# Acknowledgements

The most important thing that I learnt during the course of my PhD is how to conduct research; and the credit goes to Patrick. Patrick, the enthusiasm you showed in every part of the work was the driving force for progress. The patience with which you tolerated all my mistakes, no matter how silly, was exceptional. Your attitude of ‘tell me the physics’ enabled me to see beyond the chores of computations. I consider myself to be fortunate to have you as my guide.

My sincere thanks goes to Jaap den Toonder, Erik van der Giessen and Patrick Anderson for encouraging my work by providing critical comments during every meeting we had. I also would like to thank Michiel Baltussen for the extensive discussions we had and for the enormous help provided in programming during the initial part of the project.

I would also like to acknowledge the consortium members of the European artificial cilia project for their comments and feedback on my work during the course of the project. My thanks goes to Oswald Prucker, Jerry Westerweel, Vijay Patel, Jurgen R uhe, Julian Vincent, Craus Bogdan, Daniel Ioan, Jeanette Hussong, Nicolas Schorr and Jacob Belardi.

A big thanks goes to all the members of the micromechanics department Ria, Ratna, Can, Goran, Kodanda, Ranjeet, Kapil, Ali, Siva, Sandeep, Liu, Dogan, Radu, Mathieu and Siamak for the technical and non-technical discussions we had. Outside work my interactions were mainly with Martin and Sriram. Thanks to you guys for giving me the social touch.

I would also like to thank Kapil, Siva, Sandeep, Liu, Michiel and Naveen for proof-reading the first version of the thesis and giving valuable comments.

I would like to thank the support of my parents, without which I would not have pursued a PhD degree. Finally, I would like to acknowledge the support of my wife, Mohsina, who makes sure that I realise that work is not the only thing in the world.
