Toward a virosomal Respiratory Syncytial virus vaccine with a built- in lipophilic adjuvant

A vaccine candidate for the elderly and pregnant women

Julia Lederhofer

The research described in my thesis was performed at the Department of Medical Microbiology of the University Medical Center Groningen (UMCG) within the Molecular Virology group and at the company Mymetics BV in Leiden.

The work described in this thesis was primarily financially supported by the University Medical Center of Groningen (UMCG) and Mymetics BV in Leiden. It was also supported by GUIDE and the Jan Kornelis de Kock foundation (Groningen, The Netherlands).

The printing of this thesis was financially supported by

To my mother Ingrid and my father Norbert...

Chapter 1	
General Introduction	9
Chapter 2	
Immunogenicity and protective capacity of a virosomal Respiratory Syncytial virus vaccine adjuvanted with monophosphoryl lipid A in mice	41
Chapter 3	
Immunopotentiating activities of RSV virosome-incorporated MPLA, 3-OD-MPLA and synthetic MPLA on mouse dendritic cells and B cells <i>in vitro</i>	65
Chapter 4	
Induction of RSV-specific antibody and CD8 T-cell responses in mice after immunization with RSV virosomes containing a novel synthetic variant of MPLA	75
Chapter 5	
Development of a virosomal RSV vaccine containing 3D-PHAD® adjuvant: formulation, composition, and long-term stability	91
Chapter 6	
Virosomes derived from thermostable Respiratory Syncytial virus strains L19F or L19F I557V and containing a synthetic MPLA derivative: A comparative immunogenicity study in mice	117
Chapter 7	
Immunogenicity in mice of synthetic liposomal nanoparticles with conjugated prefusion and postfusion F glycoprotein of Respiratory Syncytial virus	137
Chapter 8	
Summarizing discussion and future perspectives	163
Addendum	
Nederlandse samenvatting	185
Deutsche Zusammenfassung	191
Acknowledgements	199
Curriculum vitae	205
Publications	206
