**Modulation of lipoxygenase activity and
chemistry-based detection of protein
nitration in inflammation**

Paranymphs : Jenny Novianty Soetedjo
Thea van den Bosch

The research project described in this thesis was carried out in the division of Pharmaceutical Gene Modulation, Groningen Research Institute of Pharmacy, according to the requirements of the Graduate School of Science (Faculty of Mathematics and Natural Sciences, University of Groningen).

This work was financially supported by the University of Groningen

Cover design : Andreas Hidayat Gunawan

Layout : Rosalina Wisastra

Printing : Off Page (www.offpage.nl)

For my dad, mom, brother and my beloved families

I can do all things through Him who strengthens me.

Philippians 4:13

Contents

CHAPTER 1	Introduction and scope of the thesis	11
CHAPTER 2	Anacardic acid derived salicylates are inhibitors or activators of lipoxygenases	37
CHAPTER 3	Discovery of a novel activator of 5-lipoxygenase from an anacardic acid derived compound collection	65
CHAPTER 4	Isothiazolones; thiol-reactive inhibitors of cysteine protease cathepsin B and histone acetyl transferase PCAF	103
CHAPTER 5	Antibody-free detection of protein tyrosine nitration in tissue sections	123
CHAPTER 6	Summary, General Discussion and Future Perspectives	143
Appendix	Dutch summary - Nederlandse samenvatting	151
	Acknowledgements	161
	List of Publications	165
