Acknowledgements

It was five years ago that I arrived in Groningen to start my Ph.D. studies. After spending a cold, snowy and dark winter in Finland, the Netherlands was quite a big change. Here I did not have to fight with the cold or the darkness anymore, only with the rain. During my stay in Groningen I met many new people who supported me and guided me in my studies. Now, when my thesis is ready it is time to say thank you to everyone who helped in my five year journey.

First of all I would like to thank my promoters, Prof. Dr. Edo Vellenga and Prof. Dr. Jan Jacob Schuringa and to my co-promoter Dr. Simon M. G. J. Daenen for taking me as a Ph.D. student, introducing me to leukemia research and guiding me with your advice in the last five years.

Edo, thanks for your scientific discussions which helped me to broaden my knowledge. I will never forget our regular meetings in your office which gave me new directions in my work when necessary. I really appreciate that you gave me fast and detailed feedback on my manuscripts and sent me relevant useful articles from time to time. Thank you again for all of your support.

JJ, I enjoyed very much the discussions that we had from day to day. It really meant a lot to me that I could stop by at your office any time to discuss my new results. You were always very enthusiastic and creative which helped me and motivated me many times. Your suggestions on my manuscripts were very clear and your sense of detail has been helpful for

finding critical mistakes. It was a pleasure to work with you during these years.

Simon, first of all I want to say thank you for funding my research work for four years through the “Wilhelmina Beerepoot Stichting”. I also appreciated your clinical feedback on my work. I remember when I started as a Ph.D. student you gave me a general introduction to leukemia which was very helpful. Many thanks for your help in correcting my manuscripts too.

I would like to thank the members of the reading committee Prof. dr. B. M. Burgering, Prof. dr. R.M. Hofstra and Prof. dr. P.J. van Haastert for evaluating my thesis and spending their valuable time on it.

My thanks also go to my colleagues in the Department of Hematology. I would like to say thank you to Gerwin for his remarks during the meetings and also for the nice chats at the parties. Sarah, thanks for your suggestions, encouragement and every day support. I enjoyed our discussions and talks very much and I will never forget that you always had a few minutes for me even if you were very busy. And I will remember your “Crazy Hat Party” forever. Vincent, I would like to say thank you for all of the advice and help that you gave to me in the last two years. It was a pleasure to share the office room with you and chat about thoughts, ideas related and not related to work. At the same time let me take the opportunity to thank you for translating my summary in to Dutch. My special thanks go to Djoke who helped me many times in the lab, especially with the KRAS experiments during the last year. I really appreciate all of your work and all of the nice discussions that we had. Annelies, I would like to thank you for the enormous amount of cord blood that you gave to me and for our friendship.

It was a pleasure to talk to you anytime. When I started my Ph.D. Marjan helped me frequently to get around in the lab. Now I would like to say thank to you for these times and for all of the advice and chats in the last five years. Bart-Jan and Hein, thank you for your suggestions during meetings, work discussions and thanks for helping me in the lab, especially in my first year. Many thanks go to Karen, Francesco, Rikst-Nynke, Patrick, Annet, Carolien, Marta, and Mathieu for being open and ready for a conversation anytime. Thanks for your help, suggestions and your company. Special thanks to Lindsay and Sandra who were very supportive and contributed to my thesis with their work. I would like to say thank you to those people as well who are not members of the Department of Hematology anymore but supported me during my Ph.D. studies: Gwenny, Inge, Monica, Marcel, Ingrid, Susan, Sandra Rizo, Lina, Janny and my students Mohamed and Sietse.

I would like to acknowledge the people at the Department of Pediatric Oncology: Arja, Frank, Tiny, Kim, Berber, Erik, Alida, Henk-Marijn and Mariska. Thanks for everything in the last five years.

My thanks also go to Bianca, Willy and Greta for all of the administrative work and special thanks to Sylvia who always spoke Dutch to me.

Geert and Henk, I appreciated your assistance in the FACS facility very much. You helped me many times with cell sorting, making new protocols and setting the FACS machine. Thank you for your suggestions, discussions and work.

Acknowledgements

Finally, I want to thank to my family who supported me with constant love and patience and to my friends inside and outside of the Netherlands who were next to me in the last five years.

Thank you to all of you again and I wish you lots of luck and happiness in the future.

Szabolcs
