Acknowledgements

Acknowledgements

The work conducted in this thesis has been made possible by financial support from TI Pharma (with the Escher Value Creation project) and the research institute GUIDE from the UMCG, to which I would like to express my gratitude.

I would like to thank my promoters (Prof. Dick de Zeeuw and Prof. Hiddo Lambers Heerspink) for their guidance and crucial contributions at each step of the way towards this thesis book. They have been indispensable in getting the research done (and in a timely manner). I would also like to thank them for giving me the opportunity to conduct the studies, and for the opportunity to be trained as clinical pharmacologist.

To the RADAR steering committee (in particular John Brennan) and AleCardio steering committee (in particular Rick Grobbee) I would like to express my gratitude for making clinical trial data available for the studies presented in this thesis, and for their continued support along the way.

I would like to thank Jarno Hoekman for his contribution in setting up many of the studies reported in this thesis, and for his guidance and knowledge. Also, to Skander Mulder, Pepijn Vemer and Tobias Kröpelin I am indebted for their impressive work on statistical modeling, and to Paul Smink, for his work on developing the PRE score.

To the reading committee appointed for my thesis, Prof. D.E. Grobbee, Prof. H.G.M. Leufkens and Prof. P. Rossing, your efforts are highly appreciated.

I would like to acknowledge the co-authors listed in the different chapters for their support. Furthermore, I want to express my gratitude to my colleagues, former and present, from the department of Clinical Pharmacy and Pharmacology for a pleasant working environment and for their support. Also, to the colleagues from epidemiology and nephrology I would like to say thank you.
