Can we afford this? The capability to make financial decisions in individuals with and without cognitive impairment.

Dorien Bangma, 25 november 2021

1. Relatively basic aspects of the capability to make financial decisions remain stable across the adult life span, however, with increasing age, the tendency to buy on impulse decreases (chapter 3).
2. The severity of cognitive decline in people living with a neurodegenerative disorder is related to the degree of problems with the capability to make financial decisions (chapter 4).
3. Adults with ADHD have difficulties with several aspects of the capability to make financial decisions compared to healthy controls (chapter 7 and 8).
4. Both cognitive dysregulation and motivational-emotional dysregulation might underlie (financial) decision-making problems in adults with ADHD (chapters 6 and 7).
5. Standard neuropsychological tests cannot be used to evaluate an individual's capability to make financial decisions (chapter 9).
6. (Legal) decisions about an individual's capability to make financial decisions should be based on subjective as well as on performance-based financial capability measures (chapter 9).
7. Contextual factors, such as personality and demographic variables, need to be evaluated in order to evaluate an individual's capability to make financial decisions (chapter 9).
8. Science never solves a problem without creating ten more (George Bernard Shaw).
9. Geld moet je niet achterna, maar tegemoet lopen (Aristoteles).
10. It's all about the money (Joe Jackson/Meja).
