Bifurcations in Hamiltonian systems

Computing singularities by Gröbner bases

Omslag: Babs Wijnstra
Cartoons: Jeroen Gildemacher
Druk: Universal Press, Veenendaal

Rijksuniversiteit Groningen

**Bifurcations in Hamiltonian systems
Computing singularities by Gröbner bases**

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. D.F.J. Bosscher,
in het openbaar te verdedigen op
vrijdag 10 december 1999
om 16.00 uur

door

Gerard Anton Lunter

geboren op 17 maart 1971
te Sneek.

Promotor: Prof.dr. H.W. Broer
Co-promotor: Dr. G. Vegter

ISBN 90-367-1158-4

Contents

1	Introduction and overview	1
1.1	Background	1
1.1.1	Focus on qualitative results	2
1.1.2	From qualitative to quantitative results	4
1.1.3	Goal of research	5
1.2	Chronology and details	6
1.3	Results and discussion	12
1.3.1	Reduction methods	12
1.3.2	The planar reduction method	13
1.3.3	The energy-momentum map method	16
1.3.4	Standard bases	18
1.3.5	Discussion - Reduction methods	19
1.3.6	Discussion - Standard bases	21
1.4	The plan	21
I	Applications	25
2	Method I: Planar reduction	27
2.1	Introduction	27
2.1.1	BCKV-restricted morphisms	29
2.2	Details of the planar reduction method	30
2.2.1	Overview	30
2.2.2	Some notation	31
2.2.3	Birkhoff normalization	32
2.2.4	Reduction to planar 1 degree-of-freedom system	34
2.2.5	Reduction to the central singularity	36
2.2.6	Inducing the system from a versal deformation	37
2.2.7	BCKV normal form	38
2.3	Spring-pendulum in 1:2-resonance	38
2.3.1	The system	39

2.3.2	Reduction	40
2.3.3	Dynamics and bifurcations	46
3	Method II: The energy-momentum map	53
3.1	Introduction	53
3.2	Description of the method	55
3.2.1	Birkhoff normalization	55
3.2.2	Circle-equivariant vector fields	56
3.2.3	The energy-momentum map	57
3.2.4	Removing the χ -dependence	60
3.3	Application to several resonances	61
3.3.1	The 1:2 resonance	62
3.3.2	The 1:3 resonance	63
3.3.3	The 1:4 resonance	64
3.4	Spring-pendulum in 1:2 resonance	65
3.4.1	Bifurcation analysis of the 1:2-resonant normal form	66
3.4.2	Pictures	68
3.4.3	Inducing the system from the model	70
II	Theory	79
4	Birkhoff normalization	81
4.1	Introduction	81
4.2	Introduction to Hamiltonian mechanics	82
4.3	Birkhoff normal form theorem	84
4.3.1	Semisimple quadratic part, and resonance	87
4.3.2	Second normalization	88
4.4	Algorithms for the Birkhoff normal form	89
4.4.1	Another formulation of Birkhoff's result	90
4.4.2	Deprit's algorithm	91
4.4.3	The exponential-map algorithm	92
5	Singularity theory	95
5.1	Overview	95
5.2	Introduction: The finite dimensional case	96
5.2.1	Deformations	97
5.3	Functions and right-transformations	98
5.3.1	Equivalence and versal deformations	99
5.3.2	Applications	100
5.3.3	BCKV normal form	102
5.4	Maps and left-right transformations	105
5.4.1	The tangent space	105

6 Gröbner bases and Standard bases	109
6.1 Introduction	109
6.1.1 Algorithms and real numbers	111
6.2 Motivation: Gröbner bases	112
6.2.1 Term orders for Gröbner bases	112
6.2.2 Basic question	113
6.2.3 Rephrasing the basic question	114
6.2.4 A criterion for Gröbner bases	114
6.3 Standard bases	117
6.3.1 Overview	117
6.3.2 Definitions	117
6.3.3 Setup	119
6.3.4 Normal form property	120
6.3.5 The standard map theorem	121
6.3.6 Normal form algorithm	124
6.3.7 Reduced normal forms	125
6.4 Instances of standard bases	125
6.4.1 Gröbner bases	126
6.4.2 Standard bases for submodules	127
6.4.3 Standard bases for subalgebras	129
6.4.4 Standard bases for modules over subalgebras	132
6.4.5 Left-Right tangent space	136
6.5 The ring of formal power series	142
6.5.1 Three approaches	143
6.5.2 Existence of a normal form for formal power series	143
6.5.3 Truncated formal power series	145
7 Computing normalizing transformations	147
7.1 Introduction	147
7.2 Deformations of functions	148
7.2.1 Finding a universal deformation	149
7.2.2 The algorithm of Kas and Schlessinger	150
7.2.3 Solving the infinitesimal stability equation	152
7.2.4 Application: The hyperbolic umbilic	153
7.3 Deformations of maps	154
7.3.1 Adaptation of Kas and Schlessinger's algorithm	155
7.3.2 Solving the infinitesimal stability equation	158
7.3.3 Example of a LR-tangent space calculation	161
A Appendix	167
A.1 Classification of term orders	167
A.2 Proof of Proposition 5.8	170

Summary	173
Samenvatting	177
