**Climbing the Bio-based Value
Pyramid by Novel Transformations**

Bálint Fridrich

The work described in this thesis was carried out at the Stratingh Institute for Chemistry, University of Groningen, Groningen, The Netherlands.

This work was financially supported by the European Research Council, ERC Starting Grant 2015 (CatASus, ID: 678883), and the ERC Proof of Concept Grant 2019 (PURE, ID: 875649). B.F. received financial support for the purchase of a high-performance personal computer from the Hungarian Ministry of Human Capacities (NTP-NFTÖ-17-B-0593).

Cover design: Bálint Fridrich adopted by Lovebird design.

Chapter separators: Bálint Fridrich

Printing: Eikon+

Climbing the Bio-based Value Pyramid by Novel Transformations

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 11 January 2022 at 11.00 hours

by

Bálint Fridrich

born on 15 January 1992
in Budapest, Hungary

Supervisors

Prof. K. Barta
Prof. J.G. Roelfes

Assessment Committee

Prof. A.J. Minnaard
Prof. S. Otto
Prof. W. Kroutil

*Dedicated to my emotional pillars:
Fanni, Vica, Ilona and Mária*

Contents

Chapter 1: Climbing the bio-based value pyramid	11
1.1. Introduction	13
1.2. Renewable carbon sources: matching volume with value	14
1.3. Towards bio-based products from lignin	19
1.4. Surfactants based on renewable resources: an attractive target.....	26
1.5. Classes of surfactants and commercial examples	28
1.6. Efforts to make novel bio-based surfactants	35
1.6.1. First generation bio-based surfactants: Surfactants produced by chemical means	35
1.6.2. Second generation bio-based surfactants (Produced by biological means)	36
1.6.3. Novel first generation bio-based surfactants	37
1.6.4. The ideal surfactant	38
1.7. The aim of this thesis: Climbing the value pyramid of bio-based products	41
1.8. References	42
Chapter 2: Selective coupling of bio-derived aliphatic alcohols with acetone using hydrotalcite derived Mg-Al porous metal oxide and Raney Nickel	51
2.1. Introduction	53
2.2. Design philosophy	55
2.3. Results and discussion	55
2.3.1. Catalytic coupling of 1-BuOH with acetone using (transition metal doped) porous metal oxides (Step 1: coupling)	55
2.3.2. Combination of Raney Nickel and PMO for increased activity (Step 1: coupling).....	57
2.3.3. Effect of Various Reaction Parameters (Step 1: coupling).....	59
2.3.4. Mechanistic Considerations and side products in the catalytic C-C bond formation (Step 1: coupling)	59
2.3.5. Optimization of Product Formation Profiles and subsequent Hydrodeoxygenation (Step 2).....	62
2.3.6. Coupling of ABE Mixture to chain elongated ketones and subsequent Hydrodeoxygenation	64
2.3.7. TEM and Elemental mapping characterization of the catalysts.....	66
2.4. Conclusion.....	70
2.5. Outlook.....	70
2.6. Experimental section	72
2.6.1. General methods	72
2.6.2. Experimental procedures	73
2.6.3. XRD characterization of the crystalline hydrotalcite catalyst precursors and the corresponding PMOs.....	77
2.6.4. Analysis of the gas phase of a catalytic coupling reaction (Step 1)	77
2.7. References	77

Chapter 3: Synthesis of lignin-derived polymer building blocks	81
3.1. Introduction	83
3.1.1. Bio-based polyesters.....	85
3.2. Design philosophy.....	86
3.3. Results and discussion	88
3.3.1. The development of synthetic and catalytic strategies for the conversion of dihydroconiferyl alcohol (1G) to polyester building blocks.....	88
3.3.2. The development of synthetic and catalytic strategies for the conversion of vanillin to bisphenolic polymer building blocks.....	93
3.4. Conclusions.....	103
3.5. Outlook.....	105
3.6. Experimental section	106
3.6.1. General methods	106
3.6.2. Annex of the catalytic runs	108
3.6.3. Description of the proof of principle reactions.....	110
3.6.4. Synthesis and characterization of compounds	111
3.7. References.....	122
Chapter 4: Green synthesis of fully bio-based, novel hard water tolerant gemini anionic disulfonate surfactants without the use of oleum or other harsh sulfonating agents	127
4.1. Introduction	129
4.2. Design philosophy.....	133
4.3. Results and discussion	135
4.3.1. Synthesis of Vanillin derived ethers (Step 1)	135
4.3.2. Establishing the double cross-aldol condensation between bio-based acetone and <i>O</i> -alkylated vanillins (Step 2).....	136
4.3.3. The development of efficient sulfonation strategies (Step 3)	142
4.3.4. Extension of the double cross-aldol condensation between bio-based cyclopentanone and <i>O</i> -alkylated vanillin and establishing strategy for its sulfonation... ..	151
4.3.5. Summary of important aspects.....	153
4.4. Considerations and outlook regarding industrial use and incorporation of waste streams.....	153
4.5. Physicochemical properties.....	155
4.6. Conclusion.....	161
4.7. Experimental.....	162
4.7.1. General methods	162
4.7.2. Representative procedures	164
4.7.3. NMR assignation of the simplest disulfonated compound (DS-C8MA-NH ₄) ..	167
4.7.4. Spectral data of isolated compounds	172
4.8. References.....	182
Chapter 5: Efficient, room temperature synthesis of novel zwitterionic surfactants from lignocellulose derived phenols.....	187
5.1. Introduction	189
5.2. Design philosophy.....	192

5.3. Results and discussion	193
5.3.1. Installment of the polar head by Mannich condensation (Step 1).....	193
5.3.2. Installing the apolar moieties via phase transfer alkylation of the obtained Betti bases (Step 2)	198
5.3.3. Surface active agents by mild quantitative oxidation of alkylated Betti bases (Step 3).....	209
5.4. Summary of important aspects.....	215
5.5. Determination of the physicochemical parameters of the synthesized amine oxide surfactants	216
5.6. Conclusions	222
5.7. Experimental section	223
5.7.1. General methods	223
5.7.2. Representative procedures	224
5.7.3. Spectral data of isolated compounds	226
5.8. References	249
Chapter 6: Zwitterionic surface active agents <i>via</i> catalytic routes from lignin-derived phenols.....	253
6.1. Introduction	255
6.2. Design philosophy	259
6.2.1. Synthesis of aromatic-aliphatic ethers and alcohols from phenolic lignin- derived monomers: Installing the apolar tail (Step 1)	260
6.2.2. Zwitterionic surfactants <i>via</i> catalytic amination of the aromatic-aliphatic ether alcohols with Proline (Step 2)	261
6.2.3. Amine oxide surfactants via decarboxylative amination of aromatic- aliphatic ether alcohols with proline and subsequent mild oxidation (Step 2 & 3).....	262
6.2.4. Preliminary evaluation of surface activity and other physical properties of the synthesized surfactants	266
6.2.5. CryoTEM investigation of gelating behavior of C ₁₂ G ₃ PyO and C ₁₂ G ₃ Pro....	269
6.2.6. Summary of important aspects.....	270
6.3. Conclusion & Outlook.....	273
6.4. Experimental section	274
6.4.1. General methods	274
6.4.2. Representative procedures	275
6.4.3. Spectral data of isolated compounds	278
6.5. References	294
Chapter 7: Summary and Outlook	297
Samenvatting en vooruitblik	305
8.1. List of publications	312
Acknowledgments	313
