensive. They are more difficult to upgrade, maintain and repair. Tablets are fun toys, great for checking email, reading documents and spreadsheets, watching videos, and checking Facebook. However any extensive typing or document creation is a bit of a hassle. Tablets are also slower than laptops and much slower than desktops, are usually impossible to upgrade, and very difficult to repair. They are, however, very convenient and easy to carry around. For the most part, tablets are similar to smart phones with a larger screen. I personally find that I use my home desktop the most, although I do have a laptop for those times when I really need to do some work away from home, school, or the office.

As for the systems you are looking at, I should point out that 4G is a term which usually refers to mobile data service. The G stands for generation, since it's the fourth generation of cellular wireless standards. It's generally applicable to mobile phones and tablets, is sometimes available on laptops, but is usually not found on desktops. 4G service will usually require the purchase of a monthly data plan from a carrier such as Verizon, AT&T, or Sprint. 4G is most useful if you're frequently com-

Illustration by Hardman/MCT

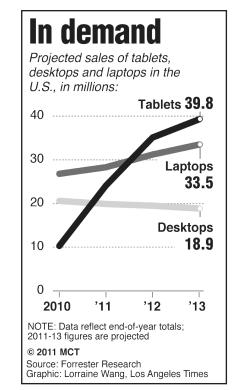

puting while on the go, away from home, work, or anywhere else that has a Wi-Fi hotspot you can access. So, if you're in your car on the highway, or in the supermarket, 4G service can come in handy. However, many locations now have Wi-Fi hotspots which can be accessed for free with a laptop or tablet without the need for a monthly service contract.

What I think you're actually referring to when you say that these systems have a 4G hard drive is that they have 4 GB of RAM. RAM stands for random access memory, which is different from the memory found in a hard drive. RAM is the workspace used by your computers processor to store the information it is currently using. When you save something to your computer, you store it to the hard drive, and nowadays these are generally much larger than 4 GB.

For what you say that you'll be using the system

for, you can get a fairly inexpensive desktop quite easily, but if mobility is a key concern, the tasks you mention can be accomplished quite easily on any of these devices. I personally have not purchased a computer from the local company you mentioned, but in my dealings with them, I have found them to be knowledgeable. When purchasing any system, make sure you receive a good warranty which covers parts and labor for at least a year. If you have any further questions, please feel free to let me know.

Have a question for Buster? He'd love to answer it! If he decides to use your question in a column, your name will be changed to protect your anonymity, and your email may be edited to fit newspaper formatting guidelines. Email him at buster@busterbytes.com.

# Now's the time to save for college

Joan Marshall The Baltimore Sun

Education beyond high school is a key to success later in life. According to the U.S. Department of Labor, 62 percent of all U.S. jobs now require a minimum of twoyear or four-year degrees or special post-secondary training. That number is expected to increase to 75 percent by 2020.

Unfortunately, at the same time that some form of higher education is becoming more important, it's also becoming increasingly more expensive. The College Board calculates that college costs have risen faster than the rates of inflation over this previous academic year. In fact, the average cost for tuition and fees at four-year public institutions has increased nearly 51 percent over the last 10 years, after adjusting for inflation. While the statistics may be

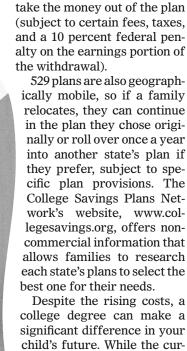

daunting, there is a simple way to make higher education more accessible and affordable: Start saving even a small amount as soon as possible. Often we see parents worrying about their children's academic preparation for college, but financial preparation is equally important. In fact, according to a recent study in the Journal of Children and Poverty, researchers at the Center for Social Development at Washington University in St. Louis found that children with a savings account in their name were approximately six times more likely to attend college than those with no account. The amount saved was not important \_ only that they had some form of savings that were dedicated to higher education.

The sooner a family starts to save for higher education,

the more affordable it will be. However, many families think they don't need to prepare for higher education expenses when their child is an infant or toddler, often putting off the task until their child is

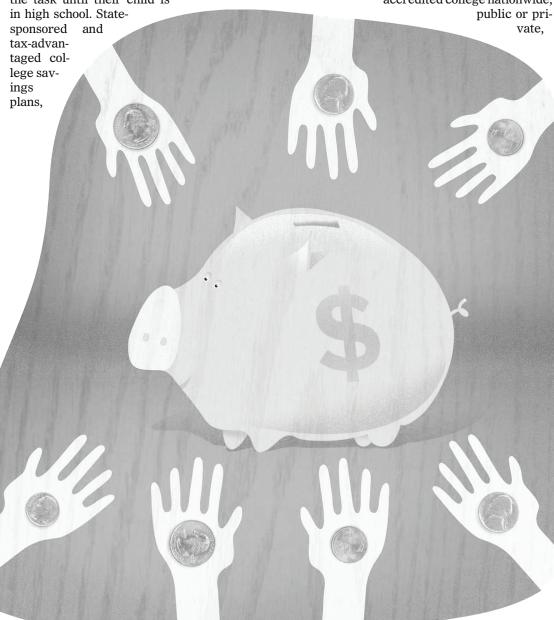

in high school. Statesponsored and tax-advanhimself or herself as beneficiary. Prospective grandparents can even open accounts the same way, as can any relative or family friend. The more time an investplans help families finance all forms of higher education and training throughout the coun-

Maryland's 539 plans can be used toward nearly any accredited college nationwide,

rent national unemployment rate for high school graduates is 9.7 percent, the rate for college graduates is 4.2 percent. Also, college graduates can expect to earn on average 66 percent more over 40 years than those with only a high school degree.

Whatever the individual situation, families should never delay starting to save because they're worried about something occurring in the future or can only make a small contribution. Start now. Save what you can afford. Adjust as you go along. The costs and importance of higher education will only continue to rise \_ but with smart planning and early savings, higher education and the benefits it brings can be a reality for all families, not just some.

called 529

plans after section 529 of the Internal Revenue Code, allow families to start saving from the time their child is born. In fact, saving for higher education can start in a 529 savings plan as soon as a couple begins to think about starting a family if the parent enrolls as the account holder and names

ment for higher education has to grow, the more valuable it can be. And those investments do not need to be designated for four-year degrees only. 529 savings plans can also be used for a two-year degree, eligible technical or trade training, room and board, books or other qualified expenses. 529

two-year or four-year, and at U.S. schools that have cam-

(c)2012 The Baltimore Sun

# A United States of Europe?

**Bruce Ackerman** Los Angeles Times

United States of Europe?

Are we witnessing the birth of the

There are uncanny similarities between the current round of wheeling and dealing and the founding of the United States of America. The Philadelphia Convention of 1787 represented America's second try at continental union. In 1781, the 13 states had come together behind a treaty-consti-

European arrangements. America's first effort was the Articles of Confederation. Like the European Union treaties, it guaranteed each citizen's right to move throughout the confederation and exercise all the economic privileges of home-staters. It also created a weak unicameral Congress and a judiciary for resolving inter-state disputes. But it did not grant the confederation independent powers of taxation, preventing it from guaranteeing the large war debts issued by each of the states. Because many

states were in shaky financial condition, their bonds had dramatically depreciated in value, undermining the confidence of European investors in New World projects.

This was one of the problems motivating the movement "for a more perfect union."

The Constitution of 1787 granted new powers to impose taxes and set up an analogue to the Bank of England. Once it came into effect, the federal government moved quickly to create a national bank and to

pay the depreciated state debt. This ended the credit crisis and established the credibility of the infant republic in European financial markets.

But before all this could happen, the founders confronted a threshold problem: So long as they were living under the laws of the confederation, it would be impossible to get their new Constitution ratified. Like the current European Union treaties, the Articles of Confederation explicitly required unanimous consent to any revision of its terms, and it was perfectly obvious that no such consent would be forthcoming.

Rhode Island was the Britain of its time - this small trading state was unwilling to give up its sovereignty to the federal colossus. It refused to send delegates to the Philadelphia Convention, denouncing it as an illegal secessionist assembly, which is precisely what it turned out to be. After a summer of secret sessions, the Philadelphians went public with a document proclaiming that, despite the articles' requirement of unanimous consent, the new Constitution would spring to life when only nine of the 13 states ratified. Confronting this revolutionary

change in the rules of the game, Rhode Island simply refused to play, as did North Carolina. When the first Congress met in 1789, there were 11 states in the union. The dissenting states caved under pressure - with Rhode Island entering in 1790 only when Congress began threatening to impose tariffs on its trade unless it abandoned the veto solemnly granted to it by the Articles of Confederation.

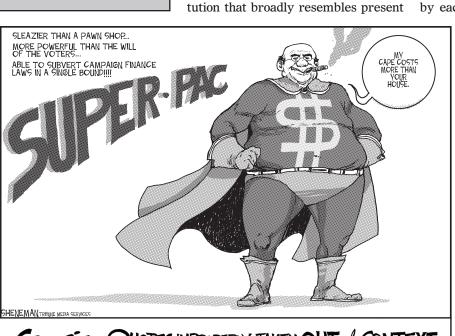

These embarrassing facts have long been forgotten, even by most serious students of the U.S. Constitution. But they put the current crisis in a new light.

The members of the new Eurozone treaty won't bludgeon Britain into Rhode Island-style capitulation. But if British Prime Minister David Cameron stands firm, his veto will likely lead to the ultimate exclusion of his nation from the EU. The projected treaty will create a large bloc whose interests systematically diverge from other members, but which will depend on a steady flow of supportive decisions by EU institutions to maintain the Eurozone's credibility.

Given these dynamics, Cameron is simply fooling himself if he really believes "that the EU institutions - the court, the commission - (would) work for all 27 nations" when this would compromise the euro bloc's fundamental interests. When Britain tries to undermine ongoing support for the Eurozone, it will predictably provoke a constitutional crisis - in which the euro bloc will eject Britain to prevent its continuing acts of sabotage.

This is a time for some serious diplomacy from the Obama administration. The United States should help bridge the gap between the Continent and Britain's divided coalition of conservatives and liberals, encouraging both sides to return to the bargaining table. If left unchecked, the current institutional dynamics will generate a United States of Continental Europe at an unacceptable price, gravely weakening the West for a very long time to come.

advertising in Charlotte, N.C., in the same building as Counter Culture Coffee, well known in the industry for its exotic offerings and its educational classes.

He went from participating in Friday "coffee-cuppings" - like wine-tastings - to attending classes to volunteering at those events. It added up to what he calls a twoyear apprenticeship with the company in which he learned everything he could about the business.

In 2008, after a friend extolled the virtues of the Dallas area, he relocated to Texas and began working as a coffee consultant. After a childhood spent moving around, he felt as if he had finally found home.

"I just fell in love with Texas culture," he said. "Now I have several pairs of cowboy boots. I started listening to country music. It's the first place I've felt I belong."

His consulting work kept increasing, with positive reviews and client success stories adding up. "It made me realize that I've got something here," he says. That led to the establishment of the school, the only one of its kind in Texas.

He chose Arlington mainly because office space is more affordable than in Dallas, he says. It has proved to be a good base, with its access to airports

and availability of overnight accommodations suitable to customers on a budget.

He also sees North Texas as prime fertile ground for specialty coffee.

predict-"Everyone is ing DFW will be the next big thing," he says. "I want to help shape it so that everybody is on the same page, not working against one another."

Two recent clients serve as examples - Oddfellows, the Oak Cliff Bishop Arts District restaurant that D Magazine credited in April with the best coffee in Dallas, and the new Original Pancake House eatery in Addison, the first in Texas to offer a coffee lounge. Those concepts, which combine high-quality food with simple high-end coffee choices and sometimes top-shelf alcoholic beverages, represent the future, Vincent says.

"It's blurring the line between restaurant and coffeehouse," he says. "Oddfellows does that exceptionally well, and The Original Pancake House is on that path. If this works, it could be the bridge that specialty coffee is looking for. It could open up a whole new world beyond Starbucks and Dunkin' Donuts."

On his website, www.texascoffeeschool.com, he offers tips on brewing a cup and operates a blog. A schedule lists upcoming workshops and cof- much contagious passion for fee-cuppings.

What should the home enthusiast keep in mind? Vincent says the first key is to buy

freshly roasted beans. That may sound expensive, he says, but the opposite is true.

"You'll be amazed that you won't have to drink half a pot," he says. "Fresh coffee is so much more potent."

The second key is to use the coffee immediately after it is ground.

"Coffee loses 80 to 85 percent of its aroma and flavor within 15 minutes of being ground," he said.

Unused coffee should not be frozen, contrary to what many people are told. And stay away from beans that have artificial flavor added to them. The process used to do that coats the beans with a harmful chemical that is not only unhealthy but also imbeds itself into the coffee machine, Vincent said.

Count Jonathan Seyoum, partner in the group that owns The Original Pancake House franchises in Texas, as among those who can attest to Vincent's expertise.

"Tom is incredibly good at what he does," Seyoum said. "He has given us tremendously valuable guidance in putting together a coffee program. He is down-to-earth about coffee, and vet Tom's appreciation for coffee starts at the local farmer, the buying and roasting process to proper grinding and brewing methods. I have yet to meet anyone who has as coffee and can teach the business of coffee."

(c)2011 the Fort Worth Star-Telegram

site. "In particular, I have signed this bill despite having serious reservations with certain provisions that regulate the detention, interrogation, and prosecution of suspected terrorists."

Later in the statement, President Obama said, "moreover, I want to clarify that my Administration will not authorize the indefinite military detention without trial of American citizens. Indeed, I believe that doing so would break with our most important traditions and values as a Nation. My Administration will interpret section 1021 in a manner that ensures that any detention it authorizes complies with the Constitution, the laws of war, and all other applicable law." While this is a comforting phrase for many, it is important to remember that there will be administrations after this. With elections coming up later this year, we may have a new president and a new administration that does not choose to follow the same guidelines as our current administration.

Amid the ruckus about the new provisions, it is also important to remember that this is a very important bill. Monetarily, this bill will be for the defense of the United States and its interests abroad.

There are generally three main viewpoints concerning this bill. The first is that the United States government will not use these provisions on its citizens and that people are getting worked up over nothing. Some people may believe that the wording was necessarily vague to prevent terrorists from slipping through loopholes. Others might think that it really isn't vague and that the public is reading too much into the bill.

The second viewpoint, and probably the most common, is remaining ignorant of what the bill is or what it could mean. There was a lot of confusion and secrecy surrounding this bill. An example would be when the House of Representatives voted to "close portions of conference" regarding the National Defense Authorization Act. This was done to prevent information pertaining to national security from being leaked out, but it also prevented information pertaining to the bill itself from reaching many American citizens.

One Parkland student, Kayla Staire, admitted that she hadn't heard of the bill. Staire is not alone in not knowing, since such information is not given the focus it deserves by many news outlets.

The third and final view- a PDF can be downloaded providing \$662 billion dollars point would be the belief that from http://goo.gl/MfXEU. the National Defense Autho-

rization Act, and the provisions contained in it, is a sign of the government's failings. Nick Schall, Parkland College employee said, "It's one of those slippery slope issues. Once you start detaining people it becomes easier to detain citizens. We already live in a prison state and once we begin making it easier to detain people we get closer to a more policed prison state.'

Ryann, a Parkland student who asked that her last name be withheld, felt that "President Obama made a decision to sign it and from what he said leading up to the 2008 presidential election I wouldn't believe that he would be signing something like this. I think that he only reason he signed it is to be re-elected, since this is something he adamantly disagreed with, even while signing it." Ryann also explained that she felt President Obama was trying to appeal to people who didn't already support him by signing a bill so unpopular with his usual supporters.

However you feel about the National Defense Authorization Act, it is important to become informed about this and other issues that could affect the aspect of life in the United States. For information about the National Defense Authorization Act specifically,

Crafts, located in Penland, North Carolina, and others whose work she has followed over the past twenty years. Each artist chosen is either a fulltime studio artist, or a member of the faculty of educational institutions. Among those selected for the showing are Margaret Bohls, Jim Brashear, Kathryn Finnerty, Doug Herren, and several more. "These artists all produce work that is significantly different from one another but have overlapping explora-

tions of their medium," gallery director Lisa Costello said. "We have a strong ceramics program here, and it's good for our students to see what contemporary artists are doing in the field. It's also a good opportunity for other students and people in the community to see what's going on in the field, especially if they ordinarily know what's going on in the field." The Biennial Ceramics Invitational will be open to the public until February 4.

For more information on show times, prices, locations and parking, visit http://www. parkland.edu.

taught by Professors Curtis Shoaf and Heidi Leuszler, is a course that focuses on energy, sustainability and the environment. BIO 104 covers Environmental Biology, and PHY 120 explains quite literally how

things work. "By combining a Biology and Physics course, we can talk about the physics and biological aspect of our current energy sources and well as alternatives," Shoaf noted. He went on to explain that the class was nicknamed "the

paperless classroom," due to the fact that Android based tablets were assigned to each student for use in the class. There were a few technical difficulties along the way, but overall, combining the courses was very successful.

Some of the topics that were discussed in class were current energy productions and alternative energy sources such as wind, solar, and biomass. BIO 104 is worth four credits, PHY120 earns three and PHY 129 is a one credit lab. The classes were linked due to the fact that they meet the Physical and Life Science general education requirements.

This semester, however, they are teaching the course using iPads instead of Android tablets.

These two brand new classes were very successful, both in the eyes of the students that took part in the class and the professors that taught them. Although it remains to be determined whether these classes are here to stay, one thing is certain - they made a large impact on both the students and the professors, and are well on the way to help shaping the future of higher education.

# Cobra men beginning to hit their stride

Photo Illustration by Briana Stodden and Nick Washington/Prospectus News

Mark Roughton Sports Writer

The Parkland Cobras Men's basketball team is beginning to hit their stride as they have won six of their last seven games, including a perfect record in the month of December. The Cobras have shrugged off the slow start in November with improved team play on both sides of the ball, pushing their record to 11-7 overall at the halfway point of the

A big difference between now and the beginning of the season is the defensive tenacity the Cobras have displayed, holding their last five opponents to just 62.5 points per game. "Defense is a huge emphasis for us," Head coach Nate Mast said. "Our team goal is 65 points or less for

the opponent every night, and when we do win it seems that those scores are in the 60's or low 70's." Mast's team is right on pace with this goal as they have allowed an average of only 64.5 points per game in each Cobra win thus far.

The recent stretch of great defensive play is due in large part to the fact that the Cobras are starting to mesh with each other better. "Through December, I thought we built on our chemistry and got a little more comfortable and settled in," Mast said. "I feel like the pieces are coming together now."

The coaching staff worked tirelessly throughout the early portion of the season figuring out the rotations and different starting fives they can use to be successful. Mast has found four solidified starters and acknowledges that the deep bench the Cobras can throw at teams makes his job of identifying that fifth starter much easier because there is simply no drop off in talent.

"Any given night somebody can have a great game for us." Mast added. Mast has consistently played ten or 11 players for significant minutes during the course of the season, thus being able to keep each player fresh and ready to go. Having that luxury has played a major role in the team's recent resurgence.

Mast, along with assistant coaches Coleco Buie and Dustin Yoder are still searching for that one player who can lead the rest of the team and get everybody on the same page. Mast would be the first to tell you that having that extra "coach" on the floor to keep

the team in tune with the head coach's expectations is vital, though he admits that with this team, it's not going to be just a one man responsibility. The responsibility is to be split between sophomores Jamel Johnson, Cody McCollum and Shaq Lowery. "They each have to work together to be our leaders," Mast said. "Getting those guys to work together, I think that will make us the most effective when they are all

leaders at the same time." Johnson, Lowery and McCollum have continued to shine, powering the Cobras through this great stretch, each averaging double figures in scoring and providing that necessary leadership to speed up the learning curve for the freshmen. The Cobras have gotten great lift from their

bench during this turn around as there are five other players that have provided a consistent scoring threat, including Charles Glass III, Tiger O'Neil, Anthony Woods, Mark Gilchrese and Geordy Mulumba. This will prove to be essential down the stretch, as balanced scoring will give their opponents more to think about.

The Cobras have already been tested early and often playing a handful of teams ranked in the division I and II polls. There is a method to this strategy by Mast. "If this is how tough it is now, it's going to be just as tough at the end so let's learn how to win these type of games now so when it comes down to the time it matters most, we're prepared,"

The schedule will begin to

work itself out, as they will have the chance to take advantage of a great home stretch where they host seven straight at Dodd's Athletic Center. Marquee games on the schedule include two with No.17 ranked Lincoln College and two with No. 4 ranked John Wood Community College. The trend of great play must continue in order for the Cobras to finish strong against such stout competition. Parkland travels to Lincoln Land for its next contest January 18, and their next home game is February 8 against Illinois Central. Come out and support your Parkland College men's basketball program as they strive to finish strong and springboard into postseason play.

# Women's Basketball continue strong season

**Spencer Brown** Sports Writer

Although they are a fairly young group of players, the Cobras Women's basketball team continues to perform at a consistent level. The 2011-12 season has nearly passed its midpoint, which means that conference play is underway and the postseason inches closer. Head coach Karrie Redeker's club has posted a record of 11-5 and plans to build on the lessons and successes of this season.

One example of success, which the coaching staff can point to, is the six game winning streak that followed a loss to Olney Central in the season opener. A streak that saw the Cobras win games by an average of almost 16 points per contest. During that run, no opponent scored more than 63 points. That level of defensive performance has been a staple and a point of emphasis from coach to players. "We set a defensive goal of holding the other team to 65 points or less, as we have found that to be a 'winnable' score." Redeker said. "Defense is easier to control on a nightly basis because it only takes effort, intensity, and a team concept. Therefore, we should expect a solid defensive effort every game. It's harder to control offense as far as the types of shots we are going to get or the percentage we are going to shoot each game."

Lessons can be drawn from the stretch of games following the winning streak. A bit of inconsistency plagued the Cobras as they split their next eight outings, including

a home loss to current No. 14, may have affected that statis-Kirkwood Community College. Redeker cited one huge reason for this, saying, "turnovers have been a killer for our team this season, so we have consistently tried to find ways to address improvement in that area." This was especially an issue in their latest defeat by the hands of Division I team Jefferson College in overtime, in which the Cobras committed 35 turnovers.

With such a freshman heavy ball club, games like those are somewhat inevitable. The task that is usually addressed by the coaching staff is keeping those young players, and those players willing to improve, focused. Redeker praises the progress of her freshman. "The area that our freshmen have improved the most has been picking up the pace of the college game and learning the intensity with which they need to play," she said.

As the season continues, the coaching staff has also done a great job helping players understand their roles and develop their games. "In high school most of them were relied on for scoring; now they are asked to be a more complete player," Redeker said.

This season has witnessed Redeker's team post a better road record (5-2) than home record (6-3). "I'm not sure there is a reason other than possibly that there are less distractions leading up to the game," Redeker said about the record. "When they are on the bus going to a game, they can only listen to music, watch a movie, or sleep. We also have had a pretty difficult home schedule, so I would think that

tic the most."

Great performance on the road is a sign of mental toughness and maturity with such a young club. Despite previous losses, one goal of this team is to hold serve on their home floor. The coaching staff's New Year's resolution is to be perfect at home in 2012.

So far, so good for the Cobras as they were victorious this past Saturday in their first home game of the New Year. After watching an 18 point halftime lead disappear against opposing Lewis and Clark Community College, solid play and execution saw the home team pull out a thrilling 85-80 victory. Lewis and Clark tied the game twice in the last 5:06, but could not take the lead. Poor shot selection down the stretch, along with Parkland's solid defense, was their downfall.

Hopefully, the momentum from this victory will travel to Springfield, as Redeker's team prepares to face Lincoln Land Community College tonight. They would also like it to set a pace for the rest of the season. "We must take one game at a time and win the majority of them to put ourselves in the top 4 so we can host a first round game in early March," Redeker stated. "Our kids need to continue to work hard each day and continue to improve and we will see where that leads." This team continues to show improvement. It should be an exciting run to the finish line. Be sure to support the team, whose next home game is January 23, at 5:30 p.m. against Milliken JV.

## NOW LEASING

## P2 - PARKLAND POINT

## FOR AUGUST 2012

Welcome to Champaign's newest student housing community located on West Bradley Avenue, adjacent to Parkland College.

P2 was built with the Parkland College student in mind - meticulous attention to detail and superior resident amenities make Parkland Point the perfect place to live.

\*Gated community with controlled gate access

\*Contemporary floor plans

\*Luxury furniture package

\*Two, Three, and Four Bedroom floor plans

\*Full-sized kitchens with beautiful granite countertops

\*Full-sized washers and dryers

\*24-hour maintenance and management

\*Free off-street parking

The community boasts a new resort-style swimming pool and sun deck, clubhouse with wi-fi, a television lounge, media room and meeting space.
