Acknowledgements

I owe my gratitude to all the people whom have made this thesis possible and whom have made my graduate experience one that I will cherish forever.

First and foremost, I would like to thank my promoter, Paul Blom, for providing me with an invaluable opportunity, to work on such a challenging and extremely interesting project over the past four years. Paul has always made himself available for help and advice, whenever I had needed it. Without his guidance, this thesis would have been a distant dream. For me, it was a pleasure to work alongside him and learn from such an extraordinary person.

Minte Mulder has made a paramount contribution to this thesis. Without his technical skills, knowledge and advice, many of the results presented in this thesis would not have been possible. Apart from his technical assistance, his unconditional personal support, care and advice, helped me more easily integrate into the group and feel comfortable in, what is for me, an entirely new environment. I thank him also for teaching me about vacuum, nature, and Dutch culture.

I have always been proud to be a member of Physics of Organic Semiconductors group at University of Groningen. I thank all of the group members for their friendship and collaboration. I'm grateful to Bert de Boer for his suggestions and knowledge of chemistry that has always helped me to improve my experiments. I am also thankful to Bert for proof reading the manuscript of this thesis. I would like to thank Jan Anton for the fascinating collaboration we had on device physics, modelling and experimental work, as well as for the enjoyable time we spent at conferences. I'm grateful to Denis for help and for long scientific discussions we had. I'm thankful to Ronald, Teunis, Cristina and lately Francesco for maintaining an extremely positive working atmosphere in the office. Hylke and Afshin have been close and always willing to help. I'm indebted to all of the undergraduate students that I have had the opportunity to supervise during these four years (Ronny, Magda, Robert, Date, and Hangxing) and whom have been responsible for some of the results presented in this thesis. A special thank you goes to Renate, who has made my life so much easier every time I have had to deal with administrative paperwork.

Thanks are due to Professors René Janssen, Jan (Kees) Hummelen, and Michael McGehee for agreeing to serve on my thesis committee and for sparing their invaluable time reviewing the manuscript.

The regular EET meetings were always an opportunity for me to meet and discuss science with everyone working on the field of organic semiconductors in the whole country. Thanks there go to Professor René Janssen, Martijn Wink, Jeroen van Duren, Sjoerd Veenstra and Jan Kroon. I would also like to thank Professor Kees Hummelen and the "bucky boys and girls" for the collaboration, letting me share their lab facility, as well as for the supply of PCBM.

I'm indebted to Anthony England for well explained, and most valuable, chemistry lessons and ideas. He was always there to help and I have appreci-

ated his advice concerning my professional career. I thank Anthony also for the numerous times when he had to correct my English, and for letting me win a snooker frame once in a while.

For the time spent outside of the lab or office, and for many social activities, I'm thankful to all my Romanian friends in Netherlands, especially Dan Cozma, Oana, Cătălin, and Mihaela in Groningen, and Odi, Giga, and Micuțu in Delft. My thanks go also to Dan Cozma and Denis Markov for agreeing to be my paranymphs.

Le mulțumesc celor care m-au crescut (părinților și bunicilor mei), m-au ajutat financiar atunci când am avut nevoie (fratelui meu Marius) și tuturor celor care într-un fel sau altul au fost alături de mine și m-au susținut.

Words cannot express the gratitude I owe to Lăcră for everything she means to me. Îi mulțumesc din suflet pentru că există!

It is impossible to remember all who, in one way or another, helped me to reach this stage in my life, and I apologize to anyone that I have inadvertently overlooked. Lastly, I thank them all.

Valentin Dan Mihailețchi
