# FROM LOCAL ADAPTATION TO RANGE SIZES

---

Ecological and evolutionary  
consequences of dispersal

The research reported in this thesis was carried out at the Theoretical Research in Evolutionary Life Sciences group (TRÊS), which is part of the Groningen Institute for Evolutionary Life Sciences (GELIFES) of the University of Groningen (The Netherlands), according to the requirements of the Graduate School of Sciences (Faculty of Mathematics and Natural Sciences, University of Groningen), and Terrestrial Ecology Unit (TEREC) of the faculty of Sciences, Ghent University (Belgium).

The research was supported by the Ubbo Emmius Fund and the SPEEDY (BelSpo) project. The printing of this thesis was partly funded by the University of Groningen and the Faculty of Science and Engineering (University of Groningen).

# **From local adaptation to range sizes**

Ecological and evolutionary consequences of dispersal

## **PhD thesis**

To obtain the degree of PhD at the  
University of Groningen  
on the authority of the  
Rector Magnificus Prof. E. Sterken  
and in accordance with  
the decision by the College of Deans

and

to obtain the degree of PhD at  
Ghent University  
on the authority of the  
Rector Prof. R. Van de Walle

Double PhD degree

This thesis will be defended in public on

Friday 16 November 2018 at 16:15 hours

by

**Adriana Alzate Vallejo**

born on 25 August 1982  
in Cali, Colombia

**Supervisors**

Prof. R.S. Etienne

Prof. D. Bonte

**Assessment committee**

Prof. L. Lens

Prof. O. De Clerck

Prof. F. Altermatt

Prof. J. van de Koppel

# Contents

<b>Chapter 1</b> .....	<b>03</b>
Introduction and outline of the thesis	
<b>Chapter 2</b> .....	<b>13</b>
Experimental island biogeography demonstrates the importance of island size and dispersal for the adaptation to novel habitats	
<b>Chapter 3</b> .....	<b>35</b>
Interspecific competition counteracts negative effects of dispersal on adaptation of an arthropod herbivore to a new host	
<b>Chapter 4</b> .....	<b>61</b>
A simple spatially explicit neutral model explains range size distribution of reef fishes	
<b>Chapter 5</b> .....	<b>87</b>
Dispersal-related traits explain variation in geographic range size of reef fishes in the Tropical Eastern Pacific	
<b>Chapter 6</b> .....	<b>107</b>
Synthesis	
<b>References</b> .....	<b>125</b>
<b>Summary</b> .....	<b>139</b>
<b>Nederlandse samenvatting</b> .....	<b>143</b>
<b>Acknowledgments</b> .....	<b>147</b>
<b>Curriculum vitae</b> .....	<b>149</b>
<b>Author affiliation and contact information</b> .....	<b>151</b>
