Acknowledgments

I would like to first thank my parents who always support me from the beginning of my life. I am also thankful to the scholarship by Faculty of Economics and Business in Groningen for my later half of bachelor and my master studies, without which I most probably would not proceed in academia after obtaining my bachelor degree.

I am in debt to my two supervisors, Marcel Timmer and Gaaitzen de Vries. This thesis is not possible without their great support. The innovative and stimulating talks with them helped me formulate the research ideas, and they also spent much time helping me in data issues as well as in writing. I want to thank Steven Brakman, Maarten Goos and Prasada Rao for the reading of my manuscript and the comments for further improvement. I also thank Gaaitzen and Shidan Lu for the editing on the Dutch summary of my thesis, and Marianna Papakonstantinou being the paranymph for my defense.

We are also grateful to many national and international colleagues, including but not limited to Ingvild Almås, Roberto Bonfatti, Steven Brakman, Angus Deaton, Erik Dietzenbacher, Erwin Diewert, Giovanni Dosi, Robert Feenstra, Maria Garcia Vega, Ejaz Ghani, Maarten Goos, Marco Haan, Jonathan Haskel, Robert Johnson, Dale Jorgenson, Mariko Klasing, Bart Los, Knox Lovell, Filip Matějka, Branko Milanovíc, Petros Milionis, Peter Neary, Prasada Rao, Robin Sickles, Dirk Stelder, Yan Xu, Christopher Zuber, for their precious discussions and comments on our papers in seminars, conferences and other occasions.

I had a good time in the "FDI and Trade" teaching team with Tarek Harchaoui, Beppo van Leeuwen, Bart Los, and Dimitrios Soudis. I want to also thank Cecilia Plottier and Stefan Pahl for being great officemates. The acknowledgment also goes to our proud secretaries – the Gemmies – for shooting out daily troubles and replacing them by funs on the fifth floor. I'd also thank the SOM office especially Arthur de Boer and Justin Drupsteen who keep track of the administrative things of PhDs but also help us in various other aspects of life.

I have been for a while in Groningen since my bachelor study, and now it's the time for a new adventure to the south. I am not going to enumerate the names of my friends here, as a complete list is hard to make and the sequence of the names is always a trouble. But I really appreciate the time with you. I wish that we can keep in touch in the future.

Kind Regards,
Xianjia

2017-MAY-19

Chapter 3 of this thesis is co-authored with Marcel P. Timmer and Laurie S. M. Reijnders. It is part of the project “Modelling Global Value Chains: a new framework to study trade, jobs and income inequality in an interdependent world” in the Groningen Growth and Development Center (GGDC). The financial support from the Dutch Science Foundation (NWO) for Reijnders and Timmer is gratefully acknowledged (grant number 453-14-012).

Contents

1 Introduction **1**

1.1 Background on global value chains 1

1.2 Puzzling questions and global value chains as the solution 4

1.3 Overview of future research directions 6

2 Estimating and explaining bilateral factor exports **9**

2.1 Introduction 9

2.2 Measuring bilateral trade in factor content 14

2.2.1 Derivation of the new measure 14

2.2.2 Data 18

2.3 The comparison with the conventional measure of bilateral factor exports 20

2.4 Testing the role of factor endowments in the direction of net bilateral factor trade 25

2.4.1 A simple testing framework 25

2.4.2 The fitness of the bilateral HOV sign test 29

2.4.3 Alternative specifications 32

2.5 Gravity equation and the home bias in factor trade 35

2.6 Concluding remarks 44

Appendix 47

3 Offshoring, biased technical change and labor demand: new evidence from global value chains **53**

3.1 Introduction 53

3.2 Data construction and sources 56

3.3 The changing characteristics of global valuec chain production 59

3.3.1 The share of foreign value added in GVCs 59

3.3.2 GVC task prices 59

3.3.3 Factor cost shares in GVCs 60

3.4 A task-Based model of GVC production 61

3.5 Estimating substitution and biased technical change in GVCs 63

3.5.1 Econometric setup 64

3.5.2 Baseline results 65

3.5.3 Robustness analysis 67
3.5.4 The role of information and communication technology 70
3.6 The impact of offshoring and BTC on domestic labor use in GVC production 73
3.7 Concluding remarks 77
Appendix 78

4 Task space: the shift of comparative advantage in globalized production 85
4.1 Introduction 85
4.2 Co-occurance in RCA as a measure for task relatedness 89
4.3 Deriving the value-added export by tasks 92
4.4 The structure of the relatedness between tasks 98
4.5 Paths of structural change in the task space 102
4.5.1 The economic potential of tasks 102
4.5.2 Possible upgrading paths in a network graph 104
4.6 The dynamics of economic structure in the task space 106
4.6.1 Actual structural upgrading paths in the task space 107
4.6.2 Testing the role of task relatedness in the actual directions of structural change 111
4.7 Concluding remarks and the implications on development strategies . 117
Appendix 121
