# Acknowledgements

Dick, at first, I would like to thank you for allowing me to work with these exciting enzymes. Still today, I am always thrilled when I can get my hands on a novel one. Some of the moments I enjoyed the most were when we had the rare chances to not only speak about science - for example on our long train rides to BASF (where we stayed at one of the finest hotels I, but surprisingly also you, have ever slept at). At our regular meetings, I admired your sharp eye and, at the same time, dreaded your sharp words. Whenever bringing up the work of others at these meetings, I loved your expression: "Do you believe this?" I have learned so much from you, especially when it comes to writing manuscripts. Some of the nicer comments used to be the frequently found "clumsy" or "less wordy"... I never forget the first time I got a manuscript draft back from you... oh boy, Sandra must have definitely needed to supply you with a fresh set of red pens in between. So far, many of my students have already experienced the *qualities* of such a red pen when getting their works back. Hopefully, I will be able to maintain the high level of scientific accuracy in my future writing and, astonishingly, I do really miss your helpful criticism and advice nowadays. Thank you!

Second, I would like to thank Marco. Although you were not directly involved in the project, you were always available with scientific advice and, sometimes even more important, very much needed encouraging words. Further I would like to thank Neil Bruce, Lubbert Dijkhuizen and Bert Poolmann for taking the time to read my thesis, for their comments and for taking part in the assessment committee. Thank you!

Of the many people at the lab I would especially like to thank my paranymphs Martijn and Matt. Martijn, you were a great colleague and have become a good friend with many parallels in our lives. Without you, I would not have learned to speak Dutch as fluent as it still is today. For this, I am especially grateful and, for a large part, you are responsible for the great Groningen experience. Matt, although I only had the pleasure to work with you in my last year, I loved our snappy and sometimes hilariously funny conversations, your snarky wit and my sarcastic humor complemented nicely, sometimes you were able to say what had not even manifested in my head. On more than one occasion, I have missed both your company after my farewell from Groningen. Therefore, I am very happy that you both agreed to become my paranymphs. Thank you!

Further, I would like to express my gratitude to my co-authors Robert, Wiktor, Hein, Lixia, Maja, Bauke, Hans Wolfgang, Bernhard, Julia, Elizabeth, Rainer, and especially Peter for all your contributions to this thesis. Peter, for all your great measurements, I hope you appreciate that I have *not* asked you to become one of my paranymphs. Thank you!

Then, I would like to thank Sandra, Nico, Theodora, and Piet for all their organizational and technical support. Thank you!

To all the other members of the lab or other groups, you all have made my time in Groningen unforgettable. Although it is really hard for me, I will refrain from naming individuals here because I am far too afraid to miss anyone. But, rest assured, I will be excited to thank you in person on December 11<sup>th</sup> (or at any later encounter). Until then: Thank you!

Last, I would like to thank my family and friends for making this thesis possible, and if it was only for nagging about its progress. Thank you!

If it was not for Anett's constant support and encouragements, you would not be holding this thesis in your hands now, I am forever indebted and thankful for her love.

Thank you!
